## ACKNOWLEDGEMENTS

In writing the fourth edition, we have accumulated a number of debts. In particular, we would like to thank Yin Harn Lee and Sam Sherrie for their valuable research assistance. We are also indebted to Tanya Aplin, Robert Burrell, Graeme Dinwoodie, Annette Kur, Oke Odudu, Eleonora Rosati, and Leanne Wiseman for their generous input. We would like to thank the staff at Oxford University Press (particularly Tom Young) for their help and forbearance, and Vanessa Plaister for her excellent copy-editing.

We would like to express gratitude to Gaenor Moore, Peter O'Byrne, Hamish Porter, and John Swarbrick, for either granting permission, or helping us locate or obtain permission, to use various images. Finally, and most importantly, we should pay tribute to Clair Milligan and Leanne Wiseman for their patience, tolerance, and ongoing support.

## NEW TO THIS EDITION

- An introduction updated to take account of case law on the meaning of ‘intellectual property’ (*Phillips v. Mulcaire*), new writing in the field of justifications (*Breakey, Merges*), and the latest literature discussing the expansion of intellectual property rights. Important developments at an international level are also covered, such as the Beijing treaty for Audiovisual Performers, and the Marrakesh Treaty on copyright exceptions for the visually impaired.
- A rewritten copyright section which covers the revolutionary case law of the CJEU, in particular on originality, infringement, and the scope of rights, and analyses the extension of term for sound recordings/performances, the new ‘Hargreaves exceptions’, the Digital Economy Act 2010, the orphan works provisions in the EU Directive and the Enterprise and Regulatory Reform Act 2013, as well as the Supreme Court’s decision in *Meltwater*.
- Part II on patents takes account of the impending Unitary Patent regime for the EU, alongside coverage of important case law from the CJEU (e.g. *Brustle*) and the Supreme Court on sufficiency, industrial applicability, and infringement by ‘making’ (*Lundbeck v. Generics, Eli Lilly v. HGS, Schutz v. Werit*).
- The designs section has been updated in the light of CJEU (e.g. *Grupo Promer*), and domestic case law on Community Designs, UK Registered Designs and UK Unregistered Designs, as well as legislative reforms (such as the repeal of section 52 CDPA and the other adjustments effected in the Intellectual Property Act 2014).
- Part IV on trade marks accounts for new case law from the European Court of Justice, on the functions of marks (*L’Oreal, Louis Vuitton, Interflora*), the territorial aspects of notions such as distinctiveness, reputation, and genuine use (*Pago, Leno Merken*) and infringement (*DHL*), and anticipates the revision of the Community Trade Mark in light of the Max Planck review.
- Part V on confidentiality takes account of new case law including the Supreme Court ruling in *Vestergaard*, and discusses the proposal for an EU Directive on trade secrets.
- Part VI on litigation and remedies includes a review of the implications of the new unitary patent court system, and of the reforms of the Patent County Court (fee caps, and the introduction of the small claims process), considers developments in the field of injunctive relief (for example, blocking injunctions), and examines the new Border Measures Regulation, the Law Commission review of the ‘threats provisions’, and the criminalization of registered design infringement under the Intellectual Property Act 2014.

# TABLE OF EU LEGISLATION

## Treaties and Conventions

Australia–EU Agreement on trade in wine... 1117

Charter of Fundamental Rights of the European

Union 2000... 11, 22, 250

Art. 7... 1214

Art. 11... 289, 1094

Art. 16... 1200, 1211

Art. 17... 2

Art. 17(2)... 2, 1033, 1213

Art. 21... 961

Community Patent Convention 1975

(CPC)... 18, 381, 382, 388, 602, 617

Arts 25–28... 610

Art. 25(c)... 620

Art. 26... 609

Art. 26(1)... 624

Art. 27(b)... 635

Art. 29(a)... 617

Art. 31... 635

Art. 57(1)... 588

Art. 81... 617

Protocol on Litigation 1989

Art. 14... 1202

Art. 35(1)... 1202

EC–Albania Stabilization and Association

Agreement 2006

Art. 70... 25

Art. 73... 25

Annex V... 25

EC–Serbia 2014

Art. 75... 25

Annex VII... 25

EU–Chile Association Agreement... 10, 1117

EU–Mexico Agreement... 1117

Lisbon Reform Treaty 2009... 11

Protocol 30... 22

Treaty establishing the European Community

(EC Treaty)... 18

Art. 28 EC... 12, 25, 616

Art. 30 EC... 12, 25

Art. 49 EC... 12

Art. 81 EC... 15, 317, 325, 616, 648, 753, 1092,

1103, 1104

Art. 81(1) EC... 16

Art. 82 EC... 15, 303, 333, 652

Art. 94 EC... 18

Art. 95 EC... 17

Art. 133 EC... 23

Art. 295 EC... 12, 16, 317

Art. 308 EC... 18

Treaty establishing the European Union (TEU)

(Maastricht Treaty)... 11, 18

Title IV... 20, 391

Art. 2... 961

Art. 3(3)... 961

Art. 6... 18, 22

Art. 16(3)... 11

Art. 16(4)... 11

Arts 29–30... 18

Treaty of Rome 1957... 11, 218, 1098

Art. 30... 12, 616

Art. 36... 12

Art. 59... 12

Art. 85... 15, 317, 325, 616, 648, 753, 1092,

1103, 1104, 1107, 1108, 1109

2 Justifications for Intellectual Property	4	4 Regional Influences	11

### 1 INTRODUCTION

Intellectual property law creates exclusive rights in a wide and diverse range of things, from novels, computer programs, paintings, films, television broadcasts, and performances, through to dress designs, pharmaceuticals, and genetically modified animals and plants. Intellectual property law also creates rights in the various insignia that are applied to goods and services, from FUJITSU for computers, to ‘I CAN’T BELIEVE IT’S NOT BUTTER’ for margarine. We are surrounded by and constantly interact with the subject matter of intellectual property law. For example, you are reading a copyright work bearing the Oxford University Press trade mark. You are probably sitting on a chair protected by design right and marking the book with a pen the mechanism for which has, at some stage, been patented. Alternatively, you may be typing notes into a computer, which no doubt has parts (such as the mouse) that are protected by patents and design right (in the shape of the product, as well as the semiconductor chip topographies inside).

Perhaps not surprisingly, given the wide range of subject matter with which it is concerned, intellectual property law is not a single homogenous body of law; rather, the term is usually used to describe a number of areas of law, typically including copyright law, patent law, and trade mark law, each of which has its own characteristics. The adjective ‘intellectual’ is regarded as descriptive of the character of some of the material that this area of law regulates—namely, the products of the human mind or ‘intellect’. The designation ‘property’ is said to describe the form of regulation—that is, primarily the grant of individual exclusive rights that operate in a manner similar to private property rights over tangibles. Neither component is uncontroversial. Certainly, not everything that this field of the law protects can be described as ‘intellectual’. Moreover, there are those who question whether, whatever the legislators may say, these rights can really be called ‘property rights’ as opposed to ‘monopolies’ or ‘rights to exclude’. Others worry that, by referring to these rights as ‘property’, particular attitudes are engendered that lead to their expansion.<sup>1</sup>

<sup>1</sup> Y. Benkler, ‘Free as the Air to Common Use: First Amendment Constraints on Enclosure of the Public Domain’ (1999) 74 *NYU L Rev* 354; R. Burrell and A. Coleman, *Copyright Exceptions: The Digital Impact* (2005), 180–7, 200, 225–6, 239; M. Lemley, ‘The Modern Lanham Act and the Death of Common Sense’ (1999) 108 *Yale LJ* 1687, 1697; N. Netanel, ‘Why Has Copyright Expanded? Analysis and Critique’, in F. MacMillan (ed.), *New Directions in Copyright Law* (2008), 1, 11–15.

Although it is possible to trace usage of the term ‘intellectual property’ back for almost 150 years to refer to the general area of law that encompasses copyright, patents, designs, and trade marks,<sup>2</sup> it has been commonly used in this way for only the last 30 or 40 years.<sup>3</sup> Nevertheless, in that relatively brief period, it has become part of the basic legal vocabulary. Legal commentators write books about ‘intellectual property’;<sup>4</sup> students study courses on ‘intellectual property’; publishers publish journals on ‘intellectual property’;<sup>5</sup> agencies (such as the United Kingdom’s ‘Intellectual Property Office’, or UK IPO) and organizations gather under the banner of ‘intellectual property’.<sup>6</sup> Perhaps more significantly, intergovernmental meetings agree treaties relating to ‘intellectual property’;<sup>7</sup> the European Parliament and Council adopts directives concerning intellectual property,<sup>8</sup> and national legislators utilize the term in drafting legislation.<sup>9</sup> This move has led to the transformation of ‘intellectual property’ from a category *of* laws to a category *in* law. Article 17 of the European Charter of Rights and Freedoms even declares that ‘intellectual property shall be protected’.<sup>10</sup>

Although widely deployed, there is little agreement on the precise coverage of the term ‘intellectual property’. Most definitions have the character of lists—sometimes exhaustive,<sup>11</sup> sometimes open-ended.<sup>12</sup> Nearly all definitions include ‘copyright’ and ‘patents’, and most include ‘trade marks’. But matters become more difficult when the question becomes, for example, whether the protection granted over confidential information (including personal information) counts as ‘intellectual property’.<sup>13</sup> Indeed, when asked to decide whether confidential information fell within the term ‘intellectual property’ as used in the Senior Courts Act 1981,<sup>14</sup> the Supreme Court in *Phillips v. Mulcaire* indicated that the term lacked ‘potency’—that is, it intrinsically does not possess (for the moment at least) the power to define the boundaries of the field.<sup>15</sup> Instead, whenever the term

<sup>2</sup> See Sherman and Bently, 95–100.

<sup>3</sup> A key factor in the widespread adoption of the term ‘intellectual property’ to refer to a broader range of rights has been the establishment of the World Intellectual Property Organization by the WIPO Convention (1967).

<sup>4</sup> In the United Kingdom, Bill Cornish wrote the first contemporary textbook, published in 1981.

<sup>5</sup> The *European Intellectual Property Review* was first published in October 1978.

<sup>6</sup> The Patent Office adopted the name ‘Intellectual Property Office’ in 2006 following the Gowers Review.

<sup>7</sup> Most significantly, the Treaty on Trade Related Aspects of Intellectual Property Rights (TRIPS), an annex to the World Trade Organization Agreement (1994).

<sup>8</sup> See Enforcement Dir., discussed in Chapter 48.

<sup>9</sup> See Intellectual Property Act 2014.

<sup>10</sup> C. Geiger, ‘Intellectual Property Shall Be Protected: Art. 17(2) of the Charter of Fundamental Rights of the EU—A Mysterious Provision with an Unclear Scope’ [2009] *EIPR* 113.

<sup>11</sup> BMR, Art. 2.

<sup>12</sup> WIPO Convention (1967), Art. 2(viii); EC Statement 2005/295/EC on the Enforcement Directive 2004/48/EC.

<sup>13</sup> Other difficult cases include the non-assignable ‘moral’ rights given to authors to be named as such on their works (see pp. 273–90) or the protection given to devices or technologies that provide access to data only on prescribed conditions (see pp. 357–68), or those rights granted to certain producers to use geographically descriptive names of products associated with particular locations (e.g. ‘Parma ham’, ‘parmesan cheese’, and so on) (see pp. 1110–36).

<sup>14</sup> Senior Courts Act 1981, s. 72. The provision creates an exception to the rule against self-incrimination, such that a person is not excused from answering questions put in proceedings or complying with an order on the basis that doing so would tend to expose that person to proceedings for a related offence if proceedings are civil proceedings ‘for infringement of rights pertaining to any intellectual property or passing off’. Under s. 72(5), ‘intellectual property’ is defined as ‘any patent, trade mark, copyright, design right, registered design, technical or commercial information or other intellectual property’.

<sup>15</sup> *Phillips v. Mulcaire* [2012] UKSC 28. But cf. *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] UKSC 31, [44] *per* Lord Neuberger (referring to ‘the protection of intellectual property, including trade secrets’).

‘intellectual property’ appears as a legal concept, its meaning must be determined by reference to the specific legislative context.<sup>16</sup>

While there are a number of important differences between the various forms of intellectual property,<sup>17</sup> one factor that they share in common is that they establish property protection over intangible things such as ideas, inventions, signs, and information. While there is a close relationship between intangible property and the tangible objects in which they are embodied, intellectual property rights are distinct and separate from property rights in tangible goods. For example, when a person posts a letter to someone, the personal property in the ink and parchment is transferred to the recipient. If the recipient is pleased with the letter, they can frame it and hang it on the wall; if they are unhappy with the letter, they can burn it; if it is a love letter, they might store it away, in which case it will pass under the recipient’s will when they die. Despite the recipient having personal property rights in the letter as a physical object, the sender (as author) retains intellectual property rights in the letter. The author will be the first owner of copyright in the letter, which will enable them to stop the recipient (or anyone else) from copying the letter or from posting it on the Internet.

For many, the fact that intellectual property rights are separate from the physical objects in which they are embodied may be counterintuitive. For example, if someone owns a recipe book, why should they not be able to photocopy a couple of recipes to send to a relative? Similarly, if someone owns an animal or plant, should they not be able to buy and sell seeds from the plant, or offspring of the animals? Or if someone purchases bottles of perfume in Singapore, should they not be able to sell them in the United Kingdom? One of the consequences of intellectual property rights being separate from property rights is that the legal answer to these questions might well be ‘no’. As rights over intangibles, intellectual property rights limit what the owners of personal property are able to do with the things that they own.

While the law has long granted property rights in intangibles, the law did not accept ‘intellectual property’ as a distinct and (relatively) non-controversial form of property until late in the eighteenth century. In granting property status to intangibles, the question arose as to how and where the boundary lines of the intangible property were to be determined. That is, once it was accepted that the law should grant property rights over intangibles, the question arose: how was the object of the property to be identified and its limits defined? While in real and personal property law, questions of this nature are answered by reference to the boundary posts and physical markers of the objects in question, one of the defining features of intangible property is that these reference points do not exist. As a result, each area of intellectual property law has developed its own techniques to define the parameters of the intangible property. These include schemes of deposit and registration, techniques of representation (such as the patent specification and claims), statutory rules and legal concepts such as the requirement of sufficiency of disclosure (in patent law),<sup>18</sup> and the originality requirement (in copyright law).<sup>19</sup>

One fact that will become apparent as we look at the various forms of intellectual property law is that they share a similar image of what it means to ‘create’ (or produce), for

<sup>16</sup> L. Bently, ‘What Is Intellectual Property?’ (2012) 71 *CLJ* 501; L. Bently, ‘Trade Secrets: Intellectual Property but not Property?’, in R. Howe and J. Griffiths (eds), *Concepts of Property in Intellectual Property Law* (2013), ch. 3.

<sup>17</sup> See W. R. Cornish, *Intellectual Property: Omnipresent, Distracting, Irrelevant?* (2004), 2–5.

<sup>18</sup> Which effectively means that the property claimed must correspond to the invented subject matter: see Chapter 20.

<sup>19</sup> See Sherman and Bently, 25, 153–5, 185–93.

example, a book, a design for a car, or a new type of pharmaceutical. More specifically, it is commonly assumed that it is an individual, rather than a god, a machine, a force of nature, or a muse, who creates ideas, information, and technical principles. It is also assumed that the act of creation occurs when an individual exercises their mental labour to manipulate the underlying raw material.

Another fact that will become clear as we progress through the book is that intellectual property law is highly politicized. On the one hand, there are groups who represent existing (or putative) right holders, which have tended to argue that the existing laws provide inadequate protection—that, for example, the threshold for patent protection for genetically modified biological material is set too high, that copyright and patent protection need to be explicitly extended to cover multimedia works and software, that trade mark owners are not sufficiently protected against cyber squatters who acquire related domain names, and so on. At the other extreme, there are a range of groups who oppose stronger intellectual property protection—whether they be representatives of the developing world, consumers and users of intellectual property (such as home tapers, digital samplers, appropriation artists, ‘netizens’, and librarians), defenders of free speech, classical liberal economic theorists, competition lawyers, post-modern theorists, ecologists, or religious groups.<sup>20</sup> While there is a tendency to caricature such debates about intellectual property as battles between ‘good’ and ‘evil’, there are many shades of opinion between these extremes that deploy a diversity of more nuanced arguments.

The remainder of this chapter provides an introduction to some topics that impinge upon all areas of intellectual property law. After looking at some of the justifications that have been given for the grant of intellectual property rights, we explain the key international and regional structures that are central to an understanding of British intellectual property law.

## 2 JUSTIFICATIONS FOR INTELLECTUAL PROPERTY

Legal and political philosophers have often debated the status and legitimacy of intellectual property.<sup>21</sup> In so doing, philosophers have typically asked ‘why should we grant intellectual property rights?’ For philosophers, it is important that this question is answered, since we have a choice as to whether we should grant such rights. It is also important because the decision to grant property rights in intangibles impinges on traders, the press and media, and the public.<sup>22</sup> Moreover, because the conventional arguments that justify the grant of private property rights in land and tangible resources are often premised on the scarcity or limited availability of such resources, and the impossibility of sharing, it seems especially important to justify the grant of exclusive rights over resources—ideas

<sup>20</sup> M. Boldrin and D. Levine, *Against Intellectual Monopoly* (2005), available online at <<http://www.dklevine.com/general/intellectual/against.htm>> (describing ‘intellectual property’ as a ‘cancer’).

<sup>21</sup> For useful collections, see A. Moore (ed.), *Intellectual Property: Moral, Legal and International Dilemmas* (1997); A. Gosseries, A. Marciano, and A. Strowel (eds), *Intellectual Property and Theories of Justice* (2008); A. Lever (ed.), *New Frontiers in the Philosophy of Intellectual Property* (2012). For an overview, see R. P. Merges, *Justifying Intellectual Property* (2011).

<sup>22</sup> For emphasis on free speech, see P. Drahos, ‘Decentering Communication: The Dark Side of Intellectual Property’, in T. Campbell and W. Sidurski (eds), *Freedom of Communication* (1994); J. Waldron, ‘From Authors to Copiers: Individual Rights and Social Values in Intellectual Property’ (1993) 68 *Chi-Kent L Rev* 841. For emphasis on the relationship between intellectual properties, identity, and alterity, see R. Coombe, *The Cultural Life of Intellectual Properties: Authorship, Appropriation and the Law* (1998).

and information—that are not scarce and can be replicated without any direct detriment to the original possessor of the intangible (who continues to be able to use the idea or information). As we will see, philosophers have not always found intellectual property rights to be justified,<sup>23</sup> and there are now many commentators who doubt that all intellectual property rights are justified in the form they currently take.

The justifications that have been given for intellectual property tend to fall into one of two general categories. First, commentators often call upon ethical and moral arguments to justify intellectual property rights. For example, it is often said that copyright is justified because the law recognizes authors' natural or human rights over the products of their labour.<sup>24</sup> Similarly, trade mark protection is justified insofar as it prevents third parties from becoming unjustly enriched by 'reaping where they have not sown'.

Alternatively, commentators often rely upon instrumental justifications that focus on the fact that intellectual property induces or encourages desirable activities.<sup>25</sup> For example, the patent system is sometimes justified on the basis that it provides inventors with an incentive to invest in research and development of new products,<sup>26</sup> or an incentive to disclose valuable technical information to the public, which would otherwise have remained secret. Similarly, the trade mark system is justified because it encourages traders to manufacture and sell high-quality products. It also encourages them to provide information to the public about the attributes of those products.<sup>27</sup> Instrumental arguments are typically premised on the position that, without intellectual property protection, there would be under-production of intellectual products. This is because while such products might be costly to create, once made available to the public, they can often be readily copied. This means that (in the absence of rights giving exclusivity) a creator is likely to be undercut by competitors who have not incurred the costs of creation. The inability of the market to guarantee that an investor in research could recoup its investment is sometimes called 'market failure'.

A related, but distinct, economic theory argues that by transforming potentially valuable intangible artefacts into property rights, those artefacts are more likely to be exploited

to their optimal extent.<sup>28</sup> Such a theory (in contrast with theories of intellectual property rights as incentives to create or disclose) is not concerned with how the intangibles came into existence and tends towards the protection of a broader range of subject matter, potentially in perpetuity. This ‘neoliberal’ economic theory would draw the limit of intellectual property protection at the point at which it begins to inhibit efficient uses (that is, the point at which the costs of transacting with a property holder start to prevent uses to which parties would agree were there no such costs).<sup>29</sup>

These justifications are examined in more detail in the introductory sections dealing with copyright, patents, and trade marks.<sup>30</sup>

### 3 INTERNATIONAL INFLUENCES

One of the primary characteristics of intellectual property rights is that they are national or territorial in nature—that is, they do not ordinarily operate outside the national territory in which they are granted.<sup>31</sup> The territorial nature of intellectual property rights has long been a problem to rights holders whose works, inventions, and brands are the subject of transnational trade. Throughout the nineteenth century, a number of countries that saw themselves as net exporters of intellectual property began to explore ways of protecting their authors, designers, inventors, and trade mark owners in other jurisdictions. Initially, this was done by way of bilateral treaties, whereby two nations agreed to allow nationals of the other country to claim the protection of their respective laws. Towards the end of the nineteenth century, a number of (largely European) countries entered into two multilateral arrangements: the Paris Convention for the Protection of Industrial Property of 1883; and the Berne Convention for the Protection of Literary and Artistic Works of 1886. While the detail of these treaties is left for later chapters, it is worth observing here that both treaties adopted as their central criterion for protection the principle of ‘national treatment’. This provides that a member state of the Paris and Berne Union (‘country A’) must offer the same protection to the nationals of another member state (say, ‘country B’) as country A gives to its own nationals. Thus, the principle of national treatment is a rule of non-discrimination. The beauty of the principle of national treatment is that it allows countries the autonomy to develop and enforce their own laws,<sup>32</sup> while meeting the demands for international protection. Effectively, national treatment is a mechanism of international protection without harmonization.

While the principle of national treatment provides rights owners with some protection in other jurisdictions, it offers only a partial solution. One problem that national treatment fails to address is that where country A requires registration as a prerequisite for protection, the right holder in country B must endure the time and cost of registration to protect its creations in country A. Since the end of the nineteenth century, one of

Kitch, ‘The Nature and Function of the Patent System’ (1977) 20 *JL & Econ* 265; W. Gordon, ‘Fair Use as Market Failure: A Structural and Economic Analysis of the Betamax Case and Its Predecessors’ (1982) 82 *Colum L Rev* 1600. For a general discussion, see W. Gordon and R. Watt (eds), *The Economics of Copyright: Developments in Research and Analysis* (2003).

<sup>30</sup> See Chapter 2, Chapter 14, and Part IV, respectively.

<sup>31</sup> On the ability of UK courts to decide issues of infringement of foreign intellectual property rights, see Chapter 47.

<sup>32</sup> Although this is usual, it is not a necessary consequence of national treatment: see Chapter 47.

the goals of international intellectual property law has been to reduce the inconvenience caused by registration. In the copyright field, this was achieved by requiring members of the Berne Union to grant copyright protection without the need for formalities (such as registration). In the field of trade marks, a mechanism was developed under which a national trade mark owner could make an ‘international registration’, which would take effect almost automatically in designated countries.<sup>33</sup> A similar procedure for international application for patents was not developed until 1970.<sup>34</sup>

The expansion of international arrangements for the protection of intellectual property continued through the twentieth century and into the twenty-first. Over this time, the Paris and Berne Conventions have been revised on a number of occasions, their membership has expanded (particularly as former colonies achieved independence), and a number of new treaties have been formulated. Most of these treaties have been developed and are supervised by the World Intellectual Property Organization (WIPO), which has its headquarters in Geneva.<sup>35</sup> It continues to be the main forum for the development of new intellectual property initiatives at an international level.

Early intellectual property treaties were largely established between countries with a shared interest in recognizing such rights (even if arrangements often implicated colonies that had quite different interests). For a long time, countries such as the United States, the USSR, and the People’s Republic of China remained outside the treaty arrangements, often believing that, as ‘net consumers’ of intellectual property, recognition of the rights of foreigners would work against their national economic interests. The persistent refusal of the United States to protect British copyright owners in the nineteenth century was a cause of great annoyance. While more acceptable arrangements were made in the twentieth century, the United States did not join the Berne Convention until 1988.

By the 1980s, the United States had realized that it was a net producer of intellectual property-based goods and, along with the European Community and Japan, began to advocate for higher levels of intellectual property protection on a global basis. Frustrated by the difficulties encountered under the traditional treaty arrangements,<sup>36</sup> the developed countries began to employ tactics that were much more aggressive than had hitherto operated at WIPO.<sup>37</sup> More specifically, in the 1980s, the US government started to take advantage of its trading power to threaten trade sanctions against countries that did not offer sufficient protection to American intellectual property rights owners.<sup>38</sup> Frustrated

<sup>33</sup> The Madrid Agreement concerning the International Registration of Marks 1891. The United Kingdom did not adhere.

<sup>34</sup> The Patent Cooperation Treaty (PCT): see p. 398 below.

<sup>35</sup> WIPO, a specialized agency of the United Nations, was established by a treaty signed in Stockholm on 14 July 1967. See C. May, *WIPO: Resurgence and Development* (2007).

<sup>36</sup> The frustrations of the developed world can be traced back to 1967, with the Stockholm Protocol to the Berne Convention: H. Sacks, ‘Crisis in International Copyright: The Protocol Regarding Developing Countries’ (1969) *J Bus L* 26. This was compounded by the failure to revise the Paris Convention between 1980 and 1984: K. Beier, ‘One Hundred Years of International Cooperation: The Role of the Paris Convention in the Past, Present and Future’ (1994) 15 *IIC* 1; *Opinion 1/94* (1994) *ECR I*-5267, 5294. See also K. Beier and G. Schrickler (eds), *GATT or WIPO?* (1996).

<sup>37</sup> See E. Uphoff, *Intellectual Property and US Relations with Indonesia, Malaysia, Singapore and Thailand* (1991).

<sup>38</sup> Most notoriously, under ‘Special 301’ of the Omnibus Trade and Competitiveness Act of 1988, *Pub L*, No. 100-418, 102 *Stat* 1176-9, the US Trade Representative conducts an annual audit, placing countries that fail to give adequate and effective protection on a ‘watch list’, followed (at time of writing, in the case of the Ukraine) by sanctions (the withdrawal of trade privileges). For annual reports and current watch lists, see <<http://www.ustr.gov>> The European Community also applied retaliatory measures against countries with inadequate intellectual property protection, under Council Regulation (EEC) No. 2641/84 of 17 September 1984 on the strengthening of the common commercial policy with regard in particular to protection against

by the experience of WIPO-controlled treaty negotiations, the United States also sought to bring intellectual property protection within the General Agreement on Tariffs and Trade (GATT) system.

The GATT was formed after the Second World War with a view to stabilizing and liberalizing trade conditions on a worldwide basis. In 1986, a new round of negotiations began, which included ‘Trade-Related Aspects of Intellectual Property Rights’ (TRIPS) on the agenda.<sup>39</sup> When compared with WIPO negotiations, the TRIPS negotiations had a number of advantages. First, they brought intellectual property rights within a broader framework, thus making clear to the parties that although it may not have been in their interest to accept stronger intellectual property standards, these would be offset by other advantages elsewhere.<sup>40</sup> Second, because non-governmental organizations and other organizations are largely excluded from the treaty process, the GATT negotiations are conducted between countries in a more streamlined manner. The negotiations that began in 1986 were concluded in 1993<sup>41</sup> and became part of the World Trade Organization (WTO) Agreement signed in Marrakesh in April 1994. There are now 159 parties to the Agreement.<sup>42</sup>

The TRIPS Agreement is the first significant agreement to adopt the concept of ‘intellectual property’ to define its remit (and it has played a critical role in placing the concept of ‘intellectual property’ at the forefront of policymaking). TRIPS defines ‘intellectual property’ by reference to the rights specifically mentioned or implicitly included via the clauses that require members of the WTO to recognize the existing standards of protection within the Berne and Paris Conventions.<sup>43</sup> It demands substantive protection for ‘neighbouring rights’ to copyright,<sup>44</sup> trade marks,<sup>45</sup> geographical indications,<sup>46</sup> designs,<sup>47</sup> patents,<sup>48</sup> topographies of integrated circuits,<sup>49</sup> and undisclosed information.<sup>50</sup> Apart from orienting legal thinking around the concept of intellectual property, the most important practical difference between TRIPS and the existing treaties is in the detailed provisions on enforcement of intellectual property rights in Part III. Prior to TRIPS, matters of procedure, remedies, and criminal sanctions had largely been left to national law.<sup>51</sup>

TRIPS has had an important impact on the general development of intellectual property law since it came into force on 1 January 1995.<sup>52</sup> As the procedures of enforcement

illicit commercial practice [1984] *OJ L* 252/1, and Council Regulation (EEC) No. 4257/88 of 19 December 1988 applying generalized tariff preferences for 1989 in respect of certain industrial products originating in developing countries [1988] *OJ L* 375/1.

<sup>48</sup> TRIPS, Arts 27–34. <sup>49</sup> TRIPS, Arts 35–8. <sup>50</sup> TRIPS, Art. 39.

<sup>51</sup> See F.-K. Beier and G. Schriker (eds), *GATT or WIPO?* (1996); D. Gervais, *The TRIPS Agreement: Drafting History and Analysis* (4th edn, 2012); C. Arup, *The New WTO Agreements: Globalizing Law through Services and Intellectual Property* (2002); J. Malbon and C. Lawson, *Interpreting the TRIPS Agreement: Is It Fair?* (2014).

<sup>52</sup> Developed countries were granted a transitional period of one year; developing countries, five years. Although TRIPS has had little direct impact on UK law, in general because the standards embodied in the Agreement reflect pre-existing European standards, it has been frequently referred to in cases interpreting UK (and European) legislation: see, e.g., *IBM/Computer program product T-1173/97* [1999] *OJ EPO* 609

through the International Court of Justice (ICJ) are cumbersome, little could be done in instances in which a country ratified, but did not comply with, an intellectual property treaty. However, as a result of TRIPS being part of the WTO Agreement, if a country fails to bring its laws into line with TRIPS, another member may complain to the WTO and set in motion a so-called ‘dispute resolution procedure’.<sup>53</sup> This involves initial consultations between the parties, followed by the establishment of a panel of three experts, which produces a report that the parties either accept or appeal. Where a successful complaint has been made against a nation, it is usually required that the relevant laws are amended so as to comply with the TRIPS Agreement,<sup>54</sup> although the possibility exists for the parties to the dispute to reach an alternative arrangement.<sup>55</sup> At time of writing, the consultation procedures have been invoked more than 34 times (in 24 disputes), and—perhaps surprisingly—most of the disputes have arisen between developed countries,<sup>56</sup> rather than between developed and less-developed countries.<sup>57</sup> A number of actions have even been brought by developing countries against developed countries.<sup>58</sup> To date, there have been a limited number of panel reports,<sup>59</sup> with even fewer appeals.<sup>60</sup> Although such panel reports are not ‘definitive interpretations’, and their status very much depends on how subsequent panels and states respond,<sup>61</sup> an important body of jurisprudence has been developing. Although there are aspects of the process that might be thought to need improvement,<sup>62</sup> so far the enforcement machinery has been effective without any need to resort to trade sanctions.<sup>63</sup>

Although TRIPS is the single most important development in international intellectual property law of the last thirty years,<sup>64</sup> it does not appear to have permanently eclipsed the role of WIPO. Indeed, not long after the WTO Agreement was signed, two new intellectual

(referring to TRIPS, Art. 27); *S. v. Havering Borough Council* (20 November 2002), [11]; *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] FSR (4) 65 (EC); *Nova Productions v. Mazooma Games* [2007] EWCA Civ 219.

<sup>53</sup> TRIPS, Arts 63–4; Understanding on Rules and Procedures Governing the Settlement of Disputes.

<sup>54</sup> Procedures exist for determining a timescale, if necessary by way of arbitration.

<sup>55</sup> As occurred in *EC v. US*, WT/DS 160 (in which, following a Panel Report that the United States violated TRIPS, Art. 13, the EC accepted compensation in lieu of change in US law). It has been observed that agreements of this sort enable those who are rich enough to buy themselves out of compliance with TRIPS standards, and that this, in turn, undermines the moral force of TRIPS.

<sup>56</sup> See, e.g., *US v. Japan*, WT/DS 28; *EC v. Japan*, WT/DS 42; *US v. Portugal*, WT/DS 37; *US v. Ireland*, WT/DS 82; *US v. EC/Denmark*, WT/DS 83/1; *US v. Sweden*, WT/DS 86/1; *EC v. Canada*, WT/DS 114; *US v. EC/Greece*, WT/DS 124/1; *US v. EC/Greece*, WT/DS 125/1; *Canada v. EC*, WT/DS 153; *EC v. US*, WT/DS 160; *US v. EC*, WT/DS 174; *Australia v. EC*, WT/DS 290; *EC v. US*, WT/DS 176; *US v. Canada*, WT/DS 179.

<sup>57</sup> *US v. Pakistan*, WT/DS 36; *US v. India*, WT/DS 50; *EC v. India*, WT/DS 79; *US v. Argentina*, WT/DS 171; *US v. Argentina*, WT/DS 196; *US v. Brazil*, WT/DS 199; *Brazil v. US*, WT/DS 224.

<sup>58</sup> *Honduras v. Australia*, DS 435 (plain packaging of tobacco products); *Dominican Republic v. Australia*, DS 441 (plain packaging); *Brazil v. EU*, DS 409; *India v. EU*, DS 408 (seizure of goods in transit).

<sup>59</sup> See, e.g., *Brazil v. US*, WT/DS 224 (re US Patents Code); *Australia v. EC*, WT/DS 290; *US v. EC*, WT/DS 174 (geographical indications); *US v. India*, WT/DS 50; *EC v. India*, WT/DS 79/1; *EC v. Canada*, WT/DS 114; *US v. Canada*, WT/DS 170; *EC v. US*, WT/DS 160; *US v. China*, WT/DS362/R.

<sup>60</sup> *US v. India*, WT/DS 50; *US v. Canada*, WT/DS 170; *EC v. US*, WT/DS 176.

<sup>61</sup> C. Correa, *Trade Related Aspects of Intellectual Property Rights: A Commentary on the TRIPS Agreement* (2007), 151 (‘panel interpretations lack precedential value in the WTO system’).

<sup>62</sup> One problem is the possibility of successive actions by different complainants over identical issues, as occurred in *US v. India*, WT/DS50, and *EC v. India*, WT/DS 79.

<sup>63</sup> On three occasions, members of the WTO have been permitted to retaliate for breaches of other aspects of the WTO Agreement by withholding privileges under TRIPS. See, e.g., *Antigua and Bermuda v. US*, WT/DS/285.

<sup>64</sup> For important appraisals, see G. Dinwoodie and R. Dreyfuss, *A Neo-federalist Vision of TRIPS* (2012); A. Kur (ed.), *Intellectual Property Rights in a Fair World Trade System* (2011).

property treaties were formulated and agreed through WIPO: the 1996 WIPO Copyright Treaty; and the 1996 WIPO Performances and Phonograms Treaty. These reincorporated the ‘Berne-plus’ elements of TRIPS into an exclusively intellectual property environment, as well as added new ‘TRIPS-plus’ elements.<sup>65</sup> Two further important developments under WIPO’s guidance are the Beijing Treaty on Audiovisual Performances, signed in 2012, and the Marrakesh Treaty for the Visually Impaired, signed in 2013.<sup>66</sup> Other WIPO initiatives, particularly in relation to traditional knowledge and standardization of patent law, will continue to play a significant role in international intellectual property law (albeit now in tandem with the WTO).

Although the intellectual property instruments that have been developed at the international level have occasionally recognized the peculiar needs of the developing and least-developed countries (most notably in terms of transitional periods),<sup>67</sup> the globalization of intellectual property standards has largely been a process whereby the wish-lists of various developed-world lobby groups are inscribed into public international law.<sup>68</sup> One notable exception to this is found in the 1992 Convention on Biological Diversity (CBD), which recognizes the rights of the (indigenous) peoples who preserve biological resources to share in the benefits arising from the commercial exploitation thereof.<sup>69</sup> This has prompted further calls for greater protection for traditional intellectual resources of the developing world—notably, plant culture, medicinal products, and indigenous folklore.<sup>70</sup> Recent years have also witnessed growing resistance to the wholesale imposition of intellectual property standards on the developing world.<sup>71</sup> Most importantly, the Ministerial Declaration at the Doha Review of TRIPS in December 2001 acknowledged the primacy of the right to life and health over the protection of intellectual property rights.<sup>72</sup> A third important exception is the so-called ‘Development Agenda’ at WIPO, established in 2007.<sup>73</sup>

While the acknowledgement of the different positions and interests of developing countries is a welcome development, a number of commentators have observed a parallel trend for the further ‘ratcheting up’ of standards through bilateral trade negotiations (particularly between the United States and developing-world countries).<sup>74</sup> One of the notable developments in recent years is the gradual shift away from multilateral treaties

<sup>65</sup> For analysis of the WCT in terms of shifts in language (to rhetoric of balance) and process, see G. Dinwoodie, ‘The WIPO Copyright Treaty: A Transition to the Future of International Copyright Lawmaking?’ (2007) 57 *Case W Res L Rev* 751.

<sup>66</sup> See Chapter 2, pp. 45–46.

<sup>67</sup> TRIPS, Arts 65–7. On 11 June 2013, the TRIPS Council extended the transition period for least developed countries to 1 July 2021 (or whenever the country ceases to be least developed, if that occurs earlier).

<sup>74</sup> See, e.g., Commission, *op. cit.*, 162–4. See, e.g., Ch. 17 of the US–Chile Trade Agreement, requiring implementation in Chile of standards well above those in TRIPS. An EU–Chile Agreement, while less ambitious, also contains TRIPS-plus obligations: see Council Decision of 18 November 2002 on the signature and provisional application of certain provisions of an Agreement establishing an association between the European Community and its member states, of the one part and the Republic of Chile, of the other part [2002] *OJ L* 352/1, esp. Art. 170. See more generally P. Yu, ‘Currents and Cross Current in the International Intellectual Property Regime’ (2004) 38 *Loyola LA L Rev* 323; P. Drahos, ‘BITs and BIPs: Bilateralism in Intellectual Property’ (2001) 4 *JWIP* 791.

as the sole domain in which the aims of the standardization and harmonization of intellectual property are pursued. The progressive geographical extension of higher standards for intellectual property rights through such trade arrangements raises the spectre of further norm-setting in the multilateral arena.<sup>75</sup> There have also been moves towards subtler forms of harmonization,<sup>76</sup> particularly in the standards applied in the different intellectual property offices throughout the world.<sup>77</sup> As well as the standardization of examination practice (such as is being developed between the US, European, and Japanese patent offices), the fact that the US Patent and Trademark Office (USPTO) has outsourced some of its patent examination work to patent offices in Australia and South Korea is likely to have a subtle, but nonetheless important, impact on patent standards.<sup>78</sup>

## 4 REGIONAL INFLUENCES

If an understanding of some of the basic aspects of international intellectual property is important for students of UK intellectual property law, familiarity with EU law is essential. This is because the majority of developments in UK intellectual property law over the last thirty years have had their origin in what is now the European Union. Moreover, any future legal developments are likely to stem from, or at least be directed through, the Union.<sup>79</sup>

Since the Lisbon Reform Treaty (which came into force on 1 December 2009),<sup>80</sup> the powers of the European Union are now embodied in a consolidated version of the Treaty establishing the European Union (TEU) and Treaty on the Functioning of the European Union (TFEU) (formerly the 'EC Treaty', or simply EC). In its early years, European intervention in British intellectual property law came largely through two avenues. First, the judicial interpretation of the Treaty of Rome produced various doctrines that limited the operation of national intellectual property laws in the Community. In addition, the Commission also played a role in policing various competition law aspects of the Treaty that had an impact on intellectual property law. However, for the last twenty five years or so, most of the important interventions have been legislative in nature.<sup>81</sup> In particular, there have been moves to centralize the administration of intellectual property rights and to harmonize national laws. As a result, it is not possible to describe British intellectual property law in any sensible way without constant reference to various European Council

<sup>75</sup> Despite the failure of the Anti-Counterfeiting Trade Agreement to be ratified, negotiations of the Trans Pacific Partnership (between a host of Pacific Rim countries) and the Transatlantic Trade and Investment Partnership (between the European Union and United States) are ongoing.

<sup>76</sup> Three 'soft law' instruments are worth mentioning: the Joint Recommendations of the Paris Union and WIPO on Use of Trade Marks on the Internet (2001), on Trademark Licenses (2000), and on Well-Known Trade Marks (1999).

<sup>77</sup> In relation to trade marks, the Trademark Law Treaty (1994) (in force from 1996) and the Singapore Treaty on the Law of Trade Marks (2006) (in force from 2009, and in the UK from 2012) are the most prescriptive.

<sup>78</sup> P. Drahos, *Global Governance of Knowledge: Patent Offices and Their Clients* (2010).

<sup>79</sup> See C. Geiger (ed.), *Constructing European Intellectual Property: Achievements and New Perspectives* (2012); C. Seville, *EU Intellectual Property Law and Policy* (2009); G. Tritton et al., *Intellectual Property in Europe* (3rd edn, 2008); T. Cook, *EU Intellectual Property Law* (2010).

<sup>80</sup> [2007] OJ C 306, signed 13 December 2007, in force from 1 December 2009.

<sup>81</sup> The impetus to legislate flowed in large measure from the adoption in the Single European Act of 1986 of new legislative procedures (based on what is now Art. 114 TFEU), which required only a 'qualified majority' of votes in Council, rather than unanimity: TEU, Art. 16(3), (4) (defining 'qualified majority' from 1 November 2014).

and Parliament directives and regulations, to the decisions of the Court of Justice and the General Court (interpreting both the TFEU and various directives and regulations),<sup>82</sup> and to the regulations and decisions of the Commission, as well as the decisions of the various intellectual property-granting offices, such as the Office of Harmonization in the Internal Market (OHIM) and the Community Plant Variety Office (CPVO). Indeed, one high-profile judicial figure has asked whether national intellectual property rights have become ‘a moribund anachronism’.<sup>83</sup>

#### 4.1 FREE MOVEMENT OF GOODS AND THE INTERNAL MARKET

In the 1970s and 1980s, much of the influence of EC law on British intellectual property law was a consequence of the interpretation of Articles 34 and 36 TFEU.<sup>84</sup> These two provisions reflect the desire to establish an ‘internal market’—that is, a single European market with no internal frontiers or national barriers to trade. To this end, Article 34 TFEU prohibits ‘quantitative restrictions’ on trade and provisions ‘having equivalent effect’.<sup>85</sup> While the use of intellectual property rights to prevent the importing of goods from one EU country into another would be a ‘quantitative restriction’, Article 36 TFEU permits such restrictions where they are necessary to protect industrial and commercial property. This is conditional on the fact that such restrictions do not ‘constitute a means of arbitrary discrimination or a disguised restriction on trade between member states’.<sup>86</sup>

While Articles 34 and 36 TFEU appear to be contradictory, the two provisions were reconciled by permitting the maintenance and use of different national intellectual property laws while simultaneously limiting the negative effects of the territorial nature of such rights through the so-called ‘doctrine of exhaustion’.<sup>87</sup> Initially, this was dressed up to appear as if it invalidated only the exercise of intellectual property rights, while preserving their existence (so as not to contravene Article 36 TFEU).<sup>88</sup> Later, the concept of the existence of the right was refined in terms of its ‘specific subject matter’<sup>89</sup> and the ‘essential function’ of the right. However clothed, the doctrine of exhaustion is best seen as a judicial and political compromise that allows the free movement of goods within the European Union. This is despite the fact that national intellectual property rights enable intellectual property rights owners to interfere with the free movement of goods.

In a nutshell, the doctrine of exhaustion prohibits an intellectual property right owner from utilizing their rights to control the resale, import, or export of any goods that have

<sup>82</sup> The Court of Justice has jurisdiction to give preliminary rulings concerning the interpretation of the Treaty. Where any question arises before a court of tribunal of a member state, then it may refer the question to the Court under Art. 267 TFEU. If the court or tribunal is one against whose decision there is no judicial remedy under national law, that court or tribunal must refer the matter to the Court of Justice.

<sup>83</sup> H. Laddie, ‘National IPRS: A Moribund Anachronism in a Federal Europe?’ [2001] *EIPR* 402, 407.

<sup>84</sup> Formerly Arts 28 and 30 EC, and, before that, Arts 30 and 36 of the Treaty of Rome.

<sup>85</sup> Article 56 TFEU (ex Art. 49 EC and Art. 59 of the Treaty) makes similar prohibition on restrictions on freedom to provide services.

<sup>86</sup> Note also Art. 345 (ex Art. 295 EC and Art. 222 of the Treaty).

<sup>87</sup> In this context, the national and territorial nature of the rights refers to the essential separateness of each right—e.g. the idea that a copyright owner in France and the United Kingdom has two separate French and UK copyrights. It was thought to follow from this that consent to distribution in France could in no way affect the exercise of the separate UK copyright. The doctrine of exhaustion does not change the distinctness of the two national rights (so, for example, each might be assigned separately to different persons); rather, it limits the scope of each national law where the rights are in common control.

<sup>88</sup> *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-56/64 [1966] *ECR* 299; *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55 and C-7/80 [1981] *ECR* 147.

<sup>89</sup> *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] *ECR* 1147.

been placed on the market in the EU by or with their consent. For example, if A, who has acquired a patent in France and the United Kingdom over a particular machine, sells a machine in France, they cannot use their UK patent rights to prevent importing of the machine into the United Kingdom. This is based on the idea that the ‘first sale’ gives the intellectual property owner the reward that constitutes the ‘specific subject matter’<sup>90</sup> of the right. It is irrelevant that the patentee expressly prohibited the purchaser from reselling the machine or exporting it. This is because it is the consent to first sale that is important.<sup>91</sup> Because the doctrine of exhaustion facilitates the ‘parallel importation’ of goods within the EU, it operates to minimize price differentials for identical goods between countries in the EU.<sup>92</sup>

The doctrine of exhaustion of rights applies only to the right to control distribution (resale, export, or import); it does not apply to the right to rent, perform, or show a (copyright) work in public where the ‘specific subject matter’ of the right allows the owner to control each and every use (for it is through charging for each use that the essential function of the right is achieved).<sup>93</sup> The case law of the Court of Justice has elaborated this general principle in a range of subsequent cases. Rather than rehearse the detailed reasoning, the resulting principles can be summarized as follows.

- (i) The principle of exhaustion applies to all types of intellectual property.<sup>94</sup>
- (ii) Consent by the intellectual property right owner includes the consent of a person or persons legally or economically dependent on the proprietor (for example a licensee or subsidiary).<sup>95</sup>
- (iii) Consent by the intellectual property right owner does *not* include the consent of a person who is an independent assignee of the right (or who happens to be the holder of a right that once had a ‘common origin’). For example, the owner of copyright in countries A and B may assign the copyright in a particular work in country B. If the new owner of the right places works on the market in country B, the owner of copyright in country A (being independent) has not exhausted their rights in country A.<sup>96</sup> Although assignments of this nature will often be void as illegitimate agreements to divide up the market (and contrary to Article 101 TFEU),<sup>97</sup> where the assignments are valid, the exception to the principle of exhaustion leaves open the possibility that intellectual property rights might restrict the free movement of goods. This can be rectified only by harmonized regimes (such as the Community trade mark), which forbid separate assignments of national rights.

<sup>96</sup> *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] ECR I–2789. This reversed *Sirena*, Case C-40/70 [1971] ECR 3711, and *Hag I*, Case C-192/73 [1974] ECR 731.

<sup>97</sup> Whether the agreement is treated as market sharing will depend on the context, the commitments, the intention of the parties, and the consideration provided: see *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-58/64 [1966] ECR 299 (assignment void); cf. *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] ECR I–2789 (assignment had been prompted by the assignor’s financial difficulties); *GSK Services Unlimited v. Commission*, Case T-168/01 [2006] ECR II-2969.

- (iv) National intellectual property rights may be used to prevent the further circulation of pirated, counterfeit, and other illicitly manufactured goods, which by definition have not been placed on the market in the European Union with the right holder's consent.
- (v) Where intellectual property rights subsist in country A, but not in country B (where A and B are both in the European Union), and goods are legitimately placed on the market by parties unconnected with the right holder in country B, the right owner has not consented to the marketing of those goods and, as such, will not have exhausted their rights. The right holder can therefore prevent import into and distribution of the goods in country A.<sup>98</sup>
- (vi) Where intellectual property rights subsist in country A, but not in country B (where A and B are both in the European Union), and goods are legitimately placed on the market by the right holder (or parties connected with the right holder) in country B, the right owner will have been taken to have consented to the marketing of those goods and so have exhausted their rights.<sup>99</sup>
- (vii) Where intellectual property rights subsist in country A, but are subject to a compulsory licence (that is, any person may exploit the intellectual property right on payment of a fee), the rights are *not* exhausted when goods are manufactured under such a licence. Here, the intellectual property right owner will be able to use national laws to prevent imports into country B.<sup>100</sup>
- (viii) Where goods have been marketed in the European Union by the intellectual property right holder (or with their consent), the right of the owner of the goods to resell might permit behaviour (such as advertising) that overrides other aspects of the proprietor's intellectual property rights.<sup>101</sup>
- (viii) Where goods have been marketed in the European Union by the intellectual property right holder (or with their consent), but the goods have subsequently been altered, a series of specific rules have been developed that define when a resale is legitimate. These are considered later, in the context of trade marks.<sup>102</sup>
- (ix) Where goods have been marketed *outside* the European Union by the intellectual property right holder (or with their consent), the principle of exhaustion has no application. In the absence of harmonization, it is for member states to determine the effects of such marketing.<sup>103</sup> Where there is harmonization, it is

<sup>98</sup> *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79. For the limits of this, see *Commission v. French Republic*, Case C-23/99 [2000] ECR I-7653.

<sup>99</sup> *Merck & Co. v. Stephar BV & Exler*, Case C-187/80 [1981] ECR 2063 (marketing of drug in Italy when patent protection was not available); *Merck & Co. v. Primecrown*, Joined Cases C-267/95 and C-268/95 [1996] ECR I-6285 (affirming *Merck v. Stephar*).

<sup>100</sup> *Pharmon v. Hoechst*, Case C-19/84 [1985] ECR 2281 (import into the Netherlands of drugs manufactured under compulsory licence in the United Kingdom); *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55/80 and C-57/80 [1981] ECR 147. One problem with this effect is that it may undermine compulsory licences that are intended to induce voluntary licensing arrangements, since the latter (but not the former) will be treated as exhausting the intellectual property owner's rights.

<sup>101</sup> *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1997] ECR I-6013; *Norwegian Government v. Astra Norge SA*, E1-98 [1999] 1 CMLR 860.

<sup>102</sup> See below at pp. 1081-6.  
<sup>103</sup> *EMI Records v. CBS United Kingdom*, Case C-51/75 [1976] ECR 811 (stopping import of copyright works from the United States); *Polydor and RSO Records v. Harlequin Record Shops and Simons Records*, Case C-70/80 [1982] ECR 329 (stopping import of copyright works from EFTA countries). See below at pp. 1088ff.

on a EU-wide basis only, so the intellectual property right holder will normally be able to prevent importation into the Union.<sup>104</sup>

Although the doctrine of exhaustion of rights has reduced some of the disruption that national intellectual property laws pose to the internal market, it has not provided a complete solution. This is because the national intellectual property laws of the member states can vary significantly. Since the principle of exhaustion comes into effect when the right owner consents to goods being placed on the market, that consent will not exist where a third party makes and distributes goods in a country in which the right does not exist or has lapsed.<sup>105</sup> It is largely for this reason that the Commission set about to harmonize intellectual property laws in Europe.

#### 4.2 COMPETITION RULES

The second way in which European initiatives have exerted an influence over British intellectual property law is through the rules on competition contained in Articles 101 and 102 TFEU (formerly Articles 81 and 82 EC and, prior to that, Articles 85 and 86 of the Treaty). These provisions are designed to prevent anti-competitive agreements and practices, as well as abusive conduct by monopolies. These provisions impact on intellectual property law in a number of ways. Articles 101 and 102 EC are both couched as prohibitions and thus automatically render void arrangements between ‘undertakings’ that meet the specified criteria (or, in the case of Article 101, those that are not exempted by Article 101(3)).<sup>106</sup> In certain cases, they also provide the basis for an action for damages,<sup>107</sup> a ground for applying to the Commission for a compulsory licence to exploit an intellectual property right,<sup>108</sup> and a defence (a so-called ‘Euro-defence’) to an action for infringement of intellectual property rights.<sup>109</sup> Articles 101 and 102 EC are both enforced by the European Commission and, from May 2004, by national competition authorities (in the United Kingdom, the Competition and Markets Authority, and on appeal from a finding of infringement or rejecting a complaint, the Competition Appeal Tribunal).<sup>110</sup> If an undertaking is found to have been acting anti-competitively, the European Commission has the ability to impose serious fines, whether the behaviour was intentional or negligent.<sup>111</sup>

<sup>104</sup> See below at p. 151 (copyright) and pp. 1088–93 (trade marks).

<sup>105</sup> *Bassett v. SACEM*, Case C-402/85 [1987] ECR 1747; *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

<sup>106</sup> TFEU, Art. 101.

<sup>107</sup> In the United Kingdom, either before a court, or the Competition Appeal Tribunal: Competition Act 1998, s. 47A (introduced by the Enterprise Act 2002, s. 18).

<sup>108</sup> *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808.

<sup>109</sup> Whether, and if so, when abuse can be used as a defence is a controversial issue: see *Chiron Corp. v. Organon Teknika* [1993] FSR 324; [1994] FSR 202; *Intel v. Via Technologies* [2003] FSR 574, [115]; *Sportswear Spa v. Stonestyle* [2007] FSR 33. Two other penalties are available in serious cases: criminal penalties as regards dishonest ‘horizontal agreements’ (Enterprise Act 2002, Pt 6) and disqualification of directors (Enterprise Act 2002, s. 204).

<sup>110</sup> Council Regulation (EC) No. 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Arts 81 and 82 of the Treaty [2003] OJ L 1/1, Art. 5. This Regulation sees a ‘modernization’ and decentralization of the enforcement of European competition law, with the European Commission operating as part of a ‘European Competition Network’ of national authorities. In general, the European Commission will enforce cases involving practices or agreements that affect at least three member states.

<sup>111</sup> Council Regulation No. 17/62 of 6 February 1962: First Regulation Implementing Arts 85 and 86 of the Treaty [1962] OJ Sp Ed 204/62, 87, reg. 15(2) (fines of up to €1 million or 10 per cent of turnover in the preceding business year); Council Regulation No. 1/2003, Arts 7 (empowering the Commission to impose behavioural or structural remedies that are ‘proportionate’ and necessary to bring the infringement to an

Article 101 prohibits ‘all agreements between undertakings . . . and concerted practices which may affect trade between member states and which have as their object or effect the prevention, restriction or distortion of competition’. Because the term ‘undertakings’ has been interpreted liberally, Article 101 potentially applies to agreements concerning the licensing and assignment of intellectual property rights,<sup>112</sup> whether between competitors or parties at different levels of distribution (for example exclusive distribution agreements). Article 101 goes on to outline certain practices, such as price fixing and market sharing, which will normally be prohibited. In other cases, a conclusion that the agreement has an anti-competitive effect depends on the actual conditions in which the agreement would function, including the economic contexts, the products covered by the agreement, and the structure of the market.<sup>113</sup>

Even though the Treaty is not meant to prejudice the rules in member states governing the system of property ownership,<sup>114</sup> the European Commission and the Court of Justice of the European Union have had little hesitation in applying Article 101(1) to agreements involving intellectual property rights. According to the Court, interference with intellectual property rights is justified on the basis that it ‘does not affect the grant of those rights but only limits their exercise to the extent necessary to give effect to the prohibition under [Article 101]’.<sup>115</sup> Article 101 also applies to institutions and arrangements for the collective administration of rights—a common feature of copyright exploitation.<sup>116</sup>

Given the potential breadth of Article 101, it is important to note that Article 101(3) allows for Article 101(1) to be ‘declared inapplicable’ in a number of circumstances.<sup>117</sup> Such exemptions must ‘contribute to improving the production or distribution of goods or to promoting technical or economic progress, while allowing consumers a fair share of the resulting benefit’.<sup>118</sup> The European Commission has issued a number of such ‘block exemptions’ in the form of Commission regulations; the most important relate to ‘technology transfer agreements’,<sup>119</sup> ‘research and development agreements’,<sup>120</sup> and ‘vertical agreements’.<sup>121</sup> These block exemptions enable operators to be confident that their

end), 23(2) (fines of up to 10 per cent of turnover in the preceding business year), and 24 (periodic penalties of up to 5 per cent of average daily turnover per day); Competition Act 1998 (giving the CMA power to impose penalties of up to 10 per cent of turnover for up to three years).

<sup>112</sup> For example, *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-583/64 [1966] ECR 299. Minor agreements are excluded: Commission Notice on agreements of minor importance which do not fall within the meaning of Art. 81(1) EC [2001] OJ C 368/13 (agreements between firms that are not competitors as falling outside of Art. 101(1) TFEU if the market share held by each of the parties does not exceed 15 per cent of any of the relevant markets affected by the agreement). see, generally, Stothers, ch. 3.

<sup>116</sup> See below at pp. 305–9, 332–9.

<sup>117</sup> Regulation No. 19/65/EEC.

<sup>118</sup> TFEU, Art. 101(3).

<sup>119</sup> Council Regulation No. 316/2014 of 21 March 2014 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to categories of technology transfer agreements [2014] OJ L 93/17 (28 March 2014) (the ‘Technology Transfer Block Exemption Regulation 2014’, or TTBER 2014); see below at pp. 648–50.

<sup>120</sup> Commission Regulation (EC) No. 2659/2000 of 29 November 2000 on the application of Article 81(3) of the Treaty to categories of research and development agreements [2000] OJ L 304/3 (5 December 2000) (the ‘R&D Block Exemption Regulation’, or R&DBER; see below at p. 649).

<sup>121</sup> Commission Regulation (EU) No. 330/2010 of 20 April 2010 on the application of Article 101(3) of the Treaty on the Functioning of the European Union of categories of vertical agreements and concerted practices [2010] OJ L 102/1 (23 April 2010) (the ‘Vertical Restraints Regulation’, or VRR); see below at pp. 1103–4.

agreements are exempt (although the benefit of a block exemption may be withdrawn as regards an individual agreement) and may also be treated as ‘guidelines’ even for agreements that fall outside the scope of the block exemption. In other situations, operators will have to form their own judgments as to whether agreements are exempt.<sup>122</sup>

Article 102 TFEU prohibits an undertaking from abusing a dominant position. This prohibition has primarily affected intellectual property law in two ways. First, it provides a basis for regulating collective organizations that administer intellectual property rights on behalf of owners and which occupy a dominant position in the market. To prevent abuse, organizations in a dominant position are able to impose only those obligations and restrictions that are necessary to achieve their legitimate aims.<sup>123</sup> Second, Article 102 provides a remedy for misuse or abuse of intellectual property rights. On one reading of Article 102, it is possible to argue that, because intellectual property rights confer monopoly rights, they necessarily place owners in a dominant position for the market covered by the intellectual property right. On this basis, all activities carried on by intellectual property right holders would need to be scrutinized to ensure that they were not abusive. However, the Court of Justice has declined to use Article 102 in this way; instead, the Court has made it clear that ownership of an intellectual property right does not of itself confer dominance in a market. As a consequence, a refusal to license an intellectual property right constitutes an abuse of a dominant position only in exceptional circumstances.<sup>124</sup>

### 4.3 CENTRALIZATION AND HARMONIZATION

While the doctrine of exhaustion has reduced the impact of national intellectual property rights on the functioning of the internal market, it has been unable to guarantee that barriers to trade will not arise where national laws differ in terms of substance or duration. Consequently, it soon became apparent that, to achieve the holy grail of an internal market, some level of harmonization would be necessary.

#### 4.3.1 The basis for legislation

Although there are three relevant ways in which the European Union is able to harmonize national laws, the primary mechanism (in our field) has been by way of directives under Article 114 TFEU. This provides for the adoption of measures for the approximation of the provisions laid down by law in member states that have as their object the establishment and functioning of the internal market.<sup>125</sup> This occurs under what is now called the ‘ordinary legislative procedure’, a process that begins with a Commission proposal, which must be approved by the Council and the European Parliament. Because only a qualified majority of the Council must support the proposal, it is not necessary to have

<sup>122</sup> A system of prior notification that was formerly in operation became unworkable and has now been abolished. From 1 May 2004, Art. 101(3) TFEU is directly applicable by the courts of member states: Council Regulation No. 1/2003, Arts 1(2) and 6, Recital 4. The Commission may still produce block exemptions, may make decisions withdrawing the benefit of such exemptions in individual cases (Art. 29), or may find that Arts 101 or 102 TFEU are inapplicable to individual cases (Art. 10).

<sup>123</sup> These are discussed below at pp. 332–9. See *Re GEMA (No. 1)* [1971] CMLR D35; *Belgische Radio en Televisie (BRT) v. SABAM*, Case C-127/73 [1974] ECR 313.

<sup>124</sup> *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808 (the ‘Magill’ case). See below pp. 320–3.

<sup>125</sup> Article 114 TFEU (ex Art. 95 EC and Art. 100A of the Treaty). See *Netherlands v. European Parliament and Council*, Case C-377/98 [2001] ECR I-7079, [13]–[29] (Biotech. Dir. was properly based on what was then Art. 100A).

the unanimous approval of all of the member states.<sup>126</sup> In addition, a residual power in the TFEU relating to the internal market has been used to justify most of the regulations hitherto adopted that establish unitary rights operative in the European Union (relating to the Community trade mark, designs, and plant breeders' rights).<sup>127</sup> Finally, Article 118 TFEU provides for the adoption of legislation relating to the creation of European intellectual property rights with unitary effect throughout the Union.<sup>128</sup> As this power was introduced into the Treaty only in 2009, it has been used for the first time in relation to the establishment of the unitary patent.<sup>129</sup>

#### 4.3.2 An overview of the progress of harmonization

Community involvement with intellectual property can be divided into five stages.

(i) *Patents from the 1970s* In the 1970s, the focus of attention was on the establishment of a Community patent system—that is, a system in which a single patent would be granted for the whole of the Community, enforceable in Community patent courts. To this end, in 1975, the Community Patent Convention was agreed to at an intergovernmental level between the (then nine) member states. However, the political will to introduce the scheme never materialized.<sup>130</sup> In part, this was because, in 1973, a separate instrument for the granting of patents, the European Patent Convention (EPC), had been agreed to between states (a number of which were then outside the European Community). As such, there was little urgency to implement the distinct (although linked) Community patent. Despite attempts to revive the Treaty through a 1989 Protocol in Luxembourg,<sup>131</sup> it is only in recent years that a real will for a single European patent regime has emerged. The existence of the EPC has limited the ability of the EU to harmonize national patent laws. The reason for this is that all member states are parties to, and therefore bound by, the EPC; at the same time, they cannot amend the Convention without the assent of the non-EU participants. In the two fields

<sup>126</sup> In addition, under Art. 115 (ex Art. 94 EC), the Council can issue directives for the approximation of the laws of member states 'as directly affect the establishing and function of the common market'. Under this process, the Commission issues a proposal and then consults with the European Parliament and Economic and Social Committee. To be passed, a proposal must be approved unanimously by the Council.

<sup>127</sup> Article 352 TFEU (ex Art. 308 EC and Art. 235 of the Treaty), which provides that if action by the Union is 'necessary to attain, in the course of the operation of the common market, one of the objectives of the Union and this Treaty has not provided the necessary powers, the Council shall, acting unanimously on a proposal from the Commission after consulting the European Parliament, take the appropriate measures'. See, e.g., CTMR, Recital 4. In these cases, the legislature is not harmonizing, but creating new rights: see *Opinion 1/94* [1994] ECR I-5267, [59]; *Netherlands v. European Parliament and Council*, Case C-377/98 [2001] ECR I-7079, [35]. See *Commission v. Council*, Case C-45/86 [1987] ECR 1493, [13].

<sup>128</sup> Article 118 TFEU mandating action establishing uniform intellectual property rights under the 'ordinary procedure'. Under the TEU, the possibility exists for further forms of action at Community level, e.g. in the field of criminal law. The 'third' pillar of the TEU (Maastricht) covers 'justice and home affairs'. But see *Commission v. Council*, Case C-176/03 [2006] *ALLER (EC)* 1, [2005] ECR I-7879 (striking down a 'framework decision' under the TEU because its object was environmental protection, a matter under the EC Treaty). This decision suggests that the EU can adopt criminal provisions under Art. 114 TFEU. See *Proposal for a European Parliament and Council Directive on criminal measures aimed at ensuring the enforcement of intellectual property rights* [SEC(2005)848]/\*COM/2005/0276 final—COD 2005/0127\*/ (referring to Art. 95).

The TEU is important for intellectual property rights partly because of its provisions recognizing fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR) (Art. 6 TEU) and on police and judicial cooperation in criminal matters (Arts 29–30 TEU, ex Art. K.1).

<sup>129</sup> Regulation 1257/2012 of 17 December 2012 (under the ordinary legislative procedure) and Regulation 1260/2012 (on translations, adopted under the special legislative procedure).

<sup>130</sup> [1976] *OJ L* 17/43.

<sup>131</sup> Luxembourg Agreement of 15 December 1989 relating to Community Patents [1989] *OJ L* 401/1.

in which EU action has taken place, the proposals have been made to appear as if they leave the EPC untouched. The two Regulations on Supplementary Protection Certificates (SPC Regulations) are worded so as to avoid appearing to be extensions of the patent term.<sup>132</sup> Similarly, Directive 98/44/EC of the European Parliament and Council on the Legal Protection of Biotechnological Inventions (the Biotech Directive), which attempts to harmonize patent law for biological inventions, is presented as a directive to harmonize the ‘interpretation’ of existing provisions of the EPC, rather than to amend or modify those provisions.

(ii) *Trade marks from the 1980s* In the 1980s, attention turned to the harmonization of trade mark law. The first part of a two-pronged strategy was to approximate national trade mark laws. This was eventually completed by way of a directive.<sup>133</sup> The second prong saw the establishment of a single office that granted Community trade marks enforceable in the courts of member states designated as Community trade mark courts. The Community trade mark was introduced by way of a Council regulation and, in 1996, the Office of Harmonization in the Internal Market (OHIM) was established in Alicante, Spain.<sup>134</sup> As the substantive rules of the Regulation are virtually identical to those of the Directive, appeals of decisions of the OHIM to its Boards of Appeal, to the General Court (formerly the Court of First Instance), and the Court of Justice offer valuable guidance to national authorities. Following a series of amendments, the Directive and Regulation were codified in 2008 and 2009 (and there are ongoing efforts at further reform, which entered the legislative process in 2013).<sup>135</sup>

(iii) *Copyright in the 1990s* At the end of the 1980s, the third wave of harmonization began when the Commission set out to harmonize a number of aspects of copyright law.<sup>136</sup> The need for action arose because the different levels of copyright protection in different member states was seen to constitute a potential barrier to trade.<sup>137</sup> In contrast with the approach taken to trade marks, the Community passed a series of seven directives, each harmonizing particular aspects of copyright law (especially relating to areas of technological change). In so doing, the Commission also aimed to set the standard of protection to be given to creators at a ‘high level’.<sup>138</sup>

Further reform of copyright has become increasingly difficult (because the whole field has become increasingly politicized). The European Commission has therefore turned to different modes of regulation, including soft law recommendations, and has also sponsored agreements (so-called ‘memoranda of understanding’, or MoUs) between industry participants.<sup>139</sup> Nevertheless, latterly there has been further piecemeal legislation: in 2011, a directive was adopted amending the Term Directive (increasing the term of copyright in sound recordings from 50 to 70 years);<sup>140</sup> in 2012, a directive was adopted on so-called ‘orphan works’;<sup>141</sup> and early in 2014, a further directive was agreed

<sup>132</sup> SPC (PM) Reg.; SPC (PPP) Reg. <sup>133</sup> TM Dir.

<sup>134</sup> See below at pp. 822–3 and Chapter 35, section 3.

<sup>135</sup> See below at p. 823. In at least one case, the Commission has sought to sponsor agreement through a memorandum of understanding. See *Memorandum of Understanding on the Sale of Counterfeit Goods via the Internet*, 4 May 2011 (Brussels).

<sup>136</sup> See below at Chapter 2, section 7.

<sup>137</sup> It was also motivated by the prompting of the Court of Justice, e.g. in *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

<sup>138</sup> For example, Term Dir., Recital 10.

<sup>139</sup> *Access to copyright works for people with print disabilities: Memorandum of Understanding (between European Blind Union and European Federation of Publishers)* and *Memorandum of Understanding on Key Principles on the Digitization and Making Available of Out-of-Commerce Work* (between library organizations and representatives for writers, visual artists and publishers).

<sup>140</sup> Directive 2011/77/EU. See below pp. 52, 179–80.

<sup>141</sup> Directive 2012/28/EU. See below pp. 54–5, 330–1.

relating to the governance of organizations that manage copyright (so-called ‘collecting societies’).<sup>142</sup>

(iv) *Plants and designs from the 1990s* The 1990s also witnessed Community intervention in relation to a number of the so-called *sui generis* intellectual property rights. A Community Plant Variety Regulation (CPVR) established a Community Office in Angers, France. In contrast to the strategy in relation to trade marks, no harmonization directive was passed regulating national law.<sup>143</sup> A directive was also passed relating to the harmonization of the law relating to designs, which was followed by a Regulation introducing a Community registered design (to be administered by the OHIM), and a Community unregistered design right.<sup>144</sup> The latter, available since April 2002, is the first Europe-wide, unitary right to be granted automatically, rather than after application to an office.

(v) *The unified patent in the new millennium* As we will see below,<sup>145</sup> over the last few years there have been renewed efforts to introduce a centralized single patent and a centralized patent court in Europe. This represents the latest efforts to harmonize intellectual property in Europe. The so-called ‘unitary patent package’, which highlights many of the structural problems with efforts to reform patent law in Europe, consists of a mixture of two new Community Regulations<sup>146</sup> (which were adopted by means of the little-used ‘enhanced cooperation mechanism’<sup>147</sup> and entered into force in January 2013) and the Agreement on a Unified Patent Court, signed on 19 February 2013 (which, following the Court of Justice’s ruling that a proposal to establish a unified patent was incompatible with EU law, is an intergovernmental treaty formed outside of the Union). While 25 countries have expressed an interest in implementing the unitary patent, it is yet to be seen how many of these countries will be able to manage domestic political concerns. At this stage, Spain and Poland have decided not to join; other countries may follow.

### 4.3.3 Challenges

Given the breadth of European intervention in intellectual property law, it is not surprising that a number of challenges have been made to particular European initiatives. In most cases, such challenges must be brought by national governments before the Court of Justice. National courts do not have the power to declare acts of the Community institutions to be invalid.<sup>148</sup> If past experiences are much to go on, it seems that attempts to set aside Community legislation are unlikely to be successful.<sup>149</sup>

### 4.3.4 Implementation

In the United Kingdom, directives have been implemented through the introduction of new statutes (as with the Trade Marks Act 1994) or, more commonly, by amending

<sup>142</sup> Directive 2014/26/EU. See below pp. 55, 334–5.

<sup>143</sup> See below at p. 666.

<sup>144</sup> See below at Part III, Introduction, section 4.

<sup>145</sup> See pp. 391–7.

<sup>146</sup> Council Regulation (EU) No. 1260/2012 of 17 December 2012 implementing enhanced cooperation in the area of the creation of unitary patent protection with regard to the applicable translation arrangements [2012] *OJ L* 361/89; Council Regulation (EU) No. 1257/2012 of 17 December 2012 implementing enhanced cooperation in the area of the creation of unitary patent protection [2012] *OJ L* 361/1.

<sup>147</sup> The general arrangements for enhanced cooperation are laid down by the TEU, Title IV. This allows member states to move forward at different speeds and/or towards different goals. It does not allow extension of the powers as laid down by the Treaties, nor may it be applied to areas that fall within the exclusive competence of the Union. Enhanced cooperation may be undertaken only as a last resort, when it has been established within the Council that the objectives of such cooperation cannot be attained within a reasonable period by the Union as a whole.

<sup>148</sup> *Foto-Frost*, Case C-314/85 [1987] *ECR* 4199.

<sup>149</sup> *Spain v. The Council of the European Union*, Case C-350/92 [1995] *ECR* I-1985; *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] *ECR* I-1953; *Netherlands v. European Parliament and Council*, Case C-377/98 [2001] *ECR* I-7079.

existing statutes by way of statutory instrument.<sup>150</sup> When implementing directives, the UK government has tended to rewrite the (often abstract) provisions used in the directives into the language that is more commonly found in British statutes. Unfortunately, such rewriting can make interpretation doubly difficult, and a number of UK judges have made adverse comments about this practice.<sup>151</sup> Unlike the case with directives, regulations do not need to be implemented into national law to be effective.<sup>152</sup> However, where national procedures need to be established (as with the SPC Regulations), some action must necessarily follow.

If a government fails to implement a directive, or implements it only partially or tardily, the Commission may commence an action against that member state before the Court of Justice.<sup>153</sup> Moreover, pending implementation, a number of consequences may follow automatically. First, in accordance with general principles of European law, the provision has a direct effect ‘vertically’ on state bodies, including rights-granting bodies such as the UK Intellectual Property Office. This direct effect applies only where the provision is clear and unconditional.<sup>154</sup> Second, the national courts must interpret existing national law in line with the unimplemented provisions of a directive—a consequence sometimes referred to as ‘indirect effect’.<sup>155</sup> Where this is not possible, individuals are not able to rely on the unimplemented provisions to bring an action against other private bodies—that is, there is no ‘horizontal’ direct effect.<sup>156</sup> While, in these circumstances, private individuals may not get the remedy to which they would have been entitled had the directive been implemented, they are not left without a course of action. This is because if a private individual has suffered damage as a result of a government’s failure to implement a directive, the member state may be required to compensate the individual. For this to occur, the claimant must show that the object of the directive was to create rights, that the scope of rights is identifiable, and that failure to introduce such rights caused the damage.<sup>157</sup>

#### 4.3.5 Interpretation

Unless provisions in EU legislation make reference to national law (or expressly leave interpretation to national law), the Court has indicated that terms contained

<sup>150</sup> European Communities Act 1972, s. 1(2).

<sup>151</sup> *Philips Electronics BV v. Remington Consumer Products* [1998] RPC 283; *British Horseracing Board v. William Hill* [2001] 2 CMLR 212, 225; *Apple Computer Inc.’s Design Application* [2002] FSR 38, 602, 603. It is now common practice to refer straight to the text of the Directive: *SAS Institute v. World Programming Ltd* [2010] EWHC 1829 (Ch), [291]; *Newspaper Licensing Agency Ltd v. Public Relations Consultants Association* [2013] UKSC 18, [5].

<sup>152</sup> Article 288 TFEU (regulations have general application and are directly applicable in all member states). Consequently, regulations have immediate effect and operate to confer rights on individuals that the national courts have a duty to protect: *Bureau national interprofessionnel du Cognac v. Gust. Ranin Oy*, Joined Cases C-4/10 and C-27/10 (14 July 2011) (ECJ, First Chamber) (considering impact of Regulation (EC) No. 110/2008 on the protection of geographical indications of spirit drink).

<sup>153</sup> See, e.g., *Commission v. United Kingdom*, Case C-30/90 [1992] ECR I-829 (UK compulsory licence provisions incompatible with Treaty).

<sup>154</sup> For an example, see *Mister Long Trade Mark* [1998] RPC 401 (TM Dir., Art. 13).

<sup>155</sup> *Marleasing v. La Comercial Internacional de Alimentacion*, Case C-106/89 [1990] ECR I-4135; *Silhouette International Schmied GmbH & Co. KG v. Hartlauer Handgesellschaft mbH*, Case C-355/96 [1998] ECR I-4799.

<sup>156</sup> *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebné lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber), [43]–[48]; *Football Association Premier League v. QC Leisure* [2012] FSR (12) 366 (Kitchin LJ), affirmed [2012] EWCA Civ 1708, [2013] FSR (20) 392 (concerning CDPA 1988, s. 72).

<sup>157</sup> *Francovich v. Italian Republic*, Joined Cases C-6 and 9/90 [1991] ECR I-5357, [31]–[45].

in EU law should be given an ‘autonomous interpretation’. In many cases, this means that the Court of Justice is free to interpret—and thus harmonize—many fundamental concepts that the legislators may not have foreseen as being harmonized. In interpreting EU legislation, the Court tends to focus, as one would expect, on the wording, but will also give close consideration to the context and purpose.<sup>158</sup> That systemic and teleological approach has, on occasions, allowed the Court to interpret a word as meaning its apparent opposite, as in the case of trade marks, when ‘dissimilar’ was taken to mean ‘dis-similar, similar or identical’.<sup>159</sup> While the text of the directive remains critical, particular attention should be given to the recitals at the front of the directive, since these often provide specific examples explaining what a clause is intended to cover.<sup>160</sup> In addition, attention is often paid to the European *travaux préparatoires*, such as Commission proposals, explanatory memoranda, and perhaps statements made adopting a common position.<sup>161</sup> In exceptional cases, it may be helpful to refer to the so-called ‘agreed statements’—that is, to the minutes of what was agreed between the Commission and the Council.<sup>162</sup> Two other sources also have a strong influence on the interpretation of legislation by the Court of Justice: the first comprises any international agreements to which the EU is a party, including, importantly, the TRIPS Agreement;<sup>163</sup> the second is the Charter of Fundamental Rights of the European Union, proclaimed on 7 December 2000,<sup>164</sup>

<sup>158</sup> *Louis Vuitton v. Google France*, Cases 236/08–238/08 [2010] ECR I–2417 (ECJ, Grand Chamber), [48]; *Génesis v. Boys Toys SA*, Case C-190/10 (22 March 2012) (ECJ, First Chamber), [40]–[41]; *Re Adidas AG*, Case C-223/98 [1999] ECR I–7081 (ECJ, Fifth Chamber); *SA Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] ECR I–02799, [AG18]; *Ansul v. Ajax*, Case C-40/01 [2003] ECR I–2439, [26].

<sup>159</sup> *Davidoff*, Case C-292/00 [2003] ECR I–389, [24]–[30], discussed below at p. 997.

<sup>160</sup> *SAS Institute Inc. v. World Programming Ltd* [2010] EWHC 1829 (Ch), [166] per Arnold J. But note the caveats expressed by Advocate-General Sharpston in *VG Wort v. KYOCERA Document Solutions Deutschland GmbH*, Joined Cases C-457/11, C-458/11, C-459/11, and 460/11 (AG Opinion, 24 January 2013), [AG28], [AG29], [AG32].

<sup>161</sup> For some examples, see *Gerolsteiner*, Case C-100/02 [2004] ECR I–691 (ECJ, Fifth Chamber), [14]–[15], [AG40] (referring to earlier versions of proposed TM Dir. to draw inferences as to the scope of TM Dir., Art. 6(1)(b)); *Pammer*, Case C-585/08 [2010] ECR I–12527, [74] (referring to the joint Declaration of the Council and the Commission at the time of the adoption of Regulation No. 44/2001, reproduced in Recital 24 in the Preamble to Regulation No. 593/2008), and AG Trstenjak, [AG66]–[AG71] (on use on the Internet); *VG Wort*, Joined Cases C-457/11, C-458/11, C-459/11, and C-460/11, [28] (referring to Commission proposal when interpreting Info. Soc. Dir., Art. 10(2)), [69] (referring to Explanatory Memorandum); (24 January 2013) [AG 69] (using *travaux* to confirm interpretation of Info. Soc. Dir. Art. 5(2)(a)); *PepsiCo, Inc. v. Grupo Promer Mon Graphic SA*, Case C-281/10 [2011] ECR I–10153, [AG33] (AG Mengozzi). But for situations in which the *travaux* have been ignored where they contradict the wording, see *VG Wort* [AG97] (declining to rely on Common Position when interpreting the scope of ‘any medium’ in Art. 5(2) of the Info. Soc. Dir.).

<sup>162</sup> In relation to the TM Dir., see *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] FSR (4) 65 (ECJ), [25] (noting that the minutes specifically acknowledge that they should not be used in interpretation); *Heidelberger Bauchemie*, Case C-49/02 [2004] ECR I–6129, [16]–[17]; *Anheuser-Busch*, Case C-245/02 [2004] ECR I–10989 (ECJ, Grand Chamber), [78]–[80]; *Leno Merken*, Case C-149/11 (ECJ, Second Chamber, 19 December 2012), esp. [45]–[47].

<sup>163</sup> See, e.g., *Heidelberger Bauchemie*, Case C-49/02 [2004] ECR I–6129, [19]–[21].

<sup>164</sup> The Charter of Fundamental Rights has the same legal value as other Treaty provisions: see Art. 6 TEU. However, the United Kingdom, Poland, and the Czech Republic negotiated an exemption from application of the Charter, under Protocol 30 to the Lisbon Treaty. Even before 2009, the EU Charter was proving influential in the interpretation of EU legislation. See, e.g., the Advocate General’s opinion in *Netherlands v. European Parliament and Council*, Case C-377/98 [2001] ECR I–7079, [197]. See J. Griffiths and L. McDonagh, ‘Fundamental Rights and European Intellectual Property Law: The Case of Art. 17(2) of the EU Charter’, in C. Geiger (ed.), *Constructing European Intellectual Property: Achievements and New Perspectives* (2012), ch. 4; J. Griffiths, ‘Constitutionalising or Harmonising? The Court of Justice, the Right to Property and European Copyright Law’ (2013) 38 *ELR* 65.

in particular its reference to the principle that ‘intellectual property shall be protected’.<sup>165</sup>

When interpreting domestic law implementing a directive, it may be important to take account of decisions of other European courts.<sup>166</sup> Occasionally, decisions given by the courts of member states before the adoption of the directive may provide some indication of what the directive was intended to achieve. Where a directive is meant to correspond to pre-harmonized law in one jurisdiction, the decisions of that jurisdiction may carry special weight.<sup>167</sup> While the judgments of the courts of member states as to the meaning of a directive may be helpful, there is no obligation to follow the interpretation of the first court that happened to do so. Decisions of the courts of all member states are meant to be equally authoritative.

Ultimately, the question of the way in which a directive (or regulation) is to be interpreted is decided by the Court of Justice.<sup>168</sup> The Court is assisted by one of the eight Advocates General, who make reasoned submissions in order to assist the Court. The Advocate General’s opinion may be a useful interpretative tool to resolve doubts over a decision of the Court. In some situations, particularly in relation to appeals from the Boards of Appeal of the OHIM, hearings are initially to the General Court (from whence appeals can be heard by the Court of Justice). That case law is voluminous.

#### 4.4 EXTERNAL RELATIONS

Another way in which the European Union is involved in intellectual property law is through the role that it plays in negotiating and signing treaties. The EU’s treaty powers are now set out in Article 207 TFEU (formerly Article 133 EC and Article 113 of the Treaty).<sup>169</sup> To date, the EU has entered into a number of intellectual property-related treaties. For example, the EU is now a party to TRIPS (which itself refers to the Berne and Paris Conventions), the Madrid

<sup>165</sup> See *Scarlet Extended v. SABAM*, Case C-70/10, [2011] ECR I–11959 (ECJ, Third Chamber), [43]; *SABAM v. Netlog NV*, Case C-360/10 (16 February 2012) (ECJ, Third Chamber), [41] (this does not suggest that the right is inviolable and must be absolutely protected); *UPC Telekabel Wien GmbH v. Constantin Film Verleih GmbH, Wega Filmproduktionsgesellschaft mbH*, Case C-314/12, (27 March 2014) (ECJ, Fourth Chamber), [47], [61]; *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 12 (12 September 2013) (AG Cruz Villalón), [AG31].

<sup>166</sup> For example, in *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 820–1, reference was made to the Swedish decision in *Ide Line Aktiebolag AG v. Philips Electronics NV* [1997] ETMR 377; in *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, reference was made to a number of German decisions.

<sup>167</sup> But for them to do so, there must be solid evidence of the relevant legislative intention: *Wagamama v. City Centre Restaurants* [1995] FSR 713, 725.

<sup>168</sup> One controversial issue concerns when ‘interpretation’ permitted under Art. 267 TFEU ends and determination of facts—a matter for the national courts—begins. See, in the context of intellectual property, *Arsenal v. Reed*, Case C-206/01 [2002] ECR I–10273; *Arsenal FC plc v. Reed (No. 2)* [2003] 1 CMLR 13, [2003] 1 All ER 137 (CA). On the UK courts’ relationship with the Court of Justice, see B. Trimmer, ‘An Increasingly Uneasy Relationship: The English Courts and the European Court of Justice in Trade Mark Disputes’ [2008] EIPR 87.

<sup>169</sup> In a case concerning the powers of the Community to enter TRIPS, the Court of Justice held that Art. 113 (as it then was) did not cover treaties relating to intellectual property rights, except insofar as they related to border measures: *Opinion 1/94* [1994] ECR I–5267, 5316. The TRIPS Agreement was entered into by the Community (under implied powers) and member states: *Opinion 1/94* [1994] ECR I–5267. However, it has now been held that the whole of TRIPS falls within ‘common commercial policy’ of Art. 207 TFEU: *Daiichi Sankyo Co. Ltd, Sanofi-Aventis Deutschland GmbH v. Demo Anonimos Viomikhaniki kai Emporiki Etairia Farmakon*, Case C-413/11 (18 July 2013) (ECJ, Grand Chamber). As to whether the European Union has exclusive competence in the field of broadcaster’s rights, see *European Commission v. Council of the European Union*, Case C-114/12 (pending; AG Opinion, 3 April 2014).

Protocol on international registration of trade marks,<sup>170</sup> the WIPO Copyright Treaty and WIPO Performances and Phonograms Treaty (which refers to the Rome Convention),<sup>171</sup> and the Hague Agreement on designs.<sup>172</sup>

Although the United Kingdom has historically adopted a ‘dualist’ approach to international law (meaning that international treaties cannot be relied upon as a source of rights unless they have been implemented into national law), the EU’s participation in international norms presents the possibility of such norms being relied upon directly in certain circumstances. Under Article 216(2) TFEU, ‘[a]greements concluded by the Union are binding upon the institutions of the Union and on its Member States’. While the Court of Justice has been willing to interpret EU legislation in the light of its treaty obligation,<sup>173</sup> it has yet to hold that any provisions in international treaties have direct effect.<sup>174</sup> Before it will do so, the provisions must ‘as regards their content, be unconditional and sufficiently precise’ and, as regards their nature and broad logic, must not preclude their being so relied on.

#### 4.5 EUROPEAN ECONOMIC AREA

To understand intellectual property law in the United Kingdom, it is important to be familiar with the European Economic Area (EEA). This is an initiative entered into between the European Union and certain satellite countries, which are members of the European Free Trade Area (EFTA). In 1994, the majority of the countries then in EFTA decided to enter into a joint EU–EFTA initiative and form the EEA.<sup>175</sup> The countries that joined the EEA from EFTA undertook to join various international conventions, to implement domestic

<sup>170</sup> Council Decision 2000/278 of 16 April 2000 [2000] *OJ L* 89/6; Council Decision of 27 October 2003 approving accession of the European Community to the Protocol relating to the Madrid Agreement Concerning the International Registration of Marks [2003] *OJ L* 296/1.

<sup>171</sup> *Società Consortile Fonografici (SCF) v. Marco Del Corso*, Case C-135/10 (15 March 2012) (ECJ, Third Chamber), [50] (stating that the Rome Convention has indirect effects within the European Union).

<sup>172</sup> Council Decision of 18 December 2006 approving accession to the Geneva Act of the Hague Agreement Concerning the International Registration of Industrial Designs [2006] *OJ L* 386/28 (29 December 2006).

<sup>173</sup> *Sociedad General de Autores y Editores de España (SGAE) v. Rafael Hoteles SL*, Case C-306/05 [2006] *ECR I*-11519, [35] (interpreting the Info. Soc. Dir. in light of the Berne Convention); *Società Consortile Fonografici (SCF) v. Marco Del Corso*, Case C-135/10 (15 March 2012) (ECJ, Third Chamber), [51]–[57] (interpreting the Info. Soc. Dir. in light of the WPPT and Rome Convention); *Bezpečnostní softwarová asociace—Svaz softwarové ochrany v. Ministerstvo kultury*, Case 393/09 [2010] *ECR I*-13971 (ECJ, Third Chamber) (interpreting Software Dir. in light of TRIPS, Art. 10); *Bericap Záródástechnikai bt v. Plastinnova 2000 kft*, C-180/11 (15 November 2012) (ECJ, Third Chamber) (interpreting Enforcement Dir., Arts 2(1) and 3(2), in light of Art. 2(1) Paris and Art. 41(1) and (2) TRIPS); *Hermes*, Case C-53/96 [1998] *ECR I*-3603 (interpreting Art. 50(6) TRIPS to assist the national court to determine its own obligations and ‘to forestall future differences of interpretation’). See also *Schieving-Nijstad VOF v. Groeneveld*, Case C-89/99 [2001] *ECR I*-5851, [35]; *Heidelberger Bauchemie GmbH*, Case C-49/02 [2004] *ECR I*-6152, [20]; *Anheuser-Busch Inc v. Budejovický Budvar NP*, Case C-245/02 [2004] *ECR I*-10989, [55]–[57].

<sup>174</sup> *Parfums Christian Dior SA v. Tuk Consultancy BV*, Cases C-300/98 and C-392/98 [2000] *ECR I*-11307 (refusing to treat Art. 50 TRIPS as having ‘direct effect’); *Develey Holding v. OHIM*, Case C-238/06P [2007] *ECR I*-9375 (ECJ, Eighth Chamber) (refusing to treat Art. 6quinquies of Paris as of direct applicability because the Community is not a party to the Convention; holding that it was not indirectly applicable via Art. 2 TRIPS, because TRIPS is not itself to be regarded as directly applicable); *Merck Genericos v. Merck & Co.*, Case C-431/05 [2007] *ECR I*-7001 (holding that patent term, a subject dealt with in Art. 33 TRIPS was primarily a matter of national competence, because of the limited harmonization in the patent field to date). Note Council Decision 94/800/EC of 22 December 1994 [1994] *OJ L* 336/1 (23 December 1994), Recital 11 (‘whereas, by its nature, the Agreement Establishing the WTO, including the Annexes thereto, is not susceptible to being directly invoked in Community or Member State courts’).

<sup>175</sup> EFTA countries that are parties to the EEA are: Iceland, Norway, and Liechtenstein. Switzerland refused to join the EEA.

provisions on the free movement of goods (similar to those in Articles 34 and 36 TFEU) and on competition (equivalent to Articles 101 and 102), and a raft of EU directives (including those on trade marks and copyright).<sup>176</sup> These provisions are enforced by the ‘EFTA Surveillance Authority’ and the ‘EFTA Court’.<sup>177</sup> In return, the EU agreed to extend its provisions to the EEA countries. As a result, where the terms ‘Community’ or ‘common market’ are used in provisions falling within the EEA, they refer to the territories of the contracting parties.<sup>178</sup> Moreover, the doctrine of exhaustion and the jurisprudence of the Court of Justice on Article 34 TFEU explicitly apply to goods placed on the market in the EEA.<sup>179</sup>

#### 4.5.1 ‘Europe agreements’

Increasingly, ‘European’ intellectual property law is having an ever-expanding significance outside the Union. In part, this is because of the expansion of the Union to 28 states.<sup>180</sup> In addition, the European Union has entered into ‘Europe agreements’ with so-called ‘candidate countries’.<sup>181</sup> The agreements, which aim to establish a free-trade area, contain a number of provisions in relation to intellectual property.

The Union also operates a number of initiatives and has agreements with many satellite countries.<sup>182</sup> It has also entered into ‘Euro-Med association agreements’ with countries of the South and East Mediterranean,<sup>183</sup> ‘partnership and co-operation agreements’ with countries in Eastern Europe and Central Asia,<sup>184</sup> and ‘stabilization and association agreements’ with Balkan states (such as Albania, although most of these are also candidate or potential candidate countries).<sup>185</sup>

Typically, these agreements include prohibitions on ‘quantitative restriction on imports and measures having equivalent effect’, as well as competition provisions similar to Articles 101 and 102 TFEU. The agreements usually also require the contracting party to apply to become a party to (or if already a party, to affirm its commitment to) various intellectual property treaties, such as the European Patent Convention, the Union for the Protection of Plant Varieties, the Rome Convention, the Madrid Protocol, the Berne and Paris Conventions, the Madrid Agreement, and the Patent Cooperation Treaty. They also require states to implement the EU *acquis* (that is, the accumulated body of legislation, legal acts, and court decisions that constitutes EU law) so as to approximate their laws on intellectual property with those of the EU. The implementation of these standards is monitored, and

<sup>176</sup> Agreement on the European Economic Area [1994] *OJ L* 1/572 (3 January 1994), see esp. Arts 11, 13, 53, 54. Subsequent instruments have updated the content of the obligations.

<sup>177</sup> See <<http://www.efta.int>> There have been few decisions of the EFTA Court of interest in intellectual property: *Mag Instrument v. California Trading Co.*, E2-97 [1998] 1 *CMLR* 331, now reversed by *L’Oreal Norge SA v. Smart Club Norge SA*, E-9/07 and E-10/07 (2 July 2008); *Norwegian Govt v. Astra Norge A/S*, E-1/98 (24 November 1998) (on copyright and free movement of medicines); *Paranova v. Merck*, E-3/02 [2003] *EFTA Ct Rep* 101.

<sup>178</sup> Paragraph 8 of Protocol 1 to the EEA Agreement on horizontal adaptation.

<sup>179</sup> Protocol 28 on intellectual property, Art. 2.

<sup>180</sup> Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic, Slovenia joined in 2004; Bulgaria, and Romania joined on 1 January 2008; Croatia joined on 1 July 2013.

<sup>181</sup> Turkey, Iceland, Montenegro, Serbia and the former Yugoslav Republic of Macedonia (with potential candidates being Bosnia and Herzegovina, Albania, and Kosovo).

<sup>182</sup> As part of the so-called ‘neighbourhood policy’. See, e.g., *Communication from the Commission to the European Council and Parliament on Strengthening the Neighbourhood Policy*, COM (2006) 726 final.

<sup>183</sup> For example, Tunisia, Morocco, Israel, Jordan, Egypt, and Syria. The Agreement with Egypt came into force on 1 June 2004. Article 37 and Annex VI relate to intellectual property rights, obliging the parties mostly in relation to the international treaties.

<sup>184</sup> These include Armenia, Georgia, Russia, Moldova, and the Ukraine.

<sup>185</sup> EC–Albania Stabilization and Association Agreement (22 May 2006), esp. Arts 70 and 73, and Annex V, and most recently with Serbia [2013] *OJ L* 278 (18 October 2014), Art. 75 and Annex VII.

Commission reports have frequently emphasized the importance of implementation both in law and in practice, in particular insisting on training law enforcement bodies and the judiciary on intellectual property matters.

The European Union also enters into bilateral agreements with countries outside of the region, such as the Central American Association Agreement of 2012,<sup>186</sup> and is in the process of negotiating the so-called ‘Transatlantic Trade and Investment Partnership’ with the United States. The Comprehensive Economic and Trade Agreement between the European Union and Canada was agreed in principle towards the end of 2013, but the text is not as yet available.

#### 4.6 NON-EU REGIONAL INITIATIVES

Finally, it is important to note that there are a number of European initiatives that are independent of the Community that relate to intellectual property law. One of the most important is the 1973 European Patent Convention (EPC). The EPC established a single central office for the granting of bundles of national patents in Munich. The EPC is a treaty independent of the European Union, and includes all of its member states and the EEA states, as well as a number of non-EEA countries, such as Switzerland and Turkey.<sup>187</sup>

The Council of Europe, a political organization founded in 1949 comprising 47 European countries, has also had an impact on intellectual property. While the Council of Europe is largely concerned with the promotion of democracy and human rights, it has undertaken a number of initiatives in the field of intellectual property. The Council supervises certain treaties, including treaties on patents (relating to formalities required for patents, international classification of patents, and the 1963 Strasbourg Convention on the Unification of Certain Points of Substantive Law on Patents for Inventions) and copyright (in particular requiring recognition of the rights of broadcasting organizations), and the protection of those authors whose works are broadcast across frontiers.<sup>188</sup>

The European Convention on Human Rights and Fundamental Freedoms (ECHR), a treaty signed in 1950 under the aegis of the Council of Europe, requires contracting parties to recognize certain rights such as fair trial (Article 6), privacy (Article 8), freedom of expression (Article 10), and property (Article 1 of the First Protocol). Alleged failures to comply with the Convention are justiciable before the European Court of Human Rights (ECtHR) (Article 19). Until recently, the impact of the Convention on British intellectual property law was limited to cases of breach of confidence and remedies. However, with the coming into force of the Human Rights Act 1998 in October 2000, arguments based on the Convention have become more frequent and the jurisprudence of the Court more relevant.<sup>189</sup> The Convention has, however, had some impact on the law of countries with more expansive intellectual property rights than those of the United Kingdom,

<sup>186</sup> [2012] *OJL* 346/3, Title VI (Arts 228ff) (an elaborate list of undertakings).

<sup>187</sup> See below pp. 381–6.

<sup>188</sup> For example, the Convention on the Unification of Certain Points of Substantive Law on Patents for Inventions (1963) ETS No. 47 (the United Kingdom ratified the Convention, which came into force in 1980); European Agreement on the Protection of Television Broadcasts (1960) ETS No. 34 and Protocol (1965) ETS No. 54, Additional Protocol (1974) ETS No. 81, and Additional Protocol (1985) ETS No. 113 (the United Kingdom ratified this treaty in 1965); European Convention on Transfrontier Broadcasting (1989) ETS No. 132 (which the United Kingdom ratified in 1993) (defining, e.g., the act of broadcasting). With the stalling of the proposed WIPO Broadcasting Treaty, attention turned in 2008 to the possibility of formulating a treaty within this forum.

<sup>189</sup> For arguments based on Art. 6(2) ECHR (presumption of innocence), see the discussion of criminal liability for trade mark infringement in *R v. Johnstone* [2003] *FSR* (42) 748. For arguments based on Art. 8 ECHR (privacy), see Chapters 44–6. For arguments based on Art. 10 ECHR (free expression), see e.g. *Levi's*

particularly countries with broad laws against ‘unfair’ competition,<sup>190</sup> and the Court has now given decisions in a number of cases in which copyright enforcement was alleged to amount to a violation of Article 10 ECHR.<sup>191</sup>

One development is likely to prove particularly significant: in *Anheuser-Busch Inc. v. Portugal*,<sup>192</sup> the Grand Chamber of the ECtHR held that a trade mark application was a ‘possession’ for the purposes of Article 1 of the First Protocol. The question was whether the Convention had been breached when the Portuguese Supreme Court held that Anheuser-Busch’s trade mark application for BUDWEISER, made in 1981, was invalid on the basis of a bilateral treaty entered between Portugal and the Czech Republic in 1986—that is, five years *after* the trade mark application had been made. Having held that the application was a ‘possession’,<sup>193</sup> the majority found there was no undue deprivation, because the Supreme Court had been applying domestic law between parties in circumstances in which the precise intent of the domestic law was in issue. This was not something that the Court felt it to be its place to judge. A much clearer and persuasive dissent (from Judges Cafilisch and Cabral Barreto) carries the majority holding that a trade mark application is a possession to its logical conclusion: the 1986 bilateral treaty, found to be retrospective, deprived Anheuser-Busch of its property and was not undertaken in the public interest or with compensation.<sup>194</sup> Because the status of intellectual property rights as protected property is confirmed,<sup>195</sup> policymakers will at the very least need to acquaint themselves with ECHR jurisprudence on when a ‘deprivation’ occurs and in what circumstances such a taking is legitimate.<sup>196</sup> At the same time, the recognition of intellectual property as protected within Article 1 of the First Protocol effectively limits the significance of the Convention. This is because, when faced with arguments concerning violation of Article 10, the ECHR will give a wide margin of appreciation where such violation is justified in order to protect intellectual property.<sup>197</sup>

*v. Tesco* [2002] 3 CMLR 11, [2002] ETMR (95) 1153 (rejecting an argument for international exhaustion); *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368, [2002] RPC 235 (public interest defence to copyright); *Confetti Records v. Warner Music UK* [2003] EMLR (35) 790, [161] (rejecting argument that Art. 10 requires a narrow reading of moral rights); *FCUK Trade Mark* [2007] RPC 1 (Arnold QC) (relevance of Art. 10 in assessment of the ‘morality’ objection to trade mark registration).

<sup>190</sup> *Hertel v. Switzerland*, Case 25181/94 (1999) 28 EHRR 534 (application of Swiss unfair competition law to publication of research on health impact of microwaves breached Art. 10 ECHR); *Krone Verlag GmbH & Co. Kg v. Austria*, Case 39069/97 (2006) 42 EHRR (28) 578 (application of Austrian unfair competition law against comparative advertiser breached Art. 10).

<sup>191</sup> *Ashby Donald and ors v. France*, Case 36769/08 (10 January 2013) [2013] ECHR 28 (ECtHR, 5th section) (finding no breach of Art. 10 where photographers were found liable for infringing French copyright in fashion designs, recognizing that Art. 10 was implicated, but, at [41], finding that nations had a wide margin of appreciation because the case involved commercial speech and balancing of Art. 10 with Art. 1 of the First Protocol); *Neij and Kolmisoppi (The Pirate Bay) v. Sweden*, Case 40397/12 [2013] ECDR (7) 213 (ECtHR, 5th section) (criminal sanctions of website used to facilitate copyright infringements was interference with Art. 10, but justified).

<sup>192</sup> Application No. 73049/01 (11 January 2007), [2007] EHRR (36) 830, [2007] ETMR (24) 343.

<sup>193</sup> [2007] EHRR (36) 830, [78], [2007] ETMR (24) 343, 364–5.

<sup>194</sup> [2007] ETMR (24) 343, 369–71.

<sup>195</sup> *Neij and Kolmisoppi (The Pirate Bay) v. Sweden*, Case 40397/12, [2013] ECDR (7) 213 (ECtHR, 5th section), [35] (‘the Court would stress that intellectual property benefits from the protection afforded by art.1 of Protocol No. 1 to the Convention’).

<sup>196</sup> In general, a ‘deprivation’ must be lawful, in the public interest, and strike a fair balance between the needs of the state and the rights of an individual. The latter balance, in all but exceptional cases, is achieved only by the payment of compensation.

<sup>197</sup> *Ashby Donald and ors v. France*, Case 36769/08 (10 January 2013) [2013] ECHR 28 (ECtHR, 5th section), [40]; *Neij and Kolmisoppi (The Pirate Bay) v. Sweden*, Case 40397/12 [2013] ECDR (7) 213 (ECtHR, 5th section), [35].

### 1 INTRODUCTION

In British legal parlance, 'copyright' is the term used to describe the area of intellectual property law that regulates the creation and use made of a range of cultural goods such as books, songs, films, and computer programs.<sup>1</sup> The intangible property protected by copyright law is distinctive in that it arises automatically and usually for the benefit of the author.<sup>2</sup> Various rights are conferred on the owner of copyright, including the right to copy the work and the right to perform the work in public.<sup>3</sup> ('Work' is the term used in British law to describe the various objects that are protected by copyright.) The rights vested in the owner are limited, notably in that they are not infringed when a person copies or performs a work that they have created themselves. The rights given to a copyright owner last for a considerable time: in many cases, for 70 years after the death of the author of the work.<sup>4</sup> The basic framework of British copyright law is largely to be found in the Copyright, Designs and Patents Act 1988 (CDPA 1988),<sup>5</sup> although this has now been amended significantly.

This chapter provides an outline of certain background matters that will make the next chapters easier to follow. We begin by looking at some of the concepts that we will encounter in the coming chapters. We then turn to look at the history and functions of copyright law, as well as international and European influences on British copyright law.

<sup>1</sup> For an analysis of various other perspectives on copyright, see P. Goldstein, 'Copyright' (1990–91) 38 *J Copyright Soc'y USA* 109.

<sup>2</sup> See Chapter 5.      <sup>3</sup> See Chapter 6.      <sup>4</sup> See Chapter 7.

<sup>5</sup> Certain related rights, such as the 'publication right' and the 'database right', are found in statutory instruments.

## 2 ‘COPYRIGHT’ AND *DROIT D’AUTEUR*

Many factors shape the way in which we view British copyright law. To some, it may appear to be an unnecessary restriction on their ability to express themselves; for others, copyright law provides the means to protect investment and labour. More generally, the image that we have of British copyright law is shaped by the way in which we think it relates to other legal regimes. Most famously, common law copyright is said to be distinct from and in many ways in opposition to the civil law *droit d’auteur* system (of France). While there is now a growing body of literature that questions the accuracy of these portrayals,<sup>6</sup> nonetheless these caricatures have had and undoubtedly will continue to have an impact on the way in which the law develops.

The common law copyright model is said to be primarily concerned with encouraging the production of new works.<sup>7</sup> This is reflected in copyright law’s emphasis on economic rights, such as the right to produce copies. Another factor that is held to typify the copyright model is its relative indifference to authors. This is said to be reflected in the fact that British law presumes that an employer is the first owner of works made by an employee, the paucity of legal restrictions on alienability, and the limited and half-hearted recognition of so-called ‘moral rights’.<sup>8</sup> In contrast, the civil law *droit d’auteur* model is said to be more concerned with the natural rights of authors in their creations. This is reflected in the fact that the civil law model not only aims to secure the author’s economic interests, but also aims to protect works against uses that are prejudicial to an author’s spiritual interests (in particular through moral rights).

## 3 AUTHOR’S RIGHTS AND NEIGHBOURING RIGHTS

While British copyright law abandoned the formal distinction between different categories of work with the passage of the 1988 Act, nonetheless an informal distinction is still drawn between two general categories of subject matter: ‘authorial works’ and ‘entrepreneurial works’.<sup>9</sup> This reflects the distinction drawn in many legal systems between ‘author’s rights’ and ‘neighbouring rights’. ‘Author’s rights’ refer to works created by ‘authors’, such as books, plays, music, art, and films. In contrast, ‘neighbouring rights’ (which are sometimes called ‘related rights’ or *droits voisins*) refer to ‘works’ created by ‘entrepreneurs’, such as sound recordings, broadcasts, cable programmes, and the typographical format of published editions. The rationale for differentiating between these two categories of subject matter lies in the facts that neighbouring (or entrepreneurial) rights are typically derivative, in the sense that they use or develop existing authorial works, that they are a product of technical and organizational skill rather than authorial skill, and that the rights are initially given not to the human creator, but to the body or

<sup>8</sup> See below at pp. 132–8, Chapter 12, section 2, and Chapter 10.

<sup>9</sup> In fact, as we will see, the process of European harmonization has reinforced the relevance of the distinction: see, e.g., pp. 47, 204–17.

person that was financially and organizationally responsible for the production of the material.<sup>10</sup>

## 4 HISTORY

The history of copyright is a complex, subtle, and rich subject. Depending on one's interest, it is possible to highlight many different themes and trends. For example, a history of copyright could look at the gradual expansion of the subject matter and the rights granted to owners, the role that copyright law plays in shaping the notion of authorship, or the impact that copyright has on particular cultural practices. Most histories of British copyright law tend to focus on the origins of copyright, which are usually traced back to the 1710 Statute of Anne, or occasionally to the practices developed in the sixteenth century to regulate the book trade.<sup>11</sup> In this section, we limit ourselves to a brief chronological account of some of the more important political and legal events that frame and shape the current law.

While aspects of copyright law have a long history, copyright law did not take on its modern meaning as a discrete area of law that grants rights in works of literature and art until at least the mid-nineteenth century.<sup>12</sup> Moreover, it was not until the passage of the Copyright Act 1911 that copyright law was rationalized and codified into the type of modern, abstract, and forward-looking statute that concerns us here.<sup>13</sup> The 1911 Act was also important insofar as it abolished common law copyright in unpublished works and also repealed the plethora of subject-specific statutes that existed at the time. In their place, the 1911 Act established a single code that conferred copyright protection on a number of works (whether published or not, and including many previously unprotectable works, such as works of architecture, sound recordings, and films). In most cases, protection lasted for 50 years after the death of the author of the work. At the same time, the 1911 Act abandoned all requirements concerning formalities (in particular the need for registration with the Stationers' Company). Infringement was also expanded to include translations and adaptation, as well as reproductions 'in a material form'.<sup>14</sup>

Following a review by the Gregory Committee in 1952, the 1911 Act was replaced by the Copyright Act 1956.<sup>15</sup> This extended the scope of copyright to encompass sound and

<sup>15</sup> *Report of the Gregory Committee on the Law of Copyright* (Cmnd. 8662, 1952).

television broadcasts, as well as typographical formats of published editions.<sup>16</sup> The 1956 Act was amended on a number of occasions, primarily to take account of new technologies such as cable television and computer software.<sup>17</sup> A further periodic review by the Whitford Committee in 1977 proposed a general revision of the 1956 Act.<sup>18</sup> After further negotiations and refinement, these proposals led to the passage of the Copyright, Designs and Patents Act 1988.<sup>19</sup>

The 1988 Act expanded significantly the rights given to copyright owners (notably by introducing a distribution right and a rental right). At the same time, the Copyright Tribunal was established to ensure that copyright owners did not exercise their rights in an anti-competitive manner.<sup>20</sup> The 1988 Act also introduced a new category of non-assignable ‘moral rights’ for authors.<sup>21</sup> Performers’ rights, which were formerly dealt with under special Acts, were also included within the 1988 Act (where they are protected separately under Part II).<sup>22</sup>

Although the 1988 Act forms the basis of contemporary copyright law, it has been amended on a number of occasions since it came into force in August 1989. In most cases, these amendments were made to give effect to obligations imposed by EU directives. As we will see, while the European Union has stopped short of a wholesale approximation of copyright law, a series of specific interventions has altered the contents of the 1988 Act to such an extent that a recodification of national law would be desirable.

More significantly, however, the Court of Justice has set out to fill the gaps in the partial harmonization effected by legislation. In a remarkable series of decisions beginning with *Infopaq*,<sup>23</sup> the Court has ruled on the concept of originality,<sup>24</sup> the notion of the work,<sup>25</sup> authorship,<sup>26</sup> and the public,<sup>27</sup> as well as the copyright/design law interface—all matters that it had been thought remained unharmonized.<sup>28</sup> Moreover, the Court has started to interpret harmonizing legislation that appeared to afford member states flexibility as to its implementation, in ways that increasingly deprive member states of that flexibility. In short, the Court has been reworking and developing the so-called *acquis communautaire*, with a view to harmonizing as much as it reasonably can.<sup>29</sup>

Alongside the shift over the last two decades in the sources of British copyright law, the law has inevitably had to respond to the challenges and opportunities raised by digitization, and particularly the Internet. Some of the responses occurred at EU level (such as the introduction of the making available right), and some fundamental issues—such

as whether browsing and hyperlinking are permissible—are in the process of being litigated to the Court of Justice.<sup>30</sup> Other matters have prompted local legislative action. For example, the Digital Economy Act 2010, which became effective on 12 June 2010,<sup>31</sup> established a statutory basis for a regulatory framework that is still being elaborated for disconnecting infringing end-users online. An application for judicial review of the Act, on a number of grounds including non-compliance with the EU e-Commerce Directive, was unsuccessful.<sup>32</sup> Proposals for dealing with orphan works, which had been contained in the Digital Economy Bill, were abandoned at the last minute. They have been revived as a consequence of a review of intellectual property and growth conducted by Professor Ian Hargreaves.<sup>33</sup> After a follow-up consultation,<sup>34</sup> legislation on orphan works has been passed (in the Enterprise and Regulatory Reform Act 2013) and implementing regulations will be adopted in 2014.<sup>35</sup> The Hargreaves Review has also led to significant reform of the exceptions to copyright through a series of statutory instruments operative from 1 June 2014.<sup>36</sup>

## 5 JUSTIFICATIONS

The existence of copyright in a particular work restricts the uses that can be made of the work. For example, a person who buys a protected CD cannot legally rip the recordings from that CD for a friend to use on that friend's mp3 player. As well as being inconvenient and/or expensive, copyright has the potential to inhibit the public's ability to communicate, to develop ideas, and to produce new works. For example, it seems that a blogger who creates a link to material on the Internet that happens to be there without the authority of the right-holder needs permission to do so.

Because copyright law has the potential to inhibit the way in which people interact with and use cultural objects, it is important that we constantly reassess its legitimacy. More specifically, we need to ask whether (and why) copyright is desirable. In this context, it is important to note that not everyone thinks that copyright is a good thing.<sup>37</sup> In fact, with the advent of the Internet, there are many who think that copyright unjustifiably stifles our ability to make the most of the new environment or that it impinges upon

<sup>36</sup> See pp. 221, 223 below.

<sup>37</sup> Criticism of copyright has come from the likes of the 'Pirate Party', which has famously won seats in the European Parliament, as well as the Czech and Icelandic national parliaments, as well as giving rise to a religion, 'the missionary church of kopimism'. Recent initiatives to expand the role of copyright in the Internet context has produced a wave of popular antipathy towards it. For a review, see M. A. Carrier, 'SOPA, PIPA, ACTA, TPP: An Alphabet Soup of Innovation-Stifling Copyright Legislation and Agreements' (2013) 11 *Nw J Tech & Intell Prop* 21.

the public domain.<sup>38</sup> Others consider that while some aspects of copyright are justifiable, others are not. Typically, the argument is that copyright law has gone too far.<sup>39</sup> In response to these copyright sceptics or critics, five basic arguments are used to support the recognition (and further extension) of copyright: (i) natural rights arguments; (ii) reward arguments; (iii) incentive arguments; (iv) neoliberal economics; and (v) arguments from democracy.<sup>40</sup>

### 5.1 NATURAL RIGHTS

According to natural rights theorists, the reason why copyright protection is granted is not that we think that the public will benefit from copyright; rather, copyright protection is granted because it is right and proper to do so. More specifically, it is right to recognize a property right in intellectual productions *because* such productions emanate from the mind of an individual author. For example, a poem is seen as the product of a poet's mind, of their intellectual effort and inspiration. As such, it should be seen as their property, and copying as equivalent to theft. Copyright is the positive law's realization of this self-evident, ethical precept. However, at this point, natural rights theorists divide as to exactly what it is about origination that entitles an author to protection. Some, particularly those associated with the European traditions, explain that works should be protected because (and insofar as) they are the expressions of each particular author's personality.<sup>41</sup> On the assumption that a work created by an individual reflects the unique nature of them as an individual, the natural rights arguments require that we allow the creator to protect the work (from misattribution, modification, or unauthorized exploitation) because it is an extension of the persona of its creator. A second version of natural right theory, strongly represented in the US literature, has tended to found itself on labour. Drawing on Locke's idea that a person has a natural right over the products of their labour, it is argued that an author has a natural right over the productions of their intellectual labour.<sup>42</sup>

Critics of natural rights theories of copyright take a number of different positions. Some simply reject the idea of 'natural rights'; others criticize the assumptions within the theory, for example that a natural right in labour justifies a natural right in the product of mixing labour and unowned resources. Some criticize the extension of natural rights theories to copyright, challenging the idea of individual creation of ideas, emphasizing the social (or 'intertextual') nature of writing and painting.<sup>43</sup> If works are seen less as the

<sup>38</sup> For a general discussion of the public domain, see (2003) 66 *L & CP* (Special edition on the public domain); B. Hugenholtz and L. Guibault (eds), *The Future of the Public Domain: Identifying the Commons in Information Law* (2006).

<sup>40</sup> For an overview, see M. Spence, 'Justifying Copyright', in D. McClean and K. Schubert (eds), *Dear Images: Art, Culture and Copyright* (2002), 388.

<sup>41</sup> For personality theory based on Hegel, see J. Hughes, 'The Philosophy of Intellectual Property' (1988) 77 *Georgetown LJ* 287.

<sup>42</sup> On Locke and labour, see Hughes, *ibid.*; A. Yen, 'Restoring the Natural Law: Copyright as Labour and Possession' (1990) 51 *Ohio St LJ* 517; W. Gordon, 'A Property Right in Self-Expression: Equality and Individualism in the Natural Law of Intellectual Property' (1993) 102 *Yale LJ* 1533. Note, too, H. Breakey, *Intellectual Liberty: Natural Rights and Intellectual Liberty* (2012) (highlighting the natural rights constraints on intellectual property rights).

<sup>43</sup> S. Shiffrin, 'Lockean Arguments for Private Intellectual Property', in S. Munzer (ed.), *New Essays in the Legal and Political Theory of Property* (2001); P. Drahos, *The Philosophy of Intellectual Property* (1996), ch. 3; L. Zemer, *The Idea of Authorship in Copyright* (2006).

products of individual labour or personality and more as reworkings of previous ideas and texts, the claim to ownership seems weak. Another critique questions why it is that a natural right in the products of one's labour should justify recognition of anything more than a right over the manuscript or immediate creation. A final argument criticizes natural rights theory on the ground that it provides no normative guidance as to the specific form of copyright law.<sup>44</sup>

## 5.2 REWARD

According to reward arguments, copyright protection is granted because we think it is fair to reward an author for the effort expended in creating a work and giving it to the public. Copyright is a legal expression of gratitude to an author for doing more than society expects or feels that they are obliged to do. In a sense, the grant of copyright is similar to the repayment of a debt. (Although the language of reward often appears when discussing the 'incentive' theory of copyright, it differs from incentive theory: in reward theory proper, the reward is an end in itself; in incentive theory, the reward is a means to an end.)

Critiques of reward theory tend to pose two questions. First, they ask: do the circumstances in which copyright protection is granted correspond to the circumstances in which people deserve rewards? One answer is that a reward is deserved only where someone has done something that they felt was unpleasant and which they would not otherwise have done. If this is the case, copyright does seem to give far too many rewards. As we will see, copyright's threshold is set at a very low level and thus catches works that are created for their own sake, such as letters, holiday photographs, and amateur paintings. Another account sees the reward as being deserved where the person invested labour (irrespective of their ulterior motives or the pleasure or pain of labouring).

The second criticism questions the nature of the reward: why should a person be granted an exclusive right? There are other systems of reward (such as the MAN Booker Prize) that have fewer social and economic costs. The usual answer is that copyright allows the general public to determine who should be rewarded and the size of that reward: the more copies of a book that are purchased or the more times a record is played on the radio, the greater the financial reward that accrues to the copyright owner. Consequently, a property right is often the best way in which to ensure that the reward is proportional to the public's appreciation of the work.

## 5.3 INCENTIVE-BASED THEORIES

In contrast to the natural rights and reward theories, the third argument for copyright is not based on ideas of what is right or fair to an author or creator; rather, it is based on an idea of what is good for society or the public in general. The incentive argument presupposes that the production and public dissemination of cultural objects such as books, music, art, and films is an important and valuable activity. It also presupposes that, without copyright protection, the production and dissemination of cultural objects would not take place at an optimal level. The reason for this is that while works are often very costly to produce, once published they can readily be copied. For example, while this textbook took a considerable amount of time and energy

<sup>44</sup> J.O. Garon, 'Normative Copyright: A Conceptual Framework for Copyright Philosophy and Ethics' (2003) 88 *Cornell L Rev* 1278, 1299–1306.

to write, once published it can be reproduced easily and cheaply. Consequently, in the absence of copyright protection, a competitor could reproduce Bently and Sherman's *Intellectual Property Law* without having to recoup the expense of its initial production. In so doing, they could undercut Oxford University Press. According to the incentive argument, if Bently, Sherman, and Oxford University Press were not given any legal protection, *Intellectual Property Law* would never have been written or published—and the world would have been a commensurably poorer place. The legal protection given by copyright is intended to rectify this 'market failure' by providing incentives that encourage the production and dissemination of works. In short, copyright provides a legal means by which those who invest time and labour in producing cultural and informational goods can not only recoup that investment, but also reap a profit proportional to the popularity of their work.<sup>45</sup>

Utilitarian arguments for copyright are commonly met with three criticisms. Some question whether an incentive is really necessary for much production, and certainly there are plenty of examples of practices of creation and dissemination of works that do not depend on the existence of copyright.<sup>46</sup> Others, admitting the need for an artificial incentive to rectify the market failure, question whether the grant of an exclusive property is the appropriate incentive.<sup>47</sup> After all, exclusive properties impose costs on people who wish to use the work, costs of policing rights and enforcement on owners, and transaction costs on those who seek permissions.<sup>48</sup> In some cases, in fact, exclusive rights are replaced by payments from general taxation (as with the public lending right discussed in Chapter 13), thus ensuring that authors are provided with an incentive, but that the costs associated with exclusive rights are minimized. Even if we accept that exclusive rights are the optimal form of incentive, the third problem with the utilitarian approach is deciding exactly what incentive is optimal: what should a copyright owner be able to prevent another person from doing and for how long?

#### 5.4 NEOLIBERAL ECONOMICS

If economic theory that sees copyright as an incentive to create or publish implies a rather narrow right, an alternative economic theory, associated with neoliberal economics, would justify protection of virtually all 'value'.<sup>49</sup> According to this school of thought, private ownership of resources is the juridical arrangement most conducive to optimal

<sup>45</sup> W. Landes and R. Posner, 'An Economic Analysis of Copyright Law' (1989) 18 *JLS* 325; W. Gordon, 'An Inquiry into the Merits of Copyright: The Challenges of Consistency, Consent and Encouragement Theory' (1989) 41 *Stanford L Rev* 1343. For recent endorsement at international level, see Marrakesh Treaty, Recital 3 ('emphasizing the importance of copyright protection as an incentive and reward for literary and artistic creations').

<sup>46</sup> S. Breyer, 'The Uneasy Case for Copyright: A Study of Copyright in Books, Photocopies and Computer Programs' (1970) 84 *Harv L Rev* 281 (emphasizing, in particular, the incentives provided by lead time and possible use of contractual methods such as subscription); D. Zimmerman, 'Copyright as Incentives: Did We Just Imagine That?' (2011) 12 *TIL* 29. For suggestions that copyright rules be modified to reflect the workings of different incentives, see L. Loren, 'The Pope's Copyright? Aligning Incentives with Reality by Using Creative Motivation to Shape Copyright Protection' (2008) 69 *LA L Rev* 1 (suggesting that works not motivated by monetary incentive should receive less protection); S. Balganes, 'Foreseeability and Copyright Incentives' (2009) 122 *Harv L Rev* 1569.

<sup>47</sup> R. Hurt and R. Schuchman, 'The Economic Rationale for Copyright' (1966) 56 *Am Econ Rev* 421 (suggesting private patronage and government support).

<sup>48</sup> See *Eldred v. Ashcroft* (2003) 123 S Ct 769, 804 *ff per* Breyer J.

<sup>49</sup> For a concise, if unsympathetic, explanation, see N. W. Netanel, 'Copyright and a Democratic Civil Society' (1996) 106 *Yale LJ* 283, 290, 306–7, 308–36.

exploitation. In contrast, common ownership or non-ownership is likely to lead to over-exploitation (the so-called ‘tragedy of the commons’). For example, it has been argued that failure to protect sound recordings by copyright would lead to their overuse, so that the public interest in the recordings would tire, and their value, diminish.<sup>50</sup> Accordingly, copyright protection should be limited only where the transaction costs involved in locating and negotiating licence agreements would prevent the conclusion of optimal agreements. These theoretical positions have not only featured in the arguments of scholars and treatise writers, and in the lobbying process, but have also even been adopted by some US courts.<sup>51</sup> However, the idea that copyright should be unlimited in coverage, scope, and duration because this will promote optimal use of intellectual resources seems to neglect a fundamental characteristic of intellectual products—namely, their ‘non-rival nature’.<sup>52</sup> Fears about overexploitation of physical resources, which (might) make private ownership the most satisfactory allocative model, simply do not apply to cultural resources: the more people who can get access to the works of Shakespeare, Mozart, and even Jeremy Bentham, the better.

### 5.5 DEMOCRATIC AND REPUBLICAN ARGUMENTS

In an important intervention in 1996, Neil Netanel has tried to justify copyright by reference to the ‘democratic paradigm’.<sup>53</sup> Netanel sees copyright as ‘fortifying our democratic institutions by promoting public education, self-reliant authorship, and robust debate. More precisely, this democratic paradigm views copyright law as a state measure designed to enhance the independent and pluralist character of civil society’.<sup>54</sup> Copyright encourages greater production, but also ‘is designed to secure the qualitative condition for creative autonomy and expressive diversity’.<sup>55</sup>

### 5.6 THE PLACE OF JUSTIFICATIONS

There is a large body of literature criticizing, developing, and refining these five justifications. There is not room here to recount and assess this literature further. Nevertheless, it is worth noting a number of points about the ways in which these theories are marshalled in support of legal arguments relating to copyright. It is often said that a natural rights-based justification for copyright inevitably produces a different conception of copyright from that which results from an incentive argument. More specifically, it is argued that a natural rights conception of copyright leads to longer and stronger protection for authors

<sup>50</sup> W. Landes and R. Posner, ‘Indefinitely Renewable Copyright’ (2003) 70 *U Chi LR* 471. For discussion of the empirical evidence refuting this, see pp. 187–8.

<sup>51</sup> *Harper & Row Publishers Inc v. Nation Enterprises* 471 US 539 (1985).

<sup>52</sup> For a compelling critique, see M. Lemley, ‘Ex Ante versus Ex Post Justifications for Intellectual Property’ (2004) 71 *U Chi L Rev* 129.

<sup>53</sup> N. W. Netanel, ‘Copyright and a Democratic Civil Society’ (1996) 106 *Yale LJ* 283, 291. For an argument that copyright diminishes diversity, see G. Pessach, ‘Copyright Law as a Silencing Restriction on Non-Infringing Materials: Unveiling the Scope of Copyright’s Diversity Externalities’ (2003) 76 *S Cal L Rev* 1067.

<sup>54</sup> Netanel, *op. cit.*, 291.

<sup>55</sup> Netanel, *op. cit.*, 339. There is a growing group of scholars who emphasize the relationship between copyright and communication, figuring copyright either as a vehicle to protect the ‘expressive autonomy’ of authors or as an important constraint. See A. Drassinower, ‘Copyright Infringement as Compelled Speech’, in A. Lever (ed.), *New Frontiers in the Philosophy of Intellectual Property* (2012), ch. 8; L. Biron, ‘Public Reason, Communication and Intellectual Property’, in Lever, *op. cit.*, ch. 9; A. Barron, ‘Kant, Copyright and Communicative Freedom’ (2012) 31(1) *Law and Philosophy* 1.

(and copyright owners) than an incentive-based conception. This is because a natural rights argument for copyright is assumed to result in a form of property that is perpetual and unqualified.<sup>56</sup> In contrast, an incentive-based argument justifies the grant of only the minimum level of protection necessary to induce the right holder to create and release the work.

Although the various theories have relatively distinct philosophical pedigrees, when they have been employed in support of various claims, little, if any, attention has been given to such niceties. Instead, the five arguments are typically deployed side by side. In fact, in most cases in which a claim is made for the legal protection of works not previously protected (such as television formats) or for the expansion of the rights conferred by the law in respect of such works, one can reasonably anticipate that all five types of justification will be used. While it is understandable that lobby groups use (or abuse) the various justifications to further their ends, more problems arise when people begin to believe the rhetoric, and assume that copyright law is determined and shaped by these philosophical ideals.<sup>57</sup>

## 6 INTERNATIONAL INFLUENCES

One of the constant themes in the history of British copyright law is that it has been influenced by foreign and international trends and developments. While the sources may have changed, contemporary law is no different. There are a number of international treaties that impact upon British copyright law.<sup>58</sup> Here, we will limit ourselves to the seven most significant treaties:<sup>59</sup> the Berne Convention; the Rome Convention; the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS); the World Intellectual Property Organization (WIPO) Copyright Treaty; the WIPO Performances and Phonograms Treaty; the Beijing Treaty on Audiovisual Performances; and the Marrakesh Treaty for the Visually Impaired.<sup>60</sup>

### 6.1 BERNE CONVENTION (1886–1971)

The most important international influence on the development of UK copyright has been the Berne Convention on the Protection of Literary and Artistic Works. The Berne Convention was drawn up in 1886 as a small treaty allowing for mutual recognition of

<sup>56</sup> See *Millar v. Taylor* (1769) 4 Burr 2303, 98 ER 201, 218–22 per Aston J, 252 per Mansfield CJ. However, if the processes of authorship are perceived as processes of a combination of existing texts, of *bricolage* and collocation, a natural rights approach might justify only a short-term and highly qualified ‘property’ in the resulting work.

<sup>57</sup> J. Litman, *Digital Copyright* (2001), 77 (‘normative arguments . . . typically, change nobody’s mind’); G. Austin, ‘Copyright’s Modest Ontology: Theory and Pragmatism in *Eldred v. Ashcroft*’ (2003) 16 *Can J L Juris* 163 (‘there are few instances where theory dictates . . . positive law’).

<sup>58</sup> Also important are the Universal Copyright Conventions (last revised at Paris in 1971), the Geneva Convention on Phonograms of 1971, and the Convention Relating to the Distribution of Programme-Carrying Signals Transmitted by Satellite (Brussels, 21 May 1974).

<sup>59</sup> The leading texts are S. Ricketson and J. Ginsburg, *International Copyright and Neighbouring Rights: The Berne Convention and Beyond* (2nd edn, 2006); P. Goldstein and B. Hugenholtz, *International Copyright: Principles, Law and Practice* (3rd edn, 2012); S. von Lewinski, *International Copyright Law and Policy* (2008).

<sup>60</sup> The Marrakesh Treaty to Facilitate Access to Published Works for Persons who are Blind, Visually Impaired or Otherwise Print Disabled (2013).

rights amongst a few largely European countries. Since then, the Treaty has been revised on a number of occasions<sup>61</sup> and the membership of the so-called 'Berne Union' has expanded to 167 states.<sup>62</sup>

In its earliest form, there were two key provisions of the Berne Convention. The first was the adoption of the principle of 'national treatment'. This meant that, with certain exceptions, a country of the Union should not discriminate between its own nationals and those of other countries of the Union.<sup>63</sup> For example, under the principle of national treatment, French law was obliged to confer the same rights on a British author as it conferred on French authors. In addition to the principle of national treatment, the Berne Convention has long required that the 'enjoyment and exercise' of copyright in the works of the Convention should not be 'subject to any formality'. This means that registration or notices cannot be made prerequisites for protection.<sup>64</sup> Because international protection is to be automatic, there is no need for international bureaucratic regimes to simplify registration processes.

Over time, the Berne Convention has come to demand that members of the Union provide certain minimum standards of protection to copyright owners and authors. These include the rights to reproduce the work,<sup>65</sup> to perform the work publicly,<sup>66</sup> to translate the work,<sup>67</sup> to adapt the work,<sup>68</sup> and to broadcast the work.<sup>69</sup> Members of the Union are also to give authors (rather than copyright owners) the moral rights of attribution and integrity.<sup>70</sup> In recognition of the need for the public to be able to utilize works without payment, there is limited scope for members of the Union to create exceptions.<sup>71</sup> In relation to the reproduction right, these exceptions must satisfy the so-called 'three-step test'. This requires that all exceptions must be limited to certain special cases, must not conflict with a normal exploitation of the work, and must not unreasonably prejudice the legitimate interests of the author.<sup>72</sup> Moreover, protection is to last at least for the life of the author, plus 50 years thereafter.<sup>73</sup>

## 6.2 ROME CONVENTION (1961)

The coverage of the Berne Convention is limited to literary and artistic works, which includes cinematographic works.<sup>74</sup> International recognition of the rights of phonogram

<sup>61</sup> The last revision was at Paris on 24 July 1971 and the last amendment on 28 September 1979.

<sup>62</sup> As of 2014. The Convention applies to all works in which copyright has not expired at the time of accession to the Convention: Berne, Art. 18.

<sup>63</sup> Berne, Art. 5(1). These are to be enjoyed by authors who are nationals of one of the countries of the Union for their works, whether published or not, and authors who are not nationals of one of the countries of the Union for their works first published in one of those countries: Berne, Art. 3. The exceptions to national treatment relate to: (i) copyright terms that exceed the Berne minimum (Art. 7(8)); (ii) copyright in applied art; and (iii) *droit de suite* (Art. 14ter (2)). <sup>64</sup> Berne, Art. 5(2).

<sup>65</sup> Berne, Art. 9 ('in any manner or form'). 9(3) specifically states that a sound or visual recording is to be considered a reproduction.

<sup>66</sup> Berne, Arts 11, 11ter. <sup>67</sup> Berne, Arts 8 and 11(2) (translation).

<sup>68</sup> Berne, Arts 12 (authorizing adaptations, arrangements, and other alterations of their works) and 14 (cinematographic adaptation).

<sup>69</sup> Berne, Art. 11bis. <sup>70</sup> Berne, Art. 6bis. See Chapter 10.

<sup>71</sup> Minor exceptions are permitted in accordance with the understandings expressed at various conferences, but these must be *de minimis*: see WTO Panel Report, WT/DS/16OR (June 2000). Compulsory licences are permitted under Arts 11bis (2) and 13 (mechanical copying).

<sup>72</sup> Berne, Art. 9(2). Note also Art. 10(2) (use by way of illustration in publications for teaching) and 10bis (use for reporting current events). The character of the 'three-step test' has become much debated. Recital 10 of the Marrakesh Treaty 2013 reaffirms 'the importance and flexibility' of the test.

<sup>73</sup> Berne, Art. 7. <sup>74</sup> Berne, Art. 14bis.

producers, performers, and broadcasters is, however, offered under a separate instrument. In 1961, an international agreement on these ‘neighbouring rights’ was reached at the Rome Convention<sup>75</sup> (which, at time of writing, has 92 signatories).<sup>76</sup> Like the Berne Convention, the central principle of the Rome Convention is national treatment. National treatment must be provided to: performances that take place in a contracting state, or which are embodied on protected sound recordings, or carried by a protected broadcast; sound recordings produced by nationals of a contracting state, fixed in a contracting state, or first published in a contracting state; and broadcasts where the broadcasting organization is situated in a contracting state or the broadcast is transmitted from a contracting state.<sup>77</sup>

The Rome Convention also requires that phonogram producers, performers, and broadcasters be granted certain substantive rights. For performers, these are relatively limited, being largely restricted to matters relating to ‘bootlegging’ (that is, the fixation of their unfixed performances without their consent), the broadcasting of their unfixed performances without their consent, and the duplication of any such recordings that have been made illicitly.<sup>78</sup> Notably, contracting states are not required to give performers rights to control the reproduction, distribution, or public communication of legitimately made recordings of their performances. (As a result, there is no requirement, for example, that performers be paid when films are shown at a cinema.) The protection that is given is to last for 20 years from the first fixation of the performance, or if it has not been fixed, 20 years from the date on which the performance took place.

Producers of phonograms and broadcasting organizations received better treatment. Producers of phonograms are to be granted the right to prevent the reproduction of those recordings for 20 years.<sup>79</sup> Broadcasting organizations are to be given exclusive rights, for a minimum of 20 years from when a broadcast took place, to authorize or prohibit the rebroadcasting of their broadcasts, the fixation of their broadcasts, and the reproduction of fixations of their broadcasts. Broadcasters were also given the right to control the showing of television broadcasts in places accessible to the public (against payment of an entrance fee).<sup>80</sup>

The three divergent interests that coexist in the Rome Convention gave rise to one further and important compromise: that contracting states are to confer a right to a *single* equitable remuneration when phonograms are broadcast or played in public.<sup>81</sup> This right to remuneration must be provided either to the performers whose performances are embodied on phonograms or to the producers of phonograms, or both. This means that broadcasters, nightclubs, restaurants, etc., must pay a single fee to play sound recordings. It is left to the contracting states whether the beneficiary of the right is to be the performer or the phonogram producer, or both.

Contracting states are permitted to make these rights subject to defences as regards private use, news reporting, ephemeral recordings, and teaching and scientific research,<sup>82</sup> as well as the same kind of limitations as are provided for literary and artistic works under the Berne Convention.<sup>83</sup>

<sup>75</sup> International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations.

<sup>76</sup> As at April 2014. The United States is not a party, as a result of its refusal to give broadcasting organizations copyright.

<sup>81</sup> Rome, Art. 12. This can be excluded under Art. 16.

<sup>82</sup> Rome, Art. 15(1).

<sup>83</sup> Rome, Art. 15(2).

### 6.3 TRIPS (1994)

The third important international development that impacts upon British copyright law is TRIPS.<sup>84</sup> There are a number of provisions in TRIPS that relate to copyright. The most significant of these is that members must implement Articles 1–21 of the Berne Convention (but not Article 6*bis* dealing with moral rights).<sup>85</sup> One of the consequences of this is that disputes over compliance with Berne can now be considered by the World Trade Organization (WTO).<sup>86</sup> While the TRIPS Agreement does not require member states to adhere to the Rome Convention, Article 14 of TRIPS contains substantively similar provisions to those of Rome (although the term of protection in such cases is substantially longer under TRIPS).<sup>87</sup>

In addition, the TRIPS Agreement contains certain ‘Berne-plus’ features, as regards various aspects of copyright. Some of these are responses to new technologies that have given rise to new sorts of work and new modes of distribution. For example, under TRIPS, protection must be given to computer programs, as literary works within the Berne Convention,<sup>88</sup> and to compilations of data or other material that, by reason of the selection or arrangement of their contents, ‘constitute intellectual creations’.<sup>89</sup> Reflecting the impact of new modes of distribution, members must (in most cases) give copyright owners the right to authorize rental of computer programs, cinematographic works, and phonograms.<sup>90</sup> Other provisions flow from more general concerns as to the nature of copyright protection. In particular, copyright is defined generally as covering ‘expressions’ and *not* ideas or methods.<sup>91</sup> Moreover, TRIPS requires that *all* limitations and exceptions (rather than merely those limiting the right of reproduction) must satisfy the three-step test.<sup>92</sup>

### 6.4 WIPO COPYRIGHT TREATY (1996)

In December 1996, two treaties were agreed at Geneva: the WIPO Copyright Treaty (WCT); and the WIPO Performances and Phonograms Treaty.<sup>93</sup> In part, these grew out of frustration at the inability to produce a revised version of the Berne Convention and subsequent attempts to produce a ‘Protocol’ to the Berne Convention (possibly incorporating the rights of record producers and performers within a single treaty). Both treaties are intended to supplement the existing conventions to reflect, in particular, technological changes and changes in practice.<sup>94</sup>

For the most part, the WCT, which came into force in 2002,<sup>95</sup> repeats many of the extensions effected in the TRIPS Agreement,<sup>96</sup> although importantly the WCT places them back under the supervision of the WIPO. Some of these are extended, for example contracting parties must provide copyright owners with the exclusive right to distribute

<sup>84</sup> See above at pp. 8–9.

<sup>85</sup> TRIPS, Art. 9(1).

<sup>86</sup> As has occurred in the WTO Dispute Panel Report on US limitations on the public performance right: WT/DS160/R (15 June 2000). According to TRIPS, Art. 14(6), the provisions on neighbouring rights in performances and phonograms apply to existing works. The WTO dispute resolution procedure was used to induce Japan to comply with this requirement: WT/DS22 and WT/DS 48.

<sup>87</sup> TRIPS, Art. 14.

<sup>88</sup> TRIPS, Art. 10(1); see also WCT, Art. 4.

<sup>89</sup> TRIPS, Art. 10(2).

<sup>90</sup> TRIPS, Arts 11, 14(4).

<sup>91</sup> TRIPS, Art. 9(2).

<sup>92</sup> TRIPS, Art. 13.

<sup>93</sup> Reinbothe and von Lewinski (2002); M. Ficsor, *Copyright and the Internet* (2002); D. Saunders and B. Sherman (eds), *From Berne to Geneva* (1997).

<sup>94</sup> WCT, Art. 1, defines the Treaty as a ‘special agreement’ within Berne, Art. 20.

<sup>95</sup> As of January 2014, there are 91 contracting parties. The United Kingdom ratified the Treaty in 2009 and it came into operation on 14 March 2010.

<sup>96</sup> WCT, Art. 2, is on a par with TRIPS, Art. 9(2); WCT, Art. 4, is on a par with TRIPS, Art. 10(1); WCT, Art. 5, is on a par with TRIPS, Art. 10(2); WCT, Art. 10, is on a par with TRIPS, Art. 13; WCT, Art. 14, is on a par with TRIPS, Art. 41.

fixed copies that can be put into circulation as tangible objects.<sup>97</sup> In addition, contracting parties must provide copyright owners whose works are embodied in phonograms (not only those in computer programs or cinematographic works) with the exclusive right to authorize the commercial rentals of those fixed copies.<sup>98</sup>

The WCT also embodies three provisions that reflect the so-called ‘digital agenda’. (In essence, these are responses to concerns raised by copyright owners about new digital communication technologies.) First, as part of the ‘communication right’, contracting parties must provide copyright owners with the exclusive rights to make their works available to the public in such a way that members may access the work from a place and at a time individually chosen by them.<sup>99</sup> (This is intended to cover, for example, the placing of a work on a website that can be accessed by the public.) Second, contracting parties must provide adequate legal protection against the circumvention of ‘effective technological measures’ used by authors to protect their rights.<sup>100</sup> Third, contracting parties must provide adequate remedies to those who tamper with ‘rights management information’—that is, information used to facilitate the identification or exploitation of those works.<sup>101</sup>

### 6.5 WIPO PERFORMANCES AND PHONOGRAMS TREATY (1996)

Although the WIPO Performances and Phonograms Treaty (WPPT) was intended to supplement the Rome Convention, it contains provisions relating only to rights of performers and phonogram producers, and *not* to those of broadcasters.<sup>102</sup> The WPPT upgrades the position of performers whose performances are embodied on phonograms. Under the WPPT, contracting parties must confer on all performers rights against bootlegging equivalent to those in the Rome Convention. This is upgraded from ‘the possibility of preventing’ to an exclusive right.<sup>103</sup> Performers in the music industry (whose performances have been ‘fixed in phonograms’) are to be given three extra rights. First, they are to be given rights to control various acts in relation to fixations of their performances—that is, the reproduction, distribution, rental, and making available of copies of such fixations.<sup>104</sup> Second, where there is public performance or broadcasting of such fixations, contracting states are to ensure that performers receive a share in the remuneration that is paid.<sup>105</sup> Third, contracting states are to confer moral rights of attribution and integrity on the performers of ‘live aural performances or performances fixed in phonograms’.<sup>106</sup>

The WPPT also extends the rights given to producers of phonograms. Contracting states are to confer on the producers of phonograms not only the right to control reproduction, but also the exclusive right to control the distribution, rental, and making available of copies of phonograms.<sup>107</sup> The WPPT also requires certain action for the benefit of *both* performers and phonogram producers. In particular, the WPPT replicates the three provisions of the WCT on the digital agenda—that is, the ‘making available’ right, the requirements relating to technological measures of protection, and the provisions on rights management information. The Treaty also provides that contracting states may create exceptions and limitations to the rights of performers or phonogram producers only if those limitations pass the three-step test.<sup>108</sup>

<sup>97</sup> WCT, Art. 6; ‘Agreed Statement’ concerning Arts 6 and 7.

<sup>98</sup> WCT, Art. 7. Note the qualifications in Art. 7(2)–(3). <sup>99</sup> WCT, Art. 8.

<sup>100</sup> WCT, Art. 11. <sup>101</sup> WCT, Art. 12.

<sup>102</sup> The WPPT entered into force on 20 May 2002. As of January 2014, there are 92 contracting parties to the WPPT. <sup>103</sup> WPPT, Art. 6.

<sup>104</sup> WPPT, Arts 7–10. <sup>105</sup> WPPT, Art. 15.

<sup>106</sup> WPPT, Art. 5. See pp. 345–6 below. <sup>107</sup> WPPT, Arts 11–14. <sup>108</sup> WPPT, Art. 16.

## 6.6 BEIJING TREATY ON AUDIOVISUAL PERFORMANCES (2012)

The Beijing Treaty on Audiovisual Performances confers rights primarily upon actors.<sup>109</sup> This topic was largely excluded from the 1996 WIPO treaties because of opposition from US-based interests, and a diplomatic conference that was held in Geneva in December 2000 concluded without agreement.<sup>110</sup> However, in June 2012 at Beijing, the stumbling block (which related to the transfer of rights) was overcome.<sup>111</sup> Whereas, at the earlier conference, delegates battled over a single regime governing transfers, in the Beijing Treaty, contracting parties are given considerable freedom to determine the effect of agreements by performers allowing fixation of their performances.<sup>112</sup> Thus contracting parties have the option (as the United States wants) to treat such consent as effective to transfer the economic rights of the performer in the fixation to the film producer, or to require express signed contracts ('with respect to audiovisual fixations produced under its national law') before such rights pass, or to require that performers receive royalties or equitable remuneration for such uses irrespective of the terms of the contract. The 2000 draft included a provision that would have identified the relevant national law applicable, but the Beijing Treaty does not do so (although it does imply that national rules on formalities may not be applied to films produced elsewhere). In other respects, the text is the same as that which had been agreed in 2000.

In many respects, the Treaty will confer on actors similar rights to those offered to performers in relation to sound recordings under the WPPT. Thus audiovisual performers who are nationals in one contracting party are to be offered, without being subjected to any formalities, national treatment by other contracting countries (subject to some limited exceptions),<sup>113</sup> and are to be granted moral rights of attribution and integrity,<sup>114</sup> rights to control the fixation, broadcasting, and other public communication of their unfixed performances (such as secretly filming or televising the performance of a play),<sup>115</sup> rights to control the reproduction, distribution, and making available of fixations of performances,<sup>116</sup> and all for a minimum term of 50 years from that the year in which the performance was fixed. Performers are also to be afforded protection for any technological protection measures that they deploy or rights management information that they use. The chief difference relates to the provision on transfers, but there are other differences as to the scope of the moral right of integrity,<sup>117</sup> the right of rental of fixations,<sup>118</sup> and the right to control the broadcasting or communication to the public of fixations.<sup>119</sup> There are also notable differences between the WPPT provision on transitional measures and those in the Beijing Treaty, but both offer flexibility for countries that do not wish to apply the treaty standards to pre-existing fixations of performances. The Beijing Treaty will come into force once 30 countries have ratified it.<sup>120</sup>

### 6.7 MARRAKESH TREATY FOR THE VISUALLY IMPAIRED (2013)

Significant concern has been expressed about the potential impact of copyright law on the ability of peoples with disabilities to access cultural materials: copyright, by preventing the making of reproductions and adaptations, as well as their communication and distribution, has the potential to deter the making of Braille copies or large-print editions. A particular problem is that the markets are small (often with the largest numbers in the developing world) and that national exceptions, if they exist, are formulated in different ways. These differences make the task of providing resources on an international level particularly difficult. It is thought that this has contributed to the so-called ‘book famine’—that is, that only a small percentage of the world’s literature (between 1 and 7 per cent) is accessible to the blind, visually impaired, and print disabled. Moreover, technological locks designed to protect copyright works may prevent deployment of ‘read-aloud’ mechanisms that allow printed materials to be automatically converted into the spoken word.

Following the lead of a 2006 UN Convention,<sup>121</sup> the WIPO has nurtured the development of a treaty specifically targeted at the protection of the blind, visually impaired, and print-disabled. At the heart of the Marrakesh Treaty for the Visually Impaired, signed in 2013, is an *obligation* on contracting parties to provide in their national copyright laws for a limitation or exception to copyright to facilitate the availability of works in ‘accessible format copies’ to the blind and print disabled.<sup>122</sup> The Treaty provides that the goal can be achieved by permitting ‘authorized entities’, which essentially are government-recognized, not-for-profit operators (such as the Royal National Institute for Blind People) to make, acquire, or supply such ‘accessible-format copies’. Moreover, acknowledging the difficulty with small markets, permitted acts can include importation of accessible-format copies.<sup>123</sup> Parties must also ‘take appropriate measures’ to ensure that the legal protection of technological measures ‘does not prevent beneficiary persons from enjoying the limitations and exceptions’ required by the Treaty. The Treaty, which has yet to come into force,<sup>124</sup> has been welcomed by the World Blind Union as a first step towards ending the ‘book famine’.<sup>125</sup> Although the Treaty states in express terms that it does not affect the scope of obligations under the Berne or WIPO treaties,<sup>126</sup> it is an important development symbolically too, in that it recognizes the benefits of international minimum standardization not merely of exclusive rights, but also of limitations (or user rights). As such, it may pave the way for the formulation of other more balanced international instruments.

## 7 EUROPEAN INFLUENCES

In the last twenty years or so, European initiatives have had an important and growing impact on British copyright law. This is because various European directives now

<sup>121</sup> UN Convention on the Rights of Persons with Disabilities (2006), Art. 30(3). The United Kingdom is a signatory and ratified the Convention in 2009.

<sup>122</sup> The beneficiaries are defined in Art. 3, while the notion of ‘accessible format copies’ is explained in Art. 2 (as a copy of a work in an alternative manner or form that gives a beneficiary person access to the work).

<sup>123</sup> Marrakesh Treaty, Art. 6.

<sup>124</sup> The Marrakesh Treaty to Facilitate Access to Published Works for Persons who are Blind, Visually Impaired or Otherwise Print Disabled (2013) will come into force three months after 20 countries have ratified it.

<sup>125</sup> World Blind Union, *The Marrakesh Treaty Explained*, available online at <<http://www.worldblindunion.org/english/news/Pages/The-Treaty-of-Marrakesh.aspx>> (stating that the WBU is ‘happy, by and large’).

<sup>126</sup> See Marrakesh Treaty, Recital 10, Art. 1.

prescribe in some detail when and in what manner member states must (and sometimes may) recognize intellectual property rights in this field. As we saw in Chapter 1, the need for harmonizing legislation arose because, despite the efforts of the Court of Justice (notably through the doctrine of exhaustion),<sup>127</sup> differences in national laws relating to copyright and related rights operate to produce barriers to trade within the internal market.<sup>128</sup> Consequently, the European Commission decided that if the plan for an internal market free from barriers were to be made good, then certain aspects of copyright would have to be harmonized. The first step in the harmonization programme was the publication of the Green Paper, *Copyright and the Challenge of Technology*,<sup>129</sup> which was followed by a White Paper in 1990.<sup>130</sup> Given that it was widely believed that national copyright traditions were very different, it was decided that the wholesale approximation of copyright law was impossible. Instead, it was decided to harmonize specific areas of copyright, particularly those relating to new technologies.

The subsequent decade witnessed the formulation and passage of a series of directives on software, cable and satellite broadcasting, rental and lending rights and ‘neighbouring rights’, the duration of copyright, databases, the resale royalty right, and copyright in the ‘information society’. While each of these directives concerned itself primarily with a specific aspect of copyright (that is, a specific type of subject matter or a specific right), the Directive on Copyright in the Information Society concerned a series of rights and exceptions applicable to virtually all copyright works. Consequently, the Directive is widely regarded as heralding a shift from ‘vertical’ harmonization to ‘horizontal’ harmonization. Matters then stalled until 2011, with the Commission increasingly talking about ‘soft law’, stakeholder dialogues, and ‘memoranda of understanding’, in preference to legislation. However, since 2011, three very narrow legislative interventions have occurred in relation to terms of copyright in sound recordings, ‘orphan works’, and collective management.

While we look at these directives at appropriate points in the following chapters, it may be useful to outline their key features here.<sup>131</sup> Before doing so, however, it may be helpful to highlight a few aspects that some have been interpreted as representing a step towards a coherent European copyright policy.

One notable feature is that the directives consistently distinguish between two categories of work: ‘authorial works’, falling under the Berne Convention; and ‘related rights’ (specifically not ‘neighbouring rights’), which refer to various rights of performers, phonogram producers, the producers of the first fixations of films, and broadcasting organizations. The related rights given to producers of the first fixations of ‘films’ by various directives are important in that they are not confined to audiovisual or cinematographic works, but also extend to other moving images (such as films of sporting events).

Another notable aspect of the directives concerns the way in which they manage the (supposed) differences between the different legal regimes (copyright and *droit d’auteur*). Given that the directives are largely the result of lobbying and horse-trading between interest groups and member states, it is not surprising that the end results are a hybrid

<sup>127</sup> *Deutsche Grammophon v. Metro*, Case C-78/70 [1971] ECR 487.

<sup>128</sup> Perhaps the clearest example of this was in the decision in *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79 (highlighting how differences in calculating the term of protection for sound recordings in different member states led to barriers to trade).

<sup>129</sup> *Copyright and the Challenge of Technology*, COM(88) 172 Final.

<sup>130</sup> *Follow Up to the Green Paper* (17 January 1991), COM(90) 584 Final.

<sup>131</sup> For a detailed treatment, see M. Walter and S. von Lewinski, *European Copyright Law* (2010).

mix of concepts taken from both the *droit d'auteur* and copyright law.<sup>132</sup> For example, there is recognition of an unwaivable right to 'equitable remuneration' for the authors of works that are the subject of rental and lending. This corresponds to similar (although more general) provisions in French and German law guaranteeing authors proportionate remuneration.<sup>133</sup> On the other hand (and much to the disappointment of some French commentators), computer programs are recognized as literary works.<sup>134</sup> In addition, where a computer program is made by an employee in the course of employment, the economic rights are given to the employer rather than to the employee.<sup>135</sup> One Advocate-General has referred to the Information Society Directive as a 'compromise . . . which takes into account the differing legal traditions of Member States'.<sup>136</sup>

Another characteristic that is apparent is that while the need for harmonization arose because variations in the law of member states posed a potential barrier to trade, the legislature has tended to harmonize 'upwards'—that is, the European Union has tended to strengthen the protection given to copyright owners. The most obvious example of this was the decision to increase the term of copyright to the term of life plus 70 years, which existed in Germany, rather than to ask that the German term be reduced to life plus 50 years (which was the term then used by many member states). While the strengthening of protection has sometimes been explained in terms of legislative convenience, it also suggests that it is at least an implicit agenda that aims to maximize copyright protection. This can be detected in Recital 10 to the Term Directive, which says that 'these rights are fundamental to intellectual creation . . . their protection ensures the maintenance and development of creativity in the interests of authors, cultural industries, consumers and society as a whole'. Another example of the strengthening of the position of right holders has been the progressive restriction of the defences or exceptions that member states are able to use in their laws.<sup>137</sup> This is particularly noticeable in the Database Directive, in which the option of a 'private use' defence is excluded when the database is in an electronic form and in which use in scientific research is confined to uses for 'non-commercial purposes'.

Another notable trend is that at least some parts of the directives adopted in the name of harmonization have only a very limited harmonizing effect. In fact, there are many situations in which the directives tolerate a level of difference between the laws of member states.<sup>138</sup> For example, in relation to subject matter, member states are expressly permitted to protect non-original photographs and critical and scientific publications of works that have fallen into the public domain.<sup>139</sup> Although there is some degree of prescription, member states have flexibility as regards specifying who are the co-authors of cinematographic works.<sup>140</sup> Member states are sometimes permitted to confer greater rights

<sup>132</sup> See, e.g., E. Derclaye, 'Software Copyright Protection: Can Europe Learn from American Case Law?' [2000] *EIPR* 7, 9–10; D. Vaver, 'The Copyright Mixture in a Mixed Legal System: Fit for Human Consumption?' (2002) *Juridical Review* 101 (largely defending the harmonization process against some of its critics).

<sup>133</sup> Rel. Rights Dir., Art. 5. <sup>134</sup> Software Dir., Art. 1. <sup>135</sup> Software Dir., Art. 2(3).

<sup>136</sup> *Padawan SL v. SGAE*, Case C-467/08 [2010] *ECR* I-10555, [AG43] (AG Trstenjak). See also *Amazon.com International Sales Inc v. Austr-Mechana Gesellschaft zur Wahrnehmung mechanisch-musikalischer Urheberrechte Gesellschaft hbG*, Case C-521/11 (7 March 2013), [AG2] (AG Mengozzi).

<sup>138</sup> In *VG Wort v. KYOCERA Document Solutions Deutschland GmbH*, Joined Cases C-457/11, C-458/11, C-459/11 and 460/11 (AG Opinion, 24 January 2013), [AG30] ('far from pursuing uniformity or harmonisation, seems practically to amount to a renunciation of those goals').

<sup>139</sup> Term Dir., Arts 5 and 6.

<sup>140</sup> Rel. Rights Dir., Art. 2(2); Term Dir., Art. 2(1). As well as designating 'legal persons' as rights holders: Software Dir., Art. 2(1); Database Dir., Art. 4(1).

on right holders than those specified in the directives<sup>141</sup> and occasionally (as with the lending right) to derogate from the standards set by the directives.<sup>142</sup> There are also permissive clauses in relation to defences,<sup>143</sup> presumed transfer of rights,<sup>144</sup> and the kinds of collective licensing regime required.<sup>145</sup> The details of ‘transitional provisions’ are also left largely to member states.<sup>146</sup> Moreover, as the case law on transitional provisions in the Term Directive and that on the concept of ‘equitable remuneration’ make clear, the harmonizing directives often offer loose, open-textured concepts around which member states must formulate specific rules, within certain limited parameters.

As already observed, the Court has started to build on the framework, reasoning from one directive to another, to offer up some harmonized norms.<sup>147</sup> The most notable example of this trend relates to the notion of originality, which we discuss in Chapter 4. The legislature harmonized the originality requirement in an identical manner for computer programs, photographs, and databases, and the Court has gone on to adopt the same standard for all authorial works—namely, that works should be protected only where they are their author’s ‘own intellectual creations’.<sup>148</sup> However, not all areas are amenable to judicial harmonization, and it is notable that at least one Advocate-General has specifically urged the legislature to pursue ‘a much greater level of harmonization’.<sup>149</sup>

With these general points in mind, we now outline the main features of the ten directives.

## 7.1 SOFTWARE DIRECTIVE (1991, CODIFIED IN 2009)

The first European initiative in the copyright field was the Software Directive (sometimes also known as the ‘Computer Programs Directive’), which had to be implemented by 1 January 1993.<sup>150</sup> The Directive requires member states to protect computer programs as literary works under the Berne Convention, as long as they are original in the sense that they are their author’s own intellectual creation. The Directive also obliges member states to confer certain rights on the owners of copyright in computer programs, including the right to control temporary reproduction, the running and storage of the program, and the translation or adaptation, distribution, or rental of programs;<sup>151</sup> as well as certain

<sup>141</sup> Satellite Dir., Art. 6 (expressly permitting member states to provide more far-reaching broadcasting and communication rights than those mandated by Rel. Rights Dir., Art. 8).

<sup>142</sup> Rel. Rights Dir., Art. 5.

<sup>143</sup> Rel. Rights Dir., Art. 10, and the more restricted Database Dir., Art. 6(2), and Info. Soc. Dir., Art. 5(2), (3).

<sup>144</sup> Rel. Rights Dir., Art. 2(6), (7).

<sup>145</sup> Rel. Rights Dir., Arts 8(2) (conditions as to sharing remuneration for broadcasting and public performance between performers and the producers of phonograms) and 13(9) (level of remuneration for rental); Satellite Dir., Arts 3(2), 9(3), 13.

<sup>146</sup> Rel. Rights Dir., Art. 13(3)–(8); Satellite Dir., Art. 7; Term Dir., Art. 10(3), which was considered by the ECJ in *Butterfly Music Srl v. Carosello Edizioni Musicali e Discografiche Srl*, Case C-60/98 [1999] ECDR 1; *Flos SpA v. Semararo Case e Famiglia SpA*, Case C-168/09 (27 January 2011) (ECJ, Second Chamber).

<sup>147</sup> In *VG Wort v. KYOCERA Document Solutions Deutschland GmbH*, Joined Cases C-457/11, C-458/11, C-459/11 and 460/11 (AG Opinion, 24 January 2013), [AG31] (‘there comes a point at which only the legislature is competent to ensure . . . evolution’).

<sup>148</sup> Software Dir., Art. 1(3); Term Dir., Art. 6, Recital 17; Database Dir., Art. 3(1); *Infopaq Int v. <sup>151</sup> Software Dir., Art. 4. See Chapter 6.

liabilities for ‘secondary infringers’,<sup>152</sup> The Directive also partially harmonizes exceptions to the exclusive rights, in particular requiring member states to implement four exceptions. The first concerns acts done by a lawful acquirer of a program that are necessitated by use of the program for its intended purpose; the second allows the making of back-up copies; the third permits the studying and testing of the program; the fourth, and most controversial, permits—in very limited circumstances—the decompilation of programs.<sup>153</sup> One final provision of interest in the Software Directive concerns the way in which it allocates the ownership of copyright. In the case of programs that are made by employees in the course of their employment, the Directive allocates the copyright in such programs to the employer.<sup>154</sup>

Subsequent directives have sought, with one or two exceptions, to leave intact the compromises embodied in the Software Directive. In the jurisprudence of the Court, the Directive has been treated as *lex specialis*.<sup>155</sup> Nevertheless, because software is very frequently combined with other material that falls to be protected under other directives, the different standards recognized in later directives often have an indirect impact on the scope of protection of software products. This is most obvious in relation to the protection of video games by technological measures.<sup>156</sup>

## 7.2 RELATED RIGHTS DIRECTIVE (1992, CODIFIED IN 2006)

The Related Rights Directive (sometimes also known as the ‘Rental Directive’) is in two parts: the first deals with the specific issues of rental and lending; the second, with related rights.<sup>157</sup> The second part comes as close to the codification of copyright as any of the European directives.

Chapter 1 of the Directive was drafted in response to the then-growing economic importance of home rental as a source of revenue for copyright owners.<sup>158</sup> The Directive requires member states to confer on authors (of works within the Berne Convention), performers, phonogram producers, and film producers the exclusive right to control the rental and public lending of copies (or, in the case of performers, fixations) of their works.<sup>159</sup> However, member states are given a number of options, sometimes in derogation from the exclusive rights. The most important of these is the option not to recognize an exclusive right to authorize ‘public lending’ if authors receive remuneration of some sort for such lending.<sup>160</sup> Member states may also exempt certain establishments from the payment of remuneration for lending.<sup>161</sup>

Chapter 1 of the Directive also includes some interesting provisions on the ownership of the rental right. The Directive recognized the need for creators to obtain an ‘adequate income as a basis for further creative and artistic work’.<sup>162</sup> As a result, a fiercely debated provision requires member states to confer on authors and performers an ‘unwaivable

<sup>152</sup> Software Dir., Art. 7. See Chapter 8. <sup>153</sup> Software Dir., Arts 5 and 6. See further Chapter 9.

<sup>154</sup> Software Dir., Art. 2(3). See Chapter 5.

<sup>155</sup> *UsedSoft GmbH v. Oracle*, Case C-128/11 (3 July 2012) (ECJ, Grand Chamber), [51].

<sup>157</sup> The Rel. Rights Dir. was in part a response to *Warner Bros v. Christiansen*, Case C-158/86 [1988] ECR 2605.

<sup>158</sup> *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] ECR I-1953, [21]–[22] (holding the Directive to be justified and proportionate limitation on freedom to trade).

<sup>159</sup> Rel. Rights Dir., Art. 1(1). Rental and lending are defined in Art. 2. See Chapter 6.

<sup>160</sup> Rel. Rights Dir., Art. 6(1). See below at pp. 154, 368–9.

<sup>161</sup> Rel. Rights Dir., Art. 6(3). See below at pp. 256, 257. <sup>162</sup> Rel. Rights Dir., Recital 5.

right to equitable remuneration' when copies of films or phonograms are rented.<sup>163</sup> In turn, it was decided that this required further definition of who is the author of a cinematographic or audiovisual work (a matter on which there are wide divergences under the laws of different countries). The Directive requires that member states recognize that the 'principal director' is one of the authors of such a work.<sup>164</sup>

Chapter 2 of the Directive harmonizes the rights of performers, producers of phonograms, broadcasters, and cable distributors (in addition to the rental and lending rights conferred by Article 2).

- *Performers* are to be given the exclusive right to authorize or prohibit the fixation,<sup>165</sup> broadcasting, or communication to the public of their unfixed performances.<sup>166</sup> They are also to be given the right to control the distribution of fixations of their performances.<sup>167</sup> Performers are additionally granted the right to share in the remuneration paid for the right to broadcast or play in public phonograms embodying their performances.<sup>168</sup>
- In turn, *phonogram producers* are to be given the exclusive right to authorize or prohibit the distribution of their phonograms.<sup>169</sup> They are also given a right to share in remuneration paid for the right to broadcast or play in public phonograms embodying their performances.<sup>170</sup>
- *Broadcasting organizations* are to be given the exclusive right to authorize or prohibit the fixation<sup>171</sup> of their unfixed broadcasts,<sup>172</sup> the distribution of fixations of their broadcasts; or the re-broadcasting or communication to the public of their broadcasts.<sup>173</sup>

Part 2 also obliges member states to confer similar rights on the producers of first fixations of films. In the European schema, 'first fixations of films' is a category of related rights that covers all fixations of moving images (and is distinct from protection of cinematographic works as authorial works). A film of a football match, for example, would be a first fixation of a film, even though it might not be a cinematographic work. The producers of these fixations are to be granted the exclusive right to authorize or prohibit the distribution of their films.<sup>174</sup>

### 7.3 CABLE AND SATELLITE DIRECTIVE (1993)

The third European initiative, the Cable and Satellite Directive, obliges member states to recognize that copyright and related rights include the right to authorize communication to the public by satellite.<sup>175</sup> The Directive does not harmonize these rights. Instead, it requires member states 'to ensure that when programmes from other member states are retransmitted by cable in their territory the applicable copyright and related rights are observed'. The Directive indicates that the rights recognized must be full property rights

<sup>163</sup> Rel. Rights Dir., Art. 5. See below at pp. 318–19.

<sup>164</sup> Rel. Rights Dir., Art. 2(2); reiterated in Term Dir., Art. 2(1). See below at pp. 128–9.

<sup>165</sup> Rel. Rights Dir., Art. 7(1). See below at pp. 341–9. The reproduction right was repealed and replaced by Info. Soc. Dir., Art. 2. <sup>166</sup> Rel. Rights Dir., Art. 9(1).

<sup>167</sup> Rel. Rights Dir., Art. 9. See below at p. 344.

<sup>168</sup> Rel. Rights Dir., Art. 8(2). See below at pp. 348–9. <sup>169</sup> Rel. Rights Dir., Art. 9.

<sup>170</sup> Rel. Rights Dir., Art. 8(2). See Chapter 6. <sup>171</sup> Rel. Rights Dir., Art. 7(1).

<sup>172</sup> Rel. Rights Dir., Art. 8(1). <sup>173</sup> Rel. Rights Dir., Arts 9(1)(d) and 8(3). See Chapter 6.

<sup>174</sup> Rel. Rights Dir., Art. 9(1)(d). For the problems that UK law has with films, see below at Chapter 3, section 3, and Chapter 3, section 6. <sup>175</sup> Satellite Dir., Arts 2 and 4.

and that statutory licensing schemes must be abolished by 31 December 1997. The Directive limits the ways in which the rights may be administered. The Directive requires that the right to grant or refuse authorization to a cable operator who wishes to retransmit a broadcast shall be exercised only through a collecting society.<sup>176</sup> This does not apply, however, where the rights are owned by broadcasting organizations. The right of the broadcaster to prohibit retransmission of its own transmissions can be exercised independently.<sup>177</sup>

The most notable feature of the Directive concerns the definition of the place where the communication takes place. Prior to the Directive, different jurisdictions responded differently to the question of whether a satellite broadcast takes place in the country in which the broadcast originated, the country from which the signals are sent, the satellite itself, or the countries in which the signal can be received (this is known as the ‘footprint’). Opting for the simplest solution, the Directive requires member states to treat a satellite broadcast as taking place where the signals are introduced (or ‘injected’). This is the simplest solution because permissions to broadcast the various works to be included in a satellite broadcast are required from the copyright owners only in the country of introduction.<sup>178</sup>

#### 7.4 TERM DIRECTIVE (1993, CODIFIED 2006, AMENDED 2011)

The Term Directive (sometimes also known as the ‘Duration Directive’) obliges member states to grant a term of protection for authorial works (including original photographs) lasting for the life of the author plus 70 years.<sup>179</sup> In the case of cinematographic works, the duration is 70 years from the death of the principal director, author of the screenplay, author of the dialogue, or composer of music.<sup>180</sup> Terms of protection for related rights (including broadcasting organizations and film producers) are to be based on a fixed 50-year term,<sup>181</sup> although, following amendments in 2011, the term for sound recordings and performers is now based on a 70-year period.<sup>182</sup> However, where the country of origin of the work is a third country and the author is not an EU national, these terms of protection are to be restricted so that the terms expire in the European Economic Area (EEA) no later than their date of expiry in their country of origin. The Directive also requires member states to grant a new right, called the ‘publication right’, where previously unpublished works in which copyright has expired are published for the first time.<sup>183</sup>

#### 7.5 DATABASE DIRECTIVE (1996)

The Database Directive requires member states to grant copyright to ‘original databases’ and to confer *sui generis* protection on databases that are the product of substantial investment. A ‘database’ is defined rather vaguely as a collection of independent works, data, or other materials arranged in a systematic or methodical way and individually accessible by electronic or other means.<sup>184</sup>

<sup>176</sup> Satellite Dir., Arts 9(2), 10. For implementation in the UK, see CDPA 1988, s. 144A.

<sup>177</sup> Satellite Dir., Art. 10.

<sup>178</sup> Satellite Dir., Art. 1. See below at pp. 160–1.

<sup>179</sup> Term Dir., Art. 1. On the failure of the Directive to achieve harmonization, see further C. Angelopoulos, ‘The Myth of European Term Harmonisation: 27 Public Domains for 27 Member States’ (2012) *IIC* 567. A particular difficulty is that rules on joint authorship are unharmonized: see below at pp. 130–2.

<sup>180</sup> Term Dir., Art. 2(2). <sup>181</sup> Term Dir., Art. 3. See below at pp. 182–4. <sup>182</sup> See p. 183.

<sup>183</sup> Term Dir., Art. 4. See below at pp. 185–6. <sup>184</sup> Database Dir., Art. 1. See pp. 68–9.

Copyright is to protect ‘original’ databases, and a similar definition of ‘originality’ was deployed as with computer programs and photographs. A database is original only where, ‘by reason of the selection or arrangement of their contents’, the database constitutes the author’s own intellectual creation.<sup>185</sup> Member states are to give the owner of copyright in a database the exclusive right to reproduce the database, to translate it, to adapt, arrange, or alter it, to distribute it, and to communicate it to the public.<sup>186</sup> Member states must provide a defence to the lawful user of a database who commits acts that are necessary to access the contents of the database and to use those contents normally.<sup>187</sup> A limited list of optional defences is also prescribed.<sup>188</sup>

The Directive also requires member states to introduce a new *sui generis* right (which is reviewed in Chapter 13). For the moment, it is worth observing that the database right arises where the maker of a database has made a substantial investment in either the activities of obtaining, verifying, or presenting the contents of the database. The maker of such a database is to be granted a right to prevent extraction or reutilization of the whole or substantial parts of the database. In certain circumstances, they may also prevent the systematic extraction and/or reutilization of insubstantial parts.<sup>189</sup> Member states may subject the database right to certain limited defences and exceptions as regards private use of non-electronic databases, use for illustration of teaching and in non-commercial scientific research, public security use, and use in administrative or judicial procedures.<sup>190</sup> This right is to last for 15 years from completion of the database or its publication, and a new right can arise where there is a substantial new investment in an existing database.<sup>191</sup>

## 7.6 E-COMMERCE DIRECTIVE (2000)

The Directive on Certain Legal Aspects of Electronic Commerce in the Internal Market (the ‘E-Commerce Directive’) aims to promote electronic commerce within the European Union—that is, the provision of goods and services online. As such, it encompasses matters such as electronic contracts, unsolicited communications, and codes of conduct, which are outside the scope of this text. However, a number of Articles impact upon intellectual property more directly, probably the most important of which concern the liability of service providers. Articles 12–15 of the Directive differentiate between situations in which services are mere conduits and those in which they are involved in caching and hosting, offering limited immunities from liability. It does not, however, refer to search tools.

## 7.7 INFORMATION SOCIETY DIRECTIVE (2001)

By far the most significant of the Community initiatives dealing with copyright is the Information Society Directive (sometimes also known as the ‘Copyright Directive’).<sup>192</sup>

<sup>185</sup> Database Dir., Art. 3. See pp. 98–107.

<sup>186</sup> Database Dir., Art. 5. See Chapter 6.

<sup>187</sup> Database Dir., Art. 6(1). See p. 264.

<sup>188</sup> Database Dir., Art. 6(2).

<sup>189</sup> Database Dir., Art. 7.

<sup>190</sup> Database Dir., Art. 9.

<sup>191</sup> Database Dir., Art. 10(3).

<sup>192</sup> As the title of the Directive makes clear, its remit was only to harmonize ‘certain aspects’ of copyright. The sloppy use of the shorthand ‘Copyright Directive’ by the Court can be traced to the Opinions of Advocate-General Sharpston in *Laserdisken ApS v. Kulturministeriet*, Case C-479/04 [2006] ECR I-8089 and *SGAE v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519. The Court, for the most part, has resisted the shorthand, with the notable exception of the Grand Chamber decision in *Football Association Premier League Ltd v. QC Leisure and Karen Murphy v. Media Protection Systems Ltd*, Joined Cases C-403/08 and 429/08 [2012] 1 CMLR (29) 769. However, it is not only the Court that uses the shorthand, but even the Commission itself: see Commission Staff Working Paper, *Digital Rights: Background, Systems, Assessment* (February 2002), SEC (2002) 197, 4.

This Directive has its origin in the Green Paper *Copyright in the Information Society*<sup>193</sup> and the 1996 White Paper that followed it.<sup>194</sup> According to one commentator, it was ‘one of the most intensively debated proposals in recent EU history’.<sup>195</sup> The Directive is intended to implement the two WIPO treaties agreed in Geneva in 1996. However, the Directive goes much further in responding to the perceived changes brought about by digital technology to the environment in which copyright law operates. As Recital 5 says:

[T]echnological development has multiplied and diversified the vectors for creation, production and exploitation. While no new concepts for the protection of intellectual property are needed, the current law on copyright and related rights should be adapted and supplemented to respond adequately to economic realities such as new forms of exploitation.

As well as introducing a ‘making available right’ and controls over technological measures of protection and rights management information,<sup>196</sup> the Directive harmonizes the reproduction, communication, and distribution rights, and attempts to limit the number and scope of the exceptions (or defences) that a national regime can operate.<sup>197</sup>

### 7.8 RESALE RIGHTS DIRECTIVE (2001)

Given that a number of European countries offered artists the right to participate in the resale value or profits from the resale of their works (known as the *droit de suite*, or ‘artist’s resale royalty’), the Commission took the view that variations in national laws could affect the operation of the art market. To ensure that this did not happen, the Resale Rights Directive was introduced in 2001.<sup>198</sup> The United Kingdom, which has a substantial art market, but had no resale right, strongly resisted adoption of the Directive. While it was unable to prevent the Directive being adopted, the United Kingdom did succeed in diluting some of the provisions. The Directive had to be implemented by 2006. The Directive and its implementation is discussed further in Chapter 13.

### 7.9 ORPHAN WORKS DIRECTIVE (2012)

The Orphan Works Directive (OWD) is a response to problems faced by cultural institutions in tracing copyright owners of works that they wish to include in digitization projects. The Directive, which is exceedingly narrow in scope, requires member states to put in place measures that would permit the digitization and making available of works by cultural institutions that have been unable to locate copyright owners after having conducted a diligent search. The Directive applies only to certain acts (reproduction and making available),<sup>199</sup> carried out in relation to a limited list of works,<sup>200</sup> by certain

institutions (cultural institutions),<sup>201</sup> in certain limited circumstances (after conducting a diligent search).<sup>202</sup> Moreover, it offers only limited relief against copyright holders who later assert their rights.<sup>203</sup> Nevertheless, the Directive is innovative insofar as it provides for ‘mutual recognition’ of orphan works: once a work is deemed orphan in one member state, it is regarded as orphan elsewhere.<sup>204</sup> The Directive is to be implemented by 29 October 2014.<sup>205</sup>

### 7.10 COLLECTIVE RIGHTS MANAGEMENT DIRECTIVE (2014)

On 26 February 2014, the Parliament and Council adopted the Collective Rights Management Directive (or CRM Directive).<sup>206</sup> This requires member states to regulate the operation of organizations that manage copyrights collectively on behalf of authors and rights holders. ‘Collective management organizations’ (or ‘collecting societies’, as they are usually known), such as the United Kingdom’s Performing Right Society (PRS), operate on behalf of rights holders in issuing licences, and collecting and distributing remuneration.<sup>207</sup> In the case of the PRS, the organization represents composers and publishers of songs as regards licensing of public performance, playing, broadcasting, and making available online. The Directive requires member states to offer protection to both members and rights holders, and users. Other aspects of the Directive are intended to facilitate Europe-wide licensing of music. The Directive is discussed in Chapter 12.

## 8 THE FUTURE

In recent years, the UK legislature has been very actively involved in the fields of copyright. Much of the activity has involved implementing international and regional norms, but as a result of two important reviews, the Gowers Review of 2006 and the Hargreaves Review of 2011, the United Kingdom has also been developing its own rules in relation to copyright exceptions,<sup>208</sup> orphan work licensing, extended collective licensing, and regulation of collecting societies. These are reviewed in Chapters 9, 11, and 12. It is to be hoped, although not expected, that parliamentary time will be made available for the passage of a Copyright Act that codifies the law so that it is more comprehensible. In an era in which members of the public are more directly involved with works protected by copyright, copyright owners are increasingly dependent on the public’s knowledge of and compliance with the law. Given this state of affairs, it is ever more pressing that the problems with the existing law be remedied.

### 8.1 INTERNATIONAL CHANGES

After recent successes in developing international norms in the Beijing and Marrakesh treaties, emphasis has turned toward bringing other WIPO projects to fruition.<sup>209</sup>

<sup>201</sup> OWD, Art. 1(1) (‘publicly accessible libraries, educational establishments and museums, as well as by archives, film or audio heritage institutions and public-service broadcasting organisations’).

<sup>202</sup> OWD, Arts 2, 3. <sup>203</sup> OWD, Art. 5. <sup>204</sup> OWD, Art. 4.

<sup>205</sup> See further pp. 330–1. <sup>206</sup> Directive 2014/26/EU.

<sup>207</sup> See further Chapter 12, pp. 305–9.

<sup>208</sup> Albeit within the framework set by EU law, in particular the Info. Soc. Dir.

<sup>209</sup> Work program adopted by the 2012 General Assembly recommended.

The first area in which the WIPO is active is in relation to broadcasting organizations.<sup>210</sup> This has been under consideration for well over a decade and various versions of a possible treaty text are in circulation. As with the two 1996 WIPO treaties, the initiative was prompted by a desire to update international copyright standards to bring them into line with the ‘information age’. Even though much of the content of the proposed treaty echoes that which was adopted for copyright, sound recordings, and performers in the two 1996 treaties, in the subsequent years opposition to copyright has grown. One recurring issue has been the best way in which to deal with Internet services, which are similar to broadcasting.<sup>211</sup> There had been some hope for a diplomatic conference in 2014.<sup>212</sup>

Second, the Standing Committee has been considering some sort of instrument on exceptions to copyright for libraries and archives and educational institutions. Once again, this is being achieved through discussion of proposed texts (on preservation, deposit, lending, and so forth),<sup>213</sup> although the nature of any instrument (a model law, a joint recommendation, a treaty, or something else) remains unsettled. It is clear that representatives of many rights owners, particularly educational publishers, are unenthusiastic.<sup>214</sup>

Third, the WIPO has long been involved examining possible systems of protection for so-called ‘traditional cultural expressions’ (TCEs).<sup>215</sup> In reflection of the fact that many indigenous cultures do not draw a rigid line between art and science in the way that Western cultures often do, WIPO’s activities extend beyond copyright to include patents, trade marks, and other related rights. The work is conducted by the Intergovernmental Committee on Intellectual Property and Genetic Resources, Traditional Knowledge and Folklore, and considerable progress has been made towards a draft, although it contains so many options (as to what counts as TCE and what protection should be afforded) that it resists summary.<sup>216</sup> The WIPO General Assembly will decide in September 2014 on whether sufficient progress has been made to warrant convening a diplomatic conference.<sup>217</sup>

## 8.2 EUROPEAN INITIATIVES

After a number of recent successes in brokering agreements between stakeholders (between the visually impaired and publishers, as well as between libraries and publishers), as well as in the legislative arena, in December 2012, the Commission announced that it would proceed to adapt copyright to ongoing challenges and opportunities through a twin track of structured stakeholder dialogue and legislative reform.<sup>218</sup> Dialogue is thought to offer a more rapid and indeed practical response to difficult challenges. The topics that were thought important were: cross-border access and the portability of services; user-generated content and licensing for small-scale users of protected material; facilitating the deposit and online accessibility of films in the European Union; and promoting

<sup>210</sup> See Ficsor, 74–6, 702–4.

<sup>211</sup> Current discussions are based on a draft treaty text, SCCR/24/10 Corr., which was proposed at the 24th session of the WIPO Standing Committee on Copyright and Related Rights in 2012.

<sup>212</sup> There is also a parallel initiative in the Council of Europe. For discussion, see *European Commission v. Council of the European Union*, Case C-114/12 (3 April 2014), [AG2]–[AG8], [AG122]–[AG139] (AG Sharpston).

<sup>213</sup> The latest working document is SCCR/26/3 from December 2013.

<sup>214</sup> It is said that educational publishing comprises 60 per cent of the publishing market worldwide. There are ongoing disputes between leading Western publishers and universities in the United States and in India.

<sup>215</sup> See Ficsor, 76–8, 704–8.

<sup>216</sup> The draft provisions on TCEs are contained in WIPO/GRTKF/IC/25/7 (July 2013).

<sup>217</sup> Assemblies of Member States, WIPO 43rd (21st Ordinary) Session, 23 September–2 October 2013.

<sup>218</sup> *Communication on Content in the Digital Single Market* (December 2012), COM (IP/12/1394) 789 Final.

efficient text and data mining for scientific research purposes. During 2013, a series of ‘stakeholder’ dialogues were held, some making some progress, while others—those concerning user-generated content and data mining—were unable to reach a consensus, thus highlighting a wide gulf between what is acceptable to different stakeholders.<sup>219</sup>

In parallel, the Commission proposed to continue its review of the EU framework for copyright with a view to a decision in 2014 on whether to table legislative reform proposals. Various reviews of national law, including the United Kingdom’s Hargreaves Review, and an Irish review,<sup>220</sup> indicate that there is a real appetite in member states for reform, particularly with regard to exceptions. At the end of 2013, the Commission opened up these same questions to consultation. Amongst the many issues raised in the consultation are questions relating to the definition of rights (in particular the territorial scope of the making available right), hyperlinking, browsing, exhaustion, registration, limitations and exception (including text and data mining, and user-generated content), private copying (and associated levies),<sup>221</sup> term, and ensuring appropriate remuneration for authors. Responses to the consultation were to be submitted by March 2014.

In the short term, the focus is likely to continue to be on the scope of rights, exceptions, and issues of enforcement. In the medium term, questions will need to be addressed on more thorny issues that have long divided the approaches of countries such as the United Kingdom from those of France and Germany: moral rights and copyright contracts. While many of the copyright reforms initiated by the Commission have proved to be difficult, it is likely that these remaining topics will be particularly problematic. In part, this is because these are areas in which the differences between different member states are most marked. They are also areas of copyright law that are closely intertwined with other areas of national law, such as contract law and labour law. As such, reform will invariably be caught up in broader debates. Early studies on moral rights and copyright contracts indicate that there is little support for harmonization of these matters on the Continent, because of fears that the laws would be made less author-protective.<sup>222</sup>

There have now been murmurings for some time about the possible codification of European copyright law. In its study for the European Commission, entitled *Recasting Copyright for the Knowledge Economy*, the Instituut voor Informatierecht [Institute for Information Law, University of Amsterdam] (IViR) has made a tentative proposal that long-term consideration be given to creation of a European Copyright Code, conferring a single, Europe-wide, indivisible copyright (and pre-empting any corresponding national rights). The proposed right would be created by Community regulation, and would draw on the existing directives and the jurisprudence of the Court of Justice. It would also fill in many of the gaps, but would not cover aspects of copyright that do not affect the

<sup>219</sup> See *Licences for Europe: Ten Pledges to Bring More Content Online* (November 2013), available online at <[http://ec.europa.eu/internal\\_market/copyright/docs/licences-for-europe/131113\\_ten-pledges\\_en.pdf](http://ec.europa.eu/internal_market/copyright/docs/licences-for-europe/131113_ten-pledges_en.pdf)> (pledges to work to make licensing easier). Guibault, *Study in the Conditions Applicable to Contracts Relating to Intellectual Property in the EU* (2002) (suggesting that harmonization would be ‘premature’). See also *Communication from the Commission to the Council, the European Parliament and the European Economic and Social Committee: The Management of Copyright and Related Rights in the Internal Market* (April 2004), COM(2004) 261 final, 13, [2.3] (given common ground, there is no need, for the time being, to harmonize rules on copyright contracts).

operation of the internal market or which reflect national cultural policy. The study thus suggests that moral rights, authorship, ownership, and supervision of collective administration would remain aspects of national law. In addition, lest such a code introduce undue inflexibility, the study suggests that national legislatures be provided with some flexibility to introduce new exceptions or limitations. Subsequently, a group of academics have published a draft code, called the 'Wittem Code', which builds on the existing rules ('the *acquis*') and offers a template of substantive norms in key areas. It has received a somewhat mixed reception.<sup>223</sup>

The potential advantages of such a change are self-evident. A code would be simpler, insofar as it consists of a single law, rather than a series of national laws. If drafted correctly, it would remove inconsistencies between the existing directives. Such a code would also be more user-friendly, insofar as it enabled rights to be enforced in a single action across Europe. Despite these attractions, however, it is unlikely that it will be introduced, at least in the near future. While the Commission has so far shown little enthusiasm,<sup>224</sup> the Court of Justice seems intent on deepening copyright law through case law (and the developing jurisprudence may alleviate some of the immediate difficulties caused by the fragmented legislative approach). In the longer term, however, the idea of a code deserves further exploration and it is referred to in the current consultation. Having explained the idea, the consultation asks: 'Should this be the next step in the development of copyright in the EU? Does the current level of difference among the Member State legislation mean that this is a longer term project?'<sup>225</sup>

4 Musical Works	71	9 Published Editions	90
5 Artistic Works	72		

### 1 INTRODUCTION

This chapter examines the subject matter protected by copyright law. In formal terms, the Copyright, Designs and Patents Act 1988 (CDPA 1988) provides a detailed and exhaustive list of the types of creation protected by copyright law. In order for a creation to be protected by copyright, the Act stipulates that it must fall within one of the following eight categories of work: (i) literary works; (ii) dramatic works; (iii) musical works; (iv) artistic works; (v) films; (vi) sound recordings; (vii) broadcasts; and (viii) published editions (or typographical works). The definitions of these categories of work are elaborated in greater detail in the case law and through the jurisprudence of the Court of Justice.

Before looking at the categories of subject matter in more detail, it is necessary to make three preliminary points. First, it should also be noted that the legal categories do not necessarily correspond to the objects commonly associated with copyright law. Instead, individual tangible objects may embody a number of different copyright works. For example, a book or newspaper might contain a literary work, an artistic work, and a typographical arrangement;<sup>1</sup> a song may consist of literary and musical works (the lyrics being a literary work); and a CD might contain a sound recording, a musical work, and a literary work. While the legal categories do not necessarily correspond to the objects protected by copyright, in most cases there have been few problems in matching a particular creative act to one of the protected categories.

Second, all types of subject matter that are protected by copyright are called ‘works’. This is in marked contrast to the position in civil law systems, such as in France, which distinguish between ‘author’s rights’ (or *droits d’auteur*) and ‘neighbouring rights’ or entrepreneurial works (*droits voisins*). Author’s rights typically cover literary, dramatic, musical, and artistic work, whereas neighbouring rights are afforded to sound recordings,

broadcasts, and performers.<sup>2</sup> This distinction is also reflected in the international conventions, with the 1886 Berne Convention protecting 'author's rights' and the 1961 Rome Convention protecting 'neighbouring rights'. Under EC law, 'neighbouring rights' are usually classed as 'related rights'. As we will see, the distinction (never fully abandoned in the details of UK law), has started to take on renewed importance, as the Court of Justice develops principles that are applicable to authors rights.

The third and most problematic issue is whether the list of eight works is to be regarded as an exhaustive list. Until recently, the list was understood to be closed. This meant that there was little opportunity for the courts to recognize new forms of subject matter, other than through the creative interpretation of the existing categories. Thus some 'works' that would be protected in countries operating a non-exhaustive system have been regarded as unprotected under the 1988 Act. This was graphically illustrated in the case of *Creation Records*.<sup>3</sup> Here, as preparation in the production of the cover for Oasis's album *Be Here Now* (see Fig. 3.1), Noel Gallagher arranged for a series of objects (a Rolls Royce, a motor bike, a clock) to be placed around a swimming pool. This collection of 'artistically' distributed objects was then photographed by the claimant and the photograph used as the album cover. However, a photographer from the defendant newspaper was present and also took a photograph of the scene. When the newspaper

<sup>2</sup> The division of subject matter into 'authorial' and 'entrepreneurial' works is based upon a belief that copyright for authors is the pure form and should not be conflated or equated with rights given in return for investment. See above pp. 32–3.

<sup>3</sup> *Creation Records v. News Group* [1997] EMLR 444.

published this photograph and offered to sell posters of the scene, the record company sought an interim injunction alleging infringement of its copyright. The claim based on copyright failed because the scene did not fall within the meaning of any of the (then) nine (now eight) categories of protected work; in particular, it was neither an artistic work nor a dramatic work.<sup>4</sup>

However, the assumption that the list is closed is under challenge. The source of the change is the interpretation of the various EU directives by the Court of Justice. Although the directives say very little about what constitutes a work, the Court has taken the view that harmonization of the concept of a work is implicit within the directives. Drawing on the terms used to define when works are ‘original’ in three directives, the Court has suggested that ‘literary and artistic works’ should be protected by member states where they constitute ‘intellectual creations’. Thus the Court has said that a ‘graphic user interface’ should be protected, but that a football match would not be.<sup>5</sup> At the same time, the Court seems to have recognized the existence of works that do not fall within any conventional category. In *Nintendo v. PC Box*,<sup>6</sup> before addressing the questions that had been referred to it by the national court, the Court of Justice went out of its way to confirm that a video game, which contained a computer program, as well as visual and sonic material, was a work. It explained:

[V]ideogames . . . constitute complex matter comprising not only a computer program but also graphic and sound elements, which, although encrypted in computer language, have a unique creative value which cannot be reduced to that encryption. In so far as the parts of a videogame, in this case, the graphic and sound elements, are part of its originality, they are protected, together with the entire work, by copyright in the context of the system established by Directive 2001/29.<sup>7</sup>

Three consequences of this development should be observed.<sup>8</sup>

First, existing British case law that purports to define the limits of the different categories of protected works will need to be revisited. Following general principles of European law, the terms of the UK statute must now be read (as far as possible) to reflect the EU principle that anything that constitutes an ‘intellectual creation’ should be protected. At least one court has recognized this, stating that the fact that a work does not fall within the definitions adopted for the existing categories does not necessarily mean that such a work is not protected.<sup>9</sup>

Second, and in turn, the supposed benefits of having an exhaustive list of copyright works have necessarily been abandoned: whatever a literal reading of any of the categories might now be, henceforth they should be offered a broad reading so as to ensure protection of anything that constitutes an intellectual creation. Thus one might doubt whether

<sup>4</sup> Interim relief, however, was granted on the basis of breach of confidence: see Chapters 44–6.

<sup>9</sup> *SAS Institute Inc. v. World Programming Ltd* [2013] *EWHC* 69 (Ch), [27].

the outcome in *Creation Records* would remain justified (though there may well be certain ‘intellectual creations’, such as perfumes, which simply cannot be fitted within the UK’s legislative scheme, no matter how flexibly it is interpreted).<sup>10</sup>

Third, the approach of the Court of Justice raises doubts about the significance of the various categories of work.<sup>11</sup> Hitherto, UK law has used the categories to provide for different conditions and consequences (for example in defining when a work must be recorded in material form in order to be protected or what counts as a reproduction). Questions have thus been asked as to whether the same creative effort can be protected under more than one category.<sup>12</sup> At least where rights (and exceptions thereto) are harmonized, such differentiation may no longer be appropriate or meaningful. The way in which a work is initially perceived or understood should be irrelevant as to the scope of protection of ‘authorial works’.

Given the implications of the Court’s case law for the United Kingdom, it is vital to understand precisely what criteria the Court of Justice considers applicable in deciding whether an intellectual product must be protected. At first glance, it looks as if the Court has eliminated any subject matter requirement, collapsing the question of whether an intellectual production is protected into an assessment of its originality. However, in *SAS Institute Ltd. v. World Programming Ltd.*,<sup>13</sup> Arnold J rejected that reading. Called upon to decide whether a computer language might be protected, he said that it was not enough that the subject be an ‘intellectual creation’; rather, ‘it remains clear that the putative copyright work must be a literary or artistic work within the meaning of Article 2(1) of the Berne Convention’.<sup>14</sup> A ‘scientific theory’, Arnold J explained, might be an intellectual creation, but would not in itself be a work. Consequently, he stated that his provisional view was that a computer ‘language’ (as opposed to, say, the collection of instances in a dictionary), being ‘a system of rules for the generation and recognition of meaningful statements’, is not a work.<sup>15</sup>

With these general points in mind, we now turn to look at the eight types of work recognized by copyright law. Until the full implications of the Court of Justice’s jurisprudence are made clear, these categories remain the starting point for any claim to copyright. Even if it comes to be accepted, as Arnold J suggests, that there is an obligation to protect all ‘intellectual creations’, in the first instance this will be done through interpreting the existing statutory language. In any case, even if some ‘intellectual creations’ that fall outside the existing categories must be protected, the categories continue to play a role

<sup>10</sup> Some European countries have even protected perfumes by copyright: *Lancôme Parfums v. Kecofa* [2006] ECDR (26) 363 (Dutch Supreme Court); cf. *Bsiri-Barbir v. Haarmann & Reimer* [2006] ECDR (28) 380 (French *Cour de Cassation*). See C. Seville, ‘Copyright in Perfume: Smelling a Rat’ (2007) 66 *CLJ* 49; H. Cohen Jehoram [2006] *EIPR* 629. Even with EU obligations, it is difficult to see how this could be possible under UK law.

<sup>11</sup> That said, European copyright law does not avoid categories completely. First, the directives require distinct regimes of protection for ‘computer programs’ and ‘databases’ (with different rules on ownership, exceptions, secondary infringement, and ‘para-copyright’ for ‘computer programs’). Second, computer programs must be protected as literary works: *Software Dir.*, Art. 1(1). Special rules also apply in relation to authorship of ‘cinematographic works’ and special rules are applicable in relation to the term of copyright for ‘musical compositions with lyrics’ under Directive 2011/77/EU of the European Parliament and of the Council of 27 September 2011 amending Directive 2006/116/EC on the term of protection of copyright and certain related rights [2011] *OJ L* 265/1.

<sup>12</sup> Compare *Electronic Technique v. Critchley* [1997] *FSR* 401 (arguing against protection as both literary and artistic work) with *Anacon Corp. v. Environmental Research Technology* [1994] *FSR* 659 (Jacob J suggesting that a circuit diagram is both a literary and artistic work) and *Sandman v. Panasonic UK Ltd* [1998] *FSR* 651 (Pumfrey J indicating that a poem could be both).<sup>13</sup> [2013] *EWHC* 69 (Ch).

<sup>14</sup> *Ibid.*, [27].<sup>15</sup> *Ibid.*, [33].

in four situations: where they reflect European differentiations between authors rights and related rights (sound recordings, broadcasts, fixations of films); where they reflect European differentiations within authors rights (as with computer programs, databases, photographs, cinematographic/audiovisual works, artistic works, works of applied art, and buildings);<sup>16</sup> where they determine matters that have not been harmonized (most obviously questions of ownership of copyright and moral rights); and, finally, where they underpin implementation in the United Kingdom of European standards (reflecting the basic principle that an EU directive is binding as regards the end to be achieved, but is designed to allow for different means of implementation).

## 2 LITERARY WORKS

Literary works have been protected from unauthorized reproduction since at least 1710.<sup>17</sup> Literary works are defined in section 3(1) of the CDPA 1988 to mean:

... any work, other than a dramatic or musical work, which is written, spoken or sung, and accordingly includes (a) a table or compilation (other than a database), (b) a computer program, (c) preparatory design material for a computer program, and (d) a database.

Literary works are also a category of authorial works expressly referred to in the Software Directive.<sup>18</sup>

It is important to note that literary works are not limited to works of literature, but include all works expressed in print or writing (other than dramatic or musical works).<sup>19</sup> 'Writing' includes symbols and numerals. The scope of the subject matter protected as a literary work is enhanced by the fact that a work will be protected irrespective of the quality or style of the creation in question: copyright law does not pass judgment on the standard of the work. As a result, the types of thing that will be protected as a literary work include novels by Salman Rushdie, poems by Ted Hughes, and lyrics by Courtney Love, as well as advertising slogans, railway timetables, and examination papers.<sup>20</sup> The fact that literary works include works that are spoken means that spontaneous conversations, interviews, and the like may also be protected (although, as we shall see, copyright does not subsist in a spoken work unless it is recorded).

For the most part, there have been few problems in deciding what is meant by a literary work. Where problems have arisen, the courts have tended to rely on the test set out in *Hollinrake v. Truswell*,<sup>21</sup> in which it was said that, to qualify as a 'book' under the Literary Copyright Act 1842, the creation must afford 'either information and instruction, or pleasure, in the form of literary enjoyment'. While this was not intended to provide a

<sup>16</sup> See, e.g., Software Dir. (special rules for computer programs); Database Dir. (special rules for databases); Term Dir., Arts 2, 6 (special rules for photographs, cinematographic, and audiovisual works); Rel. Rights Dir., Art. 3(2) (exclusion of 'buildings' and 'applied art'); Info. Soc. Dir., Art. 5(3)(j) (permissible exception for 'artistic work') and 5(3)(m) (permissible exception for 'building').

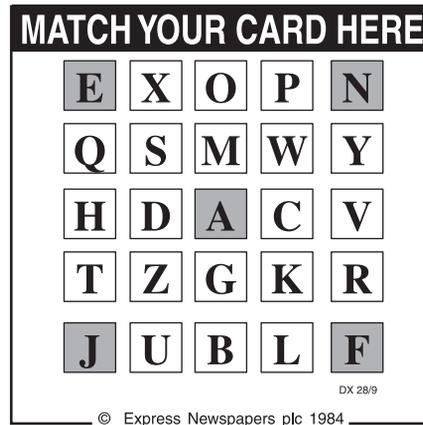

<sup>17</sup> The Statute of Anne 1710 and the Literary Copyright Act 1842 used the term 'book'. However, since 1911, the statutes have referred to literary works.

## HERE'S HOW TO WIN THE PRIZE OF A LIFETIME

O W M Q U

- THIS is your bonus chance to win £1 million. Just match your personal cash code on your card against the single line grid, from left to right IN ORDER. IF you have the perfect match you are in with a chance for that magical million.

Fig. 3.2 The grids in *Express Newspapers v. Liverpool Daily Post*

Source: Courtesy of Express Newspapers

comprehensive or exhaustive definition,<sup>22</sup> it provides useful guidance as to where the boundaries of the category are to be drawn.

Most of the cases in which the meaning of literary work has arisen have been concerned with works that afford information or instruction. These cases have made it clear that, for a work to provide information or instruction, it must be capable of conveying an intelligible meaning.<sup>23</sup> In line with the principle that protection should not be dependent upon the quality of the work, the courts have been willing to accept a very low threshold when considering whether a work 'conveys an intelligible meaning'. For example, in one case, it was accepted that sequences of letters set out in grids published in a newspaper provided information as to whether a reader had won or lost a bingo game and, as such, were literary works (see Fig. 3.2).<sup>24</sup> In order for a work to 'convey an intelligible meaning', it is not necessary that the work be understood by the general public; it is sufficient that the work is understood by a limited group with special knowledge. Thus a telegraphic code has been held to be a literary work, even though the words of the code were meaningless in themselves.<sup>25</sup> It has also been held that ciphers, mathematical tables, systems of shorthand, and Braille catalogues convey meaning, and as such qualify as literary works.<sup>26</sup> One of the few situations in which works have been held not to provide information or instruction is where the work is meaningless or gibberish.<sup>27</sup> Another situation in which a work fails

<sup>22</sup> *Apple Computer v. Computer Edge* [1984] FSR 481 (FCA), 495.

<sup>24</sup> *Express Newspapers v. Liverpool Daily Post* [1985] 3 All ER 680.

<sup>25</sup> *D. P. Anderson v. Lieber Code Company* [1917] 2 KB 469.

<sup>26</sup> *Apple Computer v. Computer Edge* [1984] FSR 481 (FCA), 521.

<sup>27</sup> *Ibid.*, 495 ('meaningless rubbish would plainly be excluded').

<sup>23</sup> *Ibid.*, 521.

to provide information is where it is an invented name. For example, it was held that the word 'EXXON', which had been created to act as a company name, conveyed no information and hence was not protected as a literary work (although, as we will see, there may have been other grounds for this decision).<sup>28</sup>

In contrast to informational works, there has been little discussion of what is meant by works that 'provide pleasure in the form of literary enjoyment'. The need for a work to provide literary enjoyment and pleasure seems to suggest a qualitative test. If so, it would run counter to the widely accepted principle that the quality of the literary work is not to be taken into account when deciding whether a work should be protected.

With these general points in mind, we now turn to look in more detail at the types of thing that are protected as literary works. After looking at names and invented words (which are not protected), we turn to look at titles, tables and compilations, computer programs, preparatory material for computer programs, and databases.

## 2.1 NAMES AND INVENTED WORDS

Despite the fact that names and titles are expressions in writing or print (and are often traded for substantial amounts of money), the United Kingdom (like most countries) refuses to protect them as literary works.<sup>29</sup> Thus invented words such as EXXON, which had been invented by Esso Petroleum as a trade name, have been held not to be protected by copyright as literary works.<sup>30</sup> It is said, although not without some criticism,<sup>31</sup> that these matters are not 'literary works' at all. This is because although names are in writing, they do not afford 'information, instruction or pleasure of a literary kind'. It was on this basis that the Court of Appeal held that EXXON was not a literary work.<sup>32</sup> The Court of Justice, likewise, has stated that words 'considered in isolation, are not as such an intellectual creation of the author who employs them'.<sup>33</sup>

There are a number of policy reasons why names may be excluded from protection as literary works by copyright law. Perhaps the main reason for not protecting names and titles relates to the general inconvenience that would arise if someone were able to control the way in which certain words and phrases were used. It would be inconvenient—indeed absurd—if business commentators and political activists could not refer (for example in broadcasts, newspapers, or campaign literature) to the oil conglomerate by using the term EXXON without gaining permission in advance. Another reason for refusing protection to names and titles as literary works under copyright law is that it is unnecessary to do so, given that they are adequately protected by passing off, trade mark law,<sup>34</sup> and artistic copyright.<sup>35</sup>

<sup>28</sup> *Exxon Corp. v. Exxon Insurance* [1982] RPC 69, 90.

<sup>29</sup> See R. Stone, 'Copyright Protection for Titles, Character Names and Catch-phrases in the Film and Television Industry' [1996] *Ent L Rev* 178, [1997] *Ent L Rev* 34.

<sup>30</sup> *Exxon Corp. v. Exxon Insurance* [1982] RPC 69.

<sup>31</sup> J. Cullabine, 'Copyright in Short Phrases and Single Words' [1992] *EIPR* 205, 208.

<sup>32</sup> *Exxon Corp. v. Exxon Insurance* [1982] RPC 69.

<sup>33</sup> *Infopaq International v. Danske Dagblades Forening*, Case C-5/08 [2009] ECR I-6569 (ECJ, Fourth Chamber), [45].

<sup>34</sup> The corollary of this is that while a person is usually free (as far as copyright is concerned) to appropriate names and short titles, care must be taken to ensure that the use of such a title cannot be seen as passing off or a trade mark infringement: see Chapters 32–34.

<sup>35</sup> '*Karo Step*' Trade Mark [1977] RPC 255 (a pictorial mark may be an artistic work); *Hutchinson Personal Communications Ltd v. Hook Advertising Ltd* [1996] FSR 549; *News Group v. Mirror Group* [1989] FSR 126.

## 2.2 TITLES AND HEADLINES

A similar approach used to be taken to titles. Thus courts have refused protection to the name of game shows such as *Opportunity Knocks*<sup>36</sup> or song titles such as ‘The Man Who Broke the Bank at Monte Carlo’.<sup>37</sup> In the latter case, the Privy Council indicated that it did not regard a title as sufficiently ‘substantial enough’ to warrant protection in its own right.<sup>38</sup> This approach leaves room for the possibility that some creative titles might still qualify for copyright protection.<sup>39</sup> The standard of ‘originality’ is reviewed in Chapter 4.

## 2.3 TABLES AND COMPILATIONS (OTHER THAN DATABASES)

Section 3(1)(a) of the CDPA 1988 specifically states that literary work includes ‘tables or compilations (other than a database)’. As a part of the reforms made to accommodate the Database Directive, section 3 was amended as of 1 January 1998 to add the rider that ‘tables and compilations’ no longer includes databases. At the same time, the definition of literary work was amended so as specifically to recognize databases as a separate type of literary work.<sup>40</sup> The reason why databases were placed in a separate category was to enable the 1988 Act to impose a different requirement of originality on databases from that applied to tables and compilations.

Prior to these amendments, a wide range of subject matter had been protected as compilations. This included football pools coupons,<sup>41</sup> a leaflet conferring information about herbicides,<sup>42</sup> television schedules,<sup>43</sup> directories listing the names and addresses of solicitors,<sup>44</sup> a compilation of computer programs,<sup>45</sup> a timetable index,<sup>46</sup> trade catalogues,<sup>47</sup> and street directories.<sup>48</sup> As we will see, a database is defined in very wide terms. As a result, it is possible that most, if not all, of the subject matter previously protected as compilations would now be protected as databases.<sup>49</sup> If this is the case, it will leave little or no room for ‘tables and compilations’ in the future.

<sup>36</sup> *Green v. Broadcasting Corp. of New Zealand* [1989] RPC 469 (CANZ), 472, 475, 490.

<sup>37</sup> *Francis Day and Hunter v. 20th Century Fox* [1940] AC 112 (copyright in the song ‘The Man Who Broke the Bank at Monte Carlo’ was not infringed by the performance of a motion picture of the same title). See also *Dick v. Yates* [1881] Ch 6 (no copyright in ‘Splendid Misery’).

<sup>38</sup> *Rose v. Information Services* [1987] FSR 254 per Hoffmann J (there was too slight a degree of skill and labour in *The Lawyer’s Diary*). In *Sinanide v. La Maison Kosmeo* (1928) 139 LTR 365 (CA), protection was refused to the advertising slogan ‘Youthful appearances are social necessities, not luxuries’ by reference to the principle *de minimis non curat lex* (‘the law does not concern itself with trifles’).

<sup>39</sup> In *Francis Day and Hunter v. 20th Century Fox* [1940] AC 112, the Privy Council indicated that if a title were extensive and important enough, it might be possible to protect it. For cases of protection, see *Lamb v. Evans* [1893] 1 Ch 218 (headings in trade directory protected) and *Shetland Times v. Dr Jonathan Wills* [1997] FSR 604 (arguable that newspaper headline of eight or so words—‘Bid to save centre after council funding cock-up’—was protected because it was designedly put together for the purpose of imparting information).  
<sup>40</sup> CDPA 1988, s. 3(1)(d).

<sup>42</sup> *Elanco v. Mandops* [1980] RPC 213.

<sup>43</sup> *Independent Television Publications v. Time Out* [1984] FSR 64.

<sup>44</sup> *Waterlow Directories v. Reed Information* [1992] FSR 409; *Waterlow Publishers v. Rose* [1995] FSR 207; *Kelly v. Morris* (1866) LR 1 Eq 697.

<sup>45</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275 (335 program files, 171 record layout files, and 46 screen layout files were held to be a compilation).

<sup>46</sup> *Blacklock v. Pearson* [1915] 2 Ch 376.

<sup>47</sup> *Purefoy v. Sykes Boxall* (1955) 72 RPC 89.

<sup>48</sup> *Kelly v. Morris* (1866) LR 1 Eq 697.

<sup>49</sup> For a systematic analysis, see E. Derclaye, ‘Do Sections 3 and 3A of the CDPA Violate the Database Directive? A Closer Look at the Definition of a Database in the UK and its Compatibility with European Law’ [2002] EIPR 466 (suggesting that a shopping list is a collection that is not a database and that a table of contents in a book is a collection in which the individual elements are not ‘independent’).

## 2.4 COMPUTER PROGRAMS

After considerable debate at both national and international levels over whether computer programs should be regulated by copyright law, patent law, or by a *sui generis* regime, it was decided in the 1980s that computer programs ought to be protected as literary works.<sup>50</sup> This position is now well entrenched in European and international intellectual property law.<sup>51</sup> In line with these trends, the 1988 Act protects computer programs as literary works.<sup>52</sup> While the Act does not define what is meant by a ‘computer program’,<sup>53</sup> it is clear that it includes source code,<sup>54</sup> assembly code, and object code. It is also clear that ‘computer program’ is not synonymous with software. On this basis, it has been held that the definition of computer program includes instructions permanently wired into an integrated circuit (that is, firmware).<sup>55</sup>

In a decision in which it held that a ‘graphic user interface’ (GUI) is not a computer program (although it may be some other type of work), the Court of Justice has articulated the defining characteristics of a computer program. The ‘object of the protection’, the Court of Justice said, ‘is the expression in any form of a computer program which permits reproduction in different computer languages, such as the source code and the object code.’<sup>56</sup> Because the key characteristic of a program is that it enables the reproduction of the computer program itself, so that the computer can perform its task, it does not include a GUI.<sup>57</sup> This is because a GUI merely enables communication between the computer program and the user, and so does not enable the reproduction of the computer program. The Court said that a GUI ‘merely constitutes one element of that program’ by means of which users make use of the features of that program.<sup>58</sup>

## 2.5 PREPARATORY DESIGN MATERIAL FOR COMPUTER PROGRAMS

To bring British law into conformity with the Software Directive, preparatory design material for computer programs is now included within the general definition of literary works. It has been suggested that this is an inappropriate way of implementing the Directive and that preparatory design material should be treated as part of a computer program.<sup>59</sup>

<sup>50</sup> *Gates v. Swift* [1982] RPC 339; *Sega Enterprises v. Richards* [1983] FSR 73; *Thrustcode v. WW Computing* [1983] FSR 502.

<sup>51</sup> Software Dir.; TRIPS, Art. 10(1); WCT, Art. 4.

<sup>52</sup> CDPA 1988, s. 3(1)(b). The Copyright (Computer Software) Act 1985 had declared only that computer programs were to be *considered* as literary works.

<sup>53</sup> But cf. the WIPO *Model Provisions on Protection of Computer Software* (1978); Green Paper, *Copyright and the Challenge of Technology* (June 1988), COM (88) 172 final, 170; Copyright Act 1976, 17 USC §101 (all offering definitions).

<sup>54</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>55</sup> Software Dir., Recital 7.

<sup>56</sup> *Bezpečnostní softwarová asociace*, Case C-393/09 [2010] ECR I-13971 (ECJ, Third Chamber), [28]–[42] (emphasis added). See also *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 CMLR (4) 55 (ECJ, Grand Chamber), [35]–[37].

<sup>57</sup> Case C-393/09, [38].

<sup>58</sup> Interpreted literally, one might form the view that the Court was saying that a GUI is ‘part’ of a program. But if that were the case, it would be protected, and clearly the Court thought that it was not protected under the Software Directive.

<sup>59</sup> Software Regs, reg. 3; *Bezpečnostní softwarová asociace*, Case C-393/09 [2010] ECR I-13971 (ECJ, Third Chamber), [36]–[37]. For commentary, see S. Chalton, ‘Implementation of the Software Directive in the UK’ [1993] *EIPR* 138, 140.

## 2.6 DATABASES

As we mentioned earlier, in order to comply with the Database Directive, the definition of literary works was amended from 1 January 1998 to introduce ‘databases’ as a distinct class of literary works. Section 3(1)(d) of the CDPA 1988, corresponding to Article 1(2) of the Directive, defines a database very broadly as ‘a collection of independent works, data or other materials which (a) are arranged in a systematic or methodical way, and (b) are individually accessible by electronic or other means’. It seems that the definition is broad enough to cover most, if not all, of the material previously protected as tables and compilations (although preparatory documents suggest that the definition may exclude collections of three-dimensional objects).<sup>60</sup>

The Court of Justice explained some aspects of the definition of a database in *Fixtures Marketing Ltd v. Organismos Prognostikon Agonon Podosfairou AE (OPAP)*.<sup>61</sup> The case concerned a claim by Fixtures Marketing to be the proprietor of a database right in English football fixtures. The defendant organization, which used the fixtures in its betting games, asserted that the fixtures lists were not ‘databases’ and the Athens Court referred a number of questions to the Court of Justice. The Court considered that the notion of database was intended to have ‘a wide scope, unencumbered by considerations of a formal, technical or material nature’. Consequently, there was no reason why a collection of sporting information should not be a database. As regards the prerequisite of ‘independence’, the Court said that this required the constituent material to be ‘separable from one another without their informative . . . or other value being affected’,<sup>62</sup> and the Court intimated that this was true of individual fixtures, each of which had ‘autonomous informative value’ by providing ‘interested third parties with relevant information’.<sup>63</sup> The Court also commented on the requirement that the materials be arranged in a ‘systematic or methodical’ manner so as to be individually accessible, and stated that this required either that there be technical means for searching or other means, such as an index, table of contents, plan, or classification, to allow retrieval.<sup>64</sup> The fixture lists, being organized chronologically and, within the chronology, alphabetically, constituted just such an arrangement. Applying these definitions, the poems in a book of poems by the same poet would most likely be regarded as ‘independent’ and ‘individually accessible’, and thus would constitute a database. It is more difficult to say whether the data on a map would be considered to be ‘independent’ or ‘individually accessible’.

A database does not include a computer program used in the making or operation of databases accessible by electronic means,<sup>65</sup> or, presumably, a compilation of programs. It should be noted that a computer program might itself be or include a compilation of information and hence be a database as well. Insofar as a computer program incorporates parts that fall within the definition of a database, it seems that these components may be independently protected as databases (whether under copyright or the *sui generis* database right). For example, if program interfaces can be characterized as databases, they may be protected by either copyright or the *sui generis* database right. The fact that a computer program may be protected both as a literary work and by the database right

<sup>60</sup> Explanatory Memorandum accompanying the Amended Proposal for a Council Directive on the legal protection of databases COM(93)464 final, SYN 393 [1993] *OJ C* 308/1, 41. *Football Association Premier League Ltd v. Panini UK Ltd* [2004] *FSR* (1) 1, [25], [29] (suggesting that an album for stickers of football players—the stickers being artistic works—is a compilation, but it is probably a database).

<sup>61</sup> Case C-444/02 [2005] 1 *CMLR* (16) 367.

<sup>62</sup> *Ibid.*, [29]. See also E. Derclaye, ‘Do Sections 3 and 3A of the CDPA Violate the Database Directive? A Closer Look at the Definition of a Database in the UK and its Compatibility with European Law’ [2002] *EIPR* 466, 469 (“‘independent’ means that an element makes sense by itself”); Davison, 72.

<sup>63</sup> Case C-444/02, [33].

<sup>64</sup> *Ibid.*, [30].

<sup>65</sup> Database Dir., Art. 1(3).

may have a number of important consequences. Because the defences available in relation to the database right are less extensive than those offered by copyright, the overlap might undermine the defences to copyright infringement specially tailored for computer programs. In particular, it is possible that the copyright defence that allows decompilation of programs for the purpose of ascertaining interface information might be rendered redundant.

One question that has arisen in this context is the extent to which a multimedia work as a whole (as distinct from the sound, pictures, text, and moving images of which it is made up) can be protected as a database.<sup>66</sup> Given that a database is defined, seemingly without restriction to the type of material, as a collection of ‘works data or other materials’, there seems no reason why a multimedia work should not be a database. While it may seem odd that a compilation of artistic works or sound recordings is protected as a literary work,<sup>67</sup> this conclusion now seems unavoidable.

### 3 DRAMATIC WORKS

The CDPA 1988 does not define what a ‘dramatic work’ is, except to state that it includes a work of dance or mime.<sup>68</sup> However, it is relatively clear that dramatic work includes the scenario or script for films, plays (written for the theatre, cinema, television, or radio),<sup>69</sup> and choreographic works.<sup>70</sup>

For a creation to qualify as a ‘dramatic work’, it must be a ‘work of action’—that is, ‘capable of being performed’.<sup>71</sup> While the courts have not yet fully explored what is meant by a ‘work of action’, it is clear that it does not include static objects, sets, scenery, or costumes<sup>72</sup> (although these might be protected as artistic works).<sup>73</sup> It has been said that a film will usually be a dramatic work where there is ‘cinematographic work’ on the film.<sup>74</sup> In some limited circumstances, a work of action might include sports, such as gymnastics or synchronized swimming.<sup>75</sup>

<sup>66</sup> See Stamatoudi, ch. 5.; Aplin, ch. 3; S. Beutler, ‘The Protection of Multimedia Products through the European Community’s Directive on the Legal Protection of Databases’ [1997] *Ent L Rev* 317.

<sup>67</sup> See *Football Association Premier League Ltd v. Panini UK Ltd* [2004] *FSR* (1) 1, [32] *per* Mummery LJ (giving examples of compilations made up of artistic works). One effect could be that a compilation of sound recordings would achieve much longer protection under copyright as a database than as a single sound recording.

<sup>68</sup> CDPA 1988, s. 3(1).

<sup>69</sup> *Green v. Broadcasting Corp. of New Zealand* [1989] *RPC* 469, 493.

<sup>70</sup> The fixation of such a work can be in writing ‘or otherwise’ and may accordingly be, for instance, on film. Where a dramatic work is recorded on a film, the film must contain the whole of the dramatic work in an unmodified state: *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67 (dance recorded on film held unprotected because the film had been drastically edited and so was no longer a recording of the dance).

<sup>71</sup> *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67 (CA), 73.

<sup>72</sup> *Creation Records* [1997] *EMLR* 444 (finding no arguable case that a photo shoot is dramatic work, since scene was inherently static, having no movement, story, or action).

<sup>73</sup> *Shelley Films v. Rex Features* [1994] *EMLR* 134; cf. *Creation Records* [1997] *EMLR* 444.

<sup>74</sup> *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67. (In the view of Buxton LJ, such a construction went some way towards ensuring compliance with Berne, Art. 14*bis*, which specifies that a cinematographic work must be protected ‘as an original work’ and that the owner of copyright therein ‘shall enjoy the same rights as the author of an original work’. Nourse LJ said that he reached his conclusion without reference to the Convention.)

<sup>75</sup> Although a film of a sporting event may be a work of action, it is probably not an ‘original’ dramatic work, being a mere recording of actions. Kamina argues that, in order to be a dramatic work, an audio-visual work must convey a story, and therefore concludes that documentaries could be protected, but doubts whether newsreels or television productions of sports matches would be: Kamina, 72–4.

The requirement that, to be a dramatic work, the subject matter must be ‘capable of being performed’ initially operated in a restrictive manner. In the *Hughie Green* case,<sup>76</sup> Green was the originator and producer of a talent show called *Opportunity Knocks*—a programme that followed a particular format: certain catchphrases were used; sponsors introduced contestants; and a ‘clapometer’ was used to measure audience reaction. Beyond this, the content of the show varied from show to show. The Broadcasting Corporation of New Zealand broadcast a television talent quest that was similar to *Opportunity Knocks* in that the title and catchphrases were the same. It also used a clapometer, as well as the idea of using sponsors to introduce contestants.<sup>77</sup> Green’s action for copyright infringement against the Broadcasting Corporation of New Zealand failed, primarily because he was unable to show that the programme was a dramatic work. In part, this was because, when looked at as a whole, the show lacked the specificity or detail for it to be performed. In particular, the Privy Council said that the scripts provided only a general idea or concept of a talent quest, which was not capable of being protected. The Privy Council also held that the features of the programme that were repeated in each show (namely, the format or style of the show) were not dramatic works. The reason for this was that a dramatic work must have sufficient unity for it to be capable of being performed.<sup>78</sup> On the facts, it was held that the particular features that were repeated from show to show (the format) were unrelated to each other except as accessories to be used in the presentation of some other dramatic performance.<sup>79</sup> The requirement of ‘unity’ means that interactive video games are not ‘dramatic works’, since the sequence of images will not be the same from one play to another. Thus, in *Nova Productions Ltd v. Mazooma Games*,<sup>80</sup> Kitchin J held that a computer game simulating billiards involved artistic works and literary works, but not a dramatic work.

The failure of the Privy Council to protect television formats in the *Hughie Green* case prompted a number of (unsuccessful) attempts to have formats recognized by British law.<sup>81</sup> The proponents of format rights appealed to the usual moral and economic arguments to support their cases. In particular, it was argued that formats require creative input similar to that involved in existing copyright works. It was also argued that failure to protect formats is not only unjust, but also fails to provide sufficient incentives to television producers. Those opposed to format rights noted the problems of defining what a format is, the anti-competitive effects, and the costs of such rights, as well as the potential for nuisance litigation.<sup>82</sup> The opponents of format rights favour leaving the developers of formats to the remedies offered by passing off<sup>83</sup> and breach of confidence.<sup>84</sup>

<sup>76</sup> *Green v. Broadcasting Corp. of New Zealand* [1989] RPC 469 (CANZ), 477 (scripts could not constitute dramatic works because they could not be acted or performed, which is the essence of drama); on appeal [1989] 2 All ER 1056 (Privy Council).

<sup>84</sup> Lord Sanderson of Bowden, Hansard (HL), 26 July 1990, cols 1718–19. See below pp. 1146–7, 1176.

While formats are not protected to the extent that some would like, the need for *sui generis* format protection is less pressing as a result of the Court of Appeal decision in *Norowzian v. Arks*.<sup>85</sup> This is because, in this case, the Court liberally interpreted the requirement that a dramatic work must be ‘capable of being performed’ to include performances by artificial means, such as the playing of a film.<sup>86</sup> Consequently, a cartoon may be a dramatic work. In this decision, the Court of Appeal was called upon to decide whether a Guinness advertisement (which featured an actor dancing while a pint of Guinness was being poured) had infringed copyright in an earlier film *Joy* (which the advertisement copied). To answer this question, it was necessary to determine whether *Joy* was a dramatic work.<sup>87</sup> One of the notable features of *Joy* was that it utilized a particular editing technique known as ‘jump-cutting’ (that is, cutting segments out of the film to produce a series of artificial effects). One of the consequences of this was that the finished film contained a series of movements that could not be performed by an actor.<sup>88</sup> At first instance, it was held that because the (artificial) dance shown on the edited film could not be performed, the film did not embody a dramatic work. (If the film had shown all of the movements of the actor, it would have been protected.) However, on appeal, it was held that the film itself was a dramatic work. The Court said that, because it was possible for the film to be played, it was therefore ‘capable of being performed’.

One might wonder whether, in the light of European developments, the question of the protection of formats needs to be revisited. If a format comprises more than ‘ideas’ and amounts to an ‘intellectual creation’, existing Court of Justice case law suggests that it should receive protection from various acts, including reproduction. The language of dramatic work is open-textured and certainly can be interpreted more broadly than occurred in the *Hughie Green* case. Overall, that case is increasingly likely to be regarded as an outlier and limited to its facts.

## 4 MUSICAL WORKS

The CDPA 1988 also protects musical works. A ‘musical work’ is defined to mean ‘a work consisting of music exclusive of any words or action intended to be sung, spoken or performed with the music’.<sup>89</sup> Thus the words and the music of songs and similar works are treated as the subject matter of distinct copyrights. A song therefore consists of both a musical work and a literary work: the tune and lyrics, respectively.

The meaning of ‘music’ was discussed in *Sawkins v. Hyperion Records*.<sup>90</sup> This case concerned the efforts of Sawkins in producing what are termed ‘performing editions’ of four of the works of the seventeenth-century composer Michel-Richard de Lalande. Sawkins’ efforts included ‘figuring of the bass’, adding ‘ornamentation’, and performance directions. Hyperion, which made recordings of performances of the works of Lalande by musicians using Sawkins’ scores, denied that, by so doing, it infringed copyright, arguing that Sawkins’ contribution had not created an original *musical* work. One question was

<sup>85</sup> *Norowzian v. Arks* (No. 2) [2000] EMLR 67, 73.      <sup>86</sup> *Ibid.*

<sup>87</sup> Note that the argument on appeal was not that there was copyright in the dance as a dramatic work (recorded on film), but that the film was not merely a ‘record’ of a dramatic work, but was itself a dramatic work: *ibid.*

<sup>88</sup> That is, the finished film owed as much to the editing technique as to the dance that was filmed.

<sup>89</sup> CDPA 1988, s. 3(1). Sheet music was held to be covered by the term ‘book’ in the Statute of Anne: see *Bach v. Longman* (1777) 2 *Cowp* 623. See R. Rabin and S. Zohn, ‘Arne, Handel, Walsh, and Music as Intellectual Property: Two Eighteenth-Century Lawsuits’ (1995) 120 *JRMA* 112.

<sup>90</sup> *Sawkins v. Hyperion Records* [2005] 1 *WLR* 3281.

whether Sawkins' contributions could count as contributions to the music in circumstances under which they did not involve alteration of the notes or melody. The Court of Appeal held that they could. Mummery LJ explained that the:

. . . essence of music is combining sounds for listening to. Music is not the same as mere noise. The sound of music is intended to produce effects of some kind on the listener's emotions and intellect. The sounds may be produced by an organised performance on instruments played from a musical score, though that is not essential for the existence of the music or of copyright in it.<sup>91</sup>

The defendant's argument mistakenly assumed that the *actual notes* were the only matter covered by musical copyright; according to the Court of Appeal, other elements that contributed to *the sound* as performed, such as tempo and performance practice indicators, were equally music.

Although the Court of Appeal explicitly excluded 'noise' from the scope of 'music', it said nothing about the controversial question of whether 'silence' can be music.<sup>92</sup> According to newspaper reports, a dispute over just such a work of 'silence' resulted in a settlement—and a six-figure payment for the rights to use the work! The work in question was by the avant-garde composer John Cage, who, in the 1950s, wrote a piece entitled *4' 33"*, a work of silence. Apparently, the basis for the claim was that classical-pop fusion group The Planets included 60 seconds of silence on its recording. A member of the group claimed that this was an improvement on Cage's effort—because they had achieved in 60 seconds what he accomplished in 273! The payment to Cage's publisher suggests, however, that the legal advisers to The Planets (and the group's record company) feared that a court would treat Cage's work as protected.<sup>93</sup>

## 5 ARTISTIC WORKS

The fourth category of works protected by copyright is artistic works.<sup>94</sup> The first artistic works protected by statute were 'engravings' (1735). These were followed by calico designs (1787), sculptures (1798 and 1814), drawings, paintings, and photographs (1862), and works of artistic craftsmanship (1911).<sup>95</sup> The various artistic works are now collected together in section 4(1) of the CDPA 1988, which contains a detailed list of the types of subject matter that are protectable as 'artistic works'. These are divided into the following three categories:

- (i) irrespective of artistic quality, a graphic work (including a painting, drawing, diagram, map, chart or plan, engraving, etching, lithograph, woodcut, or similar work), a photograph (excluding a film), a sculpture, or a collage;

<sup>91</sup> *Ibid.*, 3295, [53].

<sup>92</sup> C. L. Saw, 'Protecting the Sound of Silence in *4' 33"*' [2005] *EIPR* 467; Copinger, [3–48], 98 ('it is doubtful that a passage of silence by itself is capable of being a musical work, even if claimed by the author or critics to be such').

<sup>93</sup> (22 June 2002) *The Independent*.

<sup>94</sup> See S. Stokes, *Art and Copyright* (2nd edn, 2012); A. Barron, 'Copyright, Art and Objecthood', in D. McClean and K. Schubert (eds), *Dear Images: Art, Copyright and Culture* (2002) 277 ('copyright law's conception of the artistic work now faces a crisis of credibility').

<sup>95</sup> The Engravings Act 1735, amended by Acts in 1766 (7 *Geo.* 3 c. 38) and 1776 (17 *Geo.* 3 c. 57); the Sculpture Copyright Act 1798, amended and expanded in 1814 (54 *Geo.* 3 c. 56); the Fine Art Copyright Act 1862 (25 & 26 *Vict.* c. 68). On the latter, see L. Bently, 'Art and the Making of Modern Copyright Law', in McClean and Schubert, *op. cit.*, 331–51.

- (ii) a work of architecture, being a building or fixed structure or a model thereof; or
- (iii) a work of artistic craftsmanship.<sup>96</sup>

## 5.1 GRAPHIC WORKS, PHOTOGRAPHS, SCULPTURES, AND COLLAGES

The first subcategory of artistic works, set out in section 4(1)(a), includes graphic works, photographs, sculptures, and collages. It is important to note that the material contained in section 4(1)(a) is protected irrespective of artistic quality. This ensures that, once a creation falls within a particular category of works, copyright protection is not contingent on the work reaching a certain aesthetic standard. As a result, the task of having to decide what is good or bad art and all of the associated problems are thus avoided.<sup>97</sup> More controversially, the decision that copyright law should not concern itself with the artistic quality of these types of work has been used to expand the *types* of subject matter (as distinct from the *quality* of subject matter) protected as artistic works. While few would have problems with Marcel Duchamp's 'ready-mades' (for example his famous urinal) being protected as an artistic work, more problems arise when objects exclusively used for industrial purposes to achieve commercial ends are protected as artistic works. For a period of time, a fear of making aesthetic judgments (when combined with a degree of formalism) led the courts to provide such protection. In recent years, however, the courts have been more willing to use a general sense of what is meant by 'art' to limit the scope of protectable works.

### 5.1.1 Paintings

Graphic works are specifically defined in section 4(1)(a) to include 'paintings'. For the most part, there have been few problems in determining whether something is a 'painting' and thus whether it qualifies as an artistic work. One of the few situations in which this was not the case was *Merchandising Corp. v. Harpbond*,<sup>98</sup> in which it was argued that the facial make-up of the pop star Adam Ant was a painting and thus protected by copyright. The Court of Appeal rejected this submission, Lawton LJ remarking that it was fantastic to suggest that make-up on anyone's face could possibly be a painting. He held that a painting required a surface and that Adam Ant's face did not qualify as such, noting that '[a] painting is not an *idea*: it is an object; and paint without a surface is not a painting' (see Fig. 3.3).<sup>99</sup>

The reasoning of Lawton LJ seems odd, for it is difficult to see why Adam Ant's face is less of a surface than a piece of canvas. The decision could, however, be justified on the ground that a painting must be intended to be permanent. If so, a tattoo would be protected, but dramatic or cosmetic make-up would not.<sup>100</sup> Equally, since the make-up in question consisted of two broad red lines round a light-blue line running from nose to jaw, it is arguable that the work did not satisfy the criteria of originality. Alternatively, the decision could be seen as a case of merger of idea and expression (for which no protection is

<sup>96</sup> CDPA 1988, s. 4(1).

<sup>97</sup> In *Burge v. Swarbrick* [2007] HCA 17, (2007) 234 ALR 204, 81 ALJR 950, [63], the Australian High Court referred to 'the supposed terrors for judicial assessment of matters involving aesthetics'.

<sup>98</sup> [1983] FSR 32. <sup>99</sup> *Ibid.*, 46.

<sup>100</sup> *J. & S. Davis (Holdings) v. Wright Health Group* [1988] RPC 403 may lend support to such a view; cf. *Metix v. Maughan* [1997] FSR 718, 721.

**Fig. 3.3** The defendant's poster in *Merchandising Corp. v. Harpbond* (created by Mr Langford)  
 Source: *Merchandising Corporation of America Inc v. Harpbond Ltd* [1983] 3 FSR 32

granted).<sup>101</sup> In light of European developments,<sup>102</sup> it is suggested that the courts should revisit the unconvincing reasoning in the *Adam Ant* case. If a work made out of face paint or a tattoo constitutes its author's own intellectual creation, then, under European law, it should be protected. The most obvious way to do so under British law is to treat such works as paintings.

### 5.1.2 Drawings

The next type of subject protected as an artistic work under section 4(1)(a) is 'drawings'. In addition to sketches of people and landscapes that we expect to be classified as drawings, protection has been granted to the drawing of a hand on a 'how to vote' card,<sup>103</sup> typeface design,<sup>104</sup> architects' plans (as distinct from actual buildings), and sketches for dress designs.<sup>105</sup> Because protection is granted 'irrespective of artistic quality', copyright in drawings has been widely used to protect industrial designs.<sup>106</sup> Thus drawings of exhaust pipes, boxes for storing kiwi fruit, and the like have been protected.<sup>107</sup> Importantly, such protection has frequently prevented the copying of the (three-dimensional) designed artefact itself. As we will see later, section 51 of the CDPA 1988 has reduced the significance of copyright in drawings for three-dimensional designs, other than in designs for artistic works.<sup>108</sup>

### 5.1.3 Engravings

Engravings were first protected by copyright in 1735. For the most part, the way in which the law has developed since then has provided few surprises, protection being granted to etchings, aquatints, woodcuts, lithographs, and the like. In the last forty years, however,

<sup>101</sup> E. Derclaye, 'Debunking Some of UK Copyright Law's Longstanding Myths and Misunderstandings' [2013] 1 *IPQ* 1; cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

a range of somewhat surprising objects have been protected as engravings. For example, in *Wham-O Manufacturing v. Lincoln Industries*,<sup>109</sup> the New Zealand Court of Appeal held that both the mould from which a frisbee was pressed and the frisbee itself were protected, because the mould was made by cutting onto a surface and so was an engraving, and the frisbee itself was a print from the engraving (see Fig. 3.4).

Despite subsequent doubts being expressed by the Federal Court of Australia<sup>110</sup> about the reasoning in *Wham-O*, it was followed in *Hi-Tech Autoparts v. Towergate Two Ltd.*<sup>111</sup> In that case, Judge Christopher Floyd QC held that copies of the claimant's rubber floor mats for cars could not be sold by the defendant on the grounds that the moulds used in the production of the mats, and the mats themselves, were engravings. The moulds had been made by cutting a series of concentric circles, to a depth of 1/16th of an inch and a bevel angle of 45°, into flat plates. In so holding, the judge placed particular emphasis on the fact that the statute requires engravings to be protected 'irrespective of their artistic quality'.

### 5.1.4 Photographs

Although photographs were protected by copyright shortly after photography was invented in the 1840s,<sup>112</sup> copyright law has never been completely comfortable with photographs,<sup>113</sup> primarily because they seem to be ill-suited to the paradigm of the 'original'

<sup>109</sup> [1985] RPC 127. See also *James Arnold v. Miafern* [1980] RPC 397 (articles made from a block and also the block itself); *Martin v. Polyplas* [1969] NZLR 1046 (coin is an engraving).

and the ‘copy’.<sup>114</sup> Photographs are defined in the 1988 Act as ‘a recording of light or other radiation on any medium on which an image is produced or from which an image may by any means be produced, and which is not part of a film’.<sup>115</sup> The definition is broad enough to include digital photographs (where there is no film). Individual frames from a film are not treated as photographs.<sup>116</sup>

### 5.1.5 Other graphic works

The examples elaborated of ‘graphic works’ are non-exhaustive, so non-itemized works may also be protected as artistic works. In *Abraham Moon & Sons Ltd. v. Thornber*, the then Patents County Court (PCC)—now the Intellectual Property Enterprise Court (IPEC)—held that the instructions for generating fabric designs were graphic works, because they had visual significance for experts.<sup>117</sup> Moreover the subcategory ‘graphic work’ has also been held to protect computer screen icons and graphic user interfaces.<sup>118</sup> However, the dynamic effect created by a series of drawings is not protected as an artistic work.<sup>119</sup>

### 5.1.6 Sculpture

Sculptures were one of the earliest kinds of artistic work to be protected from reproduction. The recognition of copyright in sculptures in 1798 is notable because it took ‘copyright’ (insofar as such a concept existed at that time) out of the realm of printing (books, engravings, or calico printing) to cover reproduction more generally.

Just as the term ‘engraving’ has been stretched to cover many industrial artefacts, so the term ‘sculpture’ has often been understood broadly. Most notoriously, in *Wham-O Manufacturing v. Lincoln*, the New Zealand Court of Appeal held that the wooden model that was used as a mould to make the frisbees was ‘a sculpture’;<sup>120</sup> in *Lucasfilm Ltd v. Ainsworth*, however, Mann J ‘respectfully disagreed’ with that conclusion.<sup>121</sup>

*Lucasfilm Ltd v. Ainsworth*, which concerned the question of whether a plastic version of a ‘stormtrooper’ helmet was a ‘sculpture’, went to the Supreme Court, which approved the approach taken by Mann J and his conclusion that the helmet was not a ‘sculpture’ (see Fig. 3.5).<sup>122</sup> While acknowledging that the assessment of whether an object was a sculpture was one in which ‘subjective considerations are likely to intrude’, Mann J identified a number of guidelines.<sup>123</sup> His articulation of the guidance is worth consulting directly, but here we will note only the emphasis that the legal meaning should not stray too far from the ‘normal’ understanding of what was a sculpture. Thus Mann J noted that while something could be a ‘sculpture’ even though one would not expect to find it in an art gallery, ‘some regard’ has to be had to the normal use of the word ‘sculpture’ and care should be taken to avoid straying too far from what would normally be regarded as such. At the same time, it was stated

that no judgment is to be made about artistic worth. Mann J's guidelines go on to focus on the structural nature, mode of fabrication, and—probably most importantly—the purpose of the object. As to its nature, Mann J is clear that while it is a necessary requirement that a sculpture be a 'three-dimensional representation of a concept,' not every three-dimensional construction would be a sculpture. Likewise, the process of fabrication, such as whether the representation is carved and the material used (for example, wood or stone), might be another relevant factor—although not a determinative one: not everything carved in wood is a sculpture.<sup>124</sup> Ultimately, the determinative factor seems to be the purpose of the process. A purely functional item, not intended to be at all decorative, would not be a sculpture. It is:

. . . of the essence of a sculpture that it should have, as part of its purpose, a visual appeal in the sense that it might be enjoyed for that purpose alone, whether or not it might have another purpose as well. The purpose is that of the creator . . . An artist (in the realm of the visual arts) creates something because it has visual appeal which he wishes to be enjoyed as such. He may fail, but that does not matter (no judgments are to be made about artistic merit). It is the underlying purpose that is important.<sup>125</sup>

The fact that the object has some other use does not necessarily disqualify it from being a sculpture, but it still has to have the intrinsic quality of being intended to be enjoyed as a visual thing.

Applying these guidelines to the material before him, Mann J held that none of the articles were sculpture. His reasons are surprising, so are probably worth quoting in full:

The purpose of the helmet was that it was to be worn as an item of costume in a film, to identify a character, but in addition to portray something about that character—its allegiance, force, menace, purpose and, to some extent, probably its anonymity. It was a mixture of costume and prop. But its primary function is utilitarian. While it was intended to express something, that was for utilitarian purposes. While it has an interest as an object, and while it was intended to express an idea, it was not conceived, or created, with the intention that it should do so other than as part of character portrayal in the film . . . Not everything which has design appeal is necessarily a sculpture. I think that the ordinary perception of what is a sculpture would be over-stretched by including this helmet within it . . . It is not that it lacks artistic merit; it lacks artistic purpose.<sup>126</sup>

Fig. 3.5 Stormtrooper helmet design *Lucasfilm Ltd v. Ainsworth* [2009] FSR (2) 103.

<sup>124</sup> *Lucasfilm Ltd v. Ainsworth* [2009] FSR (2) 103, 153, [118].

<sup>125</sup> *Ibid.*, 153, [118], point (vi).

<sup>126</sup> *Ibid.*, 154 [121].

This seems to give undue emphasis to one conception of the purpose of the costumes and mistakenly to undervalue the importance of appearance in the designs. His explanation for holding that the toys were not sculptures was equally surprising:

These are, as already described, articulated models which are sold as toys and which are intended for the purposes of play. Play is their primary, if not sole, purpose. While their appearance is obviously highly important (if they did not look like the original, the child would not be so interested) they are not made for the purposes of their visual appearance as such. While there is no accounting for taste, it is highly unlikely that they would be placed on display and periodically admired as such. The child is intended to use them in a (literally) hands-on way, in a form of delegated role play, and that is doubtless how they are actually used. That means, in my view, they are not sculptures.<sup>127</sup>

Nevertheless, the Court of Appeal and Supreme Court affirmed the decision. In a speech composed jointly by Lords Walker and Collins, the Supreme Court agreed that the term ‘sculpture’ should be given its ordinary meaning,<sup>128</sup> and approved Laddie J’s definition in *Metix v. Maughan* that ‘sculpture’ refers to a ‘three-dimensional work made by an artist’s hand’.<sup>129</sup> The Court said that Mann J’s multi-factor approach was consistent with that test. It went on to note that there were good policy reasons for differentiating between copyright and designs law, so that the definition of sculpture should not be permitted to ‘creep outwards’.<sup>130</sup> Because the question was one of fact, on which the judge had heard evidence, the assessment was one that a higher court should respect. In the view of the Supreme Court, the assessment by Mann J that the helmet was utilitarian in the sense that it was an element in the process of producing the film was not ‘obviously untenable’.<sup>131</sup> Consequently, the first-instance decision was affirmed.

While the legal understanding of ‘sculpture’ is by no means confined to the works of those who exhibit in art galleries, not all three-dimensional works exhibited in art galleries and attributed to artists will necessarily qualify as sculptures. In *Creation Records* (the Oasis record cover case—see Fig. 3.1), Lloyd J held that the collection of a series of objects around a swimming pool was not itself a sculpture.<sup>132</sup> He explained that he could not see how:

... the process of assembling these disparate objects together with the members of the group can be regarded as having anything in common with sculpture ... No element in the composition has been carved, modelled or made in any of the other ways in which sculpture is made ...<sup>133</sup>

This conclusion leaves unclear the position in relation to so-called *objets trouvés* and other situations in which artists ‘create’ artistic works from found material, famous examples being Duchamp’s urinal, Carl André’s bricks, Damien Hirst’s shark, or Tracy Emin’s bed. Although it seems that these are unlikely to fall within Laddie J’s definition of sculpture as a three-dimensional work *made by an artist’s hand*, Mann J’s multi-factor test, which stresses the ‘purpose’ of the object, seems better able to accommodate such practices.<sup>134</sup>

<sup>127</sup> *Ibid.*, 154 [123]. <sup>128</sup> [2012] 1 AC 208, [29].

<sup>129</sup> *Metix v. Maughan* [1997] FSR 718, 722 (moulds for making functional cartridges in the shape of double-barrelled syringes are not sculptures). The Supreme Court said that this definition had ‘not attracted adverse comment from any quarter’: [2012] 1 AC 208, [34]. It seems that the Court overlooked *Hi-Tech Autoparts v. Towergate Two Ltd* [2002] FSR 254, [48].

<sup>130</sup> [2012] 1 AC 208, [48]. <sup>131</sup> [2012] 1 AC 208, [44], [46].

<sup>132</sup> *Creation Records v. News Group* [1997] EMLR 444. <sup>133</sup> *Ibid.*, 449.

<sup>134</sup> In *Creation Records*, Lloyd J distinguished Gallagher’s assemblage from Carl André’s bricks by reference to the ‘ephemerality of the former’. In *Lucasfilm Ltd v. Ainsworth* [2009] FSR (2) 103, 153, [118], Mann J agreed that André’s bricks would be a sculpture, emphasizing that it was its ‘artistic purpose’ that was key.

All of this concern with what counts as a ‘sculpture’ may, however, be of limited significance in terms of determining whether a work is protected.<sup>135</sup> If the Court of Justice continues the trend of harmonizing EU copyright law, then it seems that the key question is less whether the object is a ‘sculpture’ than it is whether it is an ‘intellectual creation.’ In reaching that conclusion, the question of the quality or purpose of the work may be assumed to be irrelevant except insofar as they limit the potential creative choices of the creator. Moreover, the fact that there is another regime that protects three-dimensional artefacts—namely, the law of designs, which was considered relevant by the Supreme Court—seems to be regarded as irrelevant by the Court of Justice. If the question were to arise today of whether a stormtrooper helmet is a work protected by copyright, there is some possibility that a different answer would be reached.

## 5.2 WORKS OF ARCHITECTURE

The second subcategory of artistic works listed in section 4(1)(b) of the CDPA 1988 is ‘works of architecture’. A ‘work of architecture’ is defined as a building or a model for a building.<sup>136</sup> In turn, a ‘building’ is defined as including ‘any fixed structure, and a part of a building or fixed structure’. It should be noted that copyright also exists in the architect’s plans as drawings.

One question that has arisen is whether buildings include things such as greenhouses, Portakabins, and swimming pools that are built off-site. The main obstacle to protection is that a building is defined as a *fixed* structure.<sup>137</sup> While this was apparently intended to prevent ships from being protected as works of architecture, the status of articles that are not fixed when they are created, but which are intended to be subsequently fixed or permanently placed, is unclear. In an Australian case, the Supreme Court of the Northern Territory held that a plug and mould used for manufacture of pre-cast fibreglass swimming pools were protected by copyright.<sup>138</sup> Explaining that there was no single test for what is a building, Mildren J said that a number of factors needed to be considered, including the size of the structure, its proposed use, whether it is fixed or portable, and its degree of permanence. As a result, he concluded that while neither the plug nor the mould was a building, the pools were. This was despite the fact that the pools were manufactured off-site and were capable of being removed.

In contrast to other types of artistic work, there is no requirement that architectural works (and works of artistic craftsmanship) should be protected ‘irrespective of artistic quality’. This seems to suggest that, when deciding whether subject matter qualifies as an architectural work (or as a work of artistic craftsmanship), we should consider whether the work is a work of architecture (or artistic craftsmanship), and if so, whether it is sufficiently artistic. While the courts have accepted that a work of artistic craftsmanship must, by its very nature, be sufficiently artistic to attract copyright, the position in relation to architectural works is less clear. If buildings are protected only if they are artistic, it is unlikely that designs for things such as swimming pools would be protected. One factor that suggests that, for a work to qualify as a work of architecture, it must also be ‘artistic’ is that, in contrast to section 4(1)(a), there is no explicit statement that such works are to be protected ‘irrespective of artistic quality’. However, this interpretation is difficult to reconcile

<sup>135</sup> However, at least for the moment, it retains significance particularly when examining whether the defence provided by CDPA 1988, s. 51, is in play. See further pp. 772, 775–6.

<sup>136</sup> CDPA 1988, s. 4(1)(b). Copyright protection for works of architecture was first introduced under the 1911 Act to give effect to the Berlin Revision of the Berne Convention.

<sup>137</sup> CDPA 1988, s. 4(2) (but note that the provision says ‘building’ *includes* ‘any fixed structure’).

<sup>138</sup> *Darwin Fibreglass v. Kruhse Enterprises* (1998) 41 IPR 649.

with the legislative history. Under the Copyright Act 1911, a work of architecture had to satisfy a qualitative threshold in order to be protected; this criterion was removed under the Copyright Act 1956. This would suggest that, under the CDPA 1988, the legislature intended there to be no need for a work of architecture to be ‘artistic’ for it to be protected. This would be in line with the current trend of jurisprudence from the Court of Justice.

### 5.3 WORKS OF ARTISTIC CRAFTSMANSHIP

The final category of artistic works listed in section 4(1)(c) of the CDPA 1988 is ‘works of artistic craftsmanship’. The legislative origins of this category of work, which first appeared in the Copyright Act 1911, are obscure.<sup>139</sup> Works of artistic craftsmanship cover creations such as handcrafted jewellery, tiles, pots, stained-glass windows, wrought-iron gates, hand-knitted jumpers, and crocheted doilies. In order for a work to fall within this category, it is necessary to show that the work is ‘artistic’ and that it is a work of ‘craftsmanship’. We will deal with each in turn.

#### 5.3.1 Requirement of ‘artistic quality’

A work will qualify as a work of artistic craftsmanship only if it is ‘artistic’—that is, if it has an element of real artistic or aesthetic quality.<sup>140</sup> This approach is unusual in copyright law because it requires the courts to consider whether the work satisfies the qualitative threshold of being artistic. The question of what is meant by a work of *artistic* craftsmanship was discussed by the House of Lords in *Hensher v. Restawile Upholstery*.<sup>141</sup> Because the defendants conceded that the claimant’s prototype of a mass-market upholstered chair was a work of craftsmanship, the only question to be determined was whether the chair was a work of *artistic* craftsmanship. While all of their Lordships agreed that the chair was not artistic, they differed in their explanations as to why.

- Lord Reid said that an object could be said to be artistic if a person gets ‘pleasure or satisfaction . . . from contemplating it’.<sup>142</sup> As a result, his Lordship said that the test to decide whether a work was artistic was whether ‘any substantial section of the public genuinely admires and values a thing for its appearance and gets pleasure or satisfaction, whether emotional or intellectual, from looking at it’.<sup>143</sup> Lord Reid noted that ‘looking nice appears to me to fall short of having artistic appeal’.<sup>144</sup> While the author’s intention that the resulting product is artistic might be important, Lord Reid indicated it was neither ‘necessary [n]or conclusive’. Since there was no evidence that anyone regarded the furniture in issue as artistic, Lord Reid concluded that the prototype was not protected by copyright.
- Lord Morris said that, in this context, the word ‘artistic’ required no interpretation. However, he acknowledged that, because the question of whether a particular artefact was artistic was a matter of personal judgment, courts might be faced with differences of opinion. Because of this, Lord Morris said that a court should look to see if there was a general consensus of opinion ‘among those whose views command respect’.<sup>145</sup> The views of the artist and the person acquiring the object might act as pointers as to whether something is artistic. However, the question was ultimately one for the courts, guided by evidence (particularly of specialists). Since the most

<sup>139</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64 (Lord Simon).

<sup>141</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64.

<sup>142</sup> *Ibid.*, 78E.

<sup>143</sup> *Ibid.*, 78G.

<sup>144</sup> *Ibid.*, 79C–D.

<sup>145</sup> *Ibid.*, 81D.

favourable thing that had been said about the prototype chair was that it was distinctive, Lord Morris was content to conclude that it was not artistic.

- Lord Kilbrandon said that the question of whether something was a work of art depended on whether it had come into existence as the product of an author who was consciously concerned to produce a work of art.<sup>146</sup> For Lord Kilbrandon, this must be judged from the work itself and the circumstances of its creation. A work did not become a work of art as a result of the opinions of critics or the public at large. As a consequence, expert evidence was irrelevant. Instead, it was for the judge to determine whether the author had the ‘desire to produce a thing of beauty which would have an artistic justification for its own existence’.<sup>147</sup> Since, in the case in hand, the objective was to produce a commercially successful chair, it was not a work of artistic craftsmanship.
- In deciding whether a craftwork was artistic, Viscount Dilhorne explained that this was really a question of fact for the court to answer. As such, he declined to elaborate much further on the meaning of artistic.<sup>148</sup> He did say, however, that a work would not be artistic merely because there was originality of design, but that it could be artistic even if it were functional. While Viscount Dilhorne said that expert evidence and public opinion would be relevant,<sup>149</sup> in the end it seems that he preferred to act on his own intuition as to what was a ‘work of art’. However, since no witness had described the chair as a work of art, he said that this was not even a borderline case: the prototype was not protected by copyright.<sup>150</sup>
- Lord Simon took a rather different approach from his colleagues, insofar as he emphasized that it was the craftsmanship rather than the work that must be artistic. Lord Simon also said that the fact that the work ‘appeals to the eye of the beholder, giving him visual pleasure’ was irrelevant.<sup>151</sup> Examples of ‘artistic craftsmen’ included hand-painters of tiles, and makers of stained-glass windows and wrought-iron gates, but not ‘plumbers’. Lord Simon said that many craftsmen fell into an intermediate category, some of their products being the result of artistic craftsmanship, while others were the product of craftsmanship. In making the decision as to whether a particular object was created by a person who was an ‘artist craftsman’, Lord Simon took the view that ‘the most cogent evidence is likely to be either from those who are themselves acknowledged artistic-craftsmen or from those who are concerned with the training of artist-craftsmen—in other words, expert evidence’.<sup>152</sup> Lord Simon added, however, that the crucial question was ‘the intent of the creator and its result’.<sup>153</sup> Like the other Law Lords, he found the application of his test to the facts relatively easy: none of the experts had regarded the settee as exhibiting anything more than originality of design and appeal to the eye. The settee was an ordinary piece of furniture and not an example of artistic craftsmanship.

Given the ‘different and apparently irreconcilable’ tests employed in *Hensher*, it is not surprising to find that there has been little consistency in subsequent case law as to the approach to be taken when assessing ‘artistry’.

In *Merlet v. Mothercare*,<sup>154</sup> in which Walton J had to decide whether a baby’s cape made by Madame Merlet was a work of artistic craftsmanship, Walton J said that the majority in *Hensher* had held that the relevant question in determining whether a work was artistic was whether the object in question was a work of art.<sup>155</sup> However, given the warning not to

<sup>146</sup> *Ibid.*, 96G.      <sup>147</sup> *Ibid.*, 98C.      <sup>148</sup> *Ibid.*, 86G–87A.      <sup>149</sup> *Ibid.*, 87C–D.

<sup>150</sup> *Ibid.*, 87E–F.      <sup>151</sup> *Ibid.*, 93C.      <sup>152</sup> *Ibid.*, 94H.      <sup>153</sup> *Ibid.*, 95B–C.

<sup>154</sup> *Merlet v. Mothercare* [1986] *RPC* 115. The Court of Appeal (at 129*ff*) considered only issues relating to infringement of copyright in Mme Merlet’s drawings.

<sup>155</sup> *Ibid.*, 125–6, citing Viscount Dilhorne, Lord Simon, and Lord Kilbrandon.

exercise a value judgment, he concluded that, in the first instance, the question is whether the artist-craftsman intended to create a work of art. If the intention was present and the creator had not ‘manifestly failed’ in this regard, then the work was a work of art. Because Madame Merlet had not set out to create a work of art, but instead had utilitarian considerations in mind (she hoped that the cape would shield her son from the rigours of the climate when visiting her mother in the Scottish Highlands), Walton J concluded that the baby cape was not a work of artistic craftsmanship. In contrast, in *Vermaat v. Boncrest*,<sup>156</sup> Evans-Lombe J seems to have declined to follow *Merlet* and instead adopted a new test, which required that, for a work to be artistic, there had to be evidence of creativity. The case concerned the design of a patchwork bedspread and whether this was a work of artistic craftsmanship. Evans-Lombe J referred approvingly to the view of the New Zealand High Court that the question of whether a work was of artistic craftsmanship could not depend purely on the intention of the creator; the finished work must have some artistic quality, in the sense of being produced by someone with creative ability and having aesthetic appeal.<sup>157</sup> Applying that test of artistry to the facts, the judge held that though the designs were ‘pleasing to the eye’, they did not exhibit the necessary requirement of creativity.

If the judgment in *Vermaat* undermined Walton J’s attempt in *Merlet* to resolve the question of when a work of craftsmanship is ‘artistic’, yet more confusion has been created by the rather incoherent judgment of Rimer J in *Guild v. Eskandar*.<sup>158</sup> In this case, the question was whether the claimant’s wide, square-shaped designs for a cardigan and sweater were works of artistic craftsmanship.

Initially, Rimer J purported to follow *Merlet* and found that there was no evidence that the claimant regarded herself as an artist or intended to create a work of art; she chose the design because it appealed to her and she therefore believed that it would appeal to others. If he had been rigorously following *Merlet*, that should have put an end to the investigation; instead, Rimer J went on to consider whether the garment ‘can fairly be regarded as satisfying the aesthetic emotions of a substantial section of the public’<sup>159</sup> (He may have done so purely out of deference to Lord Reid in *Hensher* or just in case a different criterion was applied on appeal, but the case is unsatisfactory for failing to explain the reasons for this examination.) The judge took account of the conflicting expert evidence, but ultimately concluded that the garments were not works of art. This was in spite of the fact they had been displayed in the Victoria & Albert Museum, Rimer J explaining that they were exhibited as examples of developments in fashion rather than because anyone regards them as works of art.

Clearly, the decisions in *Vermaat* and *Guild* have done little to clarify when a work of craftsmanship is to be treated as artistic.<sup>160</sup> Further guidance from a higher court would be welcome indeed.

### 5.3.2 Requirement of ‘craftsmanship’

As well as showing that the work is artistic, it is also necessary to show that it is a work of ‘craftsmanship’. In *Hensher v. Restawile*, Lord Simon defined a work of craftsmanship as presupposing ‘special training, skill and knowledge’ for its production.<sup>161</sup> He also said that it implied ‘a manifestation of pride in sound workmanship’. A rather different definition was provided by Lord Reid, who referred to a work of craftsmanship as ‘a durable, useful handmade object’.<sup>162</sup> Lord Reid seemed to suggest that if the defendant had not conceded

<sup>156</sup> [2001] (5) FSR 49. <sup>157</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216.

<sup>158</sup> *Guild v. Eskandar* [2001] (38) FSR 645. <sup>159</sup> *Ibid.*, 700.

<sup>160</sup> Note also *Lucasfilm v. Ainsworth* [2008] EWHC 1878 (Ch) (Mann J holding that the stormtrooper helmets in *Star Wars IV* were not works of ‘artistic craftsmanship’ because ‘[t]heir purpose was not to appeal to the aesthetic at all. It was to give a particular impression in a film; not discussed on appeal).

<sup>161</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 91. <sup>162</sup> *Ibid.*, 77.

that the prototype was a work of craftsmanship, he would not have been inclined to that view. This was because the prototype, which was a flimsy, temporary, knock-up that had subsequently been destroyed, was better described as a 'step in a commercial operation' with no value of its own rather than as a work of craftsmanship.<sup>163</sup> While wooden rods (used to teach addition and subtraction to children) have been held not to be products of craftsmanship,<sup>164</sup> knitting and tapestry-making have been held to be a craft,<sup>165</sup> and the baby's cape in *Merlet v. Mothercare* was said to be 'very much on the borderline'.<sup>166</sup>

One problem with the courts' failure to provide a helpful definition of craftsmanship is that it is unclear whether the work needs to be handmade to be protected. In *Hensher v. Restawile*, Lord Reid and Viscount Dilhorne suggested that craftsmanship implied that the work was handmade.<sup>167</sup> In contrast, Lord Simon said that 'craftsmanship' could not be limited to handicrafts, nor was the word 'artistic' incompatible with machine production.<sup>168</sup> The approach of Lord Simon was followed by the Federal Court of Australia in *Coogi Australia v. Hysport International*.<sup>169</sup> In that case, Drummond J held that the stitch structure of a fabric made up of different yarns (used to make jumpers), which was constructed in such a way as to produce a mixture of textured surfaces (some flat, some rolled, some protruding), was a work of artistic craftsmanship. Drummond J said that the way in which the designer had used the stitch structures and colour to produce an unusual textured and multi-coloured fabric meant that the design was artistic. This was so even though the design was mass-produced and had been formulated on a computer, rather than using traditional craft techniques. As regards the issue of mass-production, Drummond J reviewed the authorities and found that he preferred Lord Simon's approach in *Hensher v. Restawile*. To hold otherwise, he said, would be to import a Luddite philosophy into copyright legislation, which was enacted against a background of modern industrial organization and was intended to regulate rights of value to persons in the area of activity.<sup>170</sup> Because Drummond J's approach presents a realistic and workable approach to this issue, hopefully it will be followed in the United Kingdom.<sup>171</sup>

Another aspect of the notion of artistic craftsmanship that has proved to be problematic is whether the requirements of artistic quality and craftsmanship must emanate from the same person. In *Burke v. Spicer's Dress Designs*,<sup>172</sup> Clauson J suggested as much when he said that a woman's dress was not a work of artistic craftsmanship because the artistic element (the sketch of the dress) did not originate from the person who made the dress (the dressmaker).<sup>173</sup> However, in *Bonz Group v. Cooke*,<sup>174</sup> the New Zealand High Court held that hand-knitted woollen sweaters depicting dancing lambs and golfing kiwis were

<sup>163</sup> *Ibid.*, 77.

<sup>164</sup> *Cuisenaire v. Reed* [1963] VR 719 (Supreme Court of Victoria); *Komesaroff v. Mickle* [1988] RPC 204 (Supreme Court of Victoria), 210.

<sup>165</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216 (High Court of New Zealand), a case approved by the High Court of England and Wales in *Vermaat* [2001] (5) FSR 49. <sup>166</sup> [1986] RPC 115, 122.

<sup>167</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77 *per* Lord Reid, 84 *per* Viscount Dilhorne (made by hand and not mass-produced). <sup>168</sup> *Ibid.*, 90.

<sup>169</sup> (1998) 157 ALR 247 (FCA). See also *Burge v. Swarbrick* [2007] HCA 17, (2007) 234 ALR 204, 81 AJLR 950, [60] (noting that something such as a 'plug' for a mass-produced boat could be a work of artistic craftsmanship).

<sup>170</sup> *Coogi Australia v. Hysport International* (1999) 157 ALR 247, 258–9.

<sup>171</sup> The fact that a design is created without using traditional 'craftsmanship techniques', or is intended to be mass-produced, may be a factor. See, e.g., *Guild v. Eskander* [2001] FSR (38) 645, 700, not considered on appeal at [2003] FSR (3) 23. <sup>172</sup> [1936] 1 Ch 400, 408.

<sup>173</sup> This approach is consistent with the views of Lord Simon in *George Hensher Ltd v. Restawile Upholstery (Lancs)* [1976] AC 64 to the effect that a work of artistic craftsmanship is the work of a person who is an 'artist-craftsman'.

<sup>174</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216 (High Court of New Zealand). See also *Spyrou v. Radley* [1975] FSR 455; *Bernstein v. Sydney Murray* [1981] RPC 303; *Merlet v. Mothercare* [1986] RPC 115, 123–4.

a work of artistic craftsmanship, the hand-knitters being craftspeople and the designer an artist. Tipping J observed that it was not essential that the same person both conceive and execute the work.<sup>175</sup>

### 5.3.3 Australian escape route

It is clear that the English courts have struggled with the interpretation of the notion of artistic craftsmanship. An indication as to how the problems can be avoided has recently been provided by the unanimous decision of Australia's highest court, the High Court, in *Burge v. Swarbrick*.<sup>176</sup> The question in that case was whether Swarbrick's design for a yacht, the JS 9000 (see Fig. 3.6)—in particular, the hull and deck mouldings—were works of artistic craftsmanship.

The High Court conducted a careful review of the history of the concept of 'artistic craftsmanship', noting its origins in the Copyright Act 1911 (which had been applied to Australia) and the interpretation thereof by Lord Simon in *Hensher v. Restawile*. By emphasizing the fact that it was only Lord Simon who had considered the meaning of the composite phrase,<sup>177</sup> the High Court avoided the difficulty of 'distilling a *ratio decidendi*' from the five judgments.<sup>178</sup> While refusing to provide 'any exhaustive and fully predictive identification of what can and cannot amount to a "work of artistic craftsmanship"', the Court concluded that the key factor that separates protected works of artistic craftsmanship from mere industrial designs is the significance of functional constraints.<sup>179</sup> With works of artistic craftsmanship, there is considerable 'freedom of design choice' and thus scope for 'real or substantial artistic effort'. The intention of the designer could cast some light on this and, in his evidence, Swarbrick had acknowledged that he sought to produce a 'well mannered, easily balanced boat that was fast'. However, in most cases, the crucial evidence would be the views of experts, and here this confirmed that speed was the overriding consideration in the design of 'sports boats'.<sup>180</sup> Designing the JS 9000 therefore

<sup>175</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216 (High Court of New Zealand), 224; *Vermaat v. Boncrest* [2001] FSR 49.

<sup>176</sup> [2007] HCA 17, (2007) 234 ALR 204, 81 ALJR 950.

<sup>177</sup> According to the Court, 'craftsmanship' and 'aesthetic quality' are not distinct questions: *ibid.*, [66].

<sup>178</sup> *Ibid.*, [55]–[56]. <sup>179</sup> *Ibid.*, [82]–[84].

<sup>180</sup> See *ibid.*, [63]–[65], noting the problems with such evidence, in particular that 'few alleged authors of works of artistic craftsmanship [will] be heard readily to admit the absence of any aesthetic element in their endeavours'.

involved the application of principles of mathematics, physics, and engineering, rather than making something visually or aesthetically appealing. Thus the plug and mouldings were not works of artistic craftsmanship.

Although the decision in *Burge v. Swarbrick* is based on legislation that now differs substantially from that operating in the United Kingdom, there is much to be said for the clarity that it brings to the notion of a work of artistic craftsmanship. Had the ‘design freedom’ test been applied in *Guild v. Eskander* or *Vermaat v. Boncrest*, one could imagine that a different result might well have been reached: both look like cases in which the creator possessed and utilized the freedom available in creating the design of clothes and bedspreads. Of course, other cases, such as *Hensher* itself or *Merlet v. Mothercare*, would require the courts to face up to the difficult question as to how much design freedom would suffice to render a work one of artistic craftsmanship. The High Court was willing to say only that this was a question of ‘fact and degree’.

### 5.3.4 European escape route

An alternative way out of the problem of defining works of artistic craftsmanship—at least for the purposes of subject matter—is to question what role quality determinations can have in a harmonized system of EU copyright law. It is not simply that the EU law requires the United Kingdom to protect intellectual creations, but also that it appears to prohibit the use of qualitative criteria.<sup>181</sup> Recital 8 of the Software Directive states that originality is the only criterion for protection and that ‘no tests as to the qualitative or aesthetic merits of the program should be applied’,<sup>182</sup> while the Term Directive indicates that ‘no other criteria such as merit or purpose’ should be used when assessing the originality of photographs,<sup>183</sup> and the Database Directive directs that ‘no aesthetic or qualitative criteria’ may be used when determining the eligibility of a database for copyright.<sup>184</sup> Assuming, as the Court of Justice has been willing to do, that the logic expressed in these directives applies to all ‘works’, then no qualitative criteria could be applied when deciding on the eligibility of ‘works of artistic craftsmanship’ for protection. Applying this logic, ‘artistic’ could not be understood as having the same meaning as it has for ‘artistic works’ in copyright law generally (that is, referring to something that is perceived visually). Applying such a criterion, if a work of craftsmanship is original, in the sense described in Chapter 4 (that is, the result of creative, as opposed to functionally constrained, choices), then it should be protectable.

## 6 FILMS

Moving pictures were first produced towards the end of the nineteenth century. Initially, motion pictures were protected in the United Kingdom only indirectly as series of photographs or as dramatic works.<sup>185</sup> At an international level, ‘cinematographic works’ were gradually recognized as the subject matter of authors’ rights protection.<sup>186</sup> However, UK law instead recognized cinematic ‘films’ as an independent category of subject matter in the Copyright Act 1956,<sup>187</sup> conferring first ownership on ‘the maker’ thereof.<sup>188</sup> Under the CDPA 1988, ‘film’ is defined to mean a recording

<sup>181</sup> S. Van Gompel and E. Lavik, ‘Quality, Merit, Aesthetics and Purpose: An Inquiry into EU Copyright Law’s Eschewal of other Criteria than Originality’ (2013) 236 *RIDA* 100. <sup>182</sup> Emphasis added.

<sup>183</sup> Term Dir., Recital 16 (emphasis added). <sup>184</sup> Database Dir., Recital 16 (emphasis added).

<sup>185</sup> Kamina, ch. 2. <sup>186</sup> Berne, Art. 2(1). <sup>187</sup> CA 1956, s. 13.

<sup>188</sup> CA 1956, s. 13(4), (10) (defining ‘maker’ in terms similar to the definition of producer in CDPA 1988, s. 178). Prior to the amendments in 1996, copyright in films was treated in a similar manner to that in sound

on any medium from which a moving image may be produced by any means.<sup>189</sup> This broad definition encompasses celluloid films and video recordings or disks, as long as they produce ‘moving images’.<sup>190</sup> Multimedia products may sometimes be protected as films,<sup>191</sup> although it has been doubted whether recordings that generate text, such as teletext, would be covered.<sup>192</sup>

The EC Term and Related Rights Directives distinguish between two distinct subject matters of protection for motion pictures: on the one hand, cinematographic and audiovisual works; and on the other, related rights in fixations of moving images, so-called ‘films’, or ‘videograms’.<sup>193</sup> The former are conceived as authorial works (like literary or artistic works) and thus would be subject to a requirement of originality, and protection lasts for 70 years from the death of the principal director or author of the screenplay, dialogue, or music. Rights in fixations, in contrast, vest in the ‘producer’ and last for 50 years. Unfortunately, no corresponding adjustment has been made to UK law and the 1988 Act continues expressly to acknowledge only one copyright work, a ‘film’, which appears primarily as a ‘related right’ (although modified, as to authorship and term, to comply with the directives).<sup>194</sup> However, the courts have now recognized that original ‘cinematographic works’ under the Berne Convention are also ‘dramatic works’ under UK copyright law.<sup>195</sup>

The soundtrack accompanying a film is treated as part of the film. As we will see, there is no reason why such a soundtrack would not also qualify as a sound recording. This leads to a potential problem of overlap. Section 5B(3)(a) and (b) of the CDPA 1988 clarifies the position by stating that references to the showing of a film include playing the film soundtrack to accompany the film, and references to playing a sound recording do not include playing the film soundtrack to accompany the film. Consequently, if a cinema were to wish to show a film that included a soundtrack, the cinema would need to obtain rights clearances only from the owner of copyright in the film.<sup>196</sup> In contrast, where the soundtrack is played without the moving images, for example on a jukebox in a pub, it is necessary to obtain the consent only of the right holder in the sound recording of the soundtrack.<sup>197</sup>

recordings and broadcasts, with the producer being designated as the sole ‘author’. Films now have a hybrid status under CDPA 1988, s. 9(2)(ab), which gives the principal director joint authorship with the producer of films made on or after 1 July 1994.

<sup>189</sup> CDPA 1988, s. 5B(1); cf. CA 1956, s. 13(10), and *Spelling Goldberg v. BPC Publishing* [1981] *RPC* 283 (stating that film has three characteristics: a sequence of images, recorded on material, capable of being shown as a moving picture). <sup>190</sup> See Kamina, 88–91.

<sup>191</sup> M. Turner, ‘Do the Old Legal Categories Fit the New Multimedia Products? A Multimedia CD-ROM as a Film’ [1995] *EIPR* 107; Aplin, ch. 3; T. Aplin, ‘Not in Our Galaxy: Why Film Won’t Rescue Multimedia’ [1999] *EIPR* 633; Stamatoudi, ch. 6, esp. 126–51; Kamina, 92. Despite these criticisms, the biggest problem with relying on film copyright to protect multimedia works derives from the narrow scope of protection given by film copyright. In some cases, a multimedia work might be a dramatic work and thus benefit from ‘thick’ protection: Kamina, 79. <sup>192</sup> Stamatoudi, 111.

<sup>193</sup> Term Dir., Art. 3(3), as ‘a cinematographic or audiovisual work or moving images, whether or not accompanied by sound’ (emphasis added). See above at pp. 51–2 and below at pp. 182–3.

<sup>194</sup> CDPA 1988, s. 13B(9). For an argument that this fails to implement the directives, see P. Kamina, ‘British Film Copyright and the Incorrect Implementation of the EC Copyright Directives’ [1998] *Ent L Rev* 109.

<sup>195</sup> *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67. For criticism, see T. Rivers, ‘Norowzian Revisited’ [2000] *EIPR* 389; E. Derclay, ‘Debunking Some of UK Copyright Law’s Longstanding Myths and Misunderstandings’ [2013] 1 *IPQ* 1 (highlighting the problems involved in using the term ‘film’ both colloquially and in its legal sense).

<sup>196</sup> See also P. Kamina, ‘The Protection of Film Soundtracks under British Copyright after the Copyright Regulations 1995 and 1996’ [1998] *Ent L Rev* 153. <sup>197</sup> CDPA 1988, s. 5B(2)–(3).

## 7 SOUND RECORDINGS

Sound recordings were first given protection under the Copyright Act 1911, under which they were protected as musical works.<sup>198</sup> It soon became apparent that sound recordings were fundamentally different from musical works, involving considerable technical and organizational investment.<sup>199</sup>

Under the CDPA 1988, section 5A(1), sound recordings are defined to mean either:

- (a) a recording of sounds, from which the sounds may be reproduced, or
- (b) a recording of the whole or any part of a literary, dramatic or musical work, from which sounds reproducing the work or part may be produced,

regardless of the medium on which the recording is made or the method by which the sounds are reproduced or produced.

The definition thus covers vinyl records, tapes, compact discs, digital audiotapes, and mp3s, which embody recordings. The definition also seems to encompass digital instructions embodied in electronic form that produce sounds. In a different legal context (that of licensing places of entertainment), it has been held that ‘recorded sounds’ can include CD-ROM embodiments of Musical Interface Digital Interface (MIDI) instructions (rather than data in wave form) that cause a sound module or synthesizer to generate sounds.<sup>200</sup>

As the definition of sound recording requires that there be ‘sounds’, it appears to exclude a single sound from protection (even though a considerable amount of production work may go into its recording).<sup>201</sup> Interesting questions have also arisen as to how the limits of a sound recording are to be determined. We review these issues when we look at copyright infringement.<sup>202</sup> Because sound recordings exist irrespective of the medium on which the sounds are recorded, a soundtrack of a film is a sound recording. However, the soundtrack of a film will also be treated as part of the film insofar as the soundtrack ‘accompanies’ the film.<sup>203</sup> The effect of this is that the public showing of a film and its soundtrack requires the consent of only the owner of copyright in the film.<sup>204</sup> In contrast, where the soundtrack is played without the moving images,<sup>205</sup> this would require the consent of only the holder of rights in the sound recording.

## 8 BROADCASTS

Broadcasts, whether of sounds or images, were first included as copyright works in the Copyright Act 1956. Subsequently, they were deemed to be suitable subject matter for protection by neighbouring rights at the 1961 Rome Convention.<sup>206</sup> The decision to extend copyright protection to broadcasts marked an important change in copyright law. In

<sup>198</sup> *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 348 (brief history of recorded music). J. Gaines, in *Contested Culture* (1991), has argued that the print-based concept of copyright had difficulties accommodating sounds. This was clearly not the case in the UK.

<sup>199</sup> *Gramophone Company v. Stephen Cawardine* [1934] 1 Ch 450, 455.

<sup>200</sup> *Sean Toye v. London Borough of Southwark* (2002) 166 JP 389.

<sup>201</sup> P. Theberge, ‘Technology, Economy and Copyright reform in Canada’, in S. Frith (ed.), *Music and Copyright* (1993), 53; S. Jones, ‘Music and Copyright in the USA’, in S. Frith (ed.), *Music and Copyright* (1993), 67.

<sup>202</sup> See Chapter 8, especially p. 207. <sup>203</sup> Term Dir. Art. 3. <sup>204</sup> CDPA 1988, s. 5B (3)(a).

<sup>205</sup> CDPA 1988, s. 5B(3)(b). <sup>206</sup> Rome, Arts 3(f), 6, 13, 14, 16(1)(b); TRIPS, Art. 14(3).

contrast with art, literature, films, and recordings, a broadcast is essentially the provision of a service that involves a communication; it is not the creation of a thing, but an action. This is because broadcasts are not fixed or embodied (although they can be); rather, they are ephemeral acts of communication. This means that a broadcast does not protect any fixed entity *per se*. Instead, what is protected are the signals that are transmitted. In a sense, copyright law recognizes the value in the act of communication itself as distinct from the content of what is being communicated.<sup>207</sup>

Provision was made for protection of cable programmes from 1 January 1985.<sup>208</sup> This differentiated treatment was carried through into the CDPA 1988, but abandoned, as of 31 October 2003, with cable programmes being assimilated within a broadly defined concept of ‘broadcast’. A ‘broadcast’ is defined as:

- ... an electronic transmission of visual images, sounds, or other information which—
- (a) is transmitted for simultaneous reception by members of the public and is capable of being lawfully received by them, or
  - (b) is transmitted at a time determined solely by the person making the transmission for presentation to members of the public . . .<sup>209</sup>

This definition merely requires that the transmission be ‘electronic’,<sup>210</sup> being indifferent otherwise as to the means of transmission, the route taken, or the form of the signals.<sup>211</sup> The definition therefore covers transmissions both by wire (‘cable television’) and wireless (such as ‘free-to-air’ broadcasts), terrestrial and satellite transmission, and analogue and digital broadcasts. By referring to the transmission of ‘visual images, sound, or other information’, the definition is also broad enough to cover systems that transmit different forms of content, such as radio, television, and other broadcasts (for example teletext). It also takes into account the forms of broadcasting that may be directly received by individuals or may be received by subscribers who obtain a decoder.<sup>212</sup>

While the definition of ‘broadcast’ is deliberately broad, it was readily appreciated that this breadth was likely to confer protection on some subject matter for which it was neither needed nor desired.<sup>213</sup> Two alternative criteria limit the definition further: to constitute a broadcast, the transmission must be ‘for simultaneous reception by members of the public’ (and capable of being lawfully received) or be made ‘at a time determined solely by the person making the transmission for presentation to members of the public’. Moreover, a new section 6(1A) excludes from broadcasts ‘any Internet transmission’, although with three (not insubstantial) exceptions.

<sup>207</sup> On the question of what amounts to a ‘work’ in this context, see the Australian High Court decision in *TCN Channel Nine v. Network Ten* [2004] HCA 14, in which the majority held that, in the case of a broadcast, the work is the individual programme transmitted.

<sup>208</sup> Cable and Broadcasting Act 1984, s. 22, adding CA 1956, s. 14A.

<sup>209</sup> CDPA 1988, s. 6(1) (as amended).

<sup>210</sup> Defined in CDPA 1988, s. 178, as ‘actuated by electric, magnetic, electro-magnetic, electro-chemical or electro-mechanical energy’.

<sup>211</sup> The Copyright Directorate refers to this as a ‘technologically neutral definition’: *Consultation on UK Implementation of Directive 2001/29/EC on Copyright and Related Rights in the Information Society: An Analysis of Responses and Government Conclusions* (2003), [3.6].

<sup>212</sup> That is, any encrypted broadcast, whether terrestrial or by satellite relay, is ‘lawfully’ received if decoding equipment has been made available through the person transmitting it in encrypted form: CDPA 1988, s. 6(2).

<sup>213</sup> Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC*, [3.6] (explaining its attempt to exclude on-demand services from the definition of broadcast on the basis that the subject matter transmitted is usually protected under other headings).

The limitation of broadcasts to transmissions *for* simultaneous reception ‘by members of the public’ excludes from protection transmissions between individuals, such as telephone calls, faxes, or emails, as well as transmissions on private networks (such as company ‘intranets’): these are not for reception by members of the public. The requirement that the transmission be ‘capable of lawful reception’ reinforces the exclusion of private communications from the definition of broadcast, because the interception of such a transmission would be illegal under the Regulation of Investigatory Powers Act 2000.<sup>214</sup> The requirement for ‘simultaneous reception’, too, excludes transmissions for which the individual recipient decides the time of the transmission, as with on-demand services, or interactive database services (such as *Lexis* or *Westlaw*). The alternative criterion—that the transmission be at a time determined solely by the person making the transmission ‘for presentation to members of the public’—is designed to cover transmission for playing or showing, such as when a football game is beamed back to the away team’s stadium.<sup>215</sup> It also covers what is frequently referred to as ‘narrow-casting’, such as transmission to shops for presentation to the public.

The scope of the definition of broadcast is confined further by excluding ‘any Internet transmission’, but this exclusion is subject to three exceptions of its own. No definition is provided for an ‘Internet transmission’, but the better view is that the Internet is not confined to the ‘world wide web’. Emails to news groups and websites therefore are generally excluded from protection as ‘broadcasts’ (although they might be protected as literary or artistic works).<sup>216</sup> A non-interactive online database service (formerly thought to be a cable programme service, and its contents therefore protected as cable programmes<sup>217</sup>) would also be excluded. In contrast, an information service through telecommunications networks to subscribers to certain mobile phone services is probably a broadcast.

Having said that, the amendments have sought to keep broadcast protection for ‘Internet transmissions of a conventional broadcast character’ by means of three exceptions to the exclusion of ‘Internet transmissions’ from the definition of ‘broadcasts’. First, section 6(1A)(a) clarifies that the exclusion of ‘Internet transmissions’ does not encompass ‘a transmission taking place simultaneously on the Internet and by other means’. This means that websites that transmit sounds and images simultaneously with broadcasts—all of the BBC radio stations, for example, are accessible from the BBC’s website—remain protected broadcasts.

A second provision in section 6(1A)(b) allows for broadcasts to include an Internet transmission that is a ‘concurrent transmission of a live event’. The term ‘concurrent’ implies that the Internet transmission must occur at the same time as the ‘live event’, so would seem to cover Internet transmission of a cricket match or sounds of a pop concert. The provision refers to transmission *of* a live event and so would not treat as a broadcast

<sup>214</sup> Rather surprisingly, this might mean that foreign encrypted broadcasts, such as satellite broadcasts, for which there is no authorized distribution of decoders in the UK are unprotected because they are not capable of lawful reception in the UK. This would be a breach of Rome, Art. 6(1)(b), and is best avoided by treating the definition as covering broadcasts that are capable of lawful reception in the country at which the signals are primarily targeted.

<sup>215</sup> Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC*, [3.9] (explaining requirement that timing be determined by the person making the transmission as designed to exclude on-demand services from the definition of broadcast).

<sup>216</sup> *Ibid.*, [3.10] (explaining the exclusion as a response to user groups who were concerned that websites would be protected and that exceptions, such as research and private study, would therefore be unavailable). In these respects, the decision in *Shetland Times v. Dr Jonathan Wills* [1997] FSR 604 that a website is protected (then, as items included in a cable programme service) is no longer good law.

<sup>217</sup> *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320.

a transmission of *commentary* on a live event. Newsgroup emails of progress at the latest international copyright convention would not be a broadcast therefore, nor would the commentary on a football match (unless the commentary itself were to be treated as an event). Whether the courts will interpret ‘live event’ to cover transmissions of the *Big Brother* house (even where these were not being broadcast on television) remains to be seen; an approach that refuses to discriminate will end up treating all live web-cam feeds into websites as broadcasts.

A third exception in section 6(1A)(c) indicates that an Internet transmission is not excluded from the definition of broadcast if it is ‘a transmission of recorded moving images or sounds forming part of a programme service offered by the person responsible for making the transmission, being a service in which programmes are transmitted at scheduled times determined by that person’. This means that a person who wishes to set up a conventional style of broadcast service, solely utilizing the Internet to distribute the programme service, does gain protection for the broadcasts.

## 9 PUBLISHED EDITIONS

The final category of works that are protected by copyright is ‘typographical arrangements of published editions’. This category of works was first introduced in the United Kingdom in 1956 and remains largely a peculiarity of the British, and British-influenced, copyright systems (having no corresponding international regime).<sup>218</sup> A ‘published edition’ means ‘a published edition of the whole or any part of one or more literary, dramatic or musical works’.<sup>219</sup> In *Newspaper Licensing Agency v. Marks & Spencer*, Lord Hoffmann stated that ‘the “edition” is the product, generally between covers, which the publisher offers to the public’.<sup>220</sup> In this context, the copyright in the published edition protects the typographical arrangement—that is, the overall appearance of the page or pages. This protects the publisher’s skill and investment in typesetting, as well as the processes of design and selection that are reflected in the appearance of the text.<sup>221</sup> There is no requirement that the published edition must be a previously unpublished work. It therefore covers modern editions of works in the public domain (such as the complete works of Shakespeare) and prohibits the reproduction of the layout (but not the work itself). It should be noted that the concept of reproduction of a typographical arrangement is extremely narrow, being restricted to facsimile reprography. Consequently, the reproduction of the material contained in a published work will not infringe this limited copyright where a different layout is employed. It has been suggested that typographical arrangements may also be protected as ‘photographs’.<sup>222</sup>

<sup>218</sup> CA 1956, s. 15. See *Report of the Copyright Committee* (Cmd. 8662, October 1952), [306]–[310].

<sup>219</sup> CDPA 1988, s. 8(1).

<sup>220</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 558, [2001] 3 WLR 390 (Lord Hoffmann) (holding that the whole newspaper was the ‘edition’).

<sup>221</sup> *Ibid.*, [23]:

It is not the choice of a particular typeface, the precise number or width of the columns, the breadth of margins and the relationship of headlines and strap-lines to the other text, the number of articles on a page and the distribution of photographs and advertisements but the combination of all of these into pages which give the newspaper as a whole its distinctive appearance . . . The particular fonts, columns, margins and so forth are only, so to speak, the typographical vocabulary in which the arrangement is expressed.

## CRITERIA FOR PROTECTION

### CHAPTER CONTENTS

1 Introduction	91	4 Entrepreneurial Works: 'Not Copied'	117
2 Recorded in Material Form	91	5 Is the Work 'Qualified'?	118
3 Originality: Literary, Dramatic, Musical, and Artistic Works	93	6 Excluded Subject Matter	122

### 1 INTRODUCTION

In order for a work to be protected by copyright, it is necessary to show that, as well as being the sort of work protected by the Copyright, Designs and Patents Act 1988 (CDPA 1988), the work also satisfies the particular requirements that are imposed on it. As we will see, the requirements vary, sometimes considerably, between different categories of work.

- (i) The *first* requirement is that the work must be recorded in a material form. As we will see, this applies only to literary, dramatic, and musical works.
- (ii) The *second* requirement is that the work must be 'original'. It should be noted that this applies only to literary, dramatic, musical, and artistic works. In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be 'original'. Instead, the 1988 Act declares that copyright subsists only to the extent that such works are not copied from previous works of the same sort.<sup>1</sup>
- (iii) The *third* requirement, which applies to all works, is the work is sufficiently connected to the United Kingdom to qualify for protection under UK law.
- (iv) The *fourth* requirement is that the work is not excluded from protection on public policy grounds.

We will deal with each of these requirements in turn.

### 2 RECORDED IN MATERIAL FORM

There is no requirement that a work be registered for copyright protection to arise;<sup>2</sup> copyright arises automatically. However, the CDPA 1988 provides that copyright does not

<sup>1</sup> CDPA 1988, ss 5(2), 6(6), 7(6), 8(2).

<sup>2</sup> Registration requirements for published literary works and some artistic works existed until 1912. Over the last decade, there has been a revival of interest in an 'opt-in' copyright regime. For an extensive

subsist in literary, dramatic, or musical works ‘unless and until’ the works are ‘recorded in writing or otherwise’.<sup>3</sup> This is usually referred to as the ‘requirement that the work be recorded in a material form’. Writing is defined to include any form of notation or code ‘regardless of the method by which, or medium in or on which, it is recorded’.<sup>4</sup> Thus it seems that any digital embodiment of a work will suffice.<sup>5</sup>

There is no requirement of recording in the case of artistic works,<sup>6</sup> sound recordings, films, and published editions. In the case of sound recording and films, ‘recording’ is implicit in the statutory definition of subject matter. In the case of artistic works, material form will often be present: for example, we have already noted that the Court of Appeal has said that a painting requires a ‘surface’,<sup>7</sup> and it has been stated that an ice sculpture, although not permanent, is protected as a sculpture.<sup>8</sup> But what about, for example, a display of coloured lights? It could be argued that since fixation is not specifically required by the 1988 Act for artistic works, such a display could be protected.<sup>9</sup> If so, live televising of the display would infringe. The point remains to be decided by the courts. An Australian authority suggests that a work of kinetic art will not be protected.<sup>10</sup>

There is no requirement that broadcasts be fixed or embodied in any particular form. Thus broadcasts are protected whether or not the broadcasting organization makes a permanent version of them.

The requirement that literary, dramatic, and musical works be recorded is rarely a serious impediment to copyright protection. The reason for this is that the fixation requirement will be satisfied even if the recording is carried out by someone other than the creator (with or without their permission),<sup>11</sup> whether the recorded form is in the claimant’s hands or has subsequently been destroyed.<sup>12</sup> Given that when someone infringes copyright, they will normally have reproduced the work, and that parties unconnected with the creator can carry out the requisite recording, this means that in most cases the work will in fact have been recorded.

treatment, see S. van Gompel, *Formalities in Copyright* (2012), and the *BTLJ/BCLT* Symposium: The Next Great Copyright Act (2014) 29 *BTLJ*.

<sup>3</sup> CDPA 1988, s. 3. This is deemed to be the time when the work is ‘made’: CDPA 1988, s. 3(2). One commentator has suggested that this requirement may no longer be appropriate in the light of European harmonization of the ‘work’ concept, which requires member states to protect ‘intellectual creations’ and says nothing about fixation: see C. Handig, ‘The Copyright Term “Work”: European Harmonisation at an Unknown Level’ (2009) *IIC* 665, 673.

<sup>4</sup> CDPA 1988, s. 178.

<sup>5</sup> Written in the pre-digital era, the CDPA 1988 here seems to assume that using notation ensures that is a material version of a work. Digitization, of course, creates the possibility that there could be highly unstable or ephemeral versions that are ‘in writing’. Consider, for example, a student’s essay that is written before the computer crashes and cannot be recovered: it seems that this was ‘in writing’, but it would be strange to say that it was ‘recorded’ until a version was saved either automatically or by the author.

<sup>6</sup> But cf. *Komesaroff v. Mickle* [1988] *RPC* 204 (a device consisting of a mixture of sand, liquid, and bubble-producing substance did not qualify as a work of artistic craftsmanship).

<sup>7</sup> See *Merchandising Corporation v. Harpbond* [1983] *FSR* 32, 46 *per* Lawton LJ, discussed at pp. 73–4.

<sup>8</sup> *Metix v. Maughan* [1997] *FSR* 718, 721.

<sup>9</sup> Such a work does not fall easily within any of the designations of artistic work in CDPA 1988, s. 4. But EU law may require that it be protected nonetheless. See Chapter 3, pp. 61–3, 72–85.

<sup>10</sup> *Komesaroff v. Mickle* [1988] *RPC* 204, 210 *per* King J (stating that ‘it must be possible to define the work of artistic craftsmanship on which she bases her action, and this can be done only by a reference to a static aspect of what has been referred to by counsel as a “work of kinetic art” ’).

<sup>11</sup> CDPA 1988, s. 3(3).

<sup>12</sup> *Lucas v. Williams & Sons* [1892] 2 *QB* 113, 116; *Wham-O Manufacturing Co. v. Lincoln Industries* [1985] *RPC* 127 (CANZ), 142–5; *J & S Davis (Holdings) v. Wright Health Group* [1988] *RPC* 403, 409.

### 3 ORIGINALITY: LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Perhaps the most important requirement that must be satisfied for copyright protection to arise is that the work must be ‘original’. It should be noted that this applies only to literary, dramatic, musical, and artistic works (authorial works).<sup>13</sup> In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be original for them to qualify for protection.<sup>14</sup>

While the originality requirement has been a general statutory requirement since 1911,<sup>15</sup> it is very difficult to state with any precision what copyright law means when it demands that works be ‘original’.<sup>16</sup> Perhaps the most common account is that the work must be the result of ‘labour, skill and judgment’.<sup>17</sup> This uncertainty has been exacerbated by the fact that, as part of the harmonization of copyright law in Europe, a new concept—that of the *author’s own intellectual creation*—determines the originality not only of databases, computer programs and photographs, but also of all literary, dramatic, musical and artistic works. In what follows, therefore, we need to examine the difference between the traditional British conception of originality and the European one.

#### 3.1 COMMON CHARACTERISTICS OF ORIGINALITY

While we will explore the differences between the traditional British and European conceptions of originality below, both conceptions share a number of characteristics. First, in both traditional British and European conceptions, ‘originality’ is concerned with the relationship between an author or creator and the work—that is, originality is not concerned with whether the work is inventive, novel, or unique.<sup>18</sup> While the novelty requirement in patent law focuses on the relationship between the invention and the ‘state of the art’,<sup>19</sup> the originality examination is primarily concerned with the relationship between the creator and the work. When copyright says that a work must be original, this means that the author must have exercised the requisite intellectual qualities (in the British version, ‘labour, skill, or effort’; in the European, ‘intellectual creation’) in producing the work.<sup>20</sup> More specifically, in determining whether a work is original, copyright law focuses on the input that the author contributed to the resulting work. Consequently, a person who writes a film script based on an original story recounted by Homer in *The Odyssey* produces an

<sup>13</sup> CDPA 1988, s. 1(1).

<sup>14</sup> See below pp. 117–18.

<sup>15</sup> Although the requirement was introduced for paintings, drawings, and photographs by the Fine Art Copyright Act 1862.

<sup>16</sup> E. Judge and D. Gervais, ‘Of Silos and Constellations: Comparing Notions of Originality in Copyright Law’ (2009) 27 *Cardozo AELJ* 375 (identifying and contrasting four conceptions of originality: ‘personal intellectual creation’, associated with civil law and Europe; ‘minimal creativity’, associated with the United States after *Feist Publications v. Rural Telephone Service Co.*, 499 US 340 (1991) (SCOTUS); skill and judgment, the Canadian test after *CCH Canadian Ltd v. Law Society of Upper Canada* [2004] SCC 13, [16]; and labour, skill and judgment, the traditional British test). But, as we will see, there is no single ‘civil law’ approach and the traditional British test has more uncertainties than this suggests.

<sup>17</sup> See the case law described in section 3.3 below.

<sup>18</sup> *University of London Press v. University Tutorial Press* [1916] 2 *Ch* 601; *Sawkins v. Hyperion* [2005] 1 *WLR* 3281, 3288, [3] *per* Mummery LJ.

<sup>19</sup> See pp. 529–31.

<sup>20</sup> *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 469 *per* Lord Reid.

‘original’ work even though the story and characters have been widely known for thousands of years.<sup>21</sup>

Second, the test of originality in the traditional and European conception is concerned with the manner in which the work is *expressed*—in the way in which the paint is applied, the words are chosen and ordered, ideas are executed, or the clay moulded. That is, in assessing originality, copyright law is concerned with the originality of expression rather than ideas.<sup>22</sup>

Third, whether we are concerned with the traditional UK approach or the new EU test, it is clear that ‘derivative works’ can be original.<sup>23</sup> By ‘derivative works’ is meant works that were derived from or based upon existing works (whether or not they are protected by copyright). Obvious examples of such works are new editions, translations, arrangements of music, and engravings, as well as anthologies. To be protected, the derivative work must also be ‘original’ in itself (although as we will see, precisely what this requires in this context may vary from country to country).

It is worth reiterating that, in such cases, copyright may subsist in a derivative work even though it might infringe copyright in the existing work<sup>24</sup>—that is, a derivative work may be both original and infringing. In such a situation, any copyright that is acquired in a derivative work will be distinct from and subordinate to the copyright in any prior original work that is incorporated into it. Provided that the original work is still apparent in the new version, both the maker of the new version and any third-party copier will need the licence of the owner of copyright in the original.

The fourth point to note is that the originality threshold has been set at a very low level.<sup>25</sup> English courts have accepted as original such things as railway timetables and exam papers (which were drawn from the stock of knowledge common to mathematicians, produced quickly, and included questions similar to ones that had previously been asked by other examiners), while (as we will see) the Court of Justice has implied that 11 words might amount to an original work.<sup>26</sup> One of the consequences of the originality standard being set at a low level is that there have been relatively few instances in which subject matter has been excluded on the basis that it was non-original. Most of the problems that have arisen have been in relation to informational works, derivative works, and industrial designs.

Fifth, when considering the relevance of previous cases, it is worth bearing in mind that, whatever test is applied, the question of whether a work is original inevitably depends on the particular cultural, social, and political context in which the judgment is made. In part, this is because originality turns on the way in which the inputs into the work are perceived by the courts. One of the consequences of this is that what is seen as original may change over time. A good example of this is provided by photography. When invented in the 1840s, photography was seen as a non-creative (and non-original) mechanical process whereby images were produced by exposing chemically sensitive materials to light. In the late nineteenth century, however, photography came to be seen as an artistic activity. As

<sup>21</sup> *Christoffer v. Poseidon Film Distributors* [2001] ECDR 481.

<sup>22</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601, 608 *per* Peterson J; *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 CMLR (4) 55, 68, [AG44] (AG Bot).

<sup>23</sup> This is specifically required by Berne, Art. 2(3) (‘Translations, adaptations, arrangements of music and other alterations of a literary or artistic work shall be protected as original works without prejudice to the copyright in the original work’).

<sup>24</sup> *Redwood Music v. Chappell* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11.

<sup>25</sup> Cf. *Football Dataco Ltd and ors v. Yahoo! UK Ltd and ors*, Case C-604/10 [2012] 2 CMLR (24) 703, [AG41] (AG Mengozzi).

<sup>26</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601.

a result, photographs came to be seen as creative and thus potentially original works.<sup>27</sup> Recent developments in technology may, however, have rendered some photographs that were creative in 1900 distinctly mundane in today's terms.<sup>28</sup> Similar changes recently occurred in relation to the artistic works of Aboriginal Australians, which were once assumed to be 'non-original' on the basis that the works reflected traditional themes and imagery, but are now recognized as not merely original, but also artistic (in the sense of being of such quality as to merit inclusion in art galleries).<sup>29</sup>

### 3.2 PURPOSE OF THE ORIGINALITY REQUIREMENT

Before going into detail, it is worth pausing for a moment and considering the 'function' of the originality requirement. The originality requirement sets a threshold that determines when material falling within the definition of literary, dramatic, musical, or artistic work is protected by copyright law. Nevertheless, the policy basis for the threshold requirement has never been made clear.<sup>30</sup>

From one natural rights perspective, the requirement of originality merely reflects the premise that copyright ought to protect the personality of authors as expressed in their works: absent such 'originality'—that is, indicia or traces of personality—there is no justification for protection. Consequently, works that do not reflect their author's personality—works of labour or investment, works that different creators would come up with independently, as well as 'objective' features of works (facts, many ideas, functions)—would not warrant protection.<sup>31</sup> Moreover, no protection should be afforded to those features of works that are necessary for others to exercise their natural rights—in this respect, their creative or expressive freedom.<sup>32</sup> In contrast, from a reward perspective, where effort has been made in creating a work, the creator may be said to deserve some protection from the exploitation of that effort by another (who would be unjustly enriched). This strand of thinking points towards making protection readily available for anyone who invests labour or capital in producing a work (at least where other forms of legal protection, such as unfair competition law, are unavailable).

From a utilitarian perspective, the 'originality' threshold might have been expected to sit at a different, often more taxing, level to ensure that copyright protects only those works that would not have been produced but for the incentive provided by copyright.<sup>33</sup> While such an approach might also justify protection of works of investment or industrious collection (even though they do not reflect the individuality of their creator),<sup>34</sup> it ought to mean that trivial and insubstantial works are unprotected (and that there is no need to offer copyright protection to works that are subject to other incentive mechanisms, such

<sup>31</sup> But cf. J. Hughes, 'Created Facts and the Flawed Ontology of Copyright Law' (2007) 83 *Notre Dame L Rev* 43 (pointing out that many 'facts' are created).

<sup>32</sup> *Irene A\*\*\* v. K\*\*\* GmbH*, Case 4 Ob 162/08i (Austrian Supreme Court, 14 October 2008), [2010] *ECC* (12) 186, 191 ('To afford copyright protection to all works, including those that are mundane or banal, would intolerably hamper the creative freedom of others').

<sup>33</sup> J. Wiley, 'Copyright at the School of Patent' (1991) 58 *U Chi L Rev* 119; J. S. Miller, 'Hoisting Originality' (2009) 31 *Cardozo L Rev* 451.

<sup>34</sup> P. Jaszi, 'On the Author Effect: Contemporary Copyright and Collective Creativity' (19992) 10 *Cardozo AELJ* 293, 300–1.

as patents or design rights). In addition, a utilitarian approach to originality might be expected to ensure that no exclusivity is conferred on matters that are essential components with which others can create or express themselves (for example facts, functions, ideas, names, and titles).<sup>35</sup> Thus ‘originality’ can be seen as a key threshold in defining the ‘public domain’.<sup>36</sup>

While the natural rights and utilitarian perspectives do seem to have influenced the development of the ‘originality’ requirement, it will be unsurprising to discover that the legal tests do not reflect with precision any particular theoretical perspective. In part, this is because the legal system does not comprise philosophers, nor is it primarily concerned with philosophical consistency (natural rights, reward theories, and incentive rationales often being merged). Moreover, the legal system inevitably takes into account other matters, such as procedural economy and the desire for certainty. This leads courts to shy away from adopting or developing tests that are difficult to apply, towards ones that are simple and objective. In traditional British case law on originality, this has tended to lead courts to dilute the originality standard so as to protect works that have not been copied.<sup>37</sup> In civil law systems, originality is often assumed, particularly in relation to the productions of well-known artists.<sup>38</sup>

In addition to operating as a threshold, originality may be important in establishing whether a person has infringed copyright. This is because a person will not infringe copyright if they merely copy elements that are not original in the claimant’s work.<sup>39</sup> That is, deciding what is original in a claimant’s work plays an important role in ascertaining whether a ‘part’ of a work has been taken by the defendant. (However, it should be noted that the fact that a person creates an original work does not mean that they are not infringing copyright in work on which they have drawn.<sup>40</sup> This is because, as we see in Chapter 8, infringement depends on what a person has taken from a copyright work; the effort that such a person adds is irrelevant.)

### 3.3 BRITISH CONCEPTION OF ORIGINALITY

It would be foolish to claim that the case law developed since 1912 (or carried over from earlier jurisprudence) has defined clearly the circumstances in which a literary, dramatic, musical, or artistic work will be treated as original. Much of the case law seems inconsistent and, according to one commentator ‘the dividing line between original . . . works, and unoriginal . . . works, remains an uncertain and shifting one’.<sup>41</sup> In part, these difficulties arise because originality ‘must depend largely on the facts of the case and must in each case be very much a question of degree’.<sup>42</sup> As a result, it is very difficult to explain the traditional British approach to originality in terms of any overarching principles or

<sup>35</sup> One need only think of a whole host of products and services—from bibliographies to listings magazines—that would be placed in an uncomfortable legal position if the protection of the names and titles of books, films, etc., were to be regarded as the norm. See *Fairfax Media v. Reed International Books* [2010] FCA 984; *Francis Day and Hunter v. 20th Century Fox* [1940] AC 112 (PC), 123.

<sup>42</sup> *Macmillan v. Cooper* (1923) 93 LJPC 113 (Lord Atkinson).

rules. Nevertheless, two characterizations have tended to be deployed. First, in the words of Peterson J in *University of London Press*, works are original if they originate with the author and are not copied.<sup>43</sup> While this highlights the fact that ‘originality’ is linked to ‘origination’, it unfortunately tells the reader very little about when we can say that a work originates with an author. Hence a second characterization has tended to be found to be more valuable: a work is original if an author has exercised the requisite *labour, skill, or judgment* in producing the work. This characterization of the originality standard was adopted at the highest level in *Ladbroke v. William Hill*,<sup>44</sup> a case in which the House of Lords treated football pools coupons (tables of football matches arranged such that customers could gamble on the results in a certain number of matches) as original compilations because of the labour, skill, and judgment that had gone into devising the betting system that informed the coupon.

While the phrase ‘labour, skill, or judgment’ may be a useful label by which to describe the traditional British test of originality, it should be noted that it is a form of words that has not been deployed with great precision (and thus should not be viewed as if it were a statutory phrase). Sometimes, the courts have used the phrase disjunctively, referring to labour, skill, *or* judgment;<sup>45</sup> sometimes cumulatively, as labour, skill, *and* judgment.<sup>46</sup> On other occasions, the words ‘work’, ‘capital’, ‘effort’, ‘industry’, ‘time’, ‘knowledge’, ‘taste’, ‘ingenuity’, ‘experience’, or ‘investment’ are used.<sup>47</sup> If ‘labour, skill, and judgment’ have been the defining characteristics of the British concept of originality, it is worth noting that the accumulation of case law had added a series of additional requirements.

First, the amount of ‘labour, skill, and judgment’ must be ‘substantial’—or at least not trivial.<sup>48</sup> British law has always declined to recognize originality where the labour is trivial or insignificant and the result is trivial or insignificant. A possible example is the case of *Merchandising Corporation v. Harpbond*,<sup>49</sup> in which face paint was held to be unprotected by copyright. While, as we saw in Chapter 3, protection was refused on the rather unsatisfactory basis that the work was not a painting, the decision was justifiable on the basis that the work was a trivial outcome of an insignificant amount of labour. Yet other examples can be found in the case law on titles and advertising slogans: titles, such as *The Lawyer’s Diary*, involve too trivial an amount of labour to be regarded as original.<sup>50</sup>

Second, as Lord Oliver said in the Privy Council in *Interlego v. Tyco*, ‘only certain kinds of skill, labour and judgment confer originality’.<sup>51</sup> Consequently, a person may exercise a considerable amount of labour, yet the resulting work will not be original if the labour is of the wrong kind. This would be the case, for example, where there is a direct or slavish copy of another work.<sup>52</sup> While the tracing or copying of drawings, especially technical drawings, requires patience, skill, and labour, as Lord Oliver said in *Interlego*, ‘copying

<sup>43</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601, 609.

<sup>52</sup> *British Northrop v. Texteam (Blackburn)* [1974] RPC 57, 68 (a drawing that is simply traced from another drawing is not an original artistic work); *Rexnold v. Ancon* [1983] FSR 662, 664 (improbable that copyright would be given to a mere tracing); *Davis (Holdings) v. Wright Health Group* [1988] RPC 403, 409 (casts made from models are not original) and 412 (tracing not original).

*per se*, however much skill or labour may be devoted to the process, cannot make a work original'.<sup>53</sup> More specifically, he said that a 'well-executed tracing is the result of much labour and skill but remains what it is, a tracing'.<sup>54</sup> It is clear that the reason why tracing and photocopying do not produce original works is not that there is no labour; rather, it is that it is not the right type of labour.<sup>55</sup>

### 3.4 EUROPEAN ORIGINALITY

Although, as we noted in Chapter 2, a process of partial harmonization of copyright law has been inaugurated by the legislature in Europe, the Court of Justice has begun a more thoroughgoing harmonization of 'originality'.<sup>56</sup> While the Software and Database Directives require that a computer program or database can be protected by copyright only where the program or database is original in the sense that it is the 'author's own intellectual creation'<sup>57</sup> (and a similar test was also introduced for photographs in the Term Directive),<sup>58</sup> the Court of Justice has held that this standard is applicable to all works of authorship.

The key case was *Infopaq*.<sup>59</sup> In this case, a Danish court had to decide whether an electronic news-clippings service infringed copyright when it reproduced 11-word snippets comprising the eight words either side of a search term. The Court of Justice was asked whether this comprised a 'part' of an article protected by copyright. The Court took the view that to decide whether 11 words were a 'part' required an investigation of the conditions of protection for a work. Reviewing the Berne Convention and the Community *acquis* on copyright (the Software, Database, and Term Directives), the Court of Justice concluded that there was a generalized standard of originality—namely, the 'author's own intellectual creation'.<sup>60</sup> Whether the 11 words were a 'part' depended on whether they were themselves intellectual creations, which the Court indicated was a matter to be assessed by the national court.

As a matter of strict precedent, the *Infopaq* case might have been regarded as limited in its application to matters of infringement rather than subsistence,<sup>61</sup> but it soon came to be applied to issues of subsistence. In *Bezpečnostní softwarová asociace* (or *BSA*)<sup>62</sup> (as we noted in Chapter 3), the Court indicated that a graphic user interface would be protected under the Information Society Directive were it 'its author's own intellectual creation,' while in *Football Association Premier League*,<sup>63</sup> the Court stated that football matches were not protected, because they lacked the relevant originality. There thus seems little

doubt that, going forward, as far as ‘authorial works’ are concerned, it is necessary to apply the European standard of originality.<sup>64</sup>

The adoption of a generalized ‘originality’ test has a number of obvious advantages. For one, it makes the European copyright regime more coherent than it would otherwise have been—both horizontally (treating different works according to a single standard) and vertically (in creating a coherent relationship between standards of infringement and subsistence). Moreover, the adoption of a single standard removes some of the difficulties that arise from the failure to harmonize the work concept: for example, if the standard of originality applicable to databases is the same as that applicable to ‘database-like’ entities (in UK law, ‘tables and compilations other than databases’), legal skirmishes over the precise meaning of a database are less likely to be warranted.<sup>65</sup> Nevertheless, whatever its benefits, commentators have questioned whether deepening harmonization in this way is legitimate from a constitutional perspective and have highlighted the considerable uncertainties to which such judicial activism gives rise. In addition, the choice of a single standard for all works removes flexibility that a number of member states employed to modulate the criterion in relation to different types of work (the most notorious example of which was the German level of creativity doctrine—*Schöpfungshöhe*—according to which a higher threshold of originality was required for works of applied art).

The new standard, in principle, applies to computer programs after 1 January 1993, photographs after 1 July 1995,<sup>66</sup> and databases after 11 March 1996,<sup>67</sup> and all other authorial works (including, possibly, designs) after 22 December 2002 (when the Information Society Directive came into force). In implementing the Database Directive, the UK Database Regulations 1997<sup>68</sup> explicitly amended the originality requirement of the CDPA 1988 in relation to databases to include the new criterion of the ‘author’s own intellectual creation’.<sup>69</sup> In particular, section 3A(2) says that ‘a literary work consisting of a database is original if, and only if, by reason of the selection or arrangement of the contents of the database the database constitutes the author’s own intellectual creation’. Although the British legislature has, as yet, not responded to the emerging jurisprudence (either by extending section 3A(2) generally, or by repealing the specific reference that might otherwise be taken to imply a different standard is applicable to works other than databases) and the courts have been slow to adapt their language,<sup>70</sup> there can be little doubt that UK law has to be interpreted in line with the case law of the Court of Justice.

That said, any works that were protected prior to the relevant dates under UK law according to the traditional standard should remain protected, because all of the directives indicate that their operation should be without prejudice to ‘acquired rights’.<sup>71</sup> For this reason, the ‘traditional’ British jurisprudence will continue to be important *at least* in determining the subsistence of older works for many decades to come.

<sup>64</sup> In relation to copyright protection of designs, see Chapter 29.

<sup>66</sup> Council Directive 93/98/EEC, Art. 13(1). <sup>67</sup> Database Dir, Arts 14(2), 16(1).

<sup>68</sup> The Copyright and Rights in Database Regulations 1997 (SI 1997/3032).

<sup>69</sup> CDPA 1988, s. 3A(2), introduced by Database Regs 1997, r. 6.

<sup>70</sup> *Newspaper Licensing Agency v. Meltwater and the PRCA* [2011] EWCA Civ 890, [19]–[20] (Morritt C said that he did not understand the decision of the Court of Justice in *Infopaq* ‘to have qualified the long standing test’). Even in cases that accept *Infopaq* as authoritative, such as *Temple Island v. New English Teas Ltd* [2012] UKPC 1, there is still a tendency, e.g. at [27], to treat ‘skill and labour’ as interchangeable with ‘intellectual creation’.

<sup>71</sup> Software Dir., Art. 9(2); Term Dir., Art. 10(1); Database Dir., Art. 14(2), (4).

### 3.4.1 Personality and creative choices

What, then, does the requirement that a work be its ‘author’s own intellectual creation’ involve? The legislation offers very little guidance. Perhaps most notoriously, a recital in the Term Directive hints at its content when it refers to the need for a photograph to ‘reflect its author’s personality’.<sup>72</sup> The clear suggestion is that the test to be employed is something similar to that operative in some civil law *droit d’auteur* regimes, in which reference has frequently been made to the need for a work to bear the ‘imprint’ of the personality of its author.<sup>73</sup> The Court of Justice has thus felt it necessary to give further content to the concept, referring to the need for the exercise of ‘creative choices’. Thus, in *Infopaq* itself, the Court explained that:

[W]ords . . . considered in isolation, are not as such an intellectual creation of the author who employs them. It is only through the choice, sequence and combination of those words that the author may express his creativity in an original manner and achieve a result which is an intellectual creation.<sup>74</sup>

In the *Painer* case,<sup>75</sup> the Court considered a portrait photograph of a young girl and indicated that this would be an ‘intellectual creation’ if the photographer had been able to stamp the work with their ‘personal touch’. Similarly, in *Football Dataco*,<sup>76</sup> in which the Court was asked to advise on whether the creation of football fixture lists was an act of ‘intellectual creation’, the Court observed:

As regards the setting up of a database, that criterion of originality is satisfied when, through the selection or arrangement of the data which it contains, its author expresses his creative ability in an original manner by making free and creative choices . . . and thus stamps his ‘personal touch’.<sup>77</sup>

### 3.4.2 Non-functional

The Court has also sought to indicate when originality will not be present by indicating that where expression is ‘dictated by function’, then it is not original. In *BSA*,<sup>78</sup> the Court considered when a ‘graphic user interface’ would fall to be protected as an ordinary work (as opposed to a computer program). The Court indicated that there was no originality where ‘the expression of [the] components is dictated by their technical function’, explaining that ‘the criterion of originality is not met since the different methods of implementing an idea are so limited that the idea and the expression become indissociable’. In *Football Association Premier League*,<sup>79</sup> the Court used equivalent reasoning to explain why sporting events cannot be regarded as intellectual creations: ‘[F]ootball matches, which are subject to rules of the game, leaving no room for creative freedom for the purposes of copyright.’ While no doubt, to anyone who plays or watches football, the

<sup>72</sup> Term Dir., Recital 16.

<sup>73</sup> In *Football Dataco Ltd and ors v. Yahoo! UK Ltd and Ors*, Case C-604/10 [2012] 2 CMLR (24) 703, [AG41], Advocate-General Mengozzi stated that the European legislature had preferred the ‘more “rigorous” paradigm of the countries of the continental tradition’ to the ‘common law standard’. See also *Titus Donner*, Case C-5/11 (Opinion, 29 March 2012) (AG Jääskinen).

<sup>76</sup> *Football Dataco Ltd and Ors v. Yahoo! UK Ltd and Ors*, Case C-604/10 [2012] 2 CMLR (24) 703 (ECJ, Third Chamber).

<sup>77</sup> *Ibid.*, 724–5, [38].

<sup>78</sup> *Bezpečnostní softwarová asociace*, Case C-393/09 [2011] ECR I-13971, [49].

<sup>79</sup> *Football Association Premier League Ltd and ors v. QC Leisure and ors and Karen Murphy v. Media Protection Services Ltd*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber), [98].

claim that there is no ‘creative freedom’ because of the constraints provided by the ‘rules of the game’ may seem misguided (so that the absence of copyright in football matches may need to be explained in some other way), the Court is making the important point that where creative choice is highly constrained by rules or functional considerations, the resulting ‘work’ is unlikely to be original. This point was reiterated by the Court in *SAS Institute Inc. v. World Programming Ltd.*<sup>80</sup>

### 3.4.3 Clarifying the concept

The Court has talked about ‘creative choice’ and it is clear that decisions that are limited by functional constraints or ‘rules’ are not to be regarded as ‘creative choices’, in part because there is no—or very little—choice. But when is a choice ‘creative’? It seems clear that choices can be creative even though they are not ‘artistic’: the scope of copyright in Europe certainly includes such matters as computer programs, technical manuals, and so on, which could hardly be so if the choices required by copyright were to be ‘artistic’ in nature. The Court has referred instead to choices that focus on the form of the work: the choice, combination, and ordering of words, for example. One academic has gone further and argued that:

[A] creative choice is one made by the author that is not dictated by the function of the work, the method or technique used, or by applicable standards or relevant ‘good practice’. Conversely, purely arbitrary or insignificant selection is insufficient. A conscious, human choice must have been made, even though it may be irrational.<sup>81</sup>

Does the requirement of ‘intellectual creation’ relate to the process or the outcome? Does ‘creation’ merely imply that the work has been through a process (‘creation’), or that the result has certain distinctive features? As far as the jurisprudence goes, it seems that there must be both components for the work to be protected, although usually the existence of creative freedom will mean that the outcome is an ‘intellectual creation’. Thus Advocate-General Bot has said that:

[P]rotection for a computer program is conceivable only from the point at which the selection and compilation of those elements are indicative of the creativity and skill of the author and *thus* set his work apart from that of other authors.<sup>82</sup>

In our view, it is implicit *both* that there must have been actual choices *and* that the resulting work must as a consequence be individualized.<sup>83</sup> The distinction would become important in a situation in which there was a high level of creative freedom, but the work was produced either by making the obvious choices or by applying an arbitrary rule. In the former case, one could say there was creative freedom and that has been taken, but the resulting work does not reflect any ‘personal touch’; in the latter, the application of an

<sup>80</sup> Case C-406/10 [2012] 3 *CMLR* (4) 55, 68, [AG44] (AG Bot).

<sup>81</sup> D. Gervais, ‘Feist Goes Global: A Comparative Analysis of the Notion of Originality in Copyright Law’ (2002) *Jo Copyright Soc’y USA* 949, 976–7; E. Derclaye and D. Gervais, ‘The Scope of Computer Program Protection after SAS: Are We Closer to Answers?’ [2012] *EIPR* 565, 567 (‘creative choices are those that one can isolate by asking whether two authors in similar situations (tools, direction, budget etc) would likely have produced essentially the same thing’); J. Hughes, ‘The Personality Interest’ (1998) 16 *Cardozo AELJ* 81, 114 (choices are ‘creative’ where they are neither mechanical nor random).

<sup>82</sup> *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 *CMLR* (4) 55, 68, [AG48], emphasis added.

<sup>83</sup> B. Hugenholtz, ‘Works of Literature, Science and Art’, in B. Hugenholtz, A. Quaedvlieg, and D. Visser (eds), *A Century of Dutch Copyright Law: Auteurswet 1912–2012* (2012), 33, 43 (‘Whether the originality requirement is met depends on whether the author has had enough ‘creative space’—and used it so that the work shows sufficient subjective characteristics’).

arbitrary rule (or indeed random selection) may give rise to an individualized work, but that could not properly be said to be the outcome of choices.

Must there be a certain ‘quantity’ of effort or decision making before a work is ‘original’? Recital 19 of the Database Directive states that the compilation of several recordings of musical performances on a CD does not meet the conditions for copyright protection. This has been read, at least by one British court, as implying that there might be a quantitative dimension to the requirement that a work be its author’s own intellectual creation.<sup>84</sup> However, outside the domain of databases, the indications are that the Court of Justice envisages that even some rather small works can be ‘intellectual creations’. Thus, in *Infopaq* itself, the Court seemed to envision the possibility that 11 words from a newspaper article might be an intellectual creation, because it said that this was a matter for the national court to decide.<sup>85</sup> Perhaps the better view is that a quantitative threshold is not required so long as there is such an accumulation of creative decisions as to give the product the character of an intellectual creation. This may derive from a mass of decisions of limited creativity,<sup>86</sup> or from a smaller number of highly personal decisions, such as with the composition of an 11-word haiku.

### 3.5 DIFFERENCES BETWEEN THE EUROPEAN AND BRITISH STANDARDS

Although the new EU standard is higher in some respects than the previous British standard of originality,<sup>87</sup> for the most part the new standard probably will not lead to different results.<sup>88</sup> Most novels, plays, poems, paintings, engravings, or sculptures that were protected under the traditional UK standard would also satisfy the requirement of ‘author’s own intellectual creation’. However, we can identify some circumstances in which the rules do differ. These relate to six situations: where the work is a product of mere labour; where creativity is involved in the creation of data; where the work is a product of mere skill; where the creative contribution to the work is at the ‘pre-expressive stage’; where the creative contribution is regarded as being ‘of the wrong kind’; and where the creative contribution is trivial. It might be noted that while the European standard may be said to be ‘higher’, it is probably preferable to say it is different. This is because while, in the first four examples, some works that would qualify under the ‘labour, skill, and judgment’ standard will not reach the European threshold, in the latter two categories it may be that efforts disregarded under traditional British law will be relevant under the EU standard.

<sup>84</sup> *British Horseracing Board v. William Hill* [2001] ECDR 257, 269 per Laddie J. For discussion of a claim by the Ministry of Sound to copyright in its compilation albums, see V. Barnet et al., ‘Compilation Album Copyright’ [2014] *Ent L Rev* 1 (the dispute described there was settled).

<sup>85</sup> One example before the Court was ‘a forthcoming sale of the telecommunications group TDC which is expected to be bought’: *Infopaq Int. v. Danske Dagblades Forening*, Case C-5/08 [2009] ECR I-6569 (ECJ, Fourth Chamber), [21].

<sup>86</sup> For example, choosing the 1,000 ‘most important’ poems: *Gedichttitelliste [Poem Title List]* (2008) 39 IIC 985 (German Supreme Court).

<sup>87</sup> *SAS Institute Inc v. World Programming Ltd* [2013] EWCA Civ 1482, [37] per Lewison LJ (‘raised rather than lowered the hurdle’); *Football Dataco Ltd and Ors v. Yahoo! UK Ltd and Ors*, Case C-604/10 [2012] 2 CMLR (24) 703, [AG41] (AG Mengozzi); Davison, 15–16. Cf. W. Blocher and M. Walter, ‘Computer Program Directive’, in M. Walter and S. von Lewinski (eds), *European Copyright Law* (2010), 94, [5.1.11] (suggesting test in Software Dir. corresponds to UK and Irish standard); M. Walter, ‘Term Directive’, in M. Walter and S. von Lewinski, op. cit., 587, [8.6.10] (suggesting standard in Term Dir. ‘is a compromise’); E. Judge and D. Gervais, ‘Of Silos and Constellations: Comparing Notions of Originality in Copyright Law’ (2009) 27 *Cardozo AELJ* 375, 386–7 (suggesting standard is close to that of the United Kingdom).

<sup>88</sup> Judge and Gervais, op. cit., at 404; E. Derclaye and D. Gervais, ‘The Scope of Computer Program Protection after SAS: Are We Closer to Answers?’ [2012] *EIPR* 565, 567.

### 3.5.1 Mere labour

The most obvious area in which the new definition may lead to a change is where originality arises through the mere exercise of routine labour. Although the British position was never completely clear, some of the case law suggests that where a work resulted from a great quantity of labour, it might fall to be protected. In certain situations, the British courts had accepted that the mere exercise of a substantial amount of routine labour may give rise to an original work.<sup>89</sup> For example, where a compiler had spent a considerable amount of time and effort creating a chronological list of television programmes or an alphabetically ordered list of lawyers,<sup>90</sup> the resulting work was treated as original. That is, even though, in creating the table or compilation, the author might not have exercised any ‘skill or judgment’, nonetheless the work might still have been treated as original if the process of compilation involved a sufficient amount of (mundane) labour. However, this would be the case only if the amount of labour was substantial. For example, where the process of compilation involves little effort or judgment and the effect is commonplace, the work will not be treated as original; thus the selection of seven tables at the front of a diary, consisting of things such as days and dates of the year, tables of weights and measures, and postal information,<sup>91</sup> was held by the House of Lords to be non-original. Similarly, in another case involving a local timetable showing a selection of trains to and from a particular town that was prepared from official railway timetables, the compilation was held to be non-original.<sup>92</sup> In these sorts of cases, the difficult question was predicting how much labour was required for the resulting work to be original.

Insofar as these were good decisions under British law,<sup>93</sup> it seems clear that they would have to be decided differently under the EU standard: mere mechanical or routine labour, even if quantitatively significant, will never render a work ‘original’ in the European sense. Where all that an author has done is to exert a considerable amount of effort in the creation of a work, it is difficult to see how this, on its own, could be seen as an ‘intellectual creation’, especially one that reflects the author’s personality. Anyone exerting the same effort would produce the same result.

### 3.5.2 Creation of data, ideas, or functions

The second area in which traditional British notions of originality have been displaced is in relation to the creativity that goes into the creation of data. Although UK copyright law did not protect data as such, the courts seemed to recognize that ‘labour, skill, and effort’ in the creation of data could itself contribute to the originality of expression of the resulting work. Thus, prior to harmonization, it was assumed that television listings would be regarded as ‘original’ because of the skill and effort that went into devising what shows to broadcast, as well as at what days and times were best suited for the programmes (for example to avoid children seeing adult content, but also to maximize audience figures).

<sup>89</sup> *Ladbroke v. William Hill* [1964] 1 All ER 465, 478 per Lord Devlin.

<sup>90</sup> *BBC v. Wireless League Gazette Publishing Co.* [1926] Ch 433; *Independent Television Publications v. Time Out* [1984] FSR 64; *Waterlow Directories v. Reed Information Services* [1992] FSR 409; *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320; *Football League Ltd v. Littlewoods Pools Ltd* [1959] 1 Ch 637, 656–7 per Upjohn J.

<sup>92</sup> *Leslie v. Young* [1894] AC 335.

<sup>93</sup> *Ice TV Pty Ltd and anor v. Nine Network Australia Pty Ltd* [2009] HCA 14 (the Australian High Court—Gummow, Hayne and Heydon JJ—suggested that cases in which routine labour had been held sufficient to give rise to should be treated with caution). See K. Bowrey, ‘On Clarifying the Role of Originality and Fair Use in Nineteenth Century UK Jurisprudence’, in C. W. Ng, L. Bently, and G. D’Agostino (eds), *The Common Law of Intellectual Property* (2010), ch. 3.

The new criterion does not appear to permit a court to take account of the *creation* of information included in the database. This was made clear by the Court of Justice in its decision in *Football Dataco v. Yahoo! UK Ltd.*<sup>94</sup> In this case, the question was whether the skill and effort that went into compiling football fixture lists constituted them as original databases. The Court held that any creativity that went into the generation of data (the dates and times of the football fixtures) was irrelevant to the originality of the database.<sup>95</sup>

Although the reasoning of the Court in *Football Dataco* was grounded in special rules relating to databases,<sup>96</sup> it seems clear that the Court regards the input into the creation of basic facts, ideas, and functions as irrelevant to the assessment of whether the ultimate production based upon those facts, ideas, and function is an ‘intellectual creation’. In the *SAS* decision, when considering whether and when a user manual might be an original literary work, the Court of Justice was explicit in stating that ‘keywords, syntax, commands and combinations of commands, options, defaults and iterations’ used in creating software are unprotected because they consist of ‘words, figures or mathematical concepts’, which are not intellectual creations of the author of the computer program.<sup>97</sup> However, the Court accepted that the ‘choice, sequence and combination’ of these elements might be such that the author expresses his or her creativity and creates an ‘intellectual creation’.<sup>98</sup> Although it is not stated in so many words, it seems clear that the Court means that originality can arise only from the ‘choice, sequence, and combination’ of these elements, and that the skill (etc.) in creating each of them is not considered in that assessment.

Difficult questions, of course, remain as to what activity relates to the ‘creation’ of data and what to its selection or arrangement into a database (or other work). The Court of Appeal in *Football Dataco* had assumed that the data in football fixture lists was the games that would be played and that determining the chronology of the games (that is, when each team played each other) was creative effort expended on pre-existing data. The Court of Justice disagreed: on these facts, the finalization of dates and times took place at ‘the data creation stage’.<sup>99</sup>

### 3.5.3 Mere skill

A third way in which the new European test may differ from the old British test is in terms of the relevance of ‘skill’. Whatever may have been the position in relation to mere labour, it is clear that the British test of originality took account of the skill involved in producing a work. Nowhere was this clearer than in *Walter v. Lane*, in which various members of the House of Lords expressly recognized the copyright in newspaper reports of speeches because the skill involved in reducing to writing the words of a person who spoke quickly was an art requiring considerable training.<sup>100</sup>

The mere existence of skill has been said to be irrelevant to the assessment of whether there is ‘intellectual creation’. In *SAS Institute*, Advocate-General Bot said that:

[I]n order to determine whether a computer program is eligible for legal protection under copyright, account should be taken not of the time and work devoted to devising the program nor of the level of skill of its author but of the degree of originality of its writing.<sup>101</sup>

<sup>94</sup> Case C-604/10 [2012] 2 *CMLR* (24) 703 (ECJ, Third Chamber).

<sup>95</sup> *Ibid.*, 723–4, [32]–[33], [37]. <sup>96</sup> *Ibid.*, 723, [31].

<sup>97</sup> *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 *CMLR* (4) 55, [66].

<sup>98</sup> *Ibid.*, [67]. <sup>99</sup> Case C-604/10 [2012] 2 *CMLR* (24) 703, [AG29].

<sup>100</sup> *Walter v. Lane* [1900] *AC* 539, 551–2 *per* Lord Davey, 554 *per* Lord James of Hereford.

<sup>101</sup> *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 *CMLR* (4) 55, 71, [AG66]. *But cf.* at 68–9, [AG 48] (referring to the ‘creativity and skill of the author’).

Likewise, in *Football Dataco v. Yahoo! UK Ltd*, the Court indicated that ‘skill’ was not itself sufficient to render a work original in the European sense.<sup>102</sup> It stated that:

[T]he fact that the setting up of the database required . . . significant labour and skill of its author . . . cannot as such justify the protection of copyright . . . , if that labour and that skill do not express any originality in the selection and arrangement of that data.<sup>103</sup>

Skill of itself does not give rise to an author’s own intellectual creation; what is required is an ‘original expression of the creative freedom of its author’.<sup>104</sup>

### 3.5.4 Pre-expressive contributions

A fourth way in which the traditional British test and the European notion of originality *may* differ (the position is not completely clear) is in the treatment of ‘pre-expressive’ contributions. Traditionally, the UK courts have accepted that the originality of a work may arise in the steps preceding the production of the work (that is, in the *pre-expressive* stage). So, for example, in relation to the labour that confers originality with respect to literary compilations, the courts would consider the footwork involved in discovering the information,<sup>105</sup> or the selection or choice of the materials that are later embodied in the work. This was made clear in *Ladbroke v. William Hill*, in which the question arose as to whether football pools coupons (which listed matches to be played and offered a variety of bets arranged into 16 categories) were original compilations.<sup>106</sup> On the basis that the expressive form of the coupons inevitably followed from the preceding commercial decisions as to the bets that should be offered, the appellants argued that the coupons were not original. The House of Lords rejected these claims.<sup>107</sup> According to Lord Reid, it was artificial to divide the inquiry up into, on the one hand, the commercial decisions about which bets to offer and, on the other, the form and arrangement of the table. The selection of wagers and their presentation was so interconnected as to be inseparable. Consequently, when considering originality, it is inappropriate to dissect the labour, skill, and judgment into pre-expressive and expressive stages; both elements should be taken into account to determine whether the threshold had been reached.<sup>108</sup>

Preparatory work has been recognized as relevant to determining ‘originality’ under the European standard, but it seems unlikely that pre-expressive work will be relevant. In *SAS Institute*, Advocate-General Bot pointed to a stage in the production of a computer program, between defining the tasks to be performed and developing the code, from which the selection and compilation of elements could contribute towards the originality of the program.<sup>109</sup> In the case of a photograph, the Court has indicated that ‘pre-expressive’ choices will be relevant at least insofar as the ‘preparation stage’ is concerned—that

<sup>102</sup> Case C-604/10 [2012] 2 CMLR (24) 703, [AG35]. <sup>103</sup> *Ibid.*, 725, [42].

<sup>104</sup> *Ibid.*, 725, [45]. <sup>105</sup> *Kelly v. Morris* (1866) LR 1 Eq 697.

<sup>106</sup> [1964] 1 All ER 465, 469 *per* Lord Reid, 477 *per* Lord Hodson, 479 *per* Lord Devlin, and 481 *per* Lord Pearce. See also *Football League v. Littlewoods* [1959] Ch 637, 656; *Bookmakers’ Afternoon v. Gilbert* [1994] FSR 723.

<sup>107</sup> Note, however, *Ladbroke v. William Hill* [1964] 1 All ER 465, 472 *per* Lord Evershed, who considered the task of expressing the wagers a distinct one involving ‘considerable skill, labour and judgment’.

<sup>108</sup> Even under the traditional British test, pre-expressive work was relevant only where (i) it was causally relevant to the expression and (ii) was undertaken with expression as its object: *Purefoy Engineering v. Sykes Boxall & Co.* (1955) 72 RPC 89; *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3291, [43]; *Ladbroke v. William Hill* [1964] 1 All ER 465, 477 *per* Lord Hodson, 479 *per* Lord Devlin, and 481 *per* Lord Pearce.

<sup>109</sup> *SAS Institute Inc v. World Programming Ltd*, Case C-406/10 [2012] 3 CMLR (4) 55, 68–9, [AG47]–[AG48] (AG Bot).

is, choosing ‘the background, the subject’s pose and the lighting’.<sup>110</sup> In the case of databases, it is quite clear that the ‘intellectual creation’ must be the result of ‘selection’ and/or ‘arrangement’ of the data.<sup>111</sup> But it seems that the sort of commercial decisions that were considered relevant ‘pre-expressive’ work in the *Ladbroke* case would no longer be relevant; rather, the European standard seems focused on contributions and choices that are directly relevant to the structuring of the expression of the work.

### 3.5.5 Creativity of the wrong kind

Although, in most respects, the European test of ‘author’s own intellectual creation’ is regarded as a ‘higher’ standard than the former British standard, it is worth observing that this is not necessarily the case with respect to every aspect of the originality assessment. In particular, because of the traditional ‘box’ approach to copyright categories, the British courts have sometimes held that contributions to derivative works are to be ignored because they are of the ‘wrong kind’. In *Interlego v. Tyco Industries*,<sup>112</sup> the Privy Council was called upon to decide whether there was copyright in drawings for the children’s building blocks known as LEGOBRICKS. The particular drawings had been produced in 1973, but were based upon earlier drawings, so the question arose as to whether the alterations made in 1973 were sufficient to produce an original artistic work. The major differences between the drawings concerned the sharpening of the outer edges of the tubes in the brick, changes in tolerances, and increase in the radii on the outer edges of the knobs on the brick from 0.2 mm to 0.3 mm. Of the changes made, only the first was shown pictorially; the others, by letters and figures. While the Privy Council recognized that the alterations were technically important, they were not sufficient to render the work original because, in the case of artistic works, the change must be *visually significant*—that is, to confer copyright, the skill and labour must produce a change that is relevant to the category of work in question. On the facts, it was held that because the changes made to the drawings were primarily to the written specifications, this was not an alteration of visual significance.<sup>113</sup> As such, the drawings were not original.

The reasoning employed by the Privy Council looks suspect in the light of the European jurisprudence. The Court of Justice has not been willing to differentiate between different categories of ‘creation’ or types of creativity. From the logic of the decisions, the Court would simply ask whether the addition of the text to the traced drawings of the bricks involved creativity, not whether that creativity was literary or artistic. Nevertheless, on the facts, the same outcome could be justified under the new European originality standard. Although the Privy Council found that the act of tracing involved ‘skill’, but that the skill was of the wrong kind, under European case law ‘originality’ is no longer to be conceived in terms of skill, but instead of creative freedom—and there is clearly no creative freedom in tracing. Moreover, while the decisions as to the dimensions of various aspects of the modified bricks would not be disregarded because they were ‘literary’ rather than ‘artistic’, those decisions would not have been regarded as creative, because they were heavily constrained by function and left little formative freedom to the designer.

### 3.5.6 Trivial and insubstantial contributions

As already observed, British law traditionally refused to protect trivial and insubstantial efforts, or labour, skill, and judgment with trivial or insubstantial effects. This can be seen in the case law on titles, which ruled out protection on the basis that titles were

<sup>110</sup> *Eva-Maria Painer v. Standard VerlagsGmbH and Ors*, Case C-145/10 [2012] ECDR (6) 89 (EC), Third Chamber, 106, [91].

<sup>111</sup> Database Dir., Art. 3(1).

<sup>112</sup> [1989] AC 217.

<sup>113</sup> *Ibid.*, 268 *per* Lord Oliver.

typically ‘too insubstantial’.<sup>114</sup> So far, it is unclear whether there is any requirement of substance before a work will be protected under European law. Outside the environment of databases, the sole test seems to be that the work is the author’s own intellectual creation. Consequently, there may well be works that would not have been protected under UK law that might qualify for protection under the European standard.

### 3.6 CAN THE UNITED KINGDOM PROTECT NON-ORIGINAL WORKS? IF SO, DOES IT?

As we have seen, the new European test of originality differs from the old UK test of ‘labour, skill, and/or judgment’. One question that we have not yet considered is whether the United Kingdom—and other member states, such as Germany, which recognizes *kleine Münze* (so-called protection of ‘small change’), or the Netherlands, with its *Geschriftenbescherming* (protection of ‘other writing’)—are permitted to protect ‘non-original writings’ (for example instruction manuals, recipes, knitting patterns), and if so, whether they are entitled to do so by copyright. The answer to this very important question is (except in respect of databases) unfortunately, not yet clear.

The first point to observe is that various directives clearly envisage the possibility of some protection being offered to non-original works. The Term Directive, which harmonizes the ‘originality’ standard for photographs, does so explicitly. However, the Directive allows member states to give protection to non-original photographs (that is, those that are non-original in the European sense). Similarly, the Database Directive clearly envisages protection by *sui generis* right for databases even though they do not meet the originality standard.<sup>115</sup> In addition, the Directive preserved the system of protection afforded to non-original catalogues in the Nordic countries. Elsewhere, the directives have said little (in part, no doubt, because the legislature gave no explicit consideration to the question of originality outside the Software, Database, and Term Directives). However, the Software, Database, and Information Society Directives leave unaffected the operation of ‘unfair competition law’.<sup>116</sup>

If the United Kingdom (and other member states) are free to give protection to non-original works, the question arises whether they are free to do so by ‘copyright’ or whether they must do so only by way of some sort of ‘related right’ or by ‘unfair competition’. As regards databases, the Court of Justice, in its decision in *Football Dataco v. Yahoo! UK Ltd*,<sup>117</sup> has made it clear that no other *copyright* protection is to be available for databases. The Court inferred this not merely from the harmonizing intent, but from the specific transitional provisions in the Directive (which would have made no sense if member states had been able to continue to offer protection through different standards).<sup>118</sup> The position is less clear as regards software and photographs, but is probably the same. The Software Directive, when referring to the originality standard, states in Article 1(3) that ‘no other criteria shall be applied to determine its eligibility for protection’ and it seems, from the context, that the term ‘protection’ means ‘protection by *copyright*’. Thus member

<sup>114</sup> See Chapter 3, sections 2.1–2.2. <sup>115</sup> See Chapter 13.

<sup>116</sup> Software Dir., Art. 9(1); Database Dir., Art. 13; Info. Soc. Dir., Art. 9. The Term Dir. has no such saving, but in any case it explicitly leaves open the possibility of protecting non-original photographs.

<sup>117</sup> Case C-604/10 [2012] 2 CMLR (24) 703.

<sup>118</sup> *Ibid.*, 716, [AG51]; 726, [49]–[52]. See E. Derclaye, ‘*Football Dataco*: Skill and Labour is Dead!’ (1 March 2012), Kluwer Copyright Blog (protection via unfair competition is also precluded). But cf. A. Beunen, ‘*Geschriftenbescherming*: The Dutch Protection for Non-Original Writings’, in B. Hugenholtz, A. Quaendvlieg, and D. Visser (eds), *A Century of Dutch Copyright Law: Auteurswet 1912–2012* (2012), ch. 3, esp. 97 (whether the protection on ‘non-original writings’ survives depends on whether it ‘is to be considered a form of copyright or protection against unfair competition’).

states may not offer copyright protection to non-original programs (although they may protect any effort or investment from unfair competition). The position is less clear in other areas, particularly as to photographs. Here, Article 6 of the Term Directive states that 'Member States may provide for the protection of other photographs' and says nothing about the term or scope of such protection—implying that it might be equivalent to copyright. However, because Article 6 indicates that no criteria other than that of 'the author's own intellectual creation' can be applied to determining protection of photographs falling within 'Article 1', which relates to works within the Berne Convention, the better view is that the 'other protection' must be by means of a 'related right' rather than 'copyright'.<sup>119</sup> The question must be regarded as a more open one in relation to works falling within the general remit of the Information Society Directive and the *Infopaq* ruling.

If member states are free to protect non-original works, has the United Kingdom elected to do so? The difficulty with interpreting the British law lies in the fact that the legislature said nothing about this issue when implementing the directives. So, for example, after 1 January 1996, UK law protects 'original' photographs, but it is unclear whether by that it means 'original' in the British sense or 'original' in the European sense. The same is true of British inaction since *Infopaq*. As things stand, the most obvious way in which to interpret the originality requirement in the CDPA 1988 so that it complies with the directives and jurisprudence is to treat the word 'original' as referring to the European standard—that is, as requiring all 'original literary, dramatic, musical and artistic works' to be an author's own intellectual creation reflecting their personality. This was the assumption on which Judge Colin Birss QC operated in *Temple Island Collections Ltd v. New English Teas Ltd*,<sup>120</sup> (Fig. 4.1) in which it was held that an image of a London double-decker bus crossing Westminster Bridge, albeit modified so that the bus was in colour and the background in black and white, was original in the European sense.

However, it is still just about possible to argue that—databases apart—the United Kingdom continues to protect by copyright works that are merely 'original' in the old UK understanding. One basis for such an argument is the recognition that the low UK threshold of originality *functioned* as a form of 'unfair competition' law,<sup>121</sup> which could be preserved even in areas of European harmonization. While it might then be objected that the United Kingdom wrongly protects the works from unfair competition by means of 'copyright', it could be answered that the form of protection is British copyright (rather than as required under EU law) and that the general nature of directives leaves the freedom as to the technique of implementation to member states. The British legislature has, in effect, chosen to implement the various directives and their originality standard by incorporating them within a broader regime (which also protects works from unfair competition using identical property rights). This view is further supported by the absence of any transitional provisions, a fact that might suggest that the legislature intended the courts to continue to apply the traditional British standard.

### 3.7 EXAMPLES

While, as we noted above, the different tests will frequently not produce different results, the best way in which to understand what is at stake is to consider some of the difficult situations that have already come before the courts.

<sup>119</sup> D. Visser, 'Directive 93/98/EEC', in T. Dreier and B. Hugenholtz (eds), *Concise European Copyright Law* (2013), 299; M. Walter and S. von Lewinski (eds), *European Copyright Law* (2010).

### 3.7.1 Spontaneous conversations

We have already observed that UK law will, since 1989, protect ‘spoken works’ where they have been recorded. But when will a spoken work be ‘original’? Does a person create an ‘original work’ when they order tickets by telephone (the request being taped)? Is a conversation between a television presenter and a celebrity on a chat show sufficiently original? British courts have not, as yet, been asked to rule on this issue (whether under the traditional test or under the new European standard), but the issue did arise in the Netherlands. In the *Endstra Tapes* case,<sup>122</sup> the question arose whether the contents of an interview by the police with an informant, William Endstra, were protected. Endstra had subsequently been murdered and his family wished to prevent publication of the transcripts by a newspaper to which the tapes had been leaked. The Court of Appeal of Amsterdam denied that these were works of authorship because they had not been conceived as a coherent creation, but the Dutch Supreme Court reversed this decision on appeal. Although it stated that, under Dutch law the form of the work must be a result of human creative choices and must be neither banal nor trivial, Endstra’s conversations met those standards. To require the claimant to show that the author was consciously creating a work would be unfairly burdensome. There is no reason to think that any different result would have occurred from applying the European standard of ‘author’s own intellectual creation’.

### 3.7.2 Insubstantial creations: words, titles, etc.

Traditionally, British courts had been reluctant to protect titles, slogans, and short phrases. As a result of *Infopaq*, however, that attitude seems to be changing. In that case, the Court indicated that 11 words of a newspaper article might be original in the European sense of an ‘intellectual creation’. In the light of that holding, in *Newspaper Licensing Agency v. Meltwater and the PRCA*,<sup>123</sup> the High Court and Court of Appeal have held that ‘policy considerations’ that may once have informed the United Kingdom’s reluctance to protect titles are now irrelevant. In that case, the Newspaper Licensing Agency (NLA), which represents publishers of newspapers, brought an action against Meltwater and the Public Relations Consultants Association (PRCA), claiming that members of the latter association needed NLA’s permission to receive electronic mailshots containing links to newspaper articles publicly available on the Internet. The links were accompanied by the title of the newspaper articles and a couple of sentences of text surrounding the search term. The issue before the Court was whether to award a declaration that the PRCA were infringers when they received these services. The NLA did not claim that *all* headlines were protected, but rather that (in order for the Court to give the declaration) the Court need be persuaded only that *some* would be protected. Proudman J, whose judgment was affirmed by the Court of Appeal, found that at least some of the titles would constitute original literary works. She adopted a definition of originality articulated in *Infopaq* decision and concluded that the evidence established that headlines involve ‘considerable skill in devising and they are specifically designed to entice by informing the reader of the content of the article in an entertaining manner’.<sup>124</sup> The Court of Appeal affirmed. The Chancellor concluded that the finding that newspaper headlines *are capable of being*

<sup>122</sup> *Zonen Endstra v. Nieuw Amsterdam* [2008] EIPR N73 (Netherlands Supreme Court, 30 May 2008), described in B. Hugenholtz, ‘Works of Literature, Science and Art’, in B. Hugenholtz, A. Quaedvlieg, and D. Visser (eds), *A Century of Dutch Copyright Law: Auteurswet 1912–2012* (2012), 33, at 52–3.

<sup>123</sup> [2010] EWHC 3099, [67]–[72]; [2011] EWCA Civ 890, [19]–[22].

<sup>124</sup> [2010] EWHC 3099, [70].

original literary works is ‘plainly correct’, so that the lower court’s conclusion was ‘unassailable’.<sup>125</sup>

The ruling in *Meltwater* provides little guidance on when an individual title will be protected, apart from that this depends on whether it is original in the European sense. This seems to depend in part on length (the longer the title, the more opportunity to impose one’s personal touch), but mostly on quality—that is, whether the title describes the book, and whether the language chosen is alliterative or has other individual qualities. There seems little doubt that short descriptive titles, such as *The Lawyer’s Diary*, remain unprotected.<sup>126</sup> There is simply too little creative freedom involved in coming up with the name of a diary targeted at lawyers (and, insofar as there is freedom, in that case the claimant took the most obvious of routes). Moreover, in many cases, where titles allude to or parody existing well-known public domain titles, such as ‘A Tale of Two Council Houses’ or ‘Trunks are Too Tight to Mention’ (both examples before the courts in the *Meltwater* case), one might doubt that the creative input in substituting one or two words in *A Tale of Two Cities* or ‘Money’s Too Tight To Mention’ would give rise to copyright.<sup>127</sup> More difficulty attends the determination of whether the nine-word combination ‘The Man Who Broke the Bank At Monte Carlo’ might be thought sufficiently creative,<sup>128</sup> although Monte Carlo is primarily known for gambling and the phrase ‘to break the bank’ is a very commonly used description of winning heavily in gambling institutions.<sup>129</sup> Our view is that it would not do so.

On the assumption that *Meltwater* is right and that the protection of titles is governed by European law (and the *Infopaq* standard), it might have been hoped or anticipated that some guidance as to where the line is to be drawn could be elicited from case law in countries that have been applying similar criteria to those now embraced by the Court of Justice.<sup>130</sup> However, different countries seem to draw distinctions in different places—the French being perhaps the most generous and the Germans, the most parsimonious.<sup>131</sup> Moreover, even within those jurisdictions, there seems to be very little consistency.<sup>132</sup>

As we have noted, the English Court of Appeal declined to find copyright in the single word *EXXON*, on the basis that it was not a literary work.<sup>133</sup> That basis for the decision may no longer be sustainable in Europe, given the Court of Justice’s implicit harmonization of the ‘work’ concept. But could a single word be original in the relevant European sense? Although the French courts have occasionally gone so far as to protect titles comprising single words,<sup>134</sup> such an approach must now be doubtful as a matter of European law. In *Infopaq*, the Court indicated that the components of the 11-word phrases ‘consist of words which, considered in isolation, are not as such an intellectual creation of the author who

employs them', so that such 'words as such do not . . . constitute elements covered by the protection'.<sup>135</sup> Similarly, in *SAS Institute*, the Court was explicit in stating that 'keywords, syntax, commands' were unprotected because they consist of 'words, figures or mathematical concepts', which are not intellectual creations of the author of the computer program.<sup>136</sup>

### 3.7.3 Snapshots

No judicial guidance had been provided by British courts as to whether pointing a camera and pressing the button was sufficient 'labour, skill, and effort' to justify protection. It was possible to claim that, in such circumstances, the photograph 'originated with the author' and so should be treated as original. Elsewhere in Europe, simple snapshots have often been refused copyright.<sup>137</sup> The European standard, as described in *Painer*, allows for protection of simple portraits, as long as there is sufficient creative freedom.<sup>138</sup> Thus a portrait photographer had creative freedom because:

In the preparation phase, the photographer can choose the background, the subject's pose and the lighting. When taking a portrait photograph, he can choose the framing, the angle of view and the atmosphere created. Finally, when selecting the snapshot, the photographer may choose from a variety of developing techniques the one he wishes to adopt or, where appropriate, use computer software.<sup>139</sup>

Applying a similar standard (albeit a few years prior to *Painer*)—namely, that the photographer's personality is reflected in the arrangements (motif, angle, lighting, etc.)—the Supreme Court of Austria held that a photograph of some grapes was original and added that 'a lot of amateur photographers, who take pictures of everyday scenes in the form of photos of landscapes, persons and holiday pictures' might also be protected.<sup>140</sup> Subsequently to *Painer*, the Patents County Court referred to the Austrian decision approvingly, Judge Birss QC saying that he did not think that the UK law was any different.<sup>141</sup>

### 3.7.4 Derivative works

British courts have long recognized the possibility of protecting 'derivative works'—that is, those based on pre-existing materials. Thus the courts have protected new editions,<sup>142</sup> compilations, anthologies, translations,<sup>143</sup> and adaptations of existing materials,<sup>144</sup> as well as arrangements of music<sup>145</sup> and engravings. Importantly, the courts have indicated that, to be protected, not only need there be skill, labour, and judgment, but also the derivative work must have 'some quality or character which the raw material did not possess, and

<sup>141</sup> *Temple Island v. New English Teas Ltd* [2012] UKPC 1, [20].

<sup>142</sup> *Black v. Murray* (1870) 9 Macph 341, 355.

<sup>143</sup> *Byrne v. Statist Co.* [1914] 1 KB 622; *Cummins v. Bond* [1927] 1 Ch 167.

<sup>144</sup> *Warwick Films v. Eisinger* [1969] 1 Ch 508. <sup>145</sup> *ZYX Music GmbH v. King* [1995] 3 All ER 1.

which differentiates the product from the raw material'.<sup>146</sup> It was for this reason that, in *Interlego v. Tyco Industries*,<sup>147</sup> the technically significant alterations to the drawing, which were the result of considerable labour and expertise, were insufficient to render the later drawings original. The mere fact that the drawing took skill and labour to produce did not necessarily mean that it was therefore an original drawing. As Lord Oliver explained: 'There must in addition be some element of material alteration or embellishment which suffices to make the totality of the work an original work.'<sup>148</sup>

To date, the Court of Justice has not offered any views on 'derivative works'. The practice in member states varies: some merely require that the added or altered material constitutes a personal intellectual creation; others seem to require something more (as the United Kingdom did in *Interlego*). The Italian law, for example, refers to 'additions constituting a substantial recasting of the original work'.<sup>149</sup> There may be much to be said for excluding slight variations to existing material. Certainly, the Privy Council in *Interlego* was concerned about the effects of allowing 'evergreening' of the copyright drawings.<sup>150</sup> Whatever the precise test for originality of derivative works, it is unlikely that copyright will protect 'appropriation art'—that is, where artists copy existing works, but by so doing attempt to give it a different meaning rather than altering the appearance of the work itself.<sup>151</sup>

### 3.7.5 Reporters' copyright

In the famous case of *Walter v. Lane*,<sup>152</sup> the House of Lords held that a newspaper report of an oral speech given by Lord Rosebery, transcribed by a reporter from the talk, was protected by copyright (see Fig. 4.3). This was because, as we have noted, the reporter exercised considerable labour, skill, and judgment in producing a verbatim transcript of the speech.

How would such a case be decided under the European standard? It might be argued that while the reporter's skill in using shorthand is no longer relevant, the choices that the reporter made in deciding what to include (for example audience reaction), how to describe those reactions (for example 'laughter'), and how to punctuate the text were 'creative.' Certainly, it could be said there was some limited freedom here in deciding the way in which the report 'expressed' or reported the speech. In our view, however, these choices would not be treated as being sufficient. The reason for this is that the amount of freedom

<sup>146</sup> *Macmillan v. Cooper* (1924) 40 TLR 186, 188 (a passage described in *Interlego* as 'perhaps the most useful exegesis' on the issue of originality).

<sup>147</sup> [1989] AC 217. But a gloss was added in *LA Gear Inc. v. Hi-Tech Sports plc* [1992] FSR 121 (each successive drawing made during design process by single designer was original).

<sup>148</sup> *Interlego v. Tyco Industries* [1989] AC 217, 268. This leads to the rather bizarre conclusion that good reproductions are denied copyright, but poor ones have sufficient visually significant variation. This was explicitly stated by Lord Oliver, *ibid.* For further discussion, see Laddie et al., [4.42].

<sup>149</sup> Italian Copyright Law 1941, art. 4, cited in A. Musso, 'Italy', in Geller and Bently, *op. cit.*, ITA-16.

<sup>151</sup> *Irene A\*\*\* v. K\*\*\* GmbH*, Case 4 Ob 162/08i [2010] ECC (12) 186 (Austrian Supreme Court, 14 October 2008) (copy of standard ladies shoe in chocolate, even though the idea was that of a well-known artist, was not original). For discussion, see B. Sherman, 'Appropriating the Postmodern: Copyright and the Challenge of the New' (1995) 4 S & LS 31; D. McClean and K. Schubert (eds), *Dear Images: Art, Copyright and Culture* (2002), 405.

<sup>152</sup> [1900] AC 539, treated as being good law in *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3288, [33] *per* Mummery LJ, [79] *per* Jacob LJ. For a creative interpretation, see E. Derclaye, 'Debunking Some of UK Copyright Law's Longstanding Myths and Misunderstandings' [2013] 1 IPQ 1 (claiming that the reporter has copyright in the report as a sound recording), and a persuasive response from N. P. Gravells, 'Reporter's Copyright and Sound Recordings: A Reply to Professor Derclaye' [2013] 2 IPQ 91.

## THE TIMES, FRIDAY, JUNE 26, 1896.

### LORD ROSEBERY ON FREE LIBRARIES.

Yesterday afternoon the Earl of Rosebery opened a new free public library, named after its munificent donor, the Passmore Edwards Library, and erected as a memorial of Leigh Hunt and Charles Keene, at Uxbridge-road, near Shepherd's-bush-green, W. The special feature of this building is the complete supervision throughout all the departments from the librarian's counter, and to insure this advantage the several public rooms are divided by glazed screens. Ample light is provided everywhere, and the interior is bright and cheerful. The exterior has been designed in accordance with the English Renaissance style with bold cornices and handsome mullioned windows. The central gable is sculptured with a life-size group representing the "Shepherd in the Bush," suggested by the name of the district in which the library has been built. The librarian's house is on the first floor of the front building, and above are large storage rooms in connexion with the library. The architect was Mr. Maurice B. Adams, F.R.I.B.A., of Bedford-park, Chiswick. The cost of the building, exclusive of the site, has been rather more than £6,000. Lord Rosebery and Mr. Passmore Edwards were received on their arrival by the Library Commissioners, and conducted to the central room, where the chair was taken by Prebendary Snowden, chairman of the commissioners.

The CHAIRMAN, in opening the proceedings, explained that the site, which was peculiarly well adapted for the purpose of a public library, and which was very valuable, having an excellent building frontage, was a benefaction from the copyholders and the Ecclesiastical Commissioners, and when, after the refusal of the ratepayers to increase the library rate, those in favour of the library were almost in despair as to raising the necessary funds, Mr. Passmore Edwards came forward to their relief. (Cheers.) With noble, but not unaccustomed, generosity, he had erected that beautiful building, which was complete in all its arrangements as far as experience and skill could make it so. The chairman also made a reference to Lord Rosebery's literary achievements, and expressed the hope that he would present the library with a volume of his life of Pitt, inscribed with the author's autograph.

LORD ROSEBERY, who was received with loud cheers on rising to speak, said:—Mr. Chairman, Ladies, and Gentlemen,—I have much pleasure in declaring this library open. (Cheers.) I do that at the beginning and not at the end of what I have to say because I have observed almost invariably that public speakers whenever they have a formal duty to discharge and attempt to discharge it at the end of their speech forget to do so. (Laughter.) Now, Mr. Chairman, you have been very kind in the remarks that you have made. I shall cherish your reference to my little book which I had great pleasure in seeing on your shelves, but I will not accept your invitation to present the book to your library. In the first place, you already have a copy of it, which I do not think was at all worn out. (Laughter.) And in the second place, as it is sold I believe—although I have never bought a copy myself—at the ridiculously inadequate sum of 1s. 10d. (Laughter), it is not at all a suitable offering for me to make to this library. I trust to find a more valuable book that I may leave as a memento of my visit here to-day. (Cheers.)

### MR. PASSMORE EDWARDS.

But I have another duty to perform besides declaring this library open, it is that of proposing a vote of thanks to the generous donor of the building. (Cheers.) You have expressed a wish that I may have a long time before me to devote to literary pursuits. (Hear, hear.) I thought my neighbour on my right expressed a particularly fervent and enthusiastic assent to that sentiment. (Laughter.) I for my part have nothing to say in contravention of it. "Sweet are the uses of adversity," or what is called adversity, and it is difficult for those who are intrusted with the government of the country to come and open public libraries or perform functions of that kind; and therefore you have reason to thank her Majesty's Opposition for their existence when it comes to any question of a function of this kind. But I am bound to say that even when I was in office, and when I was subject to the responsibilities and censures of office, I found time in the very first beginning of that period to go and open another library, founded of course, and given of course, by Mr. Passmore Edwards. (Cheers.) Now there is something about the permanence of pursuits in individuals which gives one a sense of the nothingness of time. We must all have known in our younger days some venerable ancestress or female relative who was occupied in some interminable piece of worsted work. (Laughter.) We went to school, we went on our travels, and we returned again and found that piece of worsted was still progressing (laughter), and I had something of the same feeling when I came here to-day and found Mr. Passmore Edwards still giving public libraries. (Cheers.) I do not know whether you remember the old story of the gambler who lost an enormous sum at Crockford's in the old days, and came out of that haunt with a generally vicious feeling against himself and the whole human race which he did not know how to vent. Looking opposite at White's Club-house he saw a gentleman kneeling against the stairs and tying his shoe lace. The gambler saw in him an object on which to vent his feeling, and, rushing up to the gentleman, he kicked him, and cried, "Bless you"—he did not say "Bless you," but in the presence of the chairman I will not quote the exact word he did use (laughter)—but he said, "Bless you, you are always tying up your shoe lace." (Laughter.) Well, I feel inclined to approach Mr. Passmore Edwards, not to kick him, but to say, "Bless you, you are always doing good." (Cheers.) Another word about Mr. Passmore Edwards. I am given to understand by those who are accustomed to commendation that it is not pleasant to be praised, in public at any rate, and therefore I think I shall best suit his feelings if I say nothing more on a subject which I could not adorn by eloquence, and which certainly does not need eloquence to recommend it.

### OUTDOOR SPORTS IN ENGLAND.

But I think those who watch the growth of the free libraries system in this country, in spite of the almost persistent opposition of the ratepayers, have some cause to inquire, What object is it that these free libraries answer in our modern commonwealth? I confess I have formed a very clear conviction on that head. I think no one can watch the progress of our nation without seeing the enormous predominance that is given everywhere to-day to outdoor sports. I welcome that tendency. I think it is a healthy and rational tendency, but of course it may be carried too far. What we do see in the tendency to outdoor sport at this time is that it weans the race from occupations that might be objectionable, and it is rearing a noble and muscular set of human beings; and it subserves other objects which are not so immediately apparent. For instance, I take it the connexion between Australia and the mother country has been rendered closer than it would have been otherwise by the cricket contests which take place between the two countries; and I am given to understand, though I

Fig. 4.3 One of the newspaper reports considered protected by copyright in *Walter v. Lane*

Source: *The Times*, Friday 26 June 1896, page 12

is too limited: choices over how to punctuate exist, but are limited by rules of grammar and syntax; the choices over whether and how to report the audience reaction leave only a very few options. The reports would therefore no longer be protected by copyright (in the European sense).

© L. Bently and B. Sherman 2014

While newspapers today tend to provide summaries and added matter to reports of speeches (thus creating original works), the conclusion that verbatim reports are no longer protected must have potentially significant consequences for reporting services such as law reporters (such as Martin Walsh Cherer) and parliamentary reporters (such as Hansard). Whether the removal of copyright will render such services unsustainable will depend on the business models that these services operate: it may be that exclusive rights in the reports are less important than other attributes of the service, such as speed, and reputation for accuracy.

### 3.7.6 Restoration and reconstruction

In *Sawkins v. Hyperion*,<sup>153</sup> the question was whether ‘performing editions’ of musical works first composed in the seventeenth and eighteenth centuries were original musical works. It was argued by Hyperion that the reconstructed and edited scores were not original musical works, because Lionel Sawkins had added no new music over and above that in the original. While he had laboured to reconstruct the manuscripts and make them more user-friendly to today’s performers, that did not involve labour, skill, or judgment of a musical sort. Mummery LJ agreed that some aspects of Sawkins’ efforts, ‘such as time and labour spent on discovery or retrieval of the original scores and in their layout on the page’, were irrelevant.<sup>154</sup> However, labour, skill, and judgment in adding information that could potentially affect the totality of sounds produced by musicians were pertinent. On the facts, the additions to work had sufficient aural and musical significance to attract copyright protection.

How would *Sawkins* fair under the European standard? Certainly, the analysis would have to change: Lionel Sawkins’ skills as an expert would no longer be relevant and his application of standardized rules to convert old formats so as to make them understandable today (for example by so-called ‘figuring the bass’) also might be regarded as insufficient to amount to ‘intellectual creation’, in the sense of the exercise of creative choices. But it is notable that, in parallel proceedings in France,<sup>155</sup> which has traditionally applied a standard akin to that now adopted by the Court of Justice,<sup>156</sup> *Sawkins* also succeeded. The French Court observed that:

Given the state of the sources, the defendants have not proven a degree of strict faithfulness of the restored work to [the composer’s] intention that would be capable of denying any personal character in the restoration and composition work such that it became a mere act of transcription.<sup>157</sup>

Had the case been one of pure ‘reconstruction’, without adding the missing notes and musical phrases, it seems difficult to imagine that either court could now describe the work as an ‘intellectual creation’ bearing the ‘personal touch’ of its author.

### 3.7.7 Photographs of artistic works

For art galleries, the revenues generated through *claiming* copyright in photographs of paintings and other art works that they hold can be substantial. In the United Kingdom, claims to such rights have depended on the interpretation of *Graves’ Case*,<sup>158</sup> in which

<sup>153</sup> [2005] 1 WLR 3280. <sup>154</sup> *Ibid.*, 3291, [43].

<sup>155</sup> *Sawkins v. Harmonia Mundi* (2006) 37 IIC 116.

<sup>156</sup> See (2006) IIC 116, 119 (a work must bear the intellectual and personal stamp of author).

<sup>157</sup> *Sawkins v. Harmonia Mundi* (2006) 37 IIC 116, 119.

<sup>158</sup> *Graves’ Case* (1869) LR 4 QB 715. See R. Deazley, ‘Photography, Copyright and the South Kensington Experiment’ [2010] IPQ 293.

Blackburn J held that a photograph of an engraving of a painting was an ‘original photograph’ and therefore protected under the Fine Art Copyright Act 1862. However, even prior to EU harmonization, doubts had been raised as to the usefulness of this case as an authority, given that the technological apparatus for taking photographs is now so much more developed (and thus the act of taking photograph so much easier),<sup>159</sup> as well as because of developments in jurisprudence.<sup>160</sup> Nevertheless, in *Antiquesportfolio.com v. Rodney Fitch & Co Ltd*,<sup>161</sup> it was held that copyright subsists in simple photographs of three-dimensional objects because the taking of such photographs involves judgment—that is, the positioning of the object, the angle from which the picture is taken, the lighting, and the focus.

The position after the Term Directive appears to be different. As we have seen, intellectual creation involves more than the exercise of technical skill. Instead, there must be ‘formative freedom’—that is, the possibility of choices that result in an individualized outcome reflecting the author’s personal touch. This may be present in portrait photography, for example in the lighting, camera angle, choice of pose, the capturing of a particular expression, etc., but it is difficult to see that any such creativity might be present in the case of technically excellent photographic reproductions of artistic works. Indeed, it is notable that such protection had been denied to such photographs in the jurisprudence of countries applying a civilian standard of ‘creative choices’ or ‘imprint of the personality’.<sup>162</sup>

If galleries wish to have the protection for photographs taken after 1996, they should seek legislative reform to introduce a related right. Such related rights are recognized in a number of member states, including Germany and Italy.<sup>163</sup>

### 3.7.8 Computer-generated works

During the passage of the CDPA 1988, careful consideration was given to the status of computer-generated works—that is, of works created by translation programs, search engines, and the like. In part, the 1988 Act resolved this uncertainty by providing that a literary, dramatic, musical, or artistic work attracts copyright protection even where it has been generated by computer in circumstances under which there was no human author.<sup>164</sup> While these changes were useful insofar as they clarified that creations generated by a

<sup>164</sup> CDPA 1988, s. 9(3), 178.

computer could be classified as works, they said nothing about how the originality of such works was to be determined. The particular problem that arises with computer-generated works is that it is difficult to see how the existing criterion of originality, which focuses on the relationship between the author and the work, can be applied to computer-generated works, which, by definition, have no readily identifiable author.

Given that computer-generated works are protected where there is no human author, the question arises: what test for originality should be applied to such works? One possible test would have been to ask whether the work was produced as a result of the independent acts of the computer—that is, whether the work is original in the sense that it was ‘not copied’. Alternatively, a court might have said that originality exists where the computer has produced a work that is different from previous works (that is, it is novel). It has also been suggested that the courts ought to ask the hypothetical question: if the same work had been generated by a human author, would it have required the exercise of a substantial amount of skill, labour, and effort? If so, then the computer-generated work would be original.<sup>165</sup>

Because the European standard now applies to all works, it must be doubted whether copyright protection (in a European sense) should be regarded as available at all to ‘computer-generated’ works. Advocate-General Trstenjak remarked, in her opinion in the *Painer* case, that ‘only human creations are . . . protected’, although these can ‘include those for which the person employs a technical aid, such as a camera’.<sup>166</sup> It seems to follow that no computer-generated work can be protected by copyright in accordance with European law. As we have noted, there is no reason why such productions could not be protected by related rights or unfair competition law. It might be said that, given the special provisions on authorship and term that are applicable to computer-generated works,<sup>167</sup> this is in fact what the UK law in substance achieves. If so, the standard of ‘originality’ applicable is a matter for UK law alone.

#### 4 ENTREPRENEURIAL WORKS: ‘NOT COPIED’

Unlike the case with literary, dramatic, musical, and artistic works (authorial works), there is no requirement that films, sound recordings, broadcasts, or published editions be original. Instead, the CDPA 1988 provides that copyright does not subsist in a sound recording, a film, or a published edition to the extent that it is itself copied from a previous work of the same kind.<sup>168</sup> In relation to broadcasts, the Act provides that copyright does not subsist to the extent that it infringes copyright in another broadcast.<sup>169</sup> One of the consequences of this is that entrepreneurial works will be protected irrespective of whether or not the author exerted mental skill, labour, or effort in the creation of the work. This means that if a video recorder or tape recorder is turned on and left on a table, the resulting film or sound recording will be protected.

It has been suggested that the reason why a lower standard is applied to entrepreneurial works than to authorial works relates to the nature of the rights that are granted.<sup>170</sup> In relation to authorial works, copyright protects ‘the content’, not merely ‘the signal’.<sup>171</sup> As a result, it is more important that the law monitors the types of authorial work that are

<sup>165</sup> Laddie et al., [36.44].

<sup>166</sup> *Eva-Maria Painer v. Standard VerlagsGmbH and ors*, Case C-145/10 [2011] ECDR (13) 297, 324, [AG121].

<sup>170</sup> Laddie et al., [6.15]. <sup>171</sup> See Chapter 6, pp. 144, 147.

protected. Conversely, in the case of entrepreneurial works for which protection is thin, there is less need to monitor the subject matter protected. This does not mean, however, that it is not necessary to regulate the types of subject matter protected as entrepreneurial works. In particular, to have allowed such works to be protected with no threshold requirement would have created the undesirable position that rights in entrepreneurial works could have continued in perpetuity. The reason for this is that, in the absence of some limitation, every time someone copied an entrepreneurial work, they would have obtained a fresh copyright in the 'new' work. This problem is avoided in the 1988 Act by ensuring that entrepreneurial works are protected only to the extent that they are not copied.

For the most part, these provisions are relatively straightforward. However, three issues remain unsettled. The first is whether a compilation of parts of sound recordings (such as a 'megamix') would be protected as a separate sound recording.<sup>172</sup> On one view, if the megamix is compiled from existing recordings, then nothing is protectable. The reason for this is that each existing element is excluded on the basis that it is copied from another sound recording. However, if such an approach were to be followed, it would lead to the bizarre result that the absence of a notion of originality in respect of entrepreneurial works means that the threshold of protection is higher than with respect to authorial works (where collections of materials are protected as databases, tables, and compilations).<sup>173</sup> Perhaps the better view is that a compilation of sound recordings ought to be protected as a sound recording, on the basis that the compilation is more than the sum of its parts.<sup>174</sup>

The second question is whether, in the process of digitally remastering an old work, the resulting work would be protected. Where no change is made to the contents of the work, it is difficult to see how the digital version of the work could be protected by copyright, since the recording is copied from existing recording of sounds. Would the position be any different if, in the process of remastering an old recording, it were to be cleaned of unnecessary noise and interfering sound? It seems that the way in which this question will be answered depends on the way in which the phrase 'to the extent that' is construed.<sup>175</sup>

## 5 IS THE WORK 'QUALIFIED'?

In order for a work to be protected in the United Kingdom, it is necessary to show that the work is suitably 'qualified'<sup>176</sup>—that is, it is necessary to show that the work is sufficiently connected to the United Kingdom to qualify for protection under UK law. UK law withholds protection from works that fail to establish a sufficient connection to the United Kingdom. In essence, the requirement that the work be qualified helps to balance the protection offered to British authors in other jurisdictions against the protection given to foreign authors in the United Kingdom. Once a work qualifies, British law applies the

<sup>172</sup> P. Theberge, 'Technology, Economy and Copyright Reform in Canada', in S. Frith (ed.), *Music and Copyright* (1993), 53.

<sup>173</sup> It might be the case that a 'megamix' would indirectly create an original musical work or that the process of digitization creates an original literary work.

<sup>174</sup> *Football Association Premier League v. QC Leisure* [2008] EWHC 1411, [2008] FSR (32) 789, [224].

<sup>175</sup> Laddie et al., [6.15] (sound recording) and [7.31] (films); Kamina, 98–9 (noting that the film producers' copyright required under the Rel. Rights Dir. and Term Dir. refers to the *first* fixation).

<sup>176</sup> For further details, see Copinger, [3–154]–[3–303], 161–222.

principle of national treatment—that is, UK copyright law generally treats foreign works as it does those of British authors.<sup>177</sup>

## 5.1 CONNECTING FACTORS

The benefits of British copyright law have been extended to cover a vast array of works created by foreign authors or published in foreign countries. Nevertheless, the task of determining whether a particular work is protected under British copyright law is remarkably complex. While, in some situations, this task may be avoided through the use of statutory presumptions,<sup>178</sup> in most situations it needs to be undertaken. Given that British law effectively provides universal protection, some regard the complexity of the task as unnecessary.<sup>179</sup>

There are three connecting factors that enable works to qualify for copyright protection (sections 154–6). These are by reference to: (i) authorship; (ii) country of first publication; and (iii) place of transmission. A work qualifies if it satisfies *any* of these three factors. Once a work qualifies for copyright protection, British copyright law does not usually discriminate between it and a work created by or first published in the United Kingdom.<sup>180</sup>

### 5.1.1 Qualification via authorship

Section 154(1) of the CDPA 1988 provides that a work qualifies for copyright protection if, at the ‘material time’, the author of the work was a ‘qualifying person’.<sup>181</sup>

In order for a work to qualify for protection, it is necessary that the author be connected to a relevant country at the ‘material time’.<sup>182</sup> For unpublished literary, dramatic, musical, and artistic works, the ‘material time’ is the date on which the work was made. Where the work has been published, it is the author’s status at the date of first publication that is decisive, or if the author died before publication, their status at the date of death.<sup>183</sup> By contrast, the material time for other types of copyright work does not change; qualification depends on the personal status of the ‘author’ of a sound recording or film at the time of its making or, for the organization broadcasting a transmission, at the date of transmission, and for typographical format, it is the publisher at publication that is relevant.<sup>184</sup> Since a work may take a considerable time to make, section 154(4)(a) provides that, in the case of an unpublished literary, dramatic, musical, or artistic work, the ‘material time’ is ‘a substantial part of that period’. Rather oddly, no such provision exists for films.

To qualify under section 154, it is necessary to show that the author was a ‘qualifying person’. There are three ways in which this can be achieved. First, a person will be a ‘qualifying person’ if they can show that they are: a British citizen, national, or subject; a person within certain categories of the British Nationality Act 1981; or a person domiciled or resident in, or a body incorporated in, part of the United Kingdom.<sup>185</sup> The concepts of ‘domicile’ and ‘residence’ are not defined in the Act. It seems, however, that ‘domicile’ refers to the country in which a person makes their permanent home. In contrast,

<sup>177</sup> But see p. 179 for an exception to this concerning duration (applying shorter term in country of origin).

<sup>178</sup> See *Microsoft Corp. v. Electro-wide* [1997] FSR 580, 594.

<sup>179</sup> Laddie et al., [5.10], [5.154]–[5.158].

<sup>180</sup> But note the special rule on duration: see p. 179.

<sup>181</sup> This may make determination of authorship important: see *Century Communications v. Mayfair Entertainment* [1993] EMLR 335.

<sup>182</sup> CDPA 1988, s. 154(4). <sup>183</sup> *Ibid.*

<sup>184</sup> *Ibid.*, s. 154(5). <sup>185</sup> CDPA 1988, s. 154(1)(a).

the concept of 'residence' is more flexible, simply demanding some degree of continuous association with the country in question. A person can be a resident of more than one country, although a person will not be a resident if they are a casual visitor.<sup>186</sup>

Second, a person will qualify if they can show that they are an individual domiciled or resident in, or a body incorporated under the law of, a country to which the law has been 'extended'.<sup>187</sup> In this context, it should be noted that 'extension' refers to the fact that Her Majesty, by Order in Council, is given the power to extend the 1988 Act to other territories, including the Isle of Man, the Channel Islands, and any colony.<sup>188</sup> Along with the power of 'application' (discussed below), 'extension' is a technique that is used to protect works that originate from outside the United Kingdom. While the only Order operating under the 1988 Act is in relation to Guernsey,<sup>189</sup> some Orders made under the equivalent section of the Copyright Act 1956 continue to operate,<sup>190</sup> for example in the Falkland Islands.<sup>191</sup> The effect of such Orders is not simply to provide protection in the United Kingdom for categories of work with a relevant connection to those countries; protection is also afforded in those countries to works protected in the United Kingdom.<sup>192</sup> Because the power to extend the 1988 Act permits the extension to be 'subject to such exceptions and modifications as may be specified', each Order needs to be considered individually.

Third, a person will qualify if they can show that they are a citizen or subject of, and an individual domiciled or resident in, or a body incorporated under a law of, a country to which the Act has been 'applied'.<sup>193</sup> Section 159 empowers Her Majesty, by Order in Council, to 'apply' the copyright sections of the 1988 Act to other countries. This may be done so as to allow either authors connected to such countries, works first published in such countries, or broadcasts sent from such countries to qualify for protection in the United Kingdom. Moreover, such 'applications' may be subjected to such exceptions and modifications as are specified or confined to certain classes of cases specified in the Order. The power to make such Orders is restricted to 'Convention countries', other member states of the European Union, or to countries that give adequate protection to the owners of copyright in respect of the class of works to which the Order relates.<sup>194</sup> The latest version of the Order is the Copyright and Performances (Application to Other Countries) Order 2013.<sup>195</sup>

Where a work has been jointly authored, the work qualifies for copyright protection if any of the joint authors is qualified. However, the non-qualifying author is ignored when considering issues of first ownership<sup>196</sup> and duration.<sup>197</sup> Consequently, if one joint

<sup>186</sup> Laddie et al., [5.62]–[5.63].

<sup>188</sup> CDPA 1988, s. 157.

<sup>189</sup> *Guernsey* (SI 1989/1997).

<sup>190</sup> They continue to operate because of CDPA 1988, Sch. 1, para. 36.

<sup>191</sup> *Falkland Islands and Dependencies* (SIs 1963/1037, 1987/2200).

<sup>192</sup> Laddie et al., [5.85].

<sup>193</sup> CDPA 1988, s. 154(1)(c).

<sup>194</sup> *Ibid.*, ss 159–60. Under CDPA 1988, s. 160, the Order may limit protection by virtue of first publication in respect of works from a country that does not adequately protect British works. The main example of such restrictions relates to sound recordings. According to the Copyright and Performances (Application to Other Countries) Order 2013 (SI 2013/536), Sch. col. 2, the protection given to sound recordings varies between three categories of country: those merely parties to the WTO (designated by no sign and comprising mostly developing world countries), to which a required connection results in *basic* protection (as defined in art. 4); those that carry a plus sign ('+'), comprising Rome countries and EU member states, to which a required connection results in *full* protection, which includes the right to control public playing and communication to the public; and those marked with a minus sign ('-'), being WPPT countries that are not also parties to the Rome Convention (most significantly, the United States and China), but to which a required connection results in *basic* protection, coupled with the right to control communication to the public other than broadcasting.

<sup>195</sup> SI 2013/536.

<sup>196</sup> Under CDPA 1988, s. 11.

<sup>197</sup> Under CDPA 1988, s. 12.

author qualifies and another does not, the qualifying owner alone will be first owner.<sup>198</sup> Similarly, copyright in a co-written literary work expires 70 years after the death of the last qualifying co-author.<sup>199</sup>

### 5.1.2 Qualification by first publication

A work may also qualify for protection if it is first published in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’.<sup>200</sup> (These concepts were discussed above.) A work is published when copies of the work are issued to the public,<sup>201</sup> or, in the case of literary, dramatic, musical, and artistic works, when the work is made available to the public through an electronic retrieval system.<sup>202</sup> It does not include: performing a literary, dramatic, or musical work; exhibiting an artistic work; issuing specified types of copies of such works;<sup>203</sup> playing or publicly showing a sound recording or film; or communicating to the public any work.<sup>204</sup>

If a work is to qualify for protection by publication, the publication must be authorized by the author.<sup>205</sup> The 1988 Act provides that publication does not include merely colourable publications, which are not intended to satisfy the reasonable requirements of the public.<sup>206</sup> The threshold for protection is very low. At a minimum, if a work attracts no interest, the mere fact that a few copies have been made available for sale will suffice.<sup>207</sup> Publication takes place wherever the publisher invites the public to acquire copies<sup>208</sup> and may take the form of gift, hire, or sale.<sup>209</sup> Since publication consists in offering reproductions to the public, it has been suggested that anything that amounts to a reproduction will suffice (although commentators have raised doubts about this view).<sup>210</sup>

To qualify for protection, the work must be published *first* in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’. The fact that publication first occurs in a non-qualifying country will not matter, so long as that work is published within 30 days in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’.<sup>211</sup> It should also be noted that films that have been released commercially under conditions of restricted distribution may well not have been published, since copies will not have been made available to the public.<sup>212</sup>

<sup>198</sup> But the non-qualifying author, it seems, can claim moral rights and therefore should be named on the work, and the work should not be subjected to any derogatory treatment without their consent.

<sup>199</sup> CDPA 1988, s. 154(3). <sup>200</sup> CDPA 1988, s. 155(1).

<sup>201</sup> CDPA 1988, s. 175. <sup>202</sup> CDPA 1988, s. 175(1).

<sup>203</sup> CDPA 1988, s. 175(4)(a)–(b). Publication of an artistic work does not include issuing copies of a film depicting such a work, nor copies of graphic works or photographs representing a sculpture, a work of artistic craftsmanship, or a work of architecture. However, the construction of a building is the equivalent of publishing the architectural work that it embodies: CDPA 1988, s. 175(3).

<sup>204</sup> CDPA 1988, s. 175(4). But an electronic retrieval system may still serve to publish literary, dramatic, musical, or artistic works even if it operates by way of broadcasting: CDPA 1988, s. 175(4)(a)(ii), (b)(iv).

### 5.1.3 Qualification by place of transmission: broadcasts

A broadcast qualifies for protection if it is made or sent from a place in the United Kingdom, or a country to which the Act ‘extends’ or ‘applies’.<sup>213</sup> In the case of satellite broadcasts, the broadcast is made where the signals are introduced.<sup>214</sup>

## 6 EXCLUDED SUBJECT MATTER

Although a work may be recorded in material form, may be original, and may be sufficiently connected to the United Kingdom, in some circumstances the courts may nonetheless refuse to recognize copyright for policy reasons. It appears that copyright protection will not be granted for obscene, blasphemous, or immoral works. This can be seen from *Glyn v. Weston Film Feature*,<sup>215</sup> in which Younger J refused to grant an injunction for infringement of copyright in the claimant’s dramatic work, *Three Weeks*, which he described as a ‘sensual adulterous intrigue’ and condemned on the ground that it advocated ‘free love’. Younger J said: ‘[I]t is clear that copyright cannot subsist in a work of a tendency so grossly immoral as this.’<sup>216</sup>

For some time, it had been thought that *Glyn* and the other cases in which copyright had been denied to obscene, blasphemous, libellous, irreligious, or misleading works<sup>217</sup> were the products of less enlightened times and, as such, would no longer be followed.<sup>218</sup> However, in *A-G v. Guardian (No. 2)*,<sup>219</sup> the House of Lords cited *Glyn* with approval. In that case, Peter Wright, a former security services agent, had written a book (*Spycatcher*) about the various operations of the service. Importantly, in writing the book, Wright breached the duty of confidence that he owed to the Crown. The House of Lords held that Wright would not be able to bring a copyright infringement action because of the ‘disgraceful circumstances’ in which the book was written. As well as citing *Glyn* with approval, the Lords extended the scope of the immorality exclusion beyond the content of the work to include the circumstances in which the work was created.

While the House of Lords affirmed the continued existence of the public policy exclusion, there is still some doubt as to the exact effect of immorality. It is unclear whether it means that there is no copyright in the work at all or that equity will not enforce the copyright.<sup>220</sup> The way in which this question is answered might be important given that if

<sup>213</sup> The Copyright and Performances (Application to Other Countries) Order 2013 (SI 2013/536) specifies the countries to which the Act applies with respect to broadcasts in cols 3 and 4. Column 3, which relates to wireless broadcasts, differentiates between, on the one hand, those made by persons or entities appropriately connected to Rome or EU countries, which receive ‘full protection’ and, on the other, those by parties thus connected to WTO countries, which benefit from a more modest regime of rights. Column 4 relates to non-wireless broadcasts and extends protection only to those made by persons or entities appropriately connected to other EU or EFTA countries.

<sup>214</sup> CDPA 1988, s. 156(1). <sup>215</sup> [1916] 1 Ch 261. <sup>216</sup> *Ibid.*, 269.

<sup>217</sup> One difficulty with the *Glyn* decision is that it is by no means clear when a work is immoral. Generally, the criminal law restricts circulation of obscene works—works that are likely to deprave and corrupt. Immorality appears to be a wider test. It is certainly difficult to believe that a work that ‘advocated free love’ would today be denied copyright. In *Stephens v. Avery* [1988] Ch 449, in the context of breach of confidence, Browne-Wilkinson V-C stated that he thought the *Glyn* exception should not apply in the absence of public consensus that the work in question was immoral. In *Fraser’side Holdings v. Venus* [2005] FMCA 997, the Federal Magistrates’ Court of Australia was prepared to enforce copyright in ‘adult films’, explaining that the Court should look at the attitudes taken towards the work both in Australia and overseas.

<sup>218</sup> *Chaplin v. Frewin* (1966) 1 Ch 71. <sup>219</sup> [1990] 1 AC 109.

<sup>220</sup> Copinger, [3–304], 222–4 (copyright subsists, but will not be enforced); also, generally, A. Sims, ‘The Denial of Copyright on Public Policy Grounds’ [2008] *EIPR* 189.

there were no copyright, presumably all contracts that purported to deal with the copyright would be void.

The scope of the exclusion is also unclear. Although hitherto it has been concerned with matters such as sexual morality, the exclusion may also be a basis for declining to protect so-called ‘malware’—that is, software designed to appropriate sensitive information from a user’s infected personal computer.

The effect of the public policy exclusions is somewhat paradoxical. Because the denial of copyright to obscene works effectively places them in the public domain, this might increase the speed and breadth of circulation. If dissemination is deemed to be undesirable, the denial of copyright seems to be counter-productive.<sup>221</sup> (It may also stimulate public interest in the work.) Presumably, other reasons have motivated the courts. The approach taken by the courts is consistent with the view that the primary concern of copyright is to encourage creation rather than to control dissemination. Denying copyright will (supposedly) remove the incentive to produce obscene works.

As we have seen, a derivative work that infringes copyright in the work on which it is based can be original. In such circumstances, the question arises as to whether an original, but infringing, work should be denied protection on grounds of public policy. With one or two exceptions,<sup>222</sup> the courts have generally been willing to enforce copyright in derivative works even though they infringe.<sup>223</sup> This has been explained on the basis that if protection were to be denied to such works, it would lead to a substantial injustice. As Goff J said:

It is understandable that the owner of copyright should be entitled to restrain publication of an infringing work; but the idea that he should be entitled to reap the benefit of another’s original work, by exploiting it, however extensive such work might be, however innocently it might have been made, offends against justice and common sense.<sup>224</sup>

## AUTHORSHIP AND FIRST OWNERSHIP

### CHAPTER CONTENTS

1 Introduction	124	3 First Ownership	132
2 Authorship	125	4 Harmonization	138

### 1 INTRODUCTION

A considerable amount has been written about authorship and the role that it plays in copyright law. It has become clear from these discussions that the concept of authorship that operates in copyright law is not the same as that used in many other fields.<sup>1</sup> One explanation for this relates to the particular role that the author plays in copyright law. More specifically, it is because, in copyright law, the author acts as a focal point around which many of the rules and concepts are organized. For example, as we have just seen, the status of the author helps to determine whether a work qualifies for protection. Where relevant, the contribution that an author makes will also influence whether the resulting work is original. In other situations, the duration of many types of work is determined by reference to the lifespan of the author. Similarly, the moral rights that are recognized in the United Kingdom attach to the author of the work in question.

In this chapter, we explore two closely related themes. First, we look at the concept of authorship, as it is understood in copyright law. In turn, we look at one of the most important consequences that flow from being identified as author of a work—namely, first ownership of copyright and the various exceptions to this general rule.

<sup>1</sup> Frequently, it is more expansive, including those whose effort might not reach the creative levels of literary authorship. See, e.g., *Walter v. Lane* [1900] AC 539. But at other times ‘social’ conceptions of authorship are more plural. For the example of ‘scientific authorship’, see M. Biagioli, ‘Rights or Rewards? Changing Frameworks of Scientific Authorship’, in M. Biagioli and P. Gallison (eds), *Scientific Authorship: Credit and Intellectual Property in Science* (2003), 253–80. For thoughts on the legal implications, see D. Simone, ‘Recalibrating the Joint Authorship Test: Insights from Scientific Collaborations’ (2013) 26 *IPJ* 111. For an overview, see C. Fisk, ‘Credit Where It’s Due: The Law and Norms of Attribution’ (2007) 95 *Georgetown LJ* 49.

## 2 AUTHORSHIP

The author of a work is defined in the Copyright, Designs and Patents Act 1988 (CDPA 1988) as the person who creates the work.<sup>2</sup> Special provisions deal with the situation in which more than one person is involved in the creation of a work.<sup>3</sup> While to describe the creator of a painting or a sculpture as an ‘author’ may jar, few problems arise in ascertaining who is the author of most literary, dramatic, musical, and artistic works.<sup>4</sup> This is because, in relation to the traditional categories of literary, dramatic, musical, and artistic work, there is a general consensus as to which of the various people involved in the production of a work is to be treated as the creator or author of it.

More problems arise, however, in relation to entrepreneurial works and computer-generated works. In part, this is because the concept of authorship does not sit comfortably with the way in which we tend to think about such works—that is, we do not normally think of a sound recording, a typographical arrangement, or a broadcast as having an author, even in the broad sense in which it is used in copyright law. In these circumstances, it is important to appreciate that the ‘author’ is an artificial construct, a legal fiction, which is used to allocate rights. This can be seen in the fact that, in relation to sound recordings, broadcasts, and typographical arrangements, the ‘author’ is (effectively) defined as the person who made the work possible (as distinct from the creator). In the case of a literary, dramatic, musical, or artistic work that is computer-generated (which by definition has no author), the ‘author’ is ‘the person by whom the arrangements necessary for the creation of the work are undertaken’.<sup>5</sup>

The task of determining who is the author of a work is made easier because the 1988 Act sets out a series of statutory presumptions as to who is the author of a work. Section 104 provides that the name that appears on a literary, dramatic, musical, and artistic work as published, or on the work when it is made, shall be presumed to be the author. Section 105 establishes similar presumptions with respect to sound recordings, films, and computer programs.<sup>6</sup> The upshot of these presumptions, which operate only in civil matters, is that the burden of proof is placed on the person claiming that someone other than the ‘named’ author is the true creator of the work in question.

### 2.1 AUTHORSHIP OF LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

The author of literary, dramatic, musical, or artistic work is the person who creates it.<sup>7</sup> No further guidance is given in the 1988 Act as to what this means. The only exception to this is to be found in section 3(2), which indicates that the author need not necessarily be the person who fixes or records the work (although this will usually be the case).<sup>8</sup> The lack of statutory guidance as to the way in which the author is to be construed in this context does not matter that much given that there are few problems in identifying who is the author of a literary, dramatic, musical, or artistic work.

<sup>2</sup> CDPA 1988, s. 9(1). For comparative analysis, see J. Ginsburg, ‘The Many Faces of Authorship: Legal and Interdisciplinary Perspectives’ (2003) 52 *DePaul L Rev* 1063.

<sup>3</sup> See below at pp. 130–2.

<sup>4</sup> For consideration of the question of whether an amanuensis is an author, see *Donoghue v. Allied Newspapers* [1938] 1 *Ch* 106. But note that a medium who transcribed messages from the spiritual world was the author of the work: *Cummins v. Bond* [1927] 1 *Ch* 167 (Eve J held that the medium ‘had exercised sufficient skill, labour and effort to justify being treated as author’).

<sup>5</sup> CDPA 1988, ss 9(4), 178.

<sup>6</sup> CDPA 1988, s. 105.

<sup>7</sup> CDPA 1988, s. 9(1).

<sup>8</sup> CDPA 1988, s. 3(2).

Having said that, problems have occasionally arisen in determining whether a person involved in the production of a literary, dramatic, musical, or artistic work is to be regarded as an author (or creator). The way in which this question is answered is similar to the way in which the originality of a work is determined. Basically, in order for someone to be classified as an author, it is necessary for them to be able to show that their contribution to the work is of the *type and amount* that is protected by copyright—that is, that the contribution would be sufficient to confer originality on the relevant work.<sup>9</sup> Hitherto, this has tended to be expressed by saying that they must contribute ‘skill and labour of the right kind’ (reflecting the traditional British test of originality). However, as the United Kingdom adjusts to the new European standard of originality explained in Chapter 4, one would expect a shift in the terminology, so that a person will be regarded as an author only where they contribute towards the ‘intellectual creation’.

Whatever concepts are deployed, it is unlikely that a stenographer, an amanuensis, or a person who merely photocopies or traces a work would ever be considered an author.<sup>10</sup> This is either because the skill and labour is of the wrong kind, or because the contribution does not involve ‘creative choices’ regarding the expressive form of the work (in ‘Euro-copyright speak’). However, if the person makes creative choices in producing the work, even if only a very small amount, it is more likely that they will be treated as an author. This can be seen, for example, in *Cummins v. Bond*,<sup>11</sup> in which it was held that a spiritualist who produced ‘automatic writing’ dictated to her from beyond the grave at a séance was the author of the resulting work. Because the spiritualist exercised great speed in writing down the messages and used great skill in translating the spiritual communication given in an ‘unknown tongue’ into ‘archaic English’, it was held that she had exercised sufficient ‘skill, labour, and effort’ (the relevant test of originality at that time) to justify her being treated as author.

Where the contribution made by someone is at an abstract level, such as the idea for a play, or a book, or a structure of a computer program, they are unlikely to be treated as an author of the resulting work. Thus, for example, the telling of a person’s experiences to form the basis of a ‘ghostwritten’ book is (without more) unlikely to render the narrator of the tales an author of the resulting book; rather, the ghostwriter who determines the way in which the stories are expressed will be regarded in law as the author.<sup>12</sup> The more specific the contribution, however, the more likely it is that the person in question will be treated as an author. Thus, at the opposite extreme to that of the ghostwriter, in the case of a person who dictates text and punctuation to another who merely follows the instructions, UK law would regard the dictator rather than the amanuensis as the author.<sup>13</sup> In between the two extremes lies a host of possibilities. In one case, it was held that a person who developed an idea for a house design that he had explained in detail (both verbally and through sketches) to a technical draftsman was joint author of the plans that the draftsman subsequently produced.<sup>14</sup> Similarly, a political figure who dictated his memoirs to a friend, then read every

<sup>9</sup> Because the type of labour that confers originality is the same as that which enables someone to be classified as an author, reference should be made to the earlier discussions on this topic: see pp. 93–107.

<sup>10</sup> *Donoghue v. Allied Newspapers* [1938] 1 Ch 106.

<sup>11</sup> [1927] 1 Ch 167. See also *Leah v. Two Worlds Publishing* [1951] 1 Ch 393.

<sup>12</sup> *Donoghue v. Allied Newspapers* [1938] 1 Ch 106 (reporter was author of stories about jockey Steve Donoghue’s life); *Celebrity Pictures Ltd. v. B. Hannah Ltd* [2012] EWPC 32, [8] (providing a ‘general’ brief to a photographer as to the types of pose that the party commissioning the photographs wanted did not make that party a joint author).

<sup>13</sup> *Donoghue v. Allied Newspapers* [1938] 1 Ch 106, 109–10.

<sup>14</sup> *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818.

word and altered parts of the manuscript, was held to be joint author of the resulting book.<sup>15</sup>

As we saw in relation to the originality requirement, the mere fact that a person expended labour in the creation of a work will not necessarily mean that the resulting work is original (or that the person is an author) if it is the ‘wrong type’ of labour. In the case of a book, for example, while the copy-editor plays an important role in giving shape to the final product, they will not normally be treated as author of the resulting literary work.<sup>16</sup> Similarly, while copyright law has few problems in categorizing the person who wrote a play as the author of the play, in one case it was held that a person who had suggested the title, the leading characters, a few catchwords, and the scenic effects for the play had not contributed sufficiently to the play to justify being treated as a joint author.<sup>17</sup> In *Brighton v. Jones*,<sup>18</sup> Park J held that the suggestions made by a director to a playwright, prompted by problems with the script encountered during rehearsals, were not of the right kind to justify the director’s claim to co-authorship. He said that the director had failed to establish ‘that the contributions which she made were contributions to the creation of the dramatic work rather than contributions to the interpretation and theatrical presentation of the dramatic work’.<sup>19</sup>

### 2.1.1 Computer-generated works

In the case of literary, dramatic, musical, or artistic works that have been computer-generated, the creator is ‘the person by whom the arrangements necessary for the creation of the work are undertaken’.<sup>20</sup> While the meaning of this provision has yet to be tested, it seems that it might include the person who operates the computer, as well perhaps as the person who provides or has programmed the computer.<sup>21</sup>

### 2.1.2 Unknown authorship

In certain situations, it may not be possible to ascertain who is the author of a literary, dramatic, musical, or artistic work. This may be because the name of the author is not attached to the work and it is not possible to ascertain authorship by other means. In other cases, an author may wish that their works be published anonymously, under a false name or a pseudonym. Because the author acts as the focal point around which many of the rules of copyright are organized, this creates a number of potential problems. To remedy this, the CDPA 1988 includes the notion of ‘unknown authorship’. A work is a work of unknown authorship if the identity of the author is unknown and it is not possible for a person to ascertain the author’s identity by reasonable inquiry.<sup>22</sup> While, in this situation, the author remains the first copyright owner, since it is impossible to know

<sup>15</sup> *Heptulla v. Orient Longman* [1989] FSR 598 (Indian High Court).

<sup>16</sup> A technician expending skill and labour in testing software, detecting bugs, and providing information towards debugging was likened to a proofreader and therefore was not a joint author, since he did not contribute to the authorship of the software as such: *Fylde Microsystems v. Key Radio Systems* [1998] FSR 449. See L. Bently and L. Biron, ‘Discontinuities between Legal Conceptions of Authorship and Social Practices: What, If Anything, Is to Be Done?’, in M. Van Eechoud (ed.), *The Work of Authorship* (2014) (exploring conceptual art and editing).

<sup>18</sup> [2005] FSR (16) 288. <sup>19</sup> *Ibid.*, [56].

<sup>20</sup> CDPA 1988, s. 178 (where a work is created by a computer in circumstances such that there is no human author of the work). For discussion of the problem of defining ‘originality’ for such works, see pp. 116–17, where we suggest that such works might be regarded under EU law as productions protected by the United Kingdom as related rights.

<sup>21</sup> *Express Newspapers v. Liverpool Daily Post* [1985] FSR 306 (author of computer-generated bingo sheets was the programmer of the computer). See above p. 64, Fig. 3.2.

<sup>22</sup> CDPA 1988, s. 9(4), (5).

when the author of such a work died, the duration of copyright is limited to 70 years from the date on which the work was first made available to the public (or 70 years from the date on which the work is made, if it is not made available before the expiry of that period).<sup>23</sup>

## 2.2 ENTREPRENEURIAL WORKS: STATUTORY AUTHORS

As we mentioned earlier, authorship does not sit comfortably with the way in which we tend to think about entrepreneurial works. Any potential difficulties in having to identify who is the author of, say, a broadcast or a sound recording are resolved by section 9(2) of the CDPA 1988, which defines who is the author of each of the different entrepreneurial works.

### 2.2.1 Sound recordings: the producer

Section 9(2)(aa) provides that the author of a sound recording is the ‘producer’.<sup>24</sup> In turn, the ‘producer’ is defined as the ‘person by whom the arrangements necessary for the making of the sound recording are undertaken’. In most cases, the ‘producer’ of a sound recording will be the record company. This may change, however, where a sound recording is produced cooperatively, or where non-traditional modes of distribution (such as the Internet) are used. The question of what is meant by ‘the producer’ is discussed in more detail in the next section.

### 2.2.2 Films: the producer and the principal director

When the 1988 Act was enacted,<sup>25</sup> for the purposes of determining authorship, films were treated in a similar fashion to sound recordings: the author was defined as ‘the person by whom the arrangements necessary for the making of the film are undertaken’. In order to bring UK law into line with the Term Directive, the 1988 Act was amended so that the authors of a film made on or after 1 July 1994 are the producer *and the principal director* of the film. The principal director and producer are treated as joint authors, except where they are the same person.<sup>26</sup> The recognition of the principal director as author of the film marks an important change in the way in which films are regarded by British copyright law, from being treated as a type of entrepreneurial work to being treated as a hybrid of entrepreneurial and authorial works.

The ‘principal director’ is not defined in the 1988 Act. In *Slater v. Wimmer*, Judge Birss QC held that the director was ‘the person who had creative control of the making of the film’ and, in the case of a small-scale film about sky-diving on Everest, that person was the cameraman.<sup>27</sup> In more expensive productions, the director will rarely operate the cameras, but will likely be more involved in instructing the actors. Problems with identifying authorship are often resolved through industry practice, which carefully controls who is to be designated as an author.<sup>28</sup> In turn, the CDPA 1988 states that where a film bears a statement that a particular person was the director (or principal director) of the film, this shall be presumed to be correct until the contrary is proved.<sup>29</sup> Section 105(6) adds that, where a person is named as the director of a film, this shall be presumed to mean that they are the principal director.

<sup>23</sup> CDPA 1988, s. 12(3).      <sup>24</sup> CDPA 1988, s. 9(2)(aa).      <sup>25</sup> CDPA 1988, s. 9(2)(ab).

<sup>26</sup> CDPA 1988, ss 9(2)(ab) and 10(1A).      <sup>27</sup> [2012] EWPC 7, [13].

<sup>28</sup> For a discussion of credit practices in the US film industry, see C. Fisk, ‘The Role of Private Intellectual Property Rights in Markets for Labor and Ideas: Screen Credit and the Writers Guild of America, 1938–2000’ (2011) 32 *Berkeley J Emp & Lab L* 215.

<sup>29</sup> CDPA 1988, s. 105(5).  
© L. Bently and B. Sherman 2014

The ‘producer’ of a film is defined as ‘the person by whom the arrangements necessary for the making of the film are undertaken.’<sup>30</sup> This is the same definition as is used to describe the producer of a sound recording. The question of whether a person is a ‘producer’ of a film or a sound recording is a question of fact.<sup>31</sup> For the most part, there will be few problems in determining who is the producer of a film or a sound recording. Most questions regarding the allocation of ownership of copyright will be dealt with contractually. Problems may arise, however, because the production of sound recordings and films frequently involves the input of a range of different people, many of whom may lay claim to having helped to organize and facilitate the making of the sound recording or the film. Although the term ‘producer’ is used to define who is the creator, it should be noted that the courts have emphasized that there is a distinction between someone who ‘makes’ a recording and someone who ‘makes the arrangements for the production of a recording’: it is the latter who is the author, rather than the person who actually records or makes the sound recording or film (the person who operates the recording system).<sup>32</sup>

The notion of the ‘producer’ presupposes that, at the core of the production process, there is a person (or more often a company) that coordinates, controls, and organizes the production of the work.<sup>33</sup> It seems that, to be a ‘producer’, a person must exercise some degree of direct (organizational) control over the process of production.<sup>34</sup> If a person operates at the periphery of the process, such as the person who merely commissions the making of the recording, or merely provides the finance for a film or a sound recording, that person will not be regarded as a producer. If this were not the case, banks and other lending institutions would qualify as authors. However, provision of finance may be one of the organizational matters that, in combination with others, amount to a ‘necessary arrangement’.<sup>35</sup>

### 2.2.3 Broadcasts

In the case of sound and television broadcasts, the author is the person who makes the broadcast.<sup>36</sup> Where a person receives and immediately retransmits a broadcast, the author is the maker of the original broadcast rather than the person who relays it.

### 2.2.4 Typographical arrangements

The author of a typographical arrangement of a published edition of a work is the publisher.<sup>37</sup>

<sup>30</sup> CDPA 1988, s. 178. It is unclear whether the term ‘principal director’ will be treated as narrower than the term ‘director’ when used in relation to moral rights.

<sup>31</sup> *Beggars Banquet Records v. Carlton Television* [1993] EMLR 349, 361; *A & M Records v. Video Collection* [1995] EMLR 25, 29.

<sup>32</sup> *Adventure Films v. Tully* [1993] EMLR 376; *A & M Records v. Video Collection* [1995] EMLR 25; *Bamgboye v. Reed* [2004] EMLR (5) 61, 84, [77]. Kamina says that the definition of producer ‘certainly excludes purely creative contributors, including the film director’: Kamina, 139.

<sup>33</sup> See also *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (film made under restrictive conditions in China was produced by organizer outside China).

<sup>34</sup> *Adventure Films v. Tully* [1993] EMLR 376.

<sup>35</sup> *Ibid.*, 378–9. See also *Beggars Banquet Records v. Carlton Television* [1993] EMLR 349 (arguable claim that person who provided finance and arranged access to venue where event was filmed was a person who made arrangements); *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (person had undertaken the arrangements necessary for the production of the film when it initiated the making of the film, organized the activity necessary for making it, and paid for it).

<sup>36</sup> CDPA 1988, s. 9(2)(b).

<sup>37</sup> CDPA 1988, s. 9(2)(d).

### 2.3 JOINT AUTHORSHIP

Collaborative research and creation is often a fruitful and productive way for authors to work.<sup>38</sup> Copyright recognizes this mode of creation through the notion of joint authorship.<sup>39</sup> A number of important consequences, such as the way in which the work can be exploited, flow from a work being jointly authored.<sup>40</sup> While joint authorship is normally associated with literary, dramatic, musical, and artistic works, it is possible for any work to be jointly authored. As we saw earlier, the 1988 Act specifically provides that films are treated as works of joint authorship between the principal director and the producer, unless those are the same person.<sup>41</sup> The 1988 Act also extends the concept of joint authorship to a broadcast ‘where more than one person is taken as making the broadcast’—namely, those ‘providing’ or taking ‘responsibility’ for the contents of the programme, and those making the ‘arrangements necessary for its transmission’.<sup>42</sup> No special definition of joint authorship is applied to sound recordings or to published editions.

In cases other than those special circumstances under which joint authorship is deemed, a general principle applies: a work is a work of joint authorship if it is ‘a work produced by the collaboration of two or more authors in which the contribution of each author is not distinct from that of the other author or authors’.<sup>43</sup> A work is one of joint authorship if it satisfies three conditions.

(i) First, it is necessary to show that each of the authors *contributed to the making of the work*. In order to render a person a joint author, the contribution must be ‘significant’ and ‘original’.<sup>44</sup> The requirement of originality is easily satisfied: this merely requires that the claimant came up with the contribution as a result of their own skill and effort.<sup>45</sup> The requirement that the contribution be ‘significant’ has proved more problematic.<sup>46</sup> The better view is that ‘significant’ here means ‘substantial’, or ‘considerable’, or ‘non-trivial’,

<sup>38</sup> R. Dreyfuss, ‘Collaborative Research: Conflicts on Authorship, Ownership and Accountability’ (2000) 53 *Vand L Rev* 1159. For consideration of the issues raised by mass collaboration, such as Wikipedia, see D. Simone, ‘Copyright or Copyleft: Wikipedia as a Turning Point for Authorship’ (2014) 25 *Kings LJ* 102.

<sup>39</sup> Contrast the notion of a ‘work of co-authorship’, i.e. ‘a work produced by collaboration of the author of a musical work and the author of a literary work where the two works are created in order to be used together’, in CDPA 1988, s. 10A, introduced with effect from 1 November 2013 by the Copyright and Duration of Rights in Performances Regulations 2013 (SI 2013/1782), reg. 4, to implement Directive 2011/77/EU. See Chapter 7, pp. 180–1.

<sup>40</sup> A joint owner (or other co-owner of copyright) can sue an infringer independently and can also bring an action against another co-owner.

<sup>41</sup> CDPA 1988, ss 9(2)(ab) and 10(1A). Note, however, that the general scheme applies to determine authorship, or co-authorship, of the ‘dramatic work’: on which, see Kamina, 141–53.

<sup>42</sup> CDPA 1988, s. 10(2), cross-referenced to s. 6(3).

<sup>43</sup> A valuable comparative overview is offered in M. Perry and T. Margoni, ‘Ownership in Complex Authorship: A Comparative Study of Joint Works’ [2012] *EIPR* 22.

<sup>44</sup> *Godfrey v. Lees* [1995] *EMLR* 307, 325–8; *Hadley v. Kemp* [1999] *EMLR* 589; *Brighton v. Jones* [2005] *FSR* (16) 288, [34]. See also *Fylde Microsystems v. Key Radio Systems* [1998] *FSR* 449 (suggestions not sufficient); *Robin Ray v. Classic FM* [1998] *FSR* 622.

<sup>45</sup> *Locksley Brown v. Mcasso Music Production Ltd* [2005] *FSR* (40) 846, [42].

<sup>46</sup> One can contrast the decision of *Godfrey v. Lees* [1995] *EMLR* 307 (classically trained musician who acted as orchestral arranger for a rock band was held to be joint author of a number of arrangements that included orchestral passages linking the verses and choruses) with *Hadley v. Kemp* [1999] *EMLR* 589 (contribution of saxophonist, singer, and drummer insufficient to render them co-authors because contributions were simply what one would have expected). See A. Barron, ‘Introduction: Harmony or Dissonance? Copyright Concepts and Musical Practice’ (2006) 15 *S & LS* 25; L. Bently, ‘Authorship of Popular Music in UK Copyright Law’ (2009) 12(2) *Information, Communication and Society* (Special issue) 179.

rather than ‘aesthetically important’.<sup>47</sup> While, to be a joint author, it is necessary for an author to have made a significant and original contribution to the work, joint authorship does not require that the respective contributions be in equal proportions.<sup>48</sup> However, it does require the contribution to be of the ‘right kind’: a contribution to the words of a song will normally give rise to joint authorship of the literary work, but not of the music; and a contribution to the ‘performance’ of a piece of music will not render the performer a co-author of the musical work.<sup>49</sup> Equally, a contribution to ‘interpretation and theatrical presentation’ is not to be regarded as a contribution to the creation of a dramatic work.<sup>50</sup>

(ii) The second requirement that must be satisfied for a work to be one of joint authorship is that the work must have been produced through a process of *collaboration* between the authors. This means that, when setting out to create a work, there must have been some common design, cooperation, or plan that united the authors (even if only in a very loose sense).<sup>51</sup> So long as the authors have a shared plan of some sort, there is no need for them to be in close proximity for them to collaborate. Indeed, it is possible for the collaboration to take place over long distances (a practice made much easier because of email).<sup>52</sup> There is no additional requirement that the parties must have intended to create a work of joint authorship.<sup>53</sup> The upshot of this second requirement is that, although two people may work on the same project, unless there is a shared goal, they will not be classified as joint authors. This means, for example, that where one person writes a poem and another person translates it into another language, the author of the original poem will not be a joint author of the translation. Similarly, where a musician arranges an existing musical work, the author of the original musical piece will not be able to claim joint authorship over the subsequent work; instead, there will be separate copyrights in the two pieces.<sup>54</sup>

(iii) Third, for a work to be jointly authored, the respective contributions must not be *distinct* or *separate* from each other. In more positive terms, this means that the contributions must merge to form an integrated whole (rather than a series of distinct works).<sup>55</sup>

<sup>47</sup> *Fisher v. Brooker and Onward Music Ltd* [2007] FSR (12) 255, [46] (Blackburne J preferred to ask whether the claimant’s contribution was ‘non-trivial’).

<sup>48</sup> Joint authorship will usually be presumed to lead to equal shares, but this may be varied either by the court, where it feels comfortable evaluating the contributions—as in *Bamgboye v. Reed* [2004] EMLR (5) 61, 86, [85], and *Fisher v. Brooker and Onward Music Ltd* [2007] FSR (12) 255 (Fisher, author of the organ solo for ‘A Whiter Shade of Pale’, was awarded a 40 per cent share)—or according to the agreement of the parties: *Beckingham v. Hodgins* [2003] FSR 238, 249 (equal shares); *Peter Hayes v. Phonogram Ltd and ors* [2003] ECDR (11) 110, 123ff (agreement as to size of share).

<sup>49</sup> *Peter Hayes v. Phonogram Ltd and ors* [2003] ECDR (11) 110, 128; *Hadley v. Kemp* [1999] EMLR 589, 643. See R. Arnold, ‘Are Performers Authors?’ [1999] EIPR 464. Expert evidence may need to be employed to assist the court in distinguishing between what is the work and what is performance: *Barrett v. Universal Island Records* [2006] EWHC 1009, [356].

<sup>50</sup> *Brighton v. Jones* [2005] FSR (16) 288, [56].

<sup>51</sup> *Levy v. Rutley* (1871) LR 6 CP 583; *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

<sup>52</sup> *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

<sup>53</sup> *Beckingham v. Hodgins* [2003] FSR 238, 249.

<sup>54</sup> *Chappell v. Redwood Music* [1981] RPC 337. Cf. *Godfrey v. Lees* [1995] EMLR 307 (claimant who provided orchestral arrangements of existing songs was treated as a co-author); *Beckingham v. Hodgins* [2003] FSR 238 (session musician who added an introduction to a song was held to own 50 per cent of the copyright in the new arrangement). It seems that, where the author of a song collaborates in a new arrangement thereof, they acquire co-ownership of the arrangement even where they contribute nothing new.

<sup>55</sup> In some legal systems, most notably France, there is no such ‘integration’ requirement at all. Article L. 113–2 of the French Intellectual Property Code of 1992 defines a ‘collaborative work’ as one ‘to the creation of which several natural persons have contributed together’, implying collaboration and contribution, but not necessarily integration: P. Kamina, ‘France’, in P. E. Geller and L. Bently (eds), *International Copyright: Law and Practice* (2013), FRA 46–7. Belgian copyright law explicitly distinguishes between two types of collaborative work—referred to as ‘divisible’ and ‘indivisible’—each category having particular rules as to whose consent is required to exploit the contribution: see further M. Perry and T. Margoni, ‘Ownership in Complex Authorship’ [2012] EIPR 22.

For example, if the contributions of two authors were to merge in such a way that no single author were able to point to a substantial part of the work and say ‘that is mine’, the authors would be joint authors. If, however, one author were to write the first four chapters of a book and the other author, the remaining six chapters, instead of the resulting book being a joint work, the respective authors would have copyright in the particular chapters that they wrote.<sup>56</sup> Similarly, a song that comprises music and lyrics is not a work of joint authorship if one author writes the lyrics, while the other composes the music: the music and lyrics are distinct works, each of which has a single author.<sup>57</sup> In relation to a more difficult set of facts, it has been held that where one person added an introduction to the music of a song, this introduction was not ‘distinct’ because it was ‘heavily dependent’ on the rest of the tune and because, by itself, it would ‘sound odd and lose meaning’.<sup>58</sup>

### 3 FIRST OWNERSHIP

Authorship and ownership have long been closely intertwined in copyright law. Indeed, one of the notable features of the 1710 Statute of Anne was that it recognized authors as first owners of the literary property that they created. This basic formula is repeated in the CDPA 1988, which declares that the author of a work is the first owner of copyright.<sup>59</sup> The rule that copyright initially vests in the author is, however, subject to a number of exceptions. The first and most important concerns works made by employees.<sup>60</sup> Exceptions also exist in relation to Crown copyright, parliamentary copyright, and works created by officers of international organizations.<sup>61</sup> Judicially originated exceptions also exist where a work is created in breach of a fiduciary duty or in breach of confidence.

Before looking at these in more detail, it is important to note that, although the author is usually the first owner, it is possible for an author to assign their copyright to third parties. This means that the question of who is the copyright owner at any particular point of time will depend upon what has happened to the copyright since it was first created. Since valid agreements can be made in relation to the transfer of future copyright, it may be that, when copyright arises, the first owner of copyright under the statutory scheme is immediately divested of their rights in favour of an assignee. It is also important to note that, while the law recognizes that a person other than the author may be first owner, the question of who is the author remains a distinct one (and an important one). A work made by an employee author, for example, has a duration dependent on the life of the author (that is, the employee) even if first ownership vests in the employer. Equally, issues of qualification and moral rights are determined by reference to authorship (not first ownership).

#### 3.1 WORKS CREATED BY EMPLOYEES

Section 11(2) of the 1988 Act provides that, in the absence of an agreement to the contrary, where a literary, dramatic, musical, or artistic work, or a film is made in the course

<sup>56</sup> CDPA 1988, s. 10(1).

<sup>57</sup> But this will count as a work of ‘co-authorship’, a designation with implications in terms of term of protection, but not the rights of the contributors: CDPA 1988, ss 10A, 12(8).

<sup>58</sup> *Beckingham v. Hodgins* [2003] FSR 238, 248. In any case, the introductory fiddle music was repeated a number of times elsewhere in the arrangement. Cf. *Hadley v. Kemp* [1999] EMLR 589, in which Park J suggested that a saxophone solo in the middle of Spandau Ballet’s ‘Gold’ might be a distinct work.

<sup>59</sup> CDPA 1988, s. 11(1).

<sup>60</sup> CDPA 1988, s. 11(2).

<sup>61</sup> CDPA 1988, s. 11(3).

of employment, the employer is the first owner of any copyright in the work.<sup>62</sup> While employees retain moral rights in the works that they create, these are subject to a number of limitations.<sup>63</sup>

Critics have suggested that, by granting first ownership of works made by employees to employers, British law fails to provide creators with sufficient additional incentives to create.<sup>64</sup> It is also said that British law also fails to acknowledge the natural rights that employee-authors have in their creations. In so doing, it is suggested that British law fails to follow the underlying rationales for copyright. In response to arguments of this sort, it is argued that, while employers might not create works, they provide the facilities and materials that enable the act of creation to take place. In so doing, they make an important contribution to the production of new works. It is argued that granting first ownership to employers encourages employers to invest in the infrastructure that supports creators. Because employers are often in a better position than employees to exploit the copyright in a work, it is also suggested that it makes more sense to give copyright to employers than to employees. Another argument in favour of giving ownership to employers is that, in the absence of a provision that formally granted first ownership to employers, employers would require employees to assign their copyright to them. As section 11(2) achieves what would otherwise happen in practice, it thus serves to reduce transaction costs. In response to the argument that, in granting first ownership to employers, employees are not properly rewarded for their creative efforts, it is suggested that employees are rewarded through other means, such as pay, continued employment, and promotion.<sup>65</sup>

However problematic may be the arguments in favour of granting first ownership of employee works to employers, they have dominated UK policy in this area. In particular, while, under the Copyright Act 1956, employee journalists presumptively shared copyright with the newspapers, this ‘anomaly’ was removed in the 1988 Act.<sup>66</sup> As a result, under the current law, copyright in all works made in the course of employment belongs to the employer (unless there is an agreement to the contrary).

For an employer to be first owner of copyright, it is necessary to show that:

- (i) the literary, dramatic, musical, artistic work, or film was made by an employee;
- (ii) the work was made in the course of employment; and
- (iii) there is no agreement to the contrary.<sup>67</sup>

We will deal with each of these in turn.

<sup>62</sup> In the United States, related, but distinct, principles operate in relation to so-called ‘works made for hire’. On the history, see C. Fisk, ‘Authors at Work: The Origins of the Work for Hire Doctrine’ (2003) 15 *Yale JL & Human* 1.

<sup>64</sup> For a useful review, see M. Birnhack, ‘Working Authors’, *Tel Aviv University Law Faculty Working Papers* No. 97 (2008).

<sup>65</sup> The Whitford Committee considered whether a scheme should be implemented, such as that which exists under the Patents Act 1977, providing for extra reward for particularly successful works: Whitford Committee, [555]–[575]. The idea was quickly abandoned: *Reform of the Law relating to Copyright, Designs and Performers’ Protection* (Cmnd 8302, 1981) (pointing to practical difficulties).

<sup>66</sup> More specifically, under the previous law, copyright in a work made by an author in the course of employment by the daily or periodical press presumptively vested in the employer for purposes of its publication in the newspaper or periodical: CA 1956. s. 4(2).

<sup>67</sup> While the CDPA 1988 introduced changes on point, effective from 1 August 1989, the initial ownership of copyright continues generally to be determined by the law in effect when the materials in question were made: CDPA 1988, Sch. 1, para. 11.

### 3.1.1 Who is an employee?

An ‘employee’ is defined in the 1988 Act as a person who is employed under a contract of service or apprenticeship.<sup>68</sup> A contract of service is frequently distinguished from a contract *for* services. In general, it is easy to determine whether someone is an employee or not. However, there are many different sorts of work relationship, some of which are less easy to designate as employment relations. In such situations there is no simple way in which to tell whether the contract is an employment contract. At various times, courts have emphasized different elements, such as the degree of control that one party exercised over another or whether one party was part of the ‘organization’ of the other. *Chitty on Contracts* suggests the following eight factors:

- (1) the degree of control exercised by the employer;
- (2) whether the worker’s interest in the relationship involved any prospect of profit or risk of loss;
- (3) whether the worker was properly regarded as part of the employer’s organisation;
- (4) whether the worker was carrying on business on his own account or carrying on the business of the employer;
- (5) the provision of equipment;
- (6) the incidence of tax and national insurance;
- (7) the parties’ own view of their relationship;
- (8) the structure of the trade or profession concerned and the arrangements within it.<sup>69</sup>

### 3.1.2 Was the work made in the course of employment?

In order for an employer to be first owner of copyright, it is also necessary to show that the work was made in ‘the course of the employment’. Even though an author is an employee, if the work was not created in the course of employment, the author retains ownership of copyright. The question whether a work has been made in the course of employment will depend on the particular circumstances of the case in hand.

An important factor that has influenced the courts when determining whether a work has been made in the course of employment is whether the making of the work falls within the types of activity that an employer could reasonably expect or demand from an employer. In turn, this depends on the scope of the employee’s duties. This can be seen, for example, in *Stevenson Jordan v. MacDonald & Evans*,<sup>70</sup> in which the question arose as to whether an accountant or his employer (a firm of management consultants) owned copyright in a series of public lectures that the accountant had given about the budgetary control of businesses. Morris LJ noted that the employer had paid the expenses of the lecturers, that the employee-accountant could have prepared the lectures in the company’s time, used its library, and had the lectures typed up by company secretaries, and that the lectures were a useful accessory to his contracted work.<sup>71</sup> Nonetheless, Morris LJ found that, since it was not shown that the accountant could have been *ordered* to write and deliver the lectures, they were not created in the

<sup>68</sup> CDPA 1988, s. 178. <sup>69</sup> H. G. Beale (ed.), *Chitty on Contracts* (31st edn, 2013), [39–010].

<sup>70</sup> (1952) 69 *RPC* 10, 10 *TLR* 101. However, a journalist who wrote a confidential memorandum to colleagues about a possible article was acting in the course of her employment: *Beloff v. Pressdram* [1973] 1 *All ER* 241. For background to this holding, see J. Bellido, ‘The Failure of a Copyright Action: Confidences in the Papers of Nora Beloff’ (2013) 3 *Media & Arts L Rev* 249.

<sup>71</sup> In *Byrne v. Statist* [1914] 1 *KB* 622, a journalist made a translation to be used in the newspaper in his own time; this was held not to be in the course of his employment.

course of his employment. As such, the copyright belonged to the employee rather than to the employer.

Similar reasoning was also applied in *Noah v. Shuba*.<sup>72</sup> This was a copyright infringement action in relation to a book called *A Guide to Hygienic Skin Piercing*, written by the claimant, Dr Noah. During the proceedings, it was argued that, when Dr Noah wrote the guide, he was employed as a consultant epidemiologist at the Public Health Laboratory Service; as such, the copyright vested in his employer. While there was no doubt that Dr Noah was an employee of the Public Health Laboratory, it was less clear as to whether the guide had been written in the course of his employment. Dr Noah discussed his work with colleagues, made use of the services of the Public Health Laboratory Service library, and had the manuscript typed up by his secretary. In addition, the guide was published by the Public Health Laboratory Service at its own expense. Nonetheless, Mummery J held that the guide had not been written in the course of Noah's employment. One factor that influenced this decision was that Dr Noah had written the draft at home in the evenings and at weekends. Another was that Noah's contract required him to publish articles, but did not require him to write books.

It should be pointed out that the mere facts that a work is made at home or that the employee makes use of their personal resources do not necessarily mean that it will fall outside the scope of the employee's duties. Ultimately, the question of whether a work is made within the scope of employment depends upon the contract of employment. This can be seen in *Missing Link Software v. Magee*,<sup>73</sup> in which the question arose as to whether software written by an employee outside work time and on his own equipment was created in the course of his employment and thus copyright in it owned by his employer. The claimant company argued that, since it had employed the defendant to write programs of the kind in dispute, similar programs, even if written in his spare time, were created in the course of his employment. The Court held that although the employee had written the software in his own time and on his own equipment, nonetheless it was not unarguable that, because it fell within the scope of the tasks that he was employed to carry out, the computer programs were created within the course of his employment.

### 3.1.3 Agreements to the contrary

Finally, it should be noted that the copyright in works made in the course of employment will not be treated as belonging to the employer where there is an agreement to the contrary. Such an agreement may be written or oral, express, or implied.<sup>74</sup>

In some cases, such agreements have been implied from custom. For example, in *Noah v. Shuba*, Mummery J said that if the skin-piercing guide had been written in the course of Dr Noah's employment, he would nonetheless have implied a term into Dr Noah's contract that the copyright remained with the employee.<sup>75</sup> The reason for this was the Public Health Laboratory Service's long-standing practice of allowing its employees to act as if they owned copyright in their works: it allowed employees to assign copyright to publishers, to claim royalties, and (with respect to the case itself) did not assert that it owned copyright. This decision has important ramifications where employers allow employees to act as if they own copyright.

<sup>72</sup> [1991] FSR 14.      <sup>73</sup> [1989] FSR 361.

<sup>74</sup> As we will see, there is a general requirement that assignments of copyright be in writing. However, such formality is unnecessary with respect to the agreement reversing the presumption of initial ownership, which can be oral or implied. But to refer to a relationship as not being one of employment was not an implied agreement that copyright was to vest in the employee: *Robin Ray v. Classic FM* [1998] FSR 622.

<sup>75</sup> *Noah v. Shuba* [1991] FSR 14, 26–7.

### 3.2 CROWN COPYRIGHT

Another exception to the general rule that the author is the first owner relates to works governed by Crown copyright. Where a work is made by an officer or servant of the Crown in the course of their duties,<sup>76</sup> copyright in the work belongs to the Crown and not to the author of the work.<sup>77</sup>

### 3.3 PARLIAMENTARY COPYRIGHT

Where a work is made under the direction or control of the House of Commons or the House of Lords, the respective House owns copyright therein.<sup>78</sup> Such parliamentary copyright lasts for 50 years from the year in which the work was made. All Bills introduced into Parliament attract parliamentary copyright, but this ceases on royal assent, withdrawal, or rejection of the Bill.<sup>79</sup>

### 3.4 INTERNATIONAL ORGANIZATIONS

Where a literary, dramatic, musical, or artistic work is made by an officer or employee of an 'international organization',<sup>80</sup> the organization is the first owner of the resulting copyright.<sup>81</sup>

### 3.5 COMMISSIONED WORKS AND EQUITABLE ASSIGNMENT

Another exception to the general rule that the author is first owner arises, in limited circumstances, where a person commissions someone to make a work. Under the CDPA 1988, copyright in a commissioned work belongs to the author of the commissioned work.<sup>82</sup> However, in certain circumstances, the courts may infer that an independent contractor is subject to an implied obligation to assign the copyright to the commissioner. This may give rise to a trust with respect to the copyright in the commissioned work and render the commissioner the equitable owner. A good example is provided by *R. Griggs Group v. Raben Footwear*,<sup>83</sup> in which Griggs, distributors of

<sup>76</sup> CDPA 1988, ss 163, 164.

<sup>77</sup> CDPA 1988, s. 163. It lasts for 125 years from when the work is made or 50 years from its commercial publication. Crown copyright also exists in all Acts of Parliament and Measures of the General Synod of the Church of England.

<sup>78</sup> CDPA 1988, s. 164. The Government of Wales Act 1998, Sch. 12, has added to this list 'any sound recording, film, or live broadcast of the National Assembly for Wales which is made by or under the direction or control of the Assembly'.<sup>79</sup> CDPA 1988, ss 165–7.

<sup>80</sup> This means an organization the members of which include one or more states: CDPA 1988, s. 178.

<sup>81</sup> CDPA 1988, s. 168.

<sup>82</sup> Under the 1956 Act, a party commissioning a photograph, portrait, or engraving for value presumptively acquired copyright in that work: CA 1956, s. 4(3), Sch. 8, para. 1(a). When this position was changed in the 1988 Act, commissioners of photographers and films for private and domestic purposes were 'compensated' with the so-called 'moral' right of 'privacy': CDPA 1988, s. 85. The right covers issuing of copies of the work to the public, its exhibition in public, and its communication to the public.

<sup>83</sup> [2004] FSR (31) 673, [2005] FSR (31) 706 (CA). This decision is remarkable in two respects. First, the implied assignment is in favour of a third party, Griggs, rather than the design company, Jordan. The more orthodox (if artificial) view would be that there are two implied agreements: one between Jordan and Evans; and another between Griggs and Jordan. The distinction would have been important if, for example, Jordan had decided that the logo supplied by Evans was unsuitable. Second, the agreement to assign is implied in this case even though Evans did not know of the use intended by Griggs. Evans thinking the

DR MARTEN'S AIRWAIR, commissioned the advertising agency, Jordan, in 1988 to produce a logo for it. Evans, who did freelance work for Jordan, produced the logo and was paid at his standard rate of £15 an hour. Nothing was said about copyright in the logo. In 2002, Evans purported to assign copyright in the artistic work to Raben Footwear, an Australian competitor of Griggs. In response, Griggs brought an action seeking a declaration that it was beneficial owner of copyright and an assignment of legal title. Peter Prescott QC, sitting as deputy High Court judge, granted the relief sought. He held that while Evans was the author and first owner of the legal title, an agreement that copyright was to belong to Griggs was to be implied. Such an agreement was necessary to give business efficacy to the arrangement, under which it was clearly contemplated that Griggs would be able to use the logo and stop others from using it.<sup>84</sup> This could be achieved only if the implied agreement was to assign the copyright or give a perpetual exclusive licence (and the latter solution would be less convenient for Evans). The Court of Appeal affirmed.

Implied agreements to assign have also been found where a choreographer undertook to arrange certain dances for the Russian ballet,<sup>85</sup> a design of a trade mark was produced,<sup>86</sup> a person upgraded a previous version of a computer program,<sup>87</sup> a person arranged for the making of a sound recording,<sup>88</sup> and a person developed a prototype of a mask based on an artist's sketches.<sup>89</sup> These decisions amount to judicial variations of a clear legislative scheme.<sup>90</sup> Clearly, the judges are looking at transactions after the event and are motivated by gut feelings of justice to prevent opportunistic behaviour by creators. However, the impact of the decisions is to undermine a clear scheme that is designed both to achieve certainty in transactions and to protect authors.<sup>91</sup> It does so by requiring parties to allocate ownership through written assignments and, in so doing, requires those acquiring rights to specify what they want, thus giving authors an opportunity to reflect upon whether they wish to transfer all of those rights.<sup>92</sup> Under that scheme, the penalty for those commissioners who fail to organize their legal rights properly is that they risk having to bargain for them later. The courts, by repeatedly responding to their sense that rights should follow money, remove this 'penalty' and, with it, undermine the goals that the statutory scheme aims to achieve. The better view

use was for point-of-sale only. The judge seems to have ignored this on the ground that Evans was 'indifferent' to the use and, had he known, he would have accepted the more extensive use without charging a different fee.

<sup>84</sup> [2004] FSR (31) 673, [57].

<sup>85</sup> *Massine v. De Basil* [1936–45] *MacG CC* 223. See also *Brighton v. Jones* [2005] FSR (16) 288, [57]–[58] (contributions of director to play were made on behalf of theatre and so director was unable to claim copyright therein).

<sup>86</sup> *Auvi Trade Mark* [1995] FSR 288; *R. Griggs Group v. Raben Footwear* [2003] EWHC 2914.

<sup>87</sup> *Flanders v. Richardson* [1993] FSR 497, 516–19 (Ferris J held that where a computer program was improved, in circumstances under which there was an acceptance or understanding that the plaintiff owned all of the rights in the program, the court would hold the plaintiff to be the copyright owner, relying on *Massine v. De Basil* [1936–45] *MacG CC* 223).

<sup>88</sup> *A & M Records v. Video Collection* [1995] EMLR 25.

<sup>89</sup> *Lucasfilm v. Ainsworth* [2010] Ch 502 (CA), 556–7.

<sup>90</sup> *Clearsprings Management v. Businesslinx* [2006] FSR (3) 21, [9] *per* Floyd J.

<sup>91</sup> *Effects Associates, Inc. v. Cohen*, 908 F.2d 555 (9th Cir. 1990). But cf. D. Booton, 'Informal Dealings with Copyright' [2011] *IPQ* 28.

<sup>92</sup> In *Effects Associates, Inc. v. Larry Cohen; Larco Productions, Inc. & New World Entertainment*, 908 F.2d 555, 15 USPQ.2d 1559 (1990, USCA 9th Ct), Circuit Judge Alex Kozinski explained §204A of 17 USC thus: 'Section 204 ensures that the creator of a work will not give away his copyright inadvertently and forces a party who wants to use the copyrighted work to negotiate with the creator to determine precisely what rights are being transferred and at what price . . .'

is that these cases should be confined to their specific facts<sup>93</sup> and implied assignments found only in exceptional cases.<sup>94</sup>

### 3.6 BREACH OF CONFIDENCE

It also seems that copyright in works that are created in breach of a fiduciary duty or in breach of confidence will be held on constructive trust for the person to whom the duty was owed.<sup>95</sup> The same may be true of works made ‘in circumstances involving the invasion of legal or equitable rights of the [claimant] or breach of the obligation of the maker to the [claimant]’.<sup>96</sup>

## 4 HARMONIZATION

Questions of authorship and the position of employed authors are matters on which there has been little harmonization. As we have already noted, the issue was tackled, but only partially, in relation to films, by stating that the director is to be regarded as one of the authors of a cinematographic work. The only other harmonization has been in respect of the position of authors who create computer programs while employed: the Software Directive requires that the employer exclusively shall be entitled to exercise all economic rights in programs so created.<sup>97</sup> Although differences in the rules operated by member states may lead to different conclusions as to who is an author or owner of a particular copyright work, it seems unlikely that the European Commission will attempt harmonization in the near future. This is because these rules raise thorny political issues that go well beyond the field of copyright, in particular touching on national traditions as regards labour relations.

Whether the Court of Justice will be active is more difficult to predict. The various directives require member states to confer harmonized rights on ‘authors’.<sup>98</sup> Insofar as there is no reference to national law, it might well be the case that the Court will treat the term ‘author’ as an autonomous concept of European law.<sup>99</sup> If it does so, it

<sup>93</sup> For example, *Saphena Computing v. Allied Collection Agencies* [1995] FSR 616, distinguishing *Warner v. Gestetner* [1988] EIPR D–89.

<sup>94</sup> There are, in fact, many cases in which claims to equitable assignments have failed: *Tate v. Thomas* [1921] 1 Ch 503; *Robin Ray v. Classic FM* [1998] FSR 622; *Clearsprings Management v. Businesslinx* [2006] FSR (3) 21; *Slater v. Wimmer* [2012] UKPC 7.

<sup>95</sup> *A-G v. Guardian (No. 2)* [1990] AC 109, 263, 276. Insofar as the constructive trust analysis is adopted, there is no obvious reason why the analysis should be restricted to cases of breach of duties owed to the Crown: see *Ultraframe UK v. Clayton (No. 2)* [2003] EWCA Civ 1805 (director held unregistered design rights on trust for company). See below at p. 795.

<sup>96</sup> *Australian Broadcasting Corp. v. Lenah Game Meats Pty Ltd* (2001) 208 CLR 199, [101]–[102] per Gummow and Hayne JJ, and [309] per Callinan J.

<sup>97</sup> Software Dir., Art. 2(3). See also Council Directive 87/54/EEC of 16 December 1986 on the legal protection of topographies of semiconductor products [1986] OJ L 24/36, Art. 3(2)(a).

<sup>98</sup> Rel. Rights Dir., Art. 3(1)(a); Info. Soc. Dir., Arts 2(1), 3(a), 4(1) (rights to be conferred on ‘authors’).

<sup>99</sup> But cf. Database Dir., Art 4(1) (‘The author of a database shall be the natural person or group of natural persons who created the base or, where the legislation of the Member States so permits, the legal person designated as the rightholder by that legislation’, emphasis added). Recital 29 indicates that the arrangements applicable to databases created by employees are left to the discretion of the member states. The various provisions requiring that the principal director be recognized as one of the authors of a cinematograph, but which permit member states to recognize ‘other authors’—Rel. Rights Dir., Art. 2(2); Term Dir., Art. 2(1)—might lend weight to the notion that this matter is, overall, one for member states.

seems likely that it will insist that an author must be a human being, rather than a legal entity. The most obvious definition would be the natural person who is the source of the intellectual creation. Of course, those rights could be assigned, and it seems that there would be no objection to presumptions of transfer. However, if the logic of *Luksan* is followed,<sup>100</sup> there would be no room for a reallocation that was more than presumptive.<sup>101</sup> Whether it will go as far as developing rules on joint authorship is more difficult to predict.

<sup>100</sup> *Martin Luksan v. Petrus van der Let*, Case C-277/10 (9 February 2012) (ECJ, Third Chamber), [67] (holding that Austrian law vesting exploitation rights in film in the producer, rather than the director, was incompatible with the Directive—although, at [87], a rule of presumptive transfer would be acceptable).

<sup>101</sup> The rules in CDPA 1988, ss 163 (Crown copyright), 165 (parliamentary copyright), and 168 (international organizations), which are not presumptive/subject to agreement to the contrary, may be objectionable.

## NATURE OF THE RIGHTS

### CHAPTER CONTENTS

1 Introduction	140	6 Right to Broadcast the Work, Communicate it, and Make it Available to the Public	158
2 Right to Copy the Work: The Right of Reproduction	143	7 Right to Make an Adaptation of the Work	170
3 Issuing Copies of the Work to the Public: The Distribution Right	148	8 Authorization	171
4 Rental and Lending Rights	153	9 Liability of Internet Service Providers	174
5 Right to Perform, Show, or Play the Work in Public	154		

### 1 INTRODUCTION

This chapter is concerned with the rights that the law confers on the copyright owner. The scope of these rights determines the types of activity that, unless done with the copyright owner's consent, amount to an infringement of copyright.

One of the most consistent themes in the history of copyright law is that the types of activity that have fallen within the copyright owner's control have steadily expanded. For example, the 1710 Statute of Anne conferred on authors and proprietors of books the limited right to 'print and reprint' those books. In the early nineteenth century, the copyright owner's monopoly as regards musical and dramatic works was extended to cover not only the reprinting of the work, but also the public representation of the work. In 1911, the reproduction right was expanded from the right to print and reprint to the right to 'copy', which included copying in different dimensions. The same reforms conferred the right to 'adapt' a work—that is, a right to prevent translation and conversion into dramatic forms of literary works and arrangements of musical works. With the advent of broadcasting, the copyright owner's right was interpreted as covering broadcasting and, in 1956, a specific broadcasting right was added to the copyright owner's rights. Since then, further rights to distribute, rent, and lend copies have also been added, and the 'broadcasting right' has been transformed into a right to communicate a work to the public.<sup>1</sup> While the copyright owner is able to control the use that can be made of the work in many circumstances, there are still some that do not fall within the owner's control. If we take the case of the rights in a literary work, for example, the copyright owner is not able, at least yet, to control reading, browsing, private lending or resale of a book containing the work that has been sold with their consent.

<sup>1</sup> CDPA 1988, s. 20 (from 31 October 2003); Info. Soc. Dir., Art. 3.

For the most part, the rights have developed in a piecemeal way in response to external pressures, most obviously to technological change. As well as producing a complicated and illogical system of rights, the cumulative and reactionary way in which the rights have developed has also led to a degree of overlap between them.<sup>2</sup> The expansion of the rights granted to the copyright owner has continued with the implementation of the Information Society Directive,<sup>3</sup> which harmonizes the rights of reproduction, communication to the public, and distribution. Significantly, the public performance right has not been harmonized,<sup>4</sup> nor has the adaptation right (other than in relation to computer programs and databases) (see Table 6.1). This has at least three important implications. First, it means that, with respect to the harmonized rights, the detailed provisions of the Copyright, Designs and Patents Act 1988 (CDPA 1988)—for example section 17(3) on what counts as reproduction of an artistic work or section 18 on the ‘issuing right’—need to be treated with some caution, because they must be interpreted to give effect to the relevant directives. Second, and relatedly, in relation to the harmonized provisions, the Court of Justice is the key forum in which the scope of these rights is elucidated. Third, because EU law ‘harmonizes’ these rights, it creates *upper*, as well as lower, limits.<sup>5</sup> This raises interesting questions (particularly for civil law jurisdictions) about what precisely is covered (and the relationship with other rights and doctrines). Consider, for example, a ‘public exhibition’ right (a right not known to UK law, but recognized in some member states): is this unharmonized (and thus left to national law), or no longer permitted because it falls outside the scope of the distribution right?

The primary rights that are currently granted to copyright owners are set out in sections 16–21 of the 1988 Act. Anyone who carries out any of these activities, or who authorizes someone else to carry out these activities, is liable for primary infringement. This will not be the case, however, if the defendant has the permission of the copyright owner or can show that the activity falls within one of the defences available to them. While the nature of the rights that are granted varies according to the type of work in question, these include the exclusive right to:

- (i) copy the work (a reproduction right);
- (ii) issue copies of the work to the public (a distribution right);
- (iii) rent or lend the work to the public (a rental or lending right);
- (iv) perform, show, or play the work in public (a public performance right);
- (v) communicate the work to the public;
- (vi) make an adaptation of the work, or do any of the above acts in relation to an adaptation (a right of adaptation); or
- (vii) authorize others to carry out any of these activities.

It should be noted that the particular rights that are granted to copyright owners vary depending on the type of work that is protected. In particular, while the right of

<sup>2</sup> For example, between the right of reproduction and the right of adaptation. This overlap is all the more problematic because the reproduction right is harmonized under EU law, whereas the adaptation right is not.

<sup>3</sup> Copyright and Related Rights Regulations 2003 (SI 2003/2498), adding, in particular, the ‘making available’ right.

<sup>4</sup> *Circul Globus București (Circ & Variete Globus București) v. Uniunea Compozitorilor și Muzicologilor din România*, Case C-283/10 [2011] ECR I-12031 (ECJ, Third Chamber).

<sup>5</sup> Occasionally, this is made explicit: Info. Soc. Dir., Recitals 23, 24 (‘This right should not cover any other acts’). In other contexts, there are only minima: Satellite Dir., Art. 6(1).

**Table 6.1** Harmonization of the copyright owner's rights in the European Union

	Computer programs	Related rights	Databases	Authorial works

Adaptation	Software Dir., Art. 4(b)	Unharmonized	Database Dir., Art. 5(b)	Unharmonized

reproduction and the right to issue copies of the work to the public exist in relation to all types of work, the other rights apply only to certain of them. For example, the performing right applies to all works except artistic works and typographical arrangements; the right to communicate the work to the public applies to all works except typographical arrangements; the right to make an adaptation of a work applies only to literary, dramatic, or musical works. Care must be taken to check which rights a copyright owner is given by the 1988 Act (see Table 6.2).

Traditionally, it has been understood that the restricted activities found in sections 16–21 are based on a notion of strict liability. This means that the state of mind of the defendant is not normally relevant when determining whether an infringement has taken place.<sup>8</sup> As such, it does not matter if a defendant knew that the work was protected by copyright or that the claimant owned the work. All that matters, at least in relation to primary infringement, is that the defendant carried out one of the acts reserved to the copyright holder with the claimant's work (or a part of it). It should be noted that while the defendant's innocence is not a relevant factor in determining whether they have infringed copyright, it may be relevant when damages are being determined.<sup>9</sup>

In addition to the primary rights set out in sections 16–21, the 1988 Act also provides copyright owners with the ability to protect against secondary infringements (sections

<sup>6</sup> M. Walter, 'Information Society Directive', in Walter and von Lewinski, 958, [11.1.20].

<sup>7</sup> *Ibid.*, [11.3.36].

<sup>8</sup> But see pp. 159–60, where case law of the Court of Justice is described that appears to make such knowledge relevant in cases of 'communication to the public'. Moreover, insofar as the law recognizes implied licences, knowledge of the user might be relevant to liability.

<sup>9</sup> CDPA 1988, s. 97(1). See below at p. 1256.

Table 6.2 Rights under the CDPA 1988

Works	To copy the work (s. 17)	To issue copies of the work to the public (s. 18)	To rent or lend the work (s. 18A)	To perform or show the work in public (s. 19)	To communicate the work to the public (s. 20)	To make an adaptation (s. 21)
Literary, dramatic, and musical	✓	✓	✓	✓	✓	✓
Artistic	✓	✓	(but not buildings/applied art)	×	✓	×

Sound recordings	✓	✓	✓	✓	✓	×
Broadcasts	✓	✓	×	✓	✓	×
Typographical	✓	✓	×	×	×	×

22–6). A defendant may be liable for secondary infringement if, in the commercial exploitation of copies or articles specifically adapted to make copies, the defendant knew or had reason to believe that the copies were or would be infringements when made.<sup>10</sup> We deal with secondary infringement in Chapter 8.<sup>11</sup> For now, however, it is perhaps worth making one point about the place of ‘secondary infringement’ in EU copyright law. It seems that few countries in Europe other than the United Kingdom and Ireland have provisions on secondary infringement. As a consequence, the concept of secondary infringement hardly features in the harmonized copyright *acquis* (the main example appears in Article 7 of the Software Directive). It would, however, be a mistake to assume this is an area in which there is very little harmonization. In fact, some of the jurisprudence of the Court of Justice seems to be interpreting the scope of the primary rights so broadly that secondary infringement would have little, if any, place in a European copyright regime.

## 2 RIGHT TO COPY THE WORK: THE RIGHT OF REPRODUCTION

The first and best-known right given to copyright owners is the right to copy the work (section 17).<sup>12</sup> The right to copy the work is the oldest of the rights granted to owners of copyright. The right has been the subject of harmonization specifically at an EU level with respect to computer programs<sup>13</sup> and databases,<sup>14</sup> and more generally with respect to other

<sup>10</sup> CDPA 1988, ss 22–4, 27. See Laddie et al., ch. 10. <sup>11</sup> See below at Chapter 8, section 6.

<sup>12</sup> *VG Wort v. KYOCERA Document Solutions Deutschland GmbH*, Joined Cases C-457/11, C-458/11, C-459/11 and 460/11 (AG Opinion, 24 January 2013), [AG33] (the ‘fundamental’ right); cf. J. Litman, *Digital Copyright* (2001), 180ff (proposing instead a general right to control commercial exploitation).

<sup>13</sup> Software Dir., Art. 4(a). <sup>14</sup> Database Dir., Art. 5(a).

works. Article 2 of the Information Society Directive requires member states to confer on authors, film producers, phonogram producers, and broadcasters ‘the exclusive right to authorise or prohibit direct or indirect, temporary or permanent reproduction by any means and in any form, in whole or in part’.

While the precise understanding of what counts as a ‘reproduction’ varies (particularly as between authorial works and related rights, or what Mr Justice Arnold calls ‘signal’ and ‘content’ copyright),<sup>15</sup> one factor that is common to all works is that infringement takes place whether the copy is permanent, transient, temporary, or even incidental to some other use of the work.<sup>16</sup> This means a person will infringe (absent a defence) when they copy the work from disk to disk, when they take material from one website and place it on another, when they upload on to sites, or when they download through peer-to-peer systems (such as Newzbin and PirateBay). More startling, a person will reproduce material when they access material from a computer (at which point, a temporary copy is made in the ‘memory’ of a computer),<sup>17</sup> or when they run a satellite box, because the buffer system of the decoder generates a temporary technical copy.<sup>18</sup> Moreover, the image created on a computer screen, or television screen,<sup>19</sup> is also regarded as a copy (albeit a temporary one). The problems posed by the Internet for copyright holders are, in essence, ones of detection and enforcement rather than absence of liability.

## 2.1 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

When the 1710 Statute of Anne first granted copyright to books, the right was limited to the right to print and reprint copies of those books. Within a relatively short period of time, it became clear that if the rights of the copyright owner were limited to situations in which the work was copied identically, it would undermine the value of the property. It would fail, for example, to protect an owner against someone making minor changes to the work (thus rendering the ‘copied’ work non-identical). In order to protect against such uses, the scope of copyright protection was expanded to include non-identical or ‘colourable’ copying. Even so, the emergence of new practices of replication, use, and distribution of works (which were often, but not always, linked to new technologies) has repeatedly given rise to doubts about what amounts to a reproduction. Some of these doubts were resolved in a straightforward manner: photographic reproduction, for example, was readily treated as equivalent to reprinting.<sup>20</sup> On other occasions, however, it has been more difficult to accommodate the new uses within the existing conceptions of reproduction. For example, at the turn of the twentieth century, it was held that a phonographic record was not a copy of sheet music for the purposes of the Literary Copyright Act 1842.<sup>21</sup> Similarly, the courts have held that the making of *tableaux vivants* (in which performers dress up as characters from paintings so as to produce a ‘live version’ of the painting) did not amount to an infringement of the copyright in the painting.<sup>22</sup>

<sup>15</sup> R. Arnold, ‘Content Copyrights and Signal Copyrights: The Case for a Rational Scheme of Protection’ (2011) 1 *QMJJIP* 272.

<sup>16</sup> CDPA 1988, s. 17(6); Info. Soc. Dir., Art 2. But note CDPA 1988, s. 28A and Info. Soc. Dir., Art 5(1) (certain temporary acts are to be deemed to be non-infringing) discussed at pp. 230–3.

<sup>17</sup> *R v. Higgs* [2008] *EWCA Civ* 1324, [9].

<sup>18</sup> *Football Association Premier League Ltd and ors v. QC Leisure and ors and Karen Murphy v. Media Protection Services Ltd (‘FAPL’)*, Joined Cases C-403/08 and C-429/08 [2011] *ECR I*-9083 (ECJ, Grand Chamber); *ITV Broadcasting Ltd v. TV Catchup Ltd* [2011] *EWHC* 1874 (Pat).

<sup>19</sup> *FAPL*, Joined Cases C-403/08 and C-429/08 [2011] *ECR I*-9083, [159].

<sup>20</sup> For example, *Gambart v. Ball* (1863) 14 *CB (NS)* 306.

<sup>21</sup> *Newmark v. The National Phonograph Company Ltd* (1907) 23 *TLR* 439.

<sup>22</sup> *Hanfstaengl v. Empire Palace* [1894] 2 *Ch* 1, but after 1911, see *Bradbury Agnew v. Day* (1916) 32 *TLR* 349.

The 1988 Act attempts to minimize these kinds of difficulties by using a ‘technologically neutral’ concept of reproduction. This is reflected in the fact that, in relation to literary, dramatic, musical, and artistic works, copying means ‘reproducing the work in any material form’.<sup>23</sup> European law also refers to reproduction as covering reproduction by ‘any means and in any form’.<sup>24</sup> Thus reproduction is not limited to replicating a work in the same manner as it was originally produced, for example repainting a painting or reprinting a book; reproduction also includes reproduction in other forms. Thus it is clear that a photocopy of a book,<sup>25</sup> an engraving of a painting, a painting of a photograph, and a sound recording of a song are (potentially) reproductions.<sup>26</sup> There can also be little doubt that the conversion of a work into digital form—from symbols perceptible and understandable to the senses into a series of ones and zeros—will be treated as a reproduction.<sup>27</sup> Moreover, the CDPA 1988 specifies in relation to artistic works that a person will reproduce a work if there is a change of dimensions, so that, for example, photographing a sculpture and making a car exhaust pipe from a design drawing involve reproduction.<sup>28</sup> One would expect the same result under the harmonized law (although it is not obvious that the limitation to artistic works can still be justified).<sup>29</sup>

Are there limits to how far the work can be changed and still count as a reproduction? British law had found difficulty with treating an act that is as transformative as a translation as a reproduction and had included it within a distinct category of exclusive rights, the right of adaptation. This suggests that there are limits to the concept of reproduction, even if it can be ‘in any form’. In particular, British courts have stated that, in order to infringe, the derived form must be ‘objectively similar’ to the copyright work.<sup>30</sup> The requirement of objective similarity means that, to infringe, the relevant part of the defendant’s work must be a copy or representation of the whole or part of the original work.<sup>31</sup>

The Court of Justice has yet to face the same issue of the limits of the concept of reproduction square on.<sup>32</sup> It is worth noting that, except in the field of databases and computer programs, there has been no harmonization of the right to make an adaptation of a work (see Table 6.1), so that if a protected work is transformed such that it is no longer a reproduction, the question of liability falls to national law. Two judgments point in different directions. In *SAS Institute Inc. v. World Programming Ltd*,<sup>33</sup> the Court (in Grand Chamber) also offered a broad interpretation of the concept of reproduction. The question was whether a person who utilized a computer manual as a basis for constructing a program had reproduced the work. The Court held that the manual was not a computer program, but might be a literary work within the scope of the Information Society Directive. It then suggested that the making of a computer program might be a reproduction of part of the manual if the part reproduced were to constitute a part that was its own intellectual

<sup>23</sup> CDPA 1988, s. 17(2).

<sup>24</sup> Info. Soc. Dir., Art. 2; Software Dir., Art. 4(a); Database Dir., Art. 5(a).

<sup>25</sup> *Norowzian v. Arks* [1998] FSR 394, 398. <sup>26</sup> *Bauman v. Fussell* [1978] RPC 485.

<sup>27</sup> *Autospin (Oil Seals) v. Beehive Spinning (A Firm)* [1995] RPC 683, 698; *Pinckney*, Case C-170/12 (Opinion, 13 June 2013), [AG29] (AG Jääskinen). <sup>28</sup> CDPA 1988, s. 17(3).

<sup>29</sup> CDPA 1988, s. 17(3), is best understood as an example. No negative inference as to the scope of copyright in literary works should be drawn from it. Cf. *Moon v. Thornber* [2012] EWPC 37, [98]–[99] (Birss J resisting the invitation to so hold). But *Thornber* was a case of written instructions and, arguably, turns on the principle that following instructions is not reproduction.

<sup>30</sup> *Francis Day Hunter v. Bron* [1963] Ch 587, 623.

<sup>31</sup> *Brigid Foley v. Elliot* [1982] RPC 433 (Megarry VC).

<sup>32</sup> *Eva-Maria Painer v. Standard VerlagsGmbH and ors*, Case C-145/10 [2012] ECDR (6) 89 (ECJ, Third Chamber), [AG129].

<sup>33</sup> Case C-406/10 [2012] 3 CMLR (4) 55.

creation.<sup>34</sup> In contrast, in *Infopaq II*,<sup>35</sup> the Court implied that there were limits to what might be a reproduction.<sup>36</sup> More specifically, the Court took the view that the making of an abstract summarizing a newspaper article would not amount to an infringement under EU law. The reasoning is scant, but it seems clear that the Court assumed that, at a certain point, a transformation in the content of a work is so extensive that it cannot be treated as a reproduction.

Thus the *SAS Institute* ruling suggests that the notion of reproduction is broad, while *Infopaq II* implies some limits to the concept. *SAS Institute* seems to suggest that whether something is a reproduction is a question of fact, while *Infopaq II* seems to recognize that some reuses are not reproductions as a matter of law. Whether the two cases can be reconciled is difficult to say. Insofar as there is a conflict, a considered decision of the Grand Chamber might be regarded as carrying more precedential weight than an order issued from a Chamber (on a point that seems not to have been disputed). Nevertheless, there is much to be said for the approach taken in *Infopaq II* in terms of the structure and language of the directives. What might be the significance of Article 4(b) of the Software Directive and Article 5(b) of the Database Directive, both of which confer specific rights in relation to alteration or arrangement of a computer program or database, if any reuse of an original part itself is a reproduction (covered by Articles 4(a) and 5(a), respectively)?

Two interesting questions as to the limits of ‘reproduction’ arose in British case law from the pre-harmonization era. The first is whether the copyright in a work that consists of *instructions* how to make something is infringed by making the thing as instructed. Case law indicated that the answer was ‘no’: a person will not infringe the literary copyright in a recipe if they follow the instructions and bake a cake to the recipe, for example.<sup>37</sup> This is because what is protected is the intellectual creation of the recipe as a literary work and not the creation of the cake *per se*. Similarly, a person who knits clothes according to a knitting guide does not infringe copyright in the guide.<sup>38</sup> We would expect the same result under harmonized EU law.

The second issue concerned whether there is infringement where a copyright work *describes* something and the thing is made to the description. If a novel describes a scene, would copyright be infringed by someone painting the scene so described? As with instructional works, the key issue here is: when is a description ‘reproduced’? The issue is not merely theoretical: with developments in computer-aided design, computer code now commonly represents the three-dimensional article.<sup>39</sup> In *Sandman v. Panasonic*,<sup>40</sup> the Court indicated that, in certain circumstances, a two-dimensional literary work that describes something (in this case, circuit diagrams) could be reproduced in a three-dimensional form (the circuits that were incorporated into amplifiers and CD players). Pumfrey J explained that ‘the circuit itself is a reproduction because it still contains all the literary content of the literary work, albeit in a form which would require analysis for it to be extracted’.<sup>41</sup> Nevertheless, it is unlikely that the copyright in a novel that describes a particular scene will ever be infringed when someone draws it.<sup>42</sup> This may be because the description is unlikely to be sufficiently detailed.<sup>43</sup>

<sup>34</sup> *Ibid.*, [77].

## 2.2 SOUND RECORDINGS AND FILMS

The definition of ‘reproduction’ used in relation to films and sound recordings is narrower than that used in relation to literary, dramatic, musical, and artistic works. These are what Arnold J has referred to, writing extrajudicially, as ‘signal’ copyrights.<sup>44</sup> As we saw earlier, entrepreneurial works (or, in EU parlance, ‘related rights’), which are seen as the product more of investment than of creativity, are given a ‘thinner’ protection than is given to authorial works.<sup>45</sup> This is reflected in the fact that the scope of the reproduction right is inextricably linked to the way in which the particular work is defined.<sup>46</sup> Sound recordings are defined as the ‘recording of sounds from which the sounds may be reproduced’.<sup>47</sup> Consequently, what is protected in relation to sound recordings is not the content *per se*—the song, storyline, plot, or language—or the music or lyrics (which are protected, if at all, as authorial works). Instead, copyright protects the ‘signal’—that is, the recording of these sounds. Similarly, because a film is defined as a recording on a medium from which a moving image may be produced, the courts have held that film copyright protects the recording of the image (rather than the image itself).<sup>48</sup> Although the Court of Justice has yet to confirm this, there is no reason to suspect that it would come to any other conclusion.

One of the consequences of reproduction being defined very narrowly is that copyright in a sound recording of a speech is not infringed where a person transcribes the speech. Similarly, copyright in a film is not infringed when somebody writes a description of the film, or stages a play replicating events in the film. Moreover, there is no reproduction where a person records contents of a similar nature or style to those embodied on the claimant’s (film or sound) recording.<sup>49</sup> Likewise, the reshooting of a film sequence (in which not a single frame of the copyright film had been included) was held not to be a copy for the purpose of the CDPA 1988.<sup>50</sup> This is the case even if the second film closely resembles and imitates the claimant’s copyright film, or reproduces the essential features of that film.<sup>51</sup> Similarly, copyright in a sound recording is not infringed where a person remakes (or ‘covers’) the same song or records the same song performed in a similar style (also known as a ‘sound-alike’).<sup>52</sup> However, it should be noted that while an entrepreneurial copyright will not be infringed where a new recording of identical or similar sounds or images is made, this might infringe copyright in an underlying work such as the music, lyrics, or screenplay,<sup>53</sup> or violate some other intellectual property right.<sup>54</sup>

Having observed that the reproduction right in relation to films and sound recording is confined to the reproduction of the recording, it should be noted that the recording will be treated as having being reproduced even though the recording medium has changed (as long as the particular sounds or images embodied on the claimant’s recording are replicated). For example, a reproduction occurs where a person makes a tape recording of a CD, records a film on a digital camcorder, or uploads or downloads a sound recording from the Internet. Even though the Act does not specify that copying of a film or sound recording includes storing it by electronic means, the better view is that it does.<sup>55</sup>

<sup>44</sup> R. Arnold, ‘Content Copyrights and Signal Copyrights: The Case for a Rational Scheme of Protection’ (2011) 1 *QMJP* 272.

<sup>45</sup> The protection is limited to the ‘signal’ rather than ‘content’.

<sup>46</sup> This is not the case with photographs, where the copyright extends to the content or arrangement, not only the ‘recording’: *Creation Records v. News Group Newspapers* [1997] *EMLR* 444, 450.

<sup>47</sup> CDPA 1988, s. 5A(1)(a).

<sup>55</sup> Copinger, [7–78], 483.

### 2.3 BROADCASTS

The 1988 Act provides little guidance as to what it means to ‘copy’ a broadcast. However, it is clear that the making of an audiotape of a radio broadcast or a videotape of any image forming part of a television broadcast would amount to a reproduction of the broadcast (as well as the contents of the broadcast, be they sound recordings, films, or other works). In contrast with some jurisdictions, UK law does not differentiate between the first fixation and other reproductions of broadcasts.<sup>56</sup> Following the logic of entrepreneurial copyright, it seems that the reproduction of a broadcast protects only the information, sound, and images sent through particular signals. Thus a person would not infringe if they were to summarize a broadcast, or describe its contents. Similarly, the right to copy the broadcast would not be infringed if someone were to broadcast exactly the same sound recordings in the same order as had been used by another broadcaster.

### 2.4 TYPOGRAPHICAL ARRANGEMENTS

The scope of the reproduction right in relation to typographical arrangements is very narrow. This is because copying of a typographical arrangement means making a facsimile copy of the arrangement.<sup>57</sup> Although ‘facsimile’ is defined to include enlargements and reductions,<sup>58</sup> it seems to be confined to reproduction by way of reprography, photocopies, digital scanning, faxing, and little more. Retyping a work in a different font is a sure way of avoiding infringement of copyright in the typographical arrangement.

## 3 ISSUING COPIES OF THE WORK TO THE PUBLIC: THE DISTRIBUTION RIGHT

The owner of copyright in all categories of work is given the right to issue copies of the work to the public under section 18 of the CDPA 1988. This is commonly known as the ‘distribution right’.<sup>59</sup> The provision is understood to implement various provisions of European copyright law,<sup>60</sup> the most important of which is Article 4 of the Information Society Directive.

The distribution right is given in respect of the issuing of each and every copy (including the original).<sup>61</sup> As such, it needs to be distinguished from a right to make the works available to the public for the first time (that is, a ‘publication’ or ‘divulgarion’ right of the kind previously recognized in UK law). Essentially, the distribution right is a right to put each tangible copy (which has not previously been circulated) into commercial circulation.<sup>62</sup> Once particular copies are in circulation (at least where the first circulation was consensual), the right no longer operates in relation to those objects. Because the right of

<sup>56</sup> Cf. Rel. Rights Dir., Arts 6 (fixation), 7 (reproduction of fixations). <sup>57</sup> CDPA 1988, s. 17(5).

<sup>58</sup> CDPA 1988, s. 178.

<sup>59</sup> The 1988 Act has been amended twice in this regard to implement the Software Dir., Art. 4(c), and the original Rel. Rights Dir., Art. 9.

<sup>60</sup> Software Dir., Art. 4(c); Rel. Rights Dir., Art. 9; Database Dir., Art. 5(c); Info. Soc. Dir., Art. 4 (which, in turn, implements WCT, Art. 6). <sup>61</sup> CDPA 1988, s. 18(4).

<sup>62</sup> Info. Soc. Dir., Art. 4(1), refers to distribution ‘by sale or otherwise’, whereas CDPA 1988, s. 18, refers to ‘putting into circulation’. Info. Soc. Dir., Recital 28, indicates that distribution relates to distribution in the form of a ‘tangible article’.

distribution does not include ‘any subsequent distribution’,<sup>63</sup> copyright owners cannot control resale.<sup>64</sup>

### 3.1 DISTRIBUTION

But what acts count as ‘issuing’ to the public? Subsection 18(3) of the 1988 Act indicates that, once a copy is in circulation, subsequent acts of ‘distribution, sale, hiring or loan of copies’ or ‘importation’ do not infringe. On one reading, at least, this implies that putting into circulation includes not only sale and other transfers of articles, but also import,<sup>65</sup> hire, and even *loan*. The Information Society Directive refers to distribution to the public ‘by sale or otherwise’, the Database Directive, to ‘any form of distribution to the public’, the Related Rights Directive, to the ‘right to make available to the public, by sale or otherwise’, and the Software Directive, to ‘any form of distribution to the public, including the rental’.<sup>66</sup>

The better view is that the distribution right does not encompass ‘rental’ or ‘lending’, because these are acts that are separately provided for (in the Related Rights Directive, Article 3). Indeed, the Court of Justice has indicated that distribution is primarily defined as an act involving transfer of ownership.<sup>67</sup> In *Peek & Cloppenburg*,<sup>68</sup> a German court asked the Court whether distribution ‘by sale or otherwise’ (the words of Article 4(1) of the Information Society Directive) could be interpreted to encompass display in a shop of an article for use by customers as well as display in a shop window. The question arose in a case in which a German shop was displaying copies of furniture designed by Le Corbusier, which had been imported from Italy (where it had been made without permission of the German copyright holder, but not in breach of Italian copyright law). The Court rejected such a broad interpretation of distribution, taking the view that the phrase ‘or otherwise’ was limited to situations in which ownership of the goods was transferred.

Despite the conclusion in *Peek & Cloppenburg*, in the *Donner* case,<sup>69</sup> the Court indicated that ‘distribution’ can encompass a series of acts: agreement to sell, sale, and subsequent delivery.<sup>70</sup> Moreover, a distribution occurs with each of these acts. Thus if a sale transaction occurred in one member state in which a work is unprotected, but delivery occurs in a second member state in which the work is protected, there may be infringing distribution in the latter member state (even if there is none in the former). More specifically, the Court stated that a trader ‘bears responsibility’ for any act carried out by him or on his behalf giving rise to a ‘distribution to the public’. The acts of the third party are ‘attributed to him’, where the trader specifically targeted the public of the state of destination and must have been aware of the actions of that third party.<sup>71</sup>

<sup>63</sup> CDPA 1988, s. 18(3)(a). The Rel. Rights Dir., Art. 9(2), and the Software Dir., Art. 4(c), refer to exhaustion on ‘first sale’, whereas Info. Soc. Dir., Art. 4(2), allows for exhaustion in cases of ‘first sale or other transfer of ownership in the Community’.

<sup>64</sup> This corresponds with the idea of exhaustion of rights. Note, however, the resale royalty right: see Chapter 13.

<sup>65</sup> See below pp. 152–3.

<sup>66</sup> Info. Soc. Dir., Art. 4; Database Dir., Art. 5(c); Rel. Rights Dir., Art. 9; Software Dir., Art. 4(c).

<sup>67</sup> Or its functional equivalent. Thus it seems an act will be seen as transferring ownership even if it is ‘dressed up’ as an indefinite loan: *UsedSoft GmbH v. Oracle*, Case C-128/11 (3 July 2012) (ECJ, Grand Chamber).

<sup>68</sup> *Peek & Cloppenburg SA v. Cassina SpA*, Case C-456/06 [2008] ECR I-2731 (ECJ, Fourth Chamber).

<sup>69</sup> *Donner*, Case C-5/11 (21 June 2012), [26]–[30].

<sup>70</sup> Note the analogous reasoning in relation to ‘communication to the public’ in *Football Dataco Ltd. v. Sportradar GmbH*, Case C-173/11 [2013] 1 CMLR (29) 903 (18 October 2012) (ECJ, Third Chamber). See pp. 164–5.

<sup>71</sup> *Ibid.*, [27].

The *Donner* case seems to be in tension with *Peek & Cloppenburg*; the latter focused on the act of ‘transfer of ownership’, whereas the former appears to envision other acts that do not involve transfer of ownership (agreement to sell, delivery). The Court in *Donner* also seems to imply that even if the transfer of ownership occurs in a member state in which such an act is permissible, there might be liability if delivery (transfer of possession) occurs elsewhere. In doing so, the Court used language that comes very close to ‘accessorial’ liability (in English terms, joint tortfeasance). There has been no legislative harmonization of the concepts and the Court, in the trade mark context, has acknowledged this.<sup>72</sup> The Court in *Donner* showed no such scruples. Perhaps the inconsistent reasoning can be attributed to the ‘cross-border’ dimension of that case.<sup>73</sup>

The case prompted a further reference from the *Bundesgerichtshof* (BGH), the German Federal Court of Justice, in yet another case in which an Italian firm offered works of well-known designs (Marcel Breuer, Mies van der Rohe) to German consumers. Thus the Court has been asked whether advertising for sale of works is prohibited as distribution.<sup>74</sup> *Peek & Cloppenburg* would suggest a simple answer: ‘no’. This is both because of the definition, but also the facts: the display of the chairs was, after all, to advertise them. But, in light of *Donner*, at the very least it is conceivable that the Court might say that an advertisement that leads to a sale might be part of the chain of acts that comprises ‘distribution’. There is, indeed, some English authority suggesting that an offer of sale might be distribution<sup>75</sup> (although, traditionally, such an act has been regarded under UK law as a type of secondary infringement and subject to a requirement of knowledge).<sup>76</sup>

Does *Peek & Cloppenburg* preclude a member state from including in its regime of author’s rights a right to control public exhibition of artworks? It clearly indicates that such a right is not within the harmonized ‘distribution right’. Nevertheless, it might be arguable that even if the distribution right in Article 4 of the Information Society Directive exhaustively harmonizes the right, member states still have freedom to legislate for other non-harmonized rights. A right of exhibition thus might be regarded as part of the as-yet-unharmonized law relating to public performance of works. British art galleries, of course, need not worry about such a question, because no such exhibition right is hinted at within UK law.<sup>77</sup>

### 3.2 TO THE PUBLIC

What is to be understood by the limitation of the right to distribution ‘to the public’? On its face, it would exclude from liability the distribution of infringing copies

<sup>72</sup> See pp. 1208–10, and *Google France*, Cases 236/08–238/08 [2010] ECR I–2417, [57], [AG114]–[AG125] (AG Poiares Maduro); *L’Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I–6011 (ECJ, Grand Chamber), [104], [AG55]–[AG56]; *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] ECR I–13179, [35].

<sup>73</sup> One wonders whether the real reason for the decision was that the Court thought that the act of distribution in Italy ought to have been infringing, but that Italian law had not complied with the terms of the Design Directive, as interpreted in *Flos SpA v. Semararo Case e Famiglia SpA*, Case C-168/09 [2011] ECR I–181 (ECJ, Second Chamber).

<sup>74</sup> *Dimensione Direct Sales srl, Michele Labianca v. Knoll International SpA*, Case C-516/13 (pending).

<sup>75</sup> *KK Sony Computer Entertainment v. Pacific Game Technology Ltd* [2006] EWHC 2509 (Ch).

<sup>76</sup> CDPA 1988, s 23. If the Court of Justice rules that distribution does not include advertising infringing goods for sale (as we think it will), the question will arise as to whether liability for such acts is a matter left to member states or whether the harmonized provision covers the whole ground and thus pre-empts any national law that seeks to regulate other distribution-like acts.

<sup>77</sup> P. Goldstein and B. Hugenholtz, *International Copyright Law: Principles, Law and Practice* (2nd edn, 2010), 328–9; J. L. Duchemin, ‘Thoughts on the Exhibition Right’ (1993) 156 *RIDA* 13.

within a small personal network, such as a family network, or within a firm (including between subsidiaries). However, a transfer of a copy between two individual entities at arm's length—say, a retailer to a wholesaler—would seem to be a distribution to 'the public'. Further sale, from the wholesaler to the consumer, would not require further permission.

### 3.3 EXHAUSTION

The distribution right applies to the first distribution of a copy; thereafter, the copy can be resold. This is the principle of 'exhaustion', first recognized in the context of trade between member states, but extended by the directives into the definition of the right and thus equally applicable to transactions within member states.

The various directives define the scope of exhaustion in different terms. The Software and Database Directives refers to 'the first sale . . . of a copy', the Information Society Directive, to the 'first sale or other transfer of ownership . . . of that object', and the Related Rights Directive, to 'the first sale . . . of that object'.<sup>78</sup> All make clear that the act must be by the rights holder or with their consent and must occur within 'the Community'. Moreover, the legislation makes clear that exhaustion occurs in relation to the distribution right and that there will only be exhaustion of that right (and not, in particular, of the rental right).

It is suggested that, despite the variations in language as between the directives, there is nothing special about 'sales', and that the distribution right is exhausted by each and every act of distribution (as understood in *Peek & Cloppenburg*)—that is, transfer of ownership. This certainly is what the United Kingdom does in section 18 of the CDPA 1988, through the broad notion of 'issue'. Moreover, it reflects the idea that, by transferring ownership, the transferor confers on the transferee the normal incidents of ownership of personal property, which include the capacity to resell. From a pragmatic perspective, too, the question of whether the initial act of transfer was a 'sale' is a matter that the courts should not be required to investigate.<sup>79</sup>

It had been widely assumed that the distribution right applied only to the distribution of tangible copies. One consequence of this was that there would be no exhaustion where digital copies were made available electronically to consumers. However, the Court of Justice has rejected such an interpretation (at least) in the context of the Software Directive. In *UsedSoft GmbH v. Oracle*,<sup>80</sup> the Court held that the exhaustion doctrine applies to computer programs made available electronically where the substance of the arrangement is to transfer the copy to the user for an indefinite period (and thus is functionally the same as a sale of a copy on a CD-ROM). The Court acknowledged that there were good reasons to treat other works in the same way as computer programs, but also left room in its decision for a different interpretation of the different provisions of the Software Directive and the Information Society Directive. A further decision will be necessary before we can be

<sup>78</sup> Software Dir., Art. 4(c); Database Dir., Art. 5(c); Info. Soc. Dir., Art. 4(2); Rel. Rights Dir., Art. 9(2).

<sup>79</sup> See Chapter 41, pp. 1078–9.

<sup>80</sup> Case C-128/11 (3 July 2012, ECJ), [47], [49], [58] and [61]. The case has spawned a host of commentary: R. Hilty and K. Koklu, 'Software Agreements: Stocktaking and Outlook—Lessons from the *Oracle v. UsedSoft* Case from a Comparative Law Perspective' (2013) 44(3) *IIC* 263; L. Longdin and P. H. Lim, 'Inexhaustible Distribution Rights for Copyright Owners and the Foreclosure of Secondary Markets for Software' (2013) 44(5) *IIC* 541 (comparing the position on resale of digitally distributed software in the European Union, United States, and New Zealand); K. Moon, 'Resale of Digital Content: *UsedSoft v ReDigi*' (2013) 24(6) *EIPR* 193; E. F. Schulze, 'Resale of Digital Content such as Music, Films or eBooks under European Law' (2014) 36(1) *EIPR* 9.

confident about the application of the exhaustion principle in relation to intangible copies of works other than computer programs.

Moreover, even with respect to computer programs, the decision in *UsedSoft* seems likely to generate further questions: is a licence that permits use of a program for 100 years, but no longer, a sale? If not, can copyright holders avoid the implications of the Court's decision by means of this simple drafting device? Or will the Court insist that the matter be one of substance, so that there is a sale whenever permission to use extends for as long as the predicted life of the program?

### 3.4 LEGITIMATE REASONS TO OPPOSE FURTHER COMMERCIALIZATION

In general, then, a copyright owner cannot prevent resale of works placed on the market in the European Economic Area (EEA). Copyright law stands thus in contrast with trade mark law, which explicitly allows the trade mark holder to prevent further commercialization of goods bearing its mark, even though they have been placed on the market, if there are 'legitimate reasons' to do so. Nevertheless, the question is being asked whether a similar qualification might apply in relation to copyright. The national laws of many member states provide a power to prevent circulation of modified copies, as in the Dutch case in which pictures from a Christmas calendar (in which rights had been exhausted) were removed from the calendar and sold as entities in their own right.<sup>81</sup> In *Art & Allposters International BV v. Stichting Pictoright*,<sup>82</sup> the Court of Justice has been asked to consider the limits to the exhaustion principle. The reference arises in relation to a practice of taking lawfully marketed posters of famous artworks and transferring the image onto canvas for resale. The claimant, Pictoright, is a Dutch collecting society, which represents the interests of artists, and argues that the distribution right is infringed by this practice. The decision of the Court is awaited.

### 3.5 IMPORTATION

The distribution right is exhausted by distribution in the EEA.<sup>83</sup> Consequently, if a copy is legitimately put on the marketplace in the Netherlands, and then imported into the United Kingdom and sold, the importation and sale in the latter state does not infringe the issuing right (or constitute secondary infringement). The corollary of Union-wide exhaustion is that there is no 'international exhaustion' and that the distribution right should be usable to prevent importation of copies into the EEA from outside.<sup>84</sup> This was confirmed (as a matter of EU law) by the Court of Justice in *Laserdisken ApS v. Kulturministeriet*.<sup>85</sup> The UK implementation is achieved by means of somewhat convoluted drafting.<sup>86</sup> Such liability is strict, in contrast with importation as an act of secondary infringement, which is not dependent on knowledge.

But is 'importation' itself distribution? A reading of the UK law would suggest that it is: section 18(3)(b) of the CDPA 1988, in clarifying that 'subsequent importation' of works in which rights have been exhausted is not distribution, implies that, absent such a provision, 'importation' would be distribution.<sup>87</sup> Of course, importation need not involve a

<sup>81</sup> *Poortvliet v. Hovener* (19 September 1979) (Supreme Court of the Netherlands).

<sup>82</sup> Case C-419/13 (pending). <sup>83</sup> CDPA 1988, s. 18(3). <sup>84</sup> Info. Soc. Dir., Recital 28.

<sup>85</sup> Case C-479/04 [2006] ECR I-8089 (ECJ).

<sup>86</sup> CDPA 1988, s. 18(3)(b), subject to the proviso that refers back to s. 18(2)(a).

<sup>87</sup> But cf. Copinger, [7-91], 491.

change in ownership, so falls outside the definition offered in *Peek & Cloppenburg*, and, in contrast to the Trade Mark Directive (which defines use of a trade mark as including importation of goods under the sign), there is no explicit mention of importation in the Information Society Directive.<sup>88</sup> One might have thought it at least arguable, therefore, that the very act of importation (as opposed to the sale or distribution of imported copies not previously sold in the EEA) falls outside the scope of the harmonized law (and perhaps into unharmonized national rules on accessory or secondary infringement, such as CDPA 1988, sections 22 and 27).

However, it is widely assumed that copyright owners are entitled to prevent the import into the EEA of copies not previously put into circulation there, so that member states must interpret the distribution right as including importation. In *Blomqvist v. Rolex SA*,<sup>89</sup> the Court held that, where distribution in the recipient state would be illegal, the importation of the goods is illegal. The case concerned a counterfeit Rolex watch (apparently the subject matter of some sort of copyright), which a consumer purchased from a Chinese vendor from an Internet site and which was in the process of being sent to the customer. The Danish customs authorities confiscated the watch and proposed to destroy it, an act to which the customer objected. Drawing on the *Donner* decision (rather than concerning itself with any niceties of ownership), the Court of Justice held that the Danish authority was entitled to prevent the importation of the watch.

#### 4 RENTAL AND LENDING RIGHTS

While subsequent distribution of copies of the work is not generally within the control of the copyright owner, an owner of copyright in literary, dramatic, or musical works, artistic works (other than works of architecture or applied art),<sup>90</sup> sound recordings, and films is granted an exclusive right to rent and lend copies of such works to the public (CDPA 1988, section 18A).

Rental and lending both involve the making of the original or a copy of a work available for use on terms that it will or may be returned.<sup>91</sup> The distinction between ‘rental’ and ‘lending’ is that the act of rental involves making the work available ‘for direct or indirect economic or commercial advantage’, whereas lending occurs where there is no such advantage.<sup>92</sup> It has been suggested that rental might include the situation in which DVDs are loaned to hotel guests.<sup>93</sup>

Lending means ‘making a copy of the work available for use, on terms that it will or may be returned, otherwise than for direct or indirect economic or commercial advantage, through an establishment which is accessible to the public.’<sup>94</sup> The right does not

<sup>88</sup> TM Dir., Art. 5(3)(c).

<sup>89</sup> Case C-98/13 (6 February 2014) (ECJ, Second Chamber), [28]. See also *Independiente Ltd v. Music Trading On-Line (HK) Ltd* [2007] EWHC 533 (Ch), [2007] FSR 525; *KK Sony Computer Entertainment v. Pacific Game Technology Ltd* [2006] EWHC 2059 (Pat).

<sup>90</sup> Rel. Rights Dir., Art. 2(3). Apparently, these were excluded because it was thought that the rental right would then cover rental of housing, cars, etc.

<sup>91</sup> CDPA 1988, ss 18A(2), 18A(6), 182C(2) (performers); cf. the terms of Rel. Rights Dir., Art. 1 (‘making available for use, for a limited period of time’). Note that it applies only to material copies.

<sup>92</sup> Cf. Software Dir., Recital 16 (‘rental’ is the making available of a computer program for use, for a limited time, and for ‘profit-making purposes’).

<sup>93</sup> Although strangely—and we think certainly erroneously—the Court of Justice has treated some such acts as ‘communication to the public’: *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (EC), Third Chamber, [62]–[63].

<sup>94</sup> CDPA 1988, s. 18A(2)(b).

cover loans between private individuals. This is because lending is only prohibited when it is made ‘through an establishment which is accessible to the public’. Lending does not become a rental, at least as regards loans between establishments accessible to the public, where payment does not go beyond what is necessary to cover the operating costs of the establishment.<sup>95</sup>

The Rental Rights Directive and the 1988 Act both contain a number of limitations to the rental and lending rights.<sup>96</sup> Neither covers the making available of a copy for public performance, playing or showing in public, or broadcast. As Recital 13 of the Directive explains, where a cinema owner rents a film from a film distributor, which film is to be shown to the public, this falls outside the scope of the rental right.<sup>97</sup> The exclusion also seems to cover the rental of jukeboxes and possibly also the rental of sheet music.

In a similar vein, neither rental nor lending covers situations in which a work is made available for the purposes of exhibition in public. As a result, the owner of a painting does not need to seek permission from the copyright owner before lending the work to an art gallery for public display. Moreover, the rental and lending rights do not cover situations in which a work is made available for on-the-spot reference. This will exempt situations in which magazines are made available in waiting rooms.<sup>98</sup> Finally, lending does not cover the making available of a work between establishments that are accessible to the public. This means that ‘inter-library loans’ are permissible.<sup>99</sup> Special exemptions apply to the lending of works by educational establishments<sup>100</sup> and for the lending of *books* by public libraries (if the book is eligible to fall within the Public Lending Right Scheme).<sup>101</sup> In addition, copyright in *any work* is not infringed by the lending of copies of the work by a ‘prescribed’ library or archive that is not conducted for profit.<sup>102</sup>

## 5 RIGHT TO PERFORM, SHOW, OR PLAY THE WORK IN PUBLIC

The fourth right conferred on a copyright owner is the right to perform the work in public (CDPA 1988, section 19). This right, which is usually known as the ‘performing right’, was first introduced by statute in 1833 to protect owners of copyright in dramatic works.<sup>103</sup> This was because, since the primary way in which dramatic works are exploited is by way of performance, if the protection given to dramatic works were to be limited to the reproduction right, this would have been inadequate. In order to be consistent, the performing right was also extended to musical works and literary works in general. Today, section 19(1) of the 1988 Act provides that performance of a work in public is an act restricted by the copyright in a literary, dramatic, or musical work; section 19(3) states that the playing or showing of the work in public is an act restricted by

<sup>95</sup> CDPA 1988, s. 18A(5), reflecting the Rel. Rights Dir., Recital 14.

<sup>96</sup> Rel. Rights Dir., Recital 13.

<sup>97</sup> But this act was long ago held to amount to authorization of communication to the public: *Falcon v. Famous Players Film Co.* [1926] 2 KB 474.

<sup>99</sup> CDPA 1988, s. 18A(4). <sup>100</sup> CDPA 1988, s. 36A.

<sup>101</sup> CDPA 1988, s. 40A; Rel. Rights Dir., Art. 5. This was the most hotly contested issue during the passage of the Directive: see Chapter 13.

<sup>102</sup> CDPA 1988, s. 40A(2).

<sup>103</sup> See *Russell v. Smith* (1848) 12 QB 217, 236.

the copyright in a sound recording, film, or broadcast. There is no performing right for artistic works (and hence no right to authorize the public exhibition of the work)<sup>104</sup> or for typographical arrangements (see Table 6.2).

### 5.1 EUROPEAN DIVISION BETWEEN PERFORMANCE AND COMMUNICATION

As already observed, there has been harmonization of the ‘communication to the public right’, but not the ‘public performance right’ (see Table 6.1). Unfortunately, the European categories do not map onto the division in UK law between sections 19 and section 20 of the 1988 Act. But quite what division the EU categories require is more difficult to say. The answer matters, insofar as the tests adopted by the Court of Justice (for example the test of ‘the public’) differ from the tests adopted in domestic law.

Under UK law, the term ‘performance’ is defined in section 19 as including the ‘delivery’ of lectures, addresses, speeches, and sermons, as well as ‘any mode of visual or acoustic presentation of a work’, such as by means of a sound recording, film, or broadcast. Performance is distinguished from communication to the public in that, in the case of performance, the public must be present at the place where the performance occurs, the recording is played, or the film or broadcast shown.

Importantly, in this latter respect, the British performance right covers some of the ground of the European ‘communication to the public’ right, which has been held to cover cases in which the public is not present where the communication *originated* (rather than where the showing occurred). Thus, in *Football Association Premier League v. QC Leisure*, the Court of Justice held that the showing of a broadcast of a football match on a screen in a public house was a communication to the public, whereas it would fall squarely within section 19(3) of the 1988 Act.<sup>105</sup> In another case, *Circul Globus București*, the Court affirmed that the playing of live music before a circus audience constituted public performance, rather than communication to the public, and that, because ‘public performance’ is unharmonized, was not a matter regulated by European law.<sup>106</sup>

Quite whether showing a film or playing a jukebox (clearly covered in UK law under section 19(2)(b) and (3)) is to be understood in European terms as a ‘public performance’ (either of the film or the cinematographic work) or ‘communication to the public’ has yet to be determined.<sup>107</sup> In its reasoning in *FAPL* and *Circul Globus*, the Court of Justice has tended to attempt to interpret Article 3 of the Information Society Directive and Article 8 of the Rental Directive in the light of the international treaties. But, on this question, the international treaties offer different answers for films and sound recordings. Article 14(1)(ii) of the Berne Convention might support the view that showing a cinematographic work is a ‘public performance’, whereas Article 2 of the WIPO Performances and Phonograms Treaty (WPPT) points towards a different

<sup>104</sup> But see moral right of attribution, discussed at pp. 275–9, esp. 278.

<sup>105</sup> *FAPL*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber), [200]–[203]; cf. the opinion of AG Kokott at [AG144].

<sup>106</sup> *Circul Globus București (Circ & Variete Globus București) v. Uniunea Compozitorilor și Muzicologilor din România*, Case C-283/10 [2011] ECR I-12031 (ECJ, Third Chamber).

<sup>107</sup> It may be implicit from *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (ECJ, Third Chamber), [62]–[63], that playing sound recordings counts as ‘communication to the public’.

conclusion in relation to sound recordings. But surely direct representation of a film and sound recording must be treated in the same way by European law?<sup>108</sup> Given the Court's inclination to deepen harmonization, we think that the interpretation the Court is most likely to adopt is that the unharmonized public performance right relates only to live performances.<sup>109</sup> However, even this conclusion creates its own discontinuities.<sup>110</sup>

## 5.2 LOCATION

It has been held that a performance of a musical work (or a sound recording, if this still falls within the domestic performance right) takes place where it can be heard.<sup>111</sup> Presumably, a performance of a film takes place where it can be seen. Where the performance is live, it should be fairly obvious who is responsible for the performance. Where more artificial means of delivery are employed (for example where copyright-protected music embodied in a sound recording is played by way of a radio in a restaurant), the person who infringes is not the broadcaster<sup>112</sup> or the person who supplied the radio apparatus; rather, it is the person who operates the radio.<sup>113</sup> It seems that it is a publican, rather than a customer, who operates a jukebox and is liable if the public performance is not authorized.

## 5.3 'IN PUBLIC' (UNDER DOMESTIC JURISPRUDENCE)

In order to infringe, the performance must be carried on 'in public'. There are many situations in which it is clear that a performance is in public: a performance at Brixton Academy, the Royal Albert Hall, a West End theatre, or in a public house would normally all be to the public. Beyond these examples, however, what is meant by 'in public' is less clear.<sup>114</sup> Over time, three different conceptions of the 'public' have been used in the case law.

In some cases, the concept of the public is understood according to the 'character of the audience'.<sup>115</sup> In this context, a distinction is drawn between a section of the general public (which has no unifying theme other than the desire to see the performance) and a group of people who share a private or domestic link. For example, the residents of a hospital or a nursing home are bound together by a link that distinguishes them from the general public—namely, that they reside at a particular location. Consequently, in *Duck v. Bates*,<sup>116</sup> the Court of Appeal held that copyright

<sup>108</sup> *FAPL*, Cases C-403/08 and C-429/08 [2011] ECR I-9083, [188]. <sup>109</sup> *Ibid.*, [193].

<sup>110</sup> Public karaoke would thus involve public performance of the lyrics and communication to the public of the sound recording; so the performance of compositions of the scores of twentieth-century avant-gardist composer K.-H. Stockhausen's *Kurzwellen*, which includes instructions to play radio, would equally involve public performance and communication to the public, possibly by the very same act. The complexity that these sort of situations generate suggests that: (i) in the short term, when defining what constitutes 'the public' in relation to the performance right, national courts should realign national case law with Court of Justice case law on the meaning of the 'public' under the right of communication to the public; and (ii) in the longer term, the whole regime of rights, and indeed the whole of copyright, would benefit from full harmonization (on which, see pp. 57–8).

<sup>111</sup> *PRS v. Camelo* [1936] 3 All ER 557.

<sup>115</sup> *Jennings v. Stephens* [1936] 1 Ch 469, 476, 479; *PRS v. Harlequin* [1979] 2 All ER 828, 833.

<sup>116</sup> (1884) 13 QBD 843.

in the play *Our Boys* was not infringed when an amateur dramatic club performed it at Guy's Hospital for the entertainment of the nurses. This was because it was held to be a domestic performance, not a performance to which the public or any portion of the public was invited. Using a test of this sort, a performance in a shop,<sup>117</sup> before members of a club,<sup>118</sup> or in a hotel lounge<sup>119</sup> would be a performance to a 'section of the general public' (so long as anyone could enter the shop, join the club, or enter the hotel lounge). However, using the same test, it is unlikely that a performance at a dinner party,<sup>120</sup> or to students at a boarding school,<sup>121</sup> would be treated as a performance to a 'section of the general public'. In these cases, the audience is linked by personal connection, residence, or employment.

Another test that has occasionally been employed to determine whether a performance is in public effectively ignores who has access to the performance and focuses instead on whether the performance is motivated by financial considerations.<sup>122</sup> If the performance is run for profit, it is likely to be 'in public'. Thus, in *Harms v. Martans*,<sup>123</sup> the Court of Appeal held that performance of the musical work 'That Certain Feeling' at the Embassy Club to an audience of 150 members and 50 guests was a performance in public. Lord Hanworth MR suggested that the critical considerations were whether the defendants' activities were for profit,<sup>124</sup> who was admitted, and where the performance took place. Since the members paid a substantial subscription and an entrance fee, the members were the sorts of people who would pay to go to a public theatre to hear a performance, and the club paid the orchestra to perform, the performance was 'in public'.

A third test has focused upon the copyright owner's monopoly. Under this approach, a performance is 'in public' if it is made to or before 'the copyright owner's public'. This test, which first emerged in the 1930s, later came to be quite widely adopted. In *Jennings v. Stephens*,<sup>125</sup> the performance of a play *The Rest Cure* by the members of a women's institute without charge and without guests was held to be a performance in public. Greene LJ said:

[T]he expression 'in public' must be considered in relation to the owner of the copyright. If the audience considered in relation to the owner of the copyright may properly be described as the owner's 'public' or part of his 'public', then in performing the work before that audience he would in my opinion be exercising the statutory right conferred upon him.<sup>126</sup>

This test has been used to hold that the playing of the BBC's music broadcasts to 600 workers in a factory infringed the performing right.<sup>127</sup> The factory owner claimed that the audience was not a 'section of the public'—a reasonable view given that the common bond was work, not a desire to listen to music. However, Lord Greene MR held that the performances were 'in public', because to hold otherwise would have meant that the value of the monopoly given by the statute would have been substantially 'whittled down'.<sup>128</sup> This test seems prone to manipulation, since it is surely the

<sup>117</sup> *PRS v. Harlequin* [1979] 2 All ER 828.

case that most copyright owners would want to extend their monopoly as widely as possible and would therefore claim that all performances were before their ‘public’?<sup>129</sup>

While uncertainties exist over the relationship between the three tests, it should be clear that, historically, the notion of public has been defined increasingly expansively, so as to favour the copyright owner. For the moment, copyright owners and their collective representatives seem content with the limits set by the courts. These make it clear that performances in places that are open to the public (from hairdressers’ salons to hotel lounges) are performances in public. The cases also make it clear that performances before substantial numbers of people not connected by family or domestic ties will be in public. The consequences of the different approaches to defining the public now remain to be felt only in marginal cases (such as the case of playing music in the office of a small family firm, or at a wedding reception).

With regard to the infringement of the performing right, it is important to bear in mind that there are a number of related acts of secondary infringement. These are considered in Chapter 8.

## 6 RIGHT TO BROADCAST THE WORK, COMMUNICATE IT, AND MAKE IT AVAILABLE TO THE PUBLIC

The exclusive right to broadcast a work has been recognized in UK law since 1956.<sup>130</sup> European harmonization occurred first in response to satellite broadcasting, with the Satellite Directive of 1993. With the advent of the Internet, it became clear that new rights would need to be recognized to cover a broader set of communications. At the international level (with the WIPO treaties of 1996), and then at the European level (with the Information Society Directive of 2001), two ‘new’ rights were recognized: the right of communication to the public and the right of ‘making available’.<sup>131</sup>

Under Article 3(1) of the Information Society Directive, member states are to confer on authors the exclusive right of communicating a work to the public, which ‘includes’ the making available of that work in such a way that members of the public may access the work from a place and at a time individually chosen by them. The latter is sometimes referred to as the ‘making available right’. This is over and above the right to communicate the work by satellite, which was harmonized in Article 2 of the Satellite Directive and which is left intact by the Information Society Directive.

As regards related rights, the right to control broadcasting and communication to the public were harmonized in the Related Rights Directive of 1992 (which was amended by the Satellite Directive to clarify that broadcasting included communication to the public by satellite). The Information Society Directive added the right of making available as a stand-alone right.<sup>132</sup> In this context, then, ‘broadcasting’ and ‘communication to the public’ are also distinguished. In the case of performers and owners of copyright in sound recordings, the right of communication and

<sup>129</sup> See *PRS v. Harlequin Record Shops* [1979] 2 All ER 828, 834.

<sup>130</sup> See B. Sherman, ‘Public Ownership of Private Spectacles’, in B. Sherman and L. Wiseman, *When Old Technologies Were New* (2013), ch. 9.

<sup>131</sup> We put ‘new’ in quotation marks because some aspects of these general rights were already recognized within the Paris Revision of the Berne Convention.

<sup>132</sup> Info. Soc. Dir., Art. 3(2).

broadcasting is couched as a right to remuneration.<sup>133</sup> For broadcasting organizations, also, communication (which has a particular definition) and making available are two distinct rights.<sup>134</sup>

How is the relationship between these rights to be understood? We will return to this issue when we consider ‘making available’ below. However, for the moment, we think it best to indicate a preferred interpretation—that is, that there is a ‘family’ of rights: communication to the public, broadcasting, and ‘making available’.<sup>135</sup> Any attempt to impose a hierarchical relation or taxonomic logic between these elements, as might be inferred from the use of the word ‘include’ in Article 8 of the WIPO Copyright Treaty (WCT) and Article 3 of the Information Society Directive, is likely to lead only to unnecessary confusion.<sup>136</sup> Thus, for example, we will see that there are special rules as to where a broadcast occurs, so it would be dangerous to suggest that every broadcast is a communication to the public insofar as doing so might imply that the different rules on where a communication to the public occurs could also be applied to broadcasts. Similarly, if an act counts as a ‘making available’, it should be regarded as within the copyright holder’s power to prevent it, irrespective of whether it is also a communication to the public (while, at the same time, there is no reason to distort the meaning of communication to encompass all ‘making available’). In short, ‘broadcasting’ and ‘making available’ should be treated as special regimes, with ‘communication to the public’ a more open-textured rule within the same family.<sup>137</sup>

It is right to think of it as a ‘family’ of rights, however, because the rights do have some common features.<sup>138</sup> In UK law, the rights are granted to the same sets of works (literary, dramatic, musical, artistic works, films, and broadcasts).<sup>139</sup> The same definition of the ‘public’ is also applicable to all three rights. Finally, it appears to be a requirement, for liability in relation to all three rights, that the act be *intentional and in full knowledge of its consequences*.

According to a series of Court of Justice cases, an act of communication to the public must be intentional, or deliberate. In *Sociedad General de Autores y Editores de Espana (SGAE) v. Rafael Hoteles SL*, the Court referred to the fact that the defendant hotel proprietor communicated signals that it received and relayed to hotel rooms ‘to the public’, because it ‘is the organisation which intervenes, *in full knowledge of the consequences of its action*, to give access to the protected work to its customers’.<sup>140</sup> Similarly, in *FAPL*, in which the Court treated the showing of broadcasts of football matches in public houses

<sup>133</sup> Rome, Art. 10; Rel. Rights Dir., Art. 8(2) (conferring right to remuneration); WPPT, Art. 10 (making available).

<sup>134</sup> Info. Soc. Dir., Art. 3(2) (making available); Rel. Rights Dir., Art. 8(3) (communication right).

<sup>135</sup> *ITV Studios Ltd v. TV Catch Up Ltd* [2010] EWHC 3063 (Ch) (Kitchin J rejecting view that, in UK implementation, communication comprised two rights, broadcasting and making available, and nothing more).

<sup>136</sup> Consider, e.g., Satellite Dir., Arts 2, which is titled ‘broadcasting rights’, but requires recognition of a right to communicate the work to the public by satellite, and 4, which requires the broadcasting by wireless concept to include communication by satellite. This suggests, if anything, that broadcasting is the broader and includes communication.

<sup>137</sup> Reinbothe and von Lewinski (2002), 108, [16] (international terminology and form not binding on nation states); S. von Lewinski, ‘Information Society Directive’, in Walter and von Lewinski, 982, [11.3.27].

<sup>138</sup> It may be appropriate, too, to reason by analogy. See, e.g., *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber), [25].

<sup>139</sup> *ITV Studios Ltd v. TV Catch Up Ltd* [2011] EWHC 1874 (Pat), [79] *per* Floyd J (holding amendment not to have been ultra vires).

<sup>140</sup> Case C-306/05 [2006] ECR I-11519, [42] (emphasis added). See also *Societa Consortile Fonografica v. Marco Del Corso*, Case C-135/10 (ECJ, Third Chamber, 15 March 2012), [82].

as communication to the public, the Court stated that ‘the proprietor of a public house *intentionally* gives the customers present in that establishment access to a broadcast containing protected works via a television screen and speakers’.<sup>141</sup>

This requirement is surprising because, hitherto, UK law has operated on the basis that infringement of ‘primary rights’ is a matter of strict liability (knowledge being relevant to ‘secondary infringement’).<sup>142</sup>

## 6.1 BROADCASTING

Section 20 of the CDPA 1988 states that the right of the copyright owner to communicate the work to the public includes the right to broadcast it. As we saw in Chapter 3, a ‘broadcast’ is defined as an electronic transmission of visual images, sounds, or other information for simultaneous reception by the public, or which is made for presentation to the public, but excludes ‘Internet transmissions’.<sup>143</sup> As we have already observed, this covers digital, analogue, terrestrial, and satellite transmissions, but not the placing of a work on a website. The definition of broadcast covers the forms of satellite broadcasting that may be directly received by individuals as well as those which may be received by subscribers who obtain a decoder.<sup>144</sup> The relaying of a broadcast by reception and immediate retransmission constitutes a separate act of broadcasting.<sup>145</sup>

The person who makes a broadcast is either the person transmitting an item, such as a programme, where that person has responsibility for its contents, or the person providing the item for transmission who ‘makes with the person transmitting it the arrangements necessary for its transmission’.<sup>146</sup>

Because of the potential transnational nature of broadcasting, it has long been acknowledged that it is important to ascertain where a particular broadcast takes place.<sup>147</sup> A person wishing to make a broadcast needs to obtain consents from copyright holders of works included in the broadcast, but only as regards those copyrights that are operative in the territory in which the broadcast occurs. However, when a signal is sent or uplinked to a satellite (from place A) and is then beamed back to earth over a large reception area or ‘footprint’ (places A, B, and C), there are at least two possible territories where the act of broadcasting might be thought to take place. On the one hand, it could be said that the broadcast occurs from the place where the signal was sent (the ‘emission’, or ‘introduction’, theory). Alternatively, it might be thought that the broadcast occurs in the places where it is received (the ‘reception’, or ‘communication’, theory). In the face of conflicting national decisions on this issue, it became clear in the late 1980s that it was necessary to harmonize the law in this area. Two contrary concerns dominated the decision as to the choice of the place of broadcast. On the one hand, the simplest answer and the one that facilitated satellite broadcasting was that the country of broadcast was the country of uplink. However, it was feared that this would lead to satellite uplink facilities

<sup>141</sup> Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber), [195] (emphasis added). See also *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebné lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber, ), [26], [33].

<sup>143</sup> CDPA 1988, s. 6(1). See pp. 88–90.

<sup>144</sup> That is, any encrypted broadcast, whether terrestrial or by satellite relay, is ‘lawfully’ received if decoding equipment has been made available through the person transmitting it in encrypted form: CDPA 1988, s. 6(2).

<sup>145</sup> CDPA 1988, s. 6(5)(a). However, special rules apply to retransmissions of broadcasts from another EEA member state: CDPA 1988, s. 144A.

<sup>146</sup> CDPA 1988, s. 6(3).

<sup>147</sup> See M. F. Makeen, *Copyright in a Global Information Society* (2000), ch. 4.

migrating to countries in which copyright protection was weak and that copyright owners would thus be best protected if consent was required in all countries where the signal could be received. In the end, a compromise was reached: the country of introduction is treated as the relevant place only where the standard of copyright protection is satisfactory. Accordingly, section 6 of the 1988 Act defines the place of wireless broadcasting as the place where the broadcaster introduces programme-carrying signals into an uninterrupted chain of communication, including any satellite relay.<sup>148</sup> In a case in which signals were transmitted to a satellite from France, back to earth, and then sent to the French public from a receiver situated in Germany, the Court of Justice held that a transmission occurred in Germany.<sup>149</sup> The Directive did not apply because the satellite was inessential for the transmission and the signal was interrupted—by its interception in Germany—before reaching the public.

## 6.2 COMMUNICATING

Under CDPA 1988, section 20, a right to communicate a work to the public arises with respect to literary, dramatic, musical, and artistic works, sound recordings, films, and broadcasts.<sup>150</sup> The right, which was introduced to implement the Information Society Directive,<sup>151</sup> is distinguished from public performance right (section 19) by the fact that the public is not present at the place where the communication originates.<sup>152</sup> So converting sounds into electronic signals and broadcasting them so that they can be received and heard on a radio is a communication to the public (rather than a public performance); in contrast, live performance is not. As we have already noticed, there is an intermediate class of acts (which at the very least includes playing broadcasts in public) that British law treats as falling within section 19(3), but which European law regards as communication to the public. These acts are, it should be noted, subject to the harmonized concept of ‘the public’ (if and insofar as this differs from the domestic law concept).<sup>153</sup>

What is a ‘communication’? Recital 23 of the Information Society Directive elaborates that the ‘right should be understood in a broad sense covering all communication to the public not present at the place where the communication originates’. It goes on to say that the ‘right should cover any such transmission or retransmission of a work to the public by wire or wireless means, including broadcasting’, but should not cover any other acts.<sup>154</sup> The Grand Chamber of the Court of Justice in *FAPL* stated that ‘the concept of communication must be construed broadly, as referring to any transmission of the protected works, irrespective of the technical means or process used’.<sup>155</sup> It would therefore include showing broadcasts of football matches in pubs (but, as already observed, not live performances).

The clear implication is that ‘communication’ involves some mode of ‘transmission’.<sup>156</sup> In its British implementation, the communication right is confined to ‘electronic

<sup>148</sup> CDPA 1988, s. 6(4). This is subject to the safeguard rules in CDPA 1988, s. 6A, which operate in cases of transmissions from places outside the EEA.

<sup>149</sup> See *Lagardère Active Broadcast v. Société pour la perception de la rémunération équitable (SPRE)*, Case C-192/04 [2005] ECR I-7199 (ECJ, Third Chamber). <sup>150</sup> CDPA 1988, s. 20.

<sup>152</sup> Info. Soc. Dir., Recital 23. <sup>153</sup> See pp. 155–6.

<sup>154</sup> But presumably not satellite broadcasting, given Info. Soc. Dir., Art. 1(2)(c).

<sup>155</sup> *FAPL*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083, [193]. See also *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber), [23].

<sup>156</sup> See also WPPT, Art. 2(g); *Sociedad General de Autores y Editores de España (SGAE) v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519, [AG37]; *The Basic Proposal for the Treaty*, [10.15]–[10.16].

communication’, and electronic is further defined (in section 178 of the 1988 Act) as ‘actuated by electric-magnetic, electro-magnetic, electro-chemical or electro-mechanical energy’. In light of *FAPL*, this is probably too narrow (and certainly so if ‘communication’ includes playing sound recordings or films in public, the latter of which might occur by projecting light through celluloid).<sup>157</sup>

On other occasions, the Court of Justice (albeit, sitting in Chamber only) seems to have leaned towards a less concrete definition of ‘communication’. The Court has said, enigmatically, that this requires an ‘individual assessment’ involving several complementary, interdependent considerations.<sup>158</sup> ‘First and foremost’ amongst those factors is the indispensable role of the user whose intervention gives access to a work that recipients would not otherwise enjoy.<sup>159</sup> In several of these cases, the Court clarified that communication to the public requires an intervention that gives access to a work.<sup>160</sup> This ‘intervening . . . to give access’ might be interpreted as broader than ‘transmitting’ the work. There is a danger that too broad a definition could cause unnecessary overlap with other rights (such as rental and lending).

Applying this test, the Court has indicated that there is an act of communication where television signals were cabled by a hotel to the televisions in guest rooms and where such televisions were connected to a central antenna.<sup>161</sup> There was communication where an Internet service allowed for the delayed viewing of programmes selected by users. In addition, it would clearly cover electronic transmissions, such as streaming and the emailing of digital material to those on email lists.<sup>162</sup> On the other hand, the Court has held that ‘communication’ does not cover the mere provision of television in hotel rooms.<sup>163</sup>

More dubiously, however, the Court has treated the creation of hyperlinks to material freely available on the Internet as ‘communication’ because a clickable link ‘affords users of the first site access to those works’.<sup>164</sup> We consider this holding in more detail below (under ‘making available’ and again when considering the concept of ‘the public’), but on its face the decision, which is thin on reasoning, assumes a very broad concept of ‘communication’.<sup>165</sup> The Court of Justice has also held that ‘communication’ covers making available of a CD player and CDs in hotel rooms. We can understand that this is an act of intervention that gives access to a work, but think this example illustrates well why that test is much too broad: if communication really is that broad, then lending libraries, video rentals, bookshops (which permit browsing), retailers who

<sup>164</sup> *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [18]–[20].

<sup>165</sup> The Court could have reached the same outcome by leaving the question of whether this was a communication to the national court.

have works of applied art on display, and even art galleries are involved in communicating to the public.<sup>166</sup> Some of these acts are indeed within the copyright owner's rights, but under specific, carefully defined laws. The 'intervention to give access test' is thus untenable.

### 6.3 MAKING THE WORK AVAILABLE

Section 20 of the CDPA 1988 also recognizes that copyright owners have the exclusive right to make the work 'available to the public . . . by electronic transmission in such a way that members of the public may access it from a place and at a time individually chosen by them'. In contrast to the broadcasting right, which is premised on the idea of simultaneous reception, 'making available' encompasses individual communications to persons who are members of 'the public'. A recital to the Information Society Directive explains that the right will cover interactive on-demand transmissions,<sup>167</sup> such as 'video-on-demand' services and so-called 'celestial jukeboxes'. But the new right should also be assumed to cover those Internet transmissions (other than broadcasts) where a person places a work on a website in such a way that members of the public can access the work 'from a place' (their terminal, whether it be in their office, home, or on their mobile telephone) and 'at a time' chosen by them.<sup>168</sup> Uploading material onto the (publicly accessible) 'web' is making available, as is installing peer-to-peer software that allows third parties to access works from the installer's computer.<sup>169</sup>

A special provision was regarded as necessary (in Article 8 of the WCT, and in turn in Article 3(1) and (2) of the Information Society Directive) because it was assumed the 'communication to the public' rubric was insufficient. A communication presupposes an act of transmission from source to recipient, whereas a making available involves transmission of a work to a place (typically, the Internet) from which it can be accessed at will. Conceived in this way, a making available falls short of an act of communication. Although the use of the term 'includes' in Article 3 (and Article 8 of the WCT, on which it is based) has led the Court of Justice to say that any 'making available' is necessarily a 'communication',<sup>170</sup> it would have been clearer if the treaty makers and legislators had avoided the term 'includes' and simply required the recognition of the distinct (if related) rights.<sup>171</sup>

Is creating a hyperlink to material on the Internet an act of 'making available'? The Court has held that it is in the *Svensson* case.<sup>172</sup> In that case, an aggregator offered a paid service involving the creation of hyperlinks to online newspaper

<sup>166</sup> *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (ECJ, Third Chamber), [62]–[63]. Cf. the memorandum accompanying the Commission Proposal for what became the Info. Soc. Dir., COM(97) 628 final, 25, which stated: "The expression "communication to the public" of a work covers any means or process other than the distribution of physical copies."

<sup>167</sup> Info. Soc. Dir., Recital 25.

<sup>168</sup> *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [45]–[46] (website indexing Bittorrent files so as to enable users to access those files was 'communication to the public'). On the background, see Reinbothe and von Lewinski (2002), 108–11.

<sup>169</sup> *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd* [2012] EWHC 268 (Ch), [2012] RPC (27) 665, [69] *per* Arnold J.

<sup>170</sup> *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [20].

<sup>171</sup> One might have hoped that the European Commission would have learned a lesson from the TM Dir., Art. 5(1)(b), and the debates about the relationship between 'association' and 'confusion': see Chapter 38, pp. 990–1.

<sup>172</sup> *Svensson*, Case C-466/12, [19]–[20].

articles. Although the case had attracted significant attention of commentators and a number of submissions from national governments, the Court thought it sufficiently straightforward to reach a decision without an Opinion from the Advocate-General. Perhaps not surprisingly therefore the reasoning is lacking in nuance, the Court rather declaring that a 'clickable link' affords users of one website direct access to work on another, so that the work is 'made available' to those users. The Court glossed over the fact that a link is a location tool, identifying a location or address on the web.<sup>173</sup>

#### 6.4 LOCATION OF ACT OF MAKING AVAILABLE AND COMMUNICATION

Although, as already noted, the location of an act of (satellite) broadcasting has long been recognized to be controversial and the Satellite Directive made provision to resolve the question, neither the Related Rights nor Information Society Directives, nor the British implementation, explains *where* the act of 'making available' or 'communication' takes place. In the simple case of a British person who subscribes to a British service provider utilizing peer-to-peer software, it seems clear that deploying the software so that others can access files will amount to making available in the United Kingdom (even if those who access the files are, in many cases, outside the United Kingdom).<sup>174</sup> A more difficult case is that of a person in the United States creating a video using copyright-protected material, then uploading that material to YouTube, so that it can be accessed in the United Kingdom. Whether there is an infringement of UK copyright law may well depend on which acts are regarded as making the work available and where those acts are understood to occur. One candidate is the place where the individual uploads the work to a website, so that, in this example, there would be no infringement in the United Kingdom (although there might be in the United States). A second possibility is that the act of making available occurs wherever the server that permits access is located: in the case of YouTube, probably the United States. A third possibility is that the act occurs in the place, or places, from which it can be accessed. This would mean that YouTube would be making available all over the world. The fourth possibility is that the work is made available in the territory where the public at which the work is targeted is located. In a number of decisions, the Court of Justice appears to have indicated that its preferred approach is to focus on targeting.<sup>175</sup>

In *Football Dataco v. Sportradar*,<sup>176</sup> the question arose as to where a wrongful act of 'reutilization' occurred for the purposes of determining whether so-called *sui generis* rights in a database had been infringed.<sup>177</sup> The defendant uploaded a collection of sports results in Germany onto a server in the Netherlands, but accessible within the United Kingdom. An action was brought in the English court, relying as a basis for doing so on the fact that the wrongful act occurred in England and Wales.<sup>178</sup> At first instance, Floyd J held that the wrongful act had not occurred in England and so that the court lacked jurisdiction.<sup>179</sup> On appeal, the Court of Appeal referred the

<sup>173</sup> But note, e.g., *Football Association Premier League v. BSB and ors* [2013] EWHC 2058 (Ch), [42] (treating links to material streamed on the Internet without authorization as a 'making available' of that material).

<sup>174</sup> *Polydor Ltd v. Brown* [2005] EWHC 3191.

<sup>175</sup> See Chapter 40, p. 1048.

<sup>176</sup> *Football Dataco Ltd v. Sportradar GmbH*, Case C-173/11 [2013] 1 CMLR (29) 903 (18 October 2012) (ECJ, Third Chamber).

<sup>177</sup> On which, see Chapter 13, pp. 353–5.

<sup>178</sup> On issues of jurisdiction, see Chapter 47, pp. 1228–30.

<sup>179</sup> [2010] EWHC 2911 (Ch).

matter to the Court of Justice.<sup>180</sup> Sportradar argued that, just as with satellite broadcasting, the place where the wrongful act occurred was where the infringing material was uploaded; Football Dataco argued that the act occurred wherever material can be accessed.

The Court of Justice ruled that the act of reutilization takes place in a member state when the person performing the act intends to target members of the public in that member state.<sup>181</sup> Importantly, it rejected the idea that the wrongful act occurred in any territory from which the material could be accessed. Subsequent English case law has adopted the targeting approach to determine whether a communication to the public occurs in the United Kingdom.<sup>182</sup> In determining whether a territory is targeted, obvious considerations would be the language of the site and the top-level domain name, as well as the context (so, for example, it could be assumed that football data relating to the English Premier League would most likely to be of interest to English residents).<sup>183</sup> However, the Court did not rule out the possibility that the act might also occur elsewhere, for example in the territory where the material was uploaded.<sup>184</sup> At least one English authority has accepted that communication also occurs at the point of introduction of the information.<sup>185</sup>

## 6.5 ‘TO THE PUBLIC’

### 6.5.1 A harmonized concept

In the memorandum that accompanied the Commission proposal for what became the Information Society Directive, the Commission stated that ‘as in the *acquis communautaire*, it is a matter for the national law to define “public”’.<sup>186</sup> Nevertheless, in a series of cases, the Court of Justice has treated the definition of the public as a matter of European law and sought to elaborate what ‘the public’ entails.<sup>187</sup>

The process began in *SGAE v. Rafael Hotels*,<sup>188</sup> with the Court elaborating the concept of the public in the context of Article 3 of the Information Society Directive. The case concerned the relaying of television signals to individual hotel rooms. The Austrian government

<sup>184</sup> *Football Dataco*, Case C-173/11, [47] (stating that reutilization was ‘at least’ in the country targeted).

<sup>185</sup> *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [35]–[38] *per* Arnold J (holding that an act of communication can also be said to occur in the place from which the communication originates).

<sup>186</sup> *Commission Proposal* (December 1997) COM(97) 628 final, 25.

<sup>187</sup> This is case law dominated by the influence of Judge Malenovsky, Rapporteur in: *Sociedad General de Autores y Editores de Espana (SGAE) v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519; *Organismos Sillogikis Diacheirisis Dimiourgon Theatrikon kai Optikoakoustikon Ergon v. Divani Akropolis Anonimi Xenodocheiaki kai Touristiki Etaireai*, C-136/09 [2010] ECR I-00037\* (ECJ, Seventh Chamber, Order); *FAPL*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber); *Airfield NV and Canal Digitaal BV v. Sabam and Airfield NV v. Agicoa Belgium*, Joined Cases C-431/09 and C-432/09 [2011] ECR I-9363 (ECJ, Third Chamber), [77]; *Societa Consortile Fonografica v. Marco Del Corso*, Case C-135/10 [2012] ECDR (16) 276 (ECJ, Third Chamber); *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (ECJ, Third Chamber); *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber); *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber).

<sup>188</sup> *SGAE v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519 (ECJ).

sought to argue that the concept remained one for national law; the Advocate-General suggested that this contention was unreasonable, given the harmonizing goal of the Directive. The Court, in turn, rejected the contention that the definition of ‘public’ was a matter for each member state.<sup>189</sup> In later cases, the same arguments would be made, and rejected, in relation to the meaning of ‘the public’ in Article 8(2) of the Related Rights Directive (where the harmonizing intention of the legislator is less obvious, given Recital 16 of the Directive, which allows member states to offer greater protection).<sup>190</sup>

### 6.5.2 The public

Having determined that the concept of the public had been harmonized, in *SGAE*, the Court indicated that it was to be interpreted broadly, so as to confer a high level of protection.<sup>191</sup> The Court did not provide a definition of ‘the public’, but referred to the statement in an earlier decision in *Lagardère*<sup>192</sup> (interpreting the Satellite Directive) that the term refers ‘to an indeterminate number of potential viewers’. While guests might occupy individual rooms and so watch broadcasts in private, ‘the private or public nature of the place where the communication takes place is immaterial’.<sup>193</sup> The hotel guests ‘quickly succeed each other’, so that the ‘cumulative effects’ of making works available to this group ‘could become very significant’. Consequently, they could be considered as a public.

Subsequent cases have indicated that the Court favours a ‘multi-factor’ approach. In *Societa Consortile Fonografica v. Marco Del Corso*,<sup>194</sup> the Court concluded that the playing of broadcast sound recordings in dental surgeries did not involve communication to the ‘public’, observing that ‘the situation of a specific user and of all the persons to whom he communicates the protected phonogram must be assessed’, and the various factors ‘must be applied individually and in the light of their interaction with one another, given that in different specific situations, they may be met to varying degrees’.<sup>195</sup>

The criteria that the Court identified were:

- (i) the size of the group (the Court indicating that there was a *de minimis* threshold);<sup>196</sup>
- (ii) the character of the group, in particular whether it comprised ‘an indeterminate number of potential’ listeners or viewers, or was restricted to ‘a private group’;<sup>197</sup> and

<sup>189</sup> *Ibid.*, [31].

<sup>190</sup> *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (ECJ, Third Chamber). In *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [37], [40], the Court of Justice clarified that this freedom was not available in relation to authors rights under Info. Soc. Dir., Art. 3(1).

<sup>191</sup> *SGAE v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519, [36] (relying on Recital 23).

<sup>192</sup> *Lagardère Active Broadcast v. Société pour la perception de la rémunération équitable (SPRE)*, Case C-192/04 [2005] ECR I-7199 (ECJ, Third Chamber).

<sup>193</sup> *Ibid.*, [50].

<sup>194</sup> Case C-135/10 [2012] ECDR (16) 276 (ECJ, Third Chamber).

<sup>195</sup> *Ibid.*, [79].

<sup>196</sup> *Ibid.*, [84] (fairly large number), [86]. The Court said, at [96], that, even viewed sequentially, the number of patients was not large; indeed, it was ‘insignificant’. Details of the actual number were not provided. See *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebně lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber), [27] (fairly large number).

<sup>197</sup> *Ibid.*, [85]. The Court said, at [95], that a group of dental patients was a ‘determinate’ number, a consistent group, and not the public in general. No evidence was referred to in the judgment as to the character of the provision of dental services in Italy. In *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber), [33]–[36], the Court indicated that a large number of individual transmissions to individuals could be to an indeterminate number and therefore was to a public.

- (iii) the character of the communication, in particular whether it was profit-making and whether the consumers were targeted or present by chance.<sup>198</sup>

Applying these criteria, the Court said that it had enough facts before it to offer the view that the activity was not communication ‘to the public’. The number of patients was small, the clients of Mr del Corso constituted a stable, relatively determined group, and the activity was neither profit-making nor a technique for attracting business. In contrast, in a parallel case concerning music in hotel rooms, the number of guests was ‘fairly large’, their character was ‘indeterminate’ (‘persons in general’), and the facility was offered as part of a package to attract visitors to a profit-making enterprise.<sup>199</sup> Moreover, when asked whether music played at a spa is communicated to the public, the Court has concluded that it should be so regarded.<sup>200</sup>

### 6.5.3 A ‘new public’

Although a communication may be to a public, the Court has indicated that this will not necessarily lead to a finding of liability if the communication is of material that has already been communicated with the right holder’s consent. In cases in which there has been an ‘initial communication’, a retransmission or communication of that initial communication will fall within the right only if it is a communication to a new public. The notion of the ‘new public’ was first deployed in *SGAE*.<sup>201</sup> There, the Court considered how, if the author had licensed the broadcast, they could be entitled to object to its retransmission to hotel rooms. The Court observed that this was a public that was distinct from that which the ‘author’ had in mind when it licensed the broadcast. Drawing on the WIPO Guide to the Berne Convention, the Court adopted the concept of a ‘new public’ as being critical in cases in which there is some sort of public retransmission of a work that has already been communicated.<sup>202</sup> Moreover, the Court observed that the provision of access to broadcast was ‘an additional service’ provided by the hotel and ‘profit-making’.<sup>203</sup> Consequently, the Court concluded that the distribution of signals by cable to customers staying in its rooms was a ‘communication to the public’. The requirement that there be a ‘new public’ has been reiterated in a number of subsequent cases.<sup>204</sup>

What constitutes a new public? The test offered by the Court of Justice involves an examination of the expectations of the author when the initial communication was

<sup>198</sup> *Societa Consortile Fonografica v. Marco Del Corso*, Case C-135/10 [2012] ECDR (16) 276, [88], [90]–[91]. The Court indicated, at [97]–[99], that the playing of music was not profit-making and did not attract patients. Would the same result be true if a dentist were to play videos of children’s cartoons for younger patients? The ‘profit-making’ quality of a transmission is relevant, but not essential to whether it is ‘to the public’: *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber), [42].

<sup>199</sup> *Phonographic Performance (Ireland) Ltd v. Ireland*, Case C-162/10 [2012] 2 CMLR (29) 859 (ECJ, Third Chamber), [41]–[43].

<sup>200</sup> *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebné lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber), [33], but note that, at [35], the Court distinguished *Societa Consortile Fonografica v. Marco Del Corso*, Case C-135/10 [2012] ECDR (16) 276 on the basis that it concerned Rel. Rights Dir., Art. 8(2), rather than on the facts.

<sup>201</sup> Case C-306/05 [2006] ECR I-11519. <sup>202</sup> *Ibid.*, [40]–[41]. <sup>203</sup> *Ibid.*, [44].

<sup>204</sup> *Ibid.*, [42]; *Airfield NV and Canal Digitaal BV v. Sabam and Airfield NV v. Agicoa Belgium*, Joined Cases C-431/09 and C-432/09 [2011] ECR I-9363 (ECJ, Third Chamber), [77]; *FAPL*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber), [197]; *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*, Case C-607/11 [2013] 3 CMLR (1) 1 (ECJ, Fourth Chamber), [39]; *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [24]; *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebné lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber), [31].

made.<sup>205</sup> If the author hoped, or expected, the work to be received by a particular group, then merely doing an act that assists that aim does not make the work available to a new public. Thus if a broadcaster is given permission to broadcast a work and, in addition to the initial broadcast, uses ‘booster’ aerials to ensure that the same signal gets to its audience, then the use of the boosters would not involve broadcasting to a new public. Moreover, use of ‘mere technical means’ to ensure or improve reception of the original transmission in its catchment area does not constitute a ‘communication’.<sup>206</sup>

However, if the author contemplated a particular public and a user transmits the work to a further public, then that act requires authorization from the right holder. In the hotel room cases, the Court found that the expectation of right holders who permitted broadcasts was that they would be received by the owners of domestic television sets and their families; thus further transmission to others, for example hotel guests, was to a new public.<sup>207</sup> The same would be true of playing a radio or television in a cafe.<sup>208</sup>

Moreover, if a user utilizes ‘new technical means’ to retransmit a work, then the Court of Justice has suggested this is *per se* a transmission to a new public. Thus, in *ITV Broadcasting Ltd and ors v. TV CatchUp Ltd*,<sup>209</sup> there was a communication to the public when an Internet-based service captured television signals and retransmitted them at an individual subscriber’s request to that individual. The individual recipients were confined to those who would have been entitled to receive the signals from the free-to-air broadcasts (that is, holders of television licences resident in the United Kingdom). TV CatchUp added advertising before sending the signals. The Court rejected the defendant’s argument that, because the public was already entitled to view the programmes/broadcasts, there was no communication to a ‘new’ public. Instead, it found that ‘each transmission or retransmission of a work which uses a specific technical means must, as a rule, be individually authorised by the author of the work in question’.<sup>210</sup> Because the defendant streamed the broadcast ‘under specific technical conditions, using a different means of transmission for the protected works’, it did not matter that, in principle, the recipients were part of the public targeted by the initial communication.<sup>211</sup> While the result in the *TV CatchUp* case seems consistent with those in the hotel transmission cases, the reasoning is different. While a test based on the expectations of the copyright holder may be difficult to apply, a test based on whether a distinct technical means is utilized seems rather arbitrary.

The Court of Justice has used the ‘new public’ concept to regulate the legitimacy of hyperlinks. As already observed, the Court found in the *Svensson* case that creating a hyperlink involved ‘making available’ the work to which the link led.<sup>212</sup> However, it did not suggest that every hyperlink would infringe; rather, the Court differentiated between linking to material that was generally available (with the consent of the right owner), and linking to material to which access had been limited. Linking to the former material involved no new technical means and was not a communication to a ‘new public’, and was

<sup>205</sup> *Airfield NV and Canal Digitaal BV v. Sabam and Airfield NV v. Agicoa Belgium*, Joined Cases C-431/09 and C-432/09 [2011] ECR I-9363, [76].

<sup>212</sup> *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [24].

thus non-infringing.<sup>213</sup> Linking to material that was secured behind technical measures would, in contrast, communicate it to a new public.<sup>214</sup>

The decision in *Svensson* has an immediate attractiveness, not least because the Court explicitly rejected the proposition that the legitimacy of a link for copyright purposes should depend on the nature of the link (in particular whether the person who activates the link realizes that they are going to another web location).<sup>215</sup> Moreover, the Court (by studiously not mentioning as relevant the fact that the defendant was a for-profit aggregator) seems to have ruled the ‘for profit’ nature of the hyperlinker’s activity as irrelevant when determining the legitimacy of creating links.

However, the attractiveness of the judgment is superficial. By relying on the concept of the ‘new public’, the Court has chosen a device that is likely to produce confusion and uncertainty.

First, the Court identifies only the situation in which a work has been subject to technical restrictions put in place by the site on which the protected work appears in order to restrict access to that work to the site’s subscribers.<sup>216</sup> But the ‘new public’ analysis, insofar as it is really based on what the copyright owner ‘contemplated’, might require that hyperlinks be authorized in other situations. If a website contains an indication of the intended audience of the works, such as an express notice, parallel reasoning would suggest that hyperlinking to works on such a site must be regarded as communication to a new public?

The ‘new public’ analysis contains other perils for hyperlinkers. There is material on the Internet that has never been put there with the permission of the copyright owner. Some of it has been uploaded illegally, but other material might be there by taking advantage of exceptions (for example fair dealing for criticism or review, or reporting current events) or limited ‘orphan work’ immunities. Absent an independent defence, linking to such material might give rise to liability for the hyperlinker (because the ‘new public’ analysis has no place). The same would be true in relation to much user-generated content, which often has altered or transformed work (which has perhaps been placed on the Internet with the consent of the owner). If the right holder did not consent to the adaptation being on the Internet, the ‘new public’ analysis is not available to immunize a person who innocently hyperlinks to the material. The problem raised by all of these examples for users hyperlinking is uncertainty: apart from the easiest case of material featuring on sites that are evidently operated by the (only) author of the material, it is really very difficult indeed for anyone contemplating creating a link to know whether they are linking to authorized or unauthorized material. If it is difficult for humans, how much more difficult has the decision in *Svensson* made it for automated search-and-link systems, such as that of the defendant in the case?

The ‘new public’ analysis, it seems, will have enabled the Swedish court to resolve the case before it (and may provide answers to two other pending referrals). But when other cases come to be referred, we think that the Court of Justice would be wise to revisit its assumption that the creation of a hyperlink is a making available (or communication) of

<sup>213</sup> *Ibid.*, [24]–[30].

<sup>214</sup> The Court may well have had in mind the facts of another pending case: *C More Entertainment AB v. Linus Sandberg*, Case C-279/13 (pending) (another reference from Sweden in which it appears that the defendant offers access to a service of streamed sports events that the claimant operates behind a paywall).

<sup>215</sup> *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [29]. This seems to answer the question referred in *BestWater International GmbH v. Michael Mebes, Stefan Potsch*, Case C-348/13 (pending).

<sup>216</sup> *Svensson v. Retriever Sverige AB*, Case C-466/12 (13 February 2014) (ECJ, Fourth Chamber), [31].

a work at all. As the European Copyright Society argued, the act of creating such links should simply not be regarded as transmitting works at all; the links are merely location tools telling recipients where material can be found.<sup>217</sup> In the trade mark context, the Court was willing to immunize search engines (and auction sites) from primary liability for the trade mark infringements of keyword advertisers and online sellers. A similar response would be desirable in this context. This would not mean that aggregators of links to infringing material would be able to operate freely; rather, such operators are subject to accessory liability, based on their knowledge that the material to which they are linking is infringing material.<sup>218</sup>

## 7 RIGHT TO MAKE AN ADAPTATION OF THE WORK

The owner of copyright in literary, dramatic, or musical work is given the exclusive right to make an adaptation of the work.<sup>219</sup> The owner of copyright in artistic works, sound recordings, and films is not given an adaptation right. The adaptation right is restrictively defined and is not to be confused with a general right to control all derivative works, such as that recognized by copyright law in the United States.<sup>220</sup> The adaptation right includes the right to do any of the other restricted acts in relation to an adaptation, including the right to make an ‘adaptation of an adaptation’.<sup>221</sup> Consequently, it is a restricted act not only to make an adaptation, but also to reproduce an adaptation in any material form, to issue copies of it to the public, to perform it in public, or to broadcast it. Because it is not possible to draw a clear line between an adaptation and a reproduction, in many cases the same act might be both a reproduction and an adaptation.<sup>222</sup>

### 7.1 MEANING OF ADAPTATION

‘Adaptation’ is defined differently for literary works, dramatic works, computer programs, databases, and musical works. We must deal with each in turn.

In relation to literary or dramatic works, an adaptation means a translation (such as a translation into French, but also translations between technical languages),<sup>223</sup> or a dramatization of a non-dramatic work (such as where a novel is turned into a screenplay or ballet or, after *Norowzian v. Arks*,<sup>224</sup> a film). The adaptation right in a literary or dramatic work will also be infringed where the story or action is conveyed wholly or mainly by means of pictures (such as a comic strip). As regards dramatic works, an adaptation means a version of a dramatic work that is converted into a non-dramatic work (such

<sup>217</sup> European Copyright Society, *Opinion on Svensson* (2013), on SSRN; J. Litman, *Digital Copyright* (2001), 183; A. Strowel and N. Ide, ‘Liability with Regard to Hyperlinks’ (2001) 24 *Colum JL & Arts* 403, 425; B. Allgrove and P. Ganley, ‘Search Engines, Data Aggregators and UK Copyright Law: A Proposal’ [2007] *EIPR* 227 (arguing for clarification through a specific defence).

<sup>218</sup> *Universal Music Australia v. Cooper* [2005] FCA (14 July 2005); see further pp. 1208–10.

<sup>219</sup> Implementing, for the most part, Berne, Arts 8 and 11(2) (translation), 12 (adaptations, arrangements, and other alterations), and 11ter(2) (communication of translation).

<sup>220</sup> And in this respect seems narrower than Berne, Art. 12. <sup>221</sup> CDPA 1988, s. 21(2).

<sup>222</sup> CDPA 1988, s. 21(6). For consideration of the relationship between the reproduction right and the adaptation right, see *Hodgson v. Isaac* [2010] *EWPC* 37, [2012] *ECC* (4) 47, [21] (Judge Birss QC referring to the ‘unclear dividing line’ between the two rights). <sup>223</sup> *Moon v. Thornber* [2012] *EWPC* 37, [92].

<sup>224</sup> [2000] *FSR* 363.

as the conversion of a film into a novel). In relation to musical works, an adaptation is defined as an arrangement or transcription of the work.<sup>225</sup>

Although an adaptation is made only when it is recorded in writing or otherwise, the public performance or broadcasting of an adaptation will infringe even if, at that stage, the adaptation has not been recorded in writing or otherwise. Consequently, an amateur dramatic group whose public performance is based on a novel will almost certainly infringe the adaptation right. This is because, in so doing, the group will have adapted the novel by converting it into a dramatic work. Equally, the broadcast of someone translating a text from a foreign language into English will infringe, even though the translator has not made a written version of the translation.

The adaptation right also applies to computer programs and databases. In relation to computer programs, an adaptation means an arrangement, or altered version of the program, or a translation of it.<sup>226</sup> In these circumstances, translation includes the conversion into or out of a computer language, or from a computer language into a different computer language or code.<sup>227</sup> In relation to databases, adaptation means an arrangement or altered version of the database or a translation of it.<sup>228</sup>

## 8 AUTHORIZATION

As well as being given the right to carry out the restricted activities, the copyright owner is also given the right to authorize others to do any of the restricted acts.<sup>229</sup> When this right was introduced in the Copyright Act 1911, it was said to be superfluous and tautologous: the exclusive right to do an act implicitly carried with it the right of authorization.<sup>230</sup> However, it soon became clear that the term ‘authorize’ extended the copyright owner’s rights to cover the acts of persons in some way associated or affiliated with an infringement. It was said that ‘to authorize’ meant to sanction, countenance, or approve,<sup>231</sup> or, alternatively, to grant or purport to grant to a third person the right to do an act.<sup>232</sup> The latter formulation has now received the approval of the House of Lords. In order to amount to authorization, the person to whom ‘authority’ has illegitimately been granted must in fact commit an infringing act.<sup>233</sup> However, the person giving the authorization (in contrast with the person to whom authority is given) need not be located in the United Kingdom.<sup>234</sup>

The concept of authorization has been applied in two distinct ways. First, it has been used to expand the network of potential liability beyond vicarious liability. This has typically occurred in relation to the performance of copyright works.<sup>235</sup> Given that performers often do not have a lot of money, copyright owners have attempted to sue the

<sup>225</sup> *Francis Day & Hunter v. Bron* [1963] 1 Ch 587, 611 (adaptation and translation must be deliberate).

<sup>226</sup> CDPA 1988, s. 21(3)(ab). <sup>227</sup> CDPA 1988, s. 21(4); Software Dir., Art. 4(b).

<sup>228</sup> CDPA 1988, s. 21(3)(ac); Database Dir., Art. 5(b).

<sup>229</sup> CDPA 1988, s. 16(2). Y. Gendreau, ‘Authorization Revisited’ (2001) 48 *J Copyright Soc’y USA* 341. The ‘authorization’ right needs to be compared with the general principles of joint tortfeasance described in Chapter 47.

<sup>230</sup> *Falcon v. Famous Players* [1926] 2 KB 474, 495–6; *PRS v. Cyril Theatrical Syndicate* [1924] 1 KB 1, 12.

<sup>231</sup> *Falcon v. Famous Players* [1926] 2 KB 474, 491. <sup>232</sup> *Ibid.*

<sup>233</sup> *Nelson v. Rye and Cocteau Records* [1996] FSR 313, 337.

<sup>234</sup> CDPA 1988, s. 16(2), in contrast with s. 16(1), is not explicitly confined to ‘acts’ of authorization within the United Kingdom: *ABKCO Music & Records Inc. v. Music Collection International* [1995] RPC 657.

<sup>235</sup> But note also, e.g., *Pensher Security Door Co. v. Sunderland CC* [2000] RPC 249, 278–9.

parties who hired the performers. While the principle of vicarious liability made this relatively straightforward where the performer was an employee,<sup>236</sup> copyright owners argued, for example, that where a person hired a band (which infringed copyright), the hirer was liable for ‘authorizing’ the infringing performance. These attempts proved to be relatively successful where the hirer was aware of the songs that the band would perform or did nothing to control the repertoire performed. In both cases, the hirer was deemed to have authorized the infringements.<sup>237</sup> However, where a warning was given to the performers and the infringements were by way of spontaneous encores of which the hirer had no prior knowledge, the mere hiring of the band was held not to be an authorization.<sup>238</sup> In one case, an attempt to make a managing director liable for authorizing the infringing performance of a band was unsuccessful where the director had taken no interest in the content of the performance and was out of the country when it took place.<sup>239</sup>

The concept of authorization has also been applied where a person manufactures or supplies equipment or other means that enable or facilitate infringement. In these circumstances, copyright owners have argued that where a person makes facilities available in the knowledge that they will probably be used to infringe, this is equivalent to ‘authorizing’ infringement. Thus it has been asserted that a person who supplies films to a cinema, who sells blank tapes to the public when renting out records,<sup>240</sup> who makes photocopying equipment available in a library,<sup>241</sup> or who manufactures tape-to-tape machines should be treated as having authorized the resulting infringements. Today, the same kind of arguments are being used in relation to the activities of those who make available file-sharing software, such as Grokster or KaZaa, as well as others who provide hyperlinks to infringing material or provide the Internet locations of infringing material, for example on aggregation sites or through search engines.

The leading authority in the United Kingdom is *CBS Songs v. Amstrad*,<sup>242</sup> in which the House of Lords defined the term ‘authorize’ restrictively. Amstrad manufactured and marketed a double-speed twin-tape recorder, which was sold by Dixons. The advertisement, which Lord Templeman described as ‘hypocritical and disingenuous’, boasted that the model ‘now features hi-speed dubbing enabling you to make duplicate recordings from one cassette to another, record direct from any source and then make a copy and you can even make a copy of your favourite cassette’. An asterisk drew attention to a footnote warning that the recording and playback of certain material was possible only with permission. It also referred the user to the relevant legislation. The British Phonogram Industry (BPI), which represents various owners of copyright in musical and literary works and in sound recordings, claimed that Amstrad had authorized infringement of copyright in BPI’s sound recordings.

The House of Lords held that neither the sale of the equipment nor the advertisement thereof amounted to an authorization. Lord Templeman said that an authorization means

<sup>236</sup> *PRS v. Mitchell & Booker (Palais de Danse)* [1924] 1 KB 762 (applying a ‘control’ test); *PRS v. Kwik-Fit Group Ltd* [2008] ECDR (2) 13 (OH CS).

<sup>237</sup> *PRS v. Bradford Corporation* [1917–23] MacG CC 309, 312–13, 314. If the hirer were to specify that particular songs were to be performed and those performances were to infringe on copyright, the case would be even stronger: see *Standen Engineering v. Spalding & Sons* [1984] FSR 554; *Pensher v. Sunderland CC* [2000] RPC 249, 278–9 (commissioner specifying infringing design).

<sup>238</sup> *PRS v. Bradford Corporation* [1917–23] MacG CC 309, 314.

<sup>239</sup> *PRS v. Caryl Theatrical Syndicate* [1924] 1 KB 1.

<sup>240</sup> *CBS Inc v. Ames Records and Tapes* [1981] 2 All ER 812 (not authorization).

<sup>241</sup> *Moorhouse v. UNSW* [1976] RPC 151, 159 (High Court of Australia) (authorization); cf. *CCH Canadian Ltd. v. Law Society of Upper Canada* [2004] SCC 13.

<sup>242</sup> [1988] 2 All ER 484.  
© L. Bently and B. Sherman 2014

a grant or purported grant, express or implied, of the right to do the act complained of.<sup>243</sup> The House of Lords held that while the machinery enabled a person to copy lawfully or unlawfully, this did not constitute an authorization.<sup>244</sup> Lord Templeman said that it was crucial that the footnote had warned that certain types of copying required permission and that Amstrad did not have the authority to grant that permission. In short, the Lords held that there was no authorization because it was up to the operator whether to infringe or not; Amstrad in no way purported to possess the authority to give permission to copy records.

The leading case applying the ‘authorization’ standard to those who facilitate infringement on the Internet is *Twentieth Century Fox v. Newzbin*.<sup>245</sup> The case concerned material, particularly films, that third parties had uploaded to Usenet sites without the licence of the relevant copyright holder(s). Newzbin employed editors to index these sites and offered a paid service to access the index. By so doing, Newzbin enabled users to download the infringing files from Usenet bulletin boards (uploaded by third parties), especially using NZB files, which collect together all components of a work for downloading. Many of the Newzbin subcategories were ‘obviously’ infringing materials and the judge took the view that the defendant knew this.<sup>246</sup> Although Newzbin had instructed its editors not to index unlawful material and operated a delisting facility, these safeguards were found by judge to be cosmetic.<sup>247</sup>

Kitchin J explained that while authorization required a ‘grant’ or ‘purported grant’ of the freedom to do the relevant act, this could be implied from all of the relevant circumstances. The circumstances might include the nature of the relationship between the alleged authorizer and the primary infringer, whether the equipment or other material supplied constitutes the means used to infringe, whether it is inevitable that it will be used to infringe, the degree of control that the supplier retains, and whether it has taken any steps to prevent infringement.<sup>248</sup> In the circumstances, the judge found that the Newzbin facility provided the means for infringement, that it had been created by the defendant, and that was entirely within the defendant’s control. Moreover, the defendant did nothing to hinder infringement: there was no filtering and other preventative mechanisms amounted merely to ‘window dressing’. Kitchin J said that he was ‘entirely satisfied that a reasonable member would deduce from the defendant’s activities that it purports to possess the authority to grant any required permission to copy any film that a member may choose from the Movies category on Newzbin’.<sup>249</sup>

The *Newzbin* decision has become a key case in the legal strategy of content owners who are seeking to reduce levels of peer-to-peer copying. Typically, the software providers who operate the peer-to-peer systems are located out of the jurisdiction. It has become common, however, to seek orders blocking user access to such sites. The

<sup>243</sup> *Ibid.*, 493.      <sup>244</sup> *Ibid.*, 492.

<sup>245</sup> [2010] EWHC 608 (Ch). A similar result was achieved in the United States by means of its tortious notion of ‘inducement’: see *Metro-Goldwyn-Mayer Studios Inc v. Grokster* 125 S. Ct. 2764 (2005). For case law in Australia, see *Universal Music Australia v. Cooper* [2006] FCAFC 187 (authorization by provision of hyperlinks to infringing material). In *Universal Music et al v. Sharman License Holdings Ltd* [2005] FCA 1242, the Federal Court of Australia held that the marketing of KaZaa software, which was used to infringe the applicants’ copyright, amounted to authorization so to infringe. For commentaries, see R. Giblin and M. Davison, ‘KaZaa Goes the Way of Grokster: Authorization of Copyright Infringement via Peer-to-Peer Networks in Australia’ [2006] *AIPJ* 53; J. Ginsburg and S. Ricketson, ‘Inducers and Authorisers: A Comparison of the US Supreme Court’s Grokster Decision and the Australian Federal Court’s KaZaa Ruling’ (2006) 11 *Media & Arts L Rev* 1; G. Austin, ‘Importing KaZaa: Exporting Grokster’ (2006) 22 *Santa Clara Computer & High Tech LJ* 577.

<sup>247</sup> *Ibid.*, [41]–[45].

<sup>248</sup> *Ibid.*, [90].

<sup>249</sup> *Ibid.*, [102].

<sup>246</sup> [2010] EWHC 608 (Ch), [46], [78].

basis for many such orders is that the site operators ‘authorize’ the infringements of the users.<sup>250</sup>

## 9 LIABILITY OF INTERNET SERVICE PROVIDERS

One issue that has caused particular concern is the position of those who provide services and facilities that facilitate infringement on the Internet.<sup>251</sup> These people, who effectively provide the hardware and infrastructure for the information society, include multi-national enterprises that provide the cables for communication, as well as others who provide access to the web through local ‘servers,’ who run bulletin boards and websites on which others can post information, and who provide temporary access to the net at Internet cafes. At one stage, it became fashionable to suggest that the difficulties with rights holders policing their own rights were so great that some of these service providers should incur liability where infringing material was found on sites that they controlled. The argument ran that these persons were in the best position to supervise and inspect their cyber premises, and that, like the owner of a place of entertainment, they should be liable for infringements that occurred on their ‘premises.’<sup>252</sup>

The European Commission decided to pre-empt the development of diverse national responses to these issues through a harmonizing directive, but took the view that, since service providers could incur liability on a number of bases (defamation, copyright, obscenity, etc.), the issue fell outside the remit of the Information Society Directive. Instead, harmonization was provided for in Articles 12–15 of the EC Directive on Electronic Commerce (the e-Commerce Directive), which required member states to confer an immunity on such providers except in certain limited situations.<sup>253</sup> These parallel, in large part, the so-called ‘safe harbours’ introduced into US law by the US Digital Millennium Copyright Act of 1998.<sup>254</sup>

British implementation took the form of the Electronic Commerce (EC Directive) Regulations 2002.<sup>255</sup> For Internet and related service providers, law adjacent to copyright law introduces three general immunities from liability, whether it be for the infringement of copyright or the violation of any other right.<sup>256</sup> The immunities in all cases excuse liability for damages, for any other monetary remedy, and for any criminal sanction, but they do not prohibit injunctive relief.<sup>257</sup> The e-Commerce Directive does, however, prohibit the imposition of any obligation to monitor.

The beneficiaries of these immunities are so-called ‘information society service providers’—that is, any service that is normally provided for remuneration, and which operates at a distance by electronic means and at the individual request of a recipient of the services. It would therefore cover most commercial Internet service providers (ISPs), but would not cover Internet cafes, the services of which are not provided at a distance. The immunities apply to ‘mere conduits,’ ‘caching,’ and ‘hosting,’ as follows.

<sup>250</sup> *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd* [2012] EWHC 268 (Ch), [73]–[81]; *EMI Records Ltd. v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [52]–[70].

<sup>251</sup> WCT, Art. 8. Note also the ‘Agreed Statement’ annexed to the Treaty stating that the mere provision of physical facilities for enabling or making a communication does not in itself amount to a communication.

<sup>252</sup> Info. Soc. Dir., Recital 59. <sup>253</sup> e-Commerce Dir.

<sup>254</sup> Online Copyright Infringement Liability Limitation Act, Title II of the Digital Millennium Copyright Act, Pub. L. No. 105–304, amending Ch. 5 of Title 17 USC. In contrast with the US DMCA 1998, no provision is made for the benefit of information location tools. For commentaries, see A. Yen, ‘Internet Service Provider Liability for Subscriber Copyright Infringement, Enterprise Liability and the First Amendment’ (2000) 88 *Georgetown LJ* 1883. For comparisons, see V. McEvedy, ‘The DMCA and the E-Commerce Directive’ [2002] *EIPR* 65. <sup>255</sup> e-Commerce Regs (SI 2002/2013.)

<sup>256</sup> e-Commerce Regs. <sup>257</sup> e-Commerce Regs, reg. 20(1)(b).

### 9.1 MERE CONDUIT

Where the service provided is the transmission in a communication network of information provided by a recipient of the service or is the provision of access to a communication network, the service provider is exempted from liability where it did not initiate the transmission or select the receiver of the transmission, and did not select or modify the information contained in the transmission.<sup>258</sup>

### 9.2 CACHING

Where the service provided is the transmission in a communication network of information provided by a recipient of the service, the service provider shall not be liable if the information is the subject of ‘automatic, immediate and temporary storage’ and if the following conditions are satisfied:

- (a) the information is the subject of automatic, intermediate and temporary storage where that storage is for the sole purpose of making more efficient onward transmission of the information to other recipients of the service upon their request, and
- (b) the service provider—
  - (i) does not modify the information;
  - (ii) complies with conditions on access to the information;
  - (iii) complies with any rules regarding the updating of the information, specified in a manner widely recognised and used by industry;
  - (iv) does not interfere with the lawful use of technology, widely recognised and used by industry, to obtain data on the use of the information; and
  - (v) acts expeditiously to remove or to disable access to the information he has stored upon obtaining actual knowledge of the fact that the information at the initial source of the transmission has been removed from the network, or access to it has been disabled, or that a court or an administrative authority has ordered such removal or disablement.<sup>259</sup>

### 9.3 HOSTING

Where the service provided consists of storage of information provided by a recipient of the service, the service provider shall not be liable for storage where it has no actual knowledge of unlawful activity or information, and is not aware of facts or circumstances from which it would have been apparent to the service provider that the activity or information was unlawful; or, upon obtaining such knowledge or awareness, it acts expeditiously to remove or disable access to the information.<sup>260</sup> This immunity shields sites such as YouTube and Facebook, to which users upload infringing material. There is no liability prior to notice, but once notice is provided, the sites should take down the material (or forfeit the immunity).<sup>261</sup>

<sup>258</sup> E-Commerce Regs, reg. 17.

<sup>259</sup> E-Commerce Regs, reg. 18.

<sup>260</sup> E-Commerce Regs, reg. 19.

<sup>261</sup> For application, see *Société des Producteurs de Phonogrammes en France v. Google*, No. 11–13.666 (French Supreme Court 12 July 2012) (an obligation for providers of hosting services to prevent the reappearance of contents that they have already taken down—‘notice and stay-down’—might amount to a general monitoring obligation prohibited by E-Commerce Dir., Art. 15).

#### 9.4 INJUNCTIVE RELIEF

Section 97A of the CDPA 1988 (which implements Article 8 of the Information Society Directive) imposes an important counterweight to those immunities. This confers a power on the High Court to issue an injunction against a service provider where that person has actual knowledge of another person using their service to infringe copyright. In assessing whether the service provider has the appropriate knowledge, the Court is directed to take account of any notice received by the service provider under regulation 6(1)(c) of the e-Commerce Regulations 2002. Right holders are in a position to apply for an injunction against intermediaries whose services are used by a third party to infringe a copyright or related right. While the immunities given by the e-Commerce Directive prevent financial liability, if the service provider is informed of the illegal acts, thereafter it seems that it must take action to stop them from continuing or face injunctive relief. This power has been the legal basis for a series of blocking injunctions against ISPs, requiring them to block access to sites that are predominately involved in facilitating file-sharing.<sup>262</sup>

## DURATION OF COPYRIGHT

### CHAPTER CONTENTS

1 Introduction	177	5 Moral Rights	184
2 Literary, Dramatic, Musical, and Artistic Works	180	6 Publication Right in Works in which Copyright has Lapsed	185
3 Films	182	7 Optimal Term	186
4 Entrepreneurial Works	183		

### 1 INTRODUCTION

The question of the appropriate period of protection that ought to be granted to copyright works has long captured the attention of policymakers, legislatures, judges, and commentators. For example, the central question of the literary property debate of the eighteenth century was whether common law literary property protection should be perpetual.<sup>1</sup> Similar debates have arisen at many other times during the history of copyright law. While these debates have always been shaped by the particular circumstances under discussion, they are similar in that they have attempted to mediate between the private interests of owners and the interests of the public in ensuring access to creative works<sup>2</sup>—that is, they have attempted to coordinate and balance the various interests that coexist in copyright law. Another common feature of these debates is that, whenever the question of duration has arisen, the length of protection has typically increased rather than decreased.<sup>3</sup> For example, under the 1710 Statute of Anne, books were protected for 14 years from publication and for a further 14 years if the author was alive when the first term lapsed. This was increased in 1814 to 28 years, or the life of the author. After great debate, the Literary Copyright Act 1842 extended the term of copyright in books to 42 years, or the author's life plus seven years.<sup>4</sup> In 1911, this was increased once again to life plus a 50-year term. As a result of the EU Term Directive, in 1996 the term of protection for 'authorial works' (including cinematographic works) was extended to the life of the author plus

<sup>1</sup> That is, the debates surrounding *Millar v. Taylor* (1769) 98 ER 201, 4 Burr 2303, and *Donaldson v. Beckett* (1774) 2 *Brown's Parl Cases* 129; *Cobbett's Parliamentary History of England for the Years 1771–1774*, Vol. XVII (1813), 953. See M. <sup>4</sup> C. Seville, *Literary Copyright Reform in Early Victorian England* (1999).

70 years,<sup>5</sup> while in 2011 the term of protection for sound recordings rose from 50 to 70 years.

Before looking at duration in more detail, it is important to note a number of things. The first is that the period of protection changes depending on the type of work in question. This is a reflection of the fact that different interests and policy issues arise with different categories of work. The way in which the term of protection is calculated also differs depending on the type of work in question. In relation to most literary, dramatic, musical, and artistic works, copyright subsists throughout the life of the author and for a fixed term (currently 70 years) calculated from when the author dies (*post mortem*). In the case of entrepreneurial works and certain types of authorial work (such as those of unknown authorship), the protection is a fixed term that is calculated from when the work is either *made, published, or communicated to the public*. The term is calculated from the end of the year in which a particular event occurs.<sup>6</sup>

Second, the question of term of copyright is almost completely harmonized. As a result of the EU Term Directive, the length of protection for literary, dramatic, musical, and artistic works in the United Kingdom was set at the life of the author plus 70 years.<sup>7</sup> The term of protection offered to films also changed as a result of the Directive. Under the Copyright, Designs and Patents Act 1988 (CDPA 1988), as enacted, where films were treated as entrepreneurial works, films were given a fixed term of protection. As a result of harmonization, protection is required both for ‘cinematographic works’ both as authorial works and ‘fixations’ on film as ‘related rights’.<sup>8</sup> The UK legislature appears not to have fully comprehended the logic underlying the Directive. It has amended the 1988 Act to make the term of ‘films’ under section 5 (that is, fixations) depend on the life of the principal director, author of the screenplay, author of the dialogue, and the composer of music specifically created for use in the work. No changes needed to be made to the term for broadcasts,<sup>9</sup> and there has been no harmonization at all in relation to rights in typographical arrangements.

In implementing the Term Directive, member states were required to apply the new terms to all works and subject matter that were protected in at least one member state on 1 July 1995. As it turned out, this meant not only that the copyright in many works was extended, but also that the copyright in some works that had previously expired had to be revived.<sup>10</sup> For example, the UK copyright in a work by a British author who died in 1944 and which had first been published in the United Kingdom would have lapsed on 1 January 1995, but would have been revived from 1 January 1996, since the work would have been protected in Germany (which already operated a life-plus-70 term) on 1 July 1995.<sup>11</sup> The Directive also obliged member states when implementing the reforms ‘to adopt the necessary provisions to protect in particular acquired rights of third parties’.<sup>12</sup> Acts done pursuant to arrangements made before 1 July 1995 at a time when copyright did not subsist in the work are treated as not infringing any revived copyright in a work.<sup>13</sup>

<sup>5</sup> Term Dir. On this, see N. Dawson, ‘Copyright in the European Union: Plundering the Public Domain’ (1994) 45 *NILQ* 193.

<sup>6</sup> CDPA 1988, s. 12(2); Term Dir., Art. 8.

<sup>7</sup> Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297). The length of protection is greater than that which is required in WCT, Art. 1(4), and TRIPS, Art. 9.

<sup>8</sup> Duration Dir, Art. 3(3) (the rights of the producer of first fixation of a film are to last 50 years after fixation or after the fixation was lawfully published). These are distinct from the rights of the owner of copyright in a cinematographic or audiovisual work.

<sup>9</sup> Term Dir., Art. 3(4).

<sup>10</sup> Duration Regs, especially reg. 17.

<sup>11</sup> *Land Hessen v. G. Ricordi & Co.*, Case C-360/00 [2002] ECR I-5089.

<sup>12</sup> Term Dir., Art. 10. See also Recitals 26 and 27.

<sup>13</sup> Duration Regs; *Sweeney v. Macmillan Publishers Ltd* [2002] *RPC* (35) 651.

In all cases, the revived copyright is treated as ‘licensed by the copyright owner, subject only to the payment of such reasonable royalty or other remuneration as may be agreed or determined in default of agreement by the Copyright Tribunal’.<sup>14</sup>

As well as extending the period of protection given to many works, as of 1 January 1996 the Term Directive also changed the way in which duration is calculated for works originating from outside the European Economic Area (EEA). Prior to the introduction of the Directive, British law provided the same level of protection to works published outside the United Kingdom as those published within. This principle changed, however, under the Term Directive, which requires only that the extended period of protection be offered to works originating from within the EEA. The period of protection given to works of non-EEA origin—that is, to works not originating in the EEA or without an EEA author—is the same as that which the work would receive in the country of origin.<sup>15</sup> The Term Directive is therefore based on a notion of ‘comparison of terms’ rather than national treatment.<sup>16</sup> This means that, where a work is first published in Canada<sup>17</sup> and the author is not a national of an EEA state, the work is protected in Europe for only 50 years after the death of the author (because that is the duration of Canadian copyright law).<sup>18</sup>

However, it has been observed that the implementation of the ‘comparison of terms’ rule in the United Kingdom may be more far-reaching than the Directive was generally thought to have intended.<sup>19</sup> This is because section 12(6), like sections 13A(4), 13B(7), and 14(3), refers to the duration of copyright as being ‘that to which the work is entitled’ in the country of origin. A literal interpretation requires reference therefore not only to duration in the country of origin, but also to whether copyright subsists at all in that country: after all, if there is no copyright in the work in its country of origin, it is difficult to say that the work is ‘entitled’ to copyright for any length of time. The impact would be to deny copyright to works that were unprotected in the country of origin, for example, because they fell outside any list of subject matter or failed to reach that country’s originality threshold. The Directive, in contrast, states that copyright ‘shall expire on the date of expiry of the protection granted in the country of origin’.<sup>20</sup> The use of the term ‘expiry’ suggests that the rule is not directed at conditions of subsistence. The preferable view is that section 12(6) should be read as dealing only with expiry of term; in cases in which works are not protected in the country of origin, but would meet British requirements for subsistence, the section should be understood as requiring British law to give such works protection until such time as protection of a work *of that sort* would expire in the country of origin.

The Term Directive was amended by the Information Society Directive, codified in 2006<sup>21</sup> and again amended in 2011.<sup>22</sup> The latter amendments followed a period of sustained lobbying by the record industry and allied interests, particularly performers, which were concerned about the imminent lapse of sound recording copyright in material from

<sup>14</sup> Duration Regs, regs 23, 24. Serious questions exist as to whether this is compatible with EU law. The Court of Justice appears to regard a transitional rule as necessarily temporary: *Butterfly Music Srl v. Carosello Edizioni Musicali e Discografiche Srl*, Case C-60/98 [1999] ECR I-3939. In *Flos SpA v. Semeraro Casa e Famiglia*, Case C-168/09 [2011] ECR I-181 (ECJ, Second Chamber), [53]–[56], the Court indicated that such transitional provisions must: (i) not generally prevent ‘new rules from applying to the future consequences of situations which arose under the earlier rules’; (ii) be applicable only to those with ‘acquired rights and legitimate expectation’; (iii) be temporary and ‘not have the effect of deferring for a substantial period the application of the new rules’; and (iv) be proportionate. A rule that all revived copyrights are subject to compulsory licensing appears to breach the third rule.

<sup>17</sup> CDPA 1988, s. 15A(2). <sup>18</sup> CDPA 1988, s. 12(6); Canadian Copyright Act, s. 6.

<sup>19</sup> As observed by Mustafa Safiyuddin, of Legasis Partners, Mumbai. <sup>20</sup> Term Dir., Art. 7.

<sup>21</sup> Directive 2006/116/EC. <sup>22</sup> Directive 2011/77/EU.

the late 1950s and early 1960s, the heyday of rock ‘n’ roll and the early years of pop. It was argued that it would be unfair if performers, such as Sir Cliff Richard (or the French performer Johnny Halliday), were no longer able to gain income from their recordings during their lifetime. Despite arguments against such extension from the Gowers Committee<sup>23</sup> and academics,<sup>24</sup> all of which emphasized how increasing copyright term imposed costs on consumers (and welfare generally by increasing so-called ‘deadweight loss’),<sup>25</sup> the European legislature decided that an increase in the term of protection for sound recordings and performers from 50 to 70 years was appropriate.

## 2 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Subject to the exceptions listed below, copyright in a literary, dramatic, musical, or artistic work expires 70 years from the year in which the author of the work dies.<sup>26</sup> Thus, if an author of a book were to have died in 1990, the copyright in the book would expire in 2060. In general, if a literary, dramatic, musical, or artistic work is jointly authored, the 70-year *post-mortem* term of copyright is calculated from the year in which the longest surviving author dies.<sup>27</sup> However, in the case of ‘songs’, a special rule applies (following from the 2011 Directive). Where, as a result of collaboration, both a literary work and a musical work were ‘created in order to be used together’,<sup>28</sup> the works are treated as a work of ‘co-authorship’ (a statutory designation distinct from joint authorship). For the purposes of duration of copyright, co-authored songs are treated in the same way as jointly authored works—that is, copyright continues to subsist until 70 years from the death of the last of the co-authors to die.<sup>29</sup> Thus the Hammerstein lyrics of Rodgers and Hammerstein songs, such as those in the songs on *South Pacific*, will continue to be protected beyond 2030 (70 years from Oscar Hammerstein II’s death) to the end of 2049—that is, 70 years from the death of the musical composer Richard Rodgers.<sup>30</sup> But the provision will not apply where words are written for pre-existing music (as might be the case with a parody of an

existing song), or where a literary work, such as a poem, is later used as the lyrics of a song; in both of these situations, where the music and lyrics were not ‘specifically created for the . . . musical composition with words’, the normal rules apply.

## 2.1 EXCEPTIONS TO THE TERM OF LIFE PLUS 70 YEARS

The general rule that the duration of literary, dramatic, musical, and artistic works is life plus 70 years is subject to a number of exceptions.<sup>31</sup>

### 2.1.1 Computer-generated works

Where a literary, dramatic, musical, or artistic work is computer-generated, the duration of protection lasts for 50 years from the end of the year in which the work was made.<sup>32</sup>

### 2.1.2 Crown copyright

Crown copyright in a literary, dramatic, musical, or artistic work lasts for 125 years from the year in which the work was made. If the work is published commercially within 75 years from the year in which it was made, then copyright lasts for 50 years from the date on which it was commercially published.<sup>33</sup>

### 2.1.3 Parliamentary copyright and international organizations

Parliamentary copyright lasts for 50 years from the year in which the work was made.<sup>34</sup> Where an international organization is the first owner, copyright also lasts for 50 years from when the work was made.

### 2.1.4 Artistic works used in designs

Until recently, copyright in artistic works that have been used in designs of industrially produced articles lasted in effect for 25 years from the year in which such articles were first legitimately marketed. This limitation on term, which took the form of a defence (CDPA 1988, s. 52), was removed by the Enterprise and Regulatory Reform Act 2013 (EER 2013).<sup>35</sup> The practical effect of repeal of the defence is to restore the full term to all works created since 1956 (although acts completed prior to the provision coming into force will evidently not be subjected retrospectively to liability).<sup>36</sup>

<sup>31</sup> Prior, perpetual copyrights under past law end in 2040. Contrast, however, the curious exception for J. M. Barrie’s *Peter Pan*: CDPA 1988, Sch. 1, para. 13, and Sch. 6, respectively. The *Peter Pan* provision entitles the trustees of the Hospital for Sick Children to a royalty (to be used for the purposes of the hospital) in respect of any public performance, commercial publication or communication to the public of the whole or any substantial part of the work or an adaptation of the play *Peter Pan* by Sir James Matthew Barrie. Barrie died in 1937, so copyright was about to lapse when the Bill that led to the CDPA 1988 was going through Parliament. Lord Callaghan of Cardiff introduced the provision into the House of Lords as an amendment to the Bill: see 494 Hansard (HL) 494, cols 836–47 (10 March 1988). For an extensive treatment, see C. Seville, ‘Peter Pan’s rights: “To Die Will Be An Awfully Big Adventure”’ (2003) 51 *J Copyright Soc’y USA* 1.

<sup>32</sup> CDPA 1988, s. 12(7). Were this regarded as an ‘authorial right’, doubts might exist as to compatibility with various requirements of European law. These concerns diminish if the protection is conceived as a ‘related right’, which has not been the subject of harmonization.

<sup>33</sup> CDPA 1988, ss. 163(3), 164, 165(3), 166(5). International organizations initially acquiring copyright in a work may enjoy it for 50 years from the making or longer if specified by order: CDPA 1988, s. 168(3).

<sup>34</sup> CDPA 1988, s. 165(3).

<sup>35</sup> ERR 2013, s. 74. See B. Lauriat, ‘Copyright for Art’s Sake’ [2014] *EIPR* 275.

<sup>36</sup> Section 22 of the 1911 Act excluded from copyright designs capable of registration under the Patents and Designs Act 1907 where the design was used or intended to be used as models or patterns to be multiplied

### 2.1.5 Works of unknown authorship

As we saw earlier, in certain situations it may not be possible to identify the author of a particular work. Given that, with works of unknown authorship, there is no identifiable author whose death can help to set the duration of protection, copyright law is forced to use other trigger points to calculate duration. In these circumstances, the 1988 Act provides that copyright in a literary, dramatic, musical, or artistic work of unknown authorship lasts for 70 years calculated either from the year of creation, or if, during that period, the work is made available to the public, from the year in which it was made available.<sup>37</sup> If the author's name is disclosed before the 70-year term lapses and before the author's death, this disclosure will have the effect of extending the term of copyright to the author's life plus 70 years.<sup>38</sup>

### 2.1.6 Unpublished works not in the public domain

Section 17 of the Copyright Act 1911 conferred protection on unpublished literary, dramatic, and musical works, and engravings, for 50 years from the date of publication. This meant that, so long as the works remained unpublished, the copyright term was unlimited. The 1988 Act removed this possibility by specifying that copyright in works that were unpublished at the author's death and remained so until 1 August 1989 was to last for a fixed period of 50 years from 1 January 1990—that is, until 31 December 2039.<sup>39</sup> The Minister now has power to reduce the period of copyright in unpublished works.<sup>40</sup>

## 3 FILMS

Under the Copyright Act 1956 and CDPA 1988 (as enacted), where 'films' were treated as types of entrepreneurial work, protection was limited to 50 years, normally calculated from the year of release.<sup>41</sup> The Term Directive required recognition of copyright in both the first fixation of a film, for 50 years, and the 'cinematographic or audiovisual work', for which the term was to be 70 years from the year of the latest death among four categories of person: the principal director; the author of the screenplay; the author of the dialogue; or the composer of music specially created for and used in the cinematographic or audiovisual work.<sup>42</sup> Subsequent British attempts at implementation rather unwisely ignored the distinction, preferring to extend the copyright in 'film'—the section 5B copyright—to 70 years from the death of these four persons.<sup>43</sup>

by any industrial process. The 1956 Act did not alter the position for works created before 1957. Moreover, according to CDPA 1988, Sch. 1, para. 6, copyright was not to subsist in works created before 1 June 1957 that did not benefit from copyright at the time they were made.

<sup>37</sup> CDPA 1988, s. 12(3). For the definition of 'making available', see CDPA 1988, s. 12(5).

<sup>38</sup> CDPA 1988, s. 12(4).

<sup>39</sup> CDPA 1988, Sch. 1, para. 12(4). A work published after the author's death, but before 1 August 1989, obtained a term of 50 years from publication: CDPA 1988, Sch. 1, para. 12(2). Under the 1956 Act, a work unpublished at the author's death continued in copyright until 50 years after first publication: CA 1956, ss 2(3), 3(4). In some cases, certain acts, such as performance in public, had the same effect as publication. For some works unpublished on 1 August 1989, the relevant copyright will have been extended by the recent increase in the term of copyright. For example, if an author died in 1988 leaving unpublished manuscripts (which remained unpublished in 1990), the effect of the changes made in 1988 was that copyright lasted until 31 December 2039. However, as a result of the increase in the duration of copyright to life plus 70 years, copyright will be extended to 31 December 2058.

<sup>40</sup> ERR 2013, s. 76.

<sup>41</sup> CDPA 1988, s. 13 (as enacted). <sup>42</sup> Term Dir., Art. 2(2).

<sup>43</sup> CDPA 1988, s. 13B(2). Each category may include more than one member, but unidentified members do not count: CDPA 1988, s. 13B(3), (10).

Where the identity of these four people is unknown, the term of protection is 70 years from the year in which the film was made.<sup>44</sup> Alternatively, if, during that period, the film is made available to the public, copyright expires 70 years from the end of the year in which the film was first made available.<sup>45</sup> Foreseeing potential problems in identifying when such copyright expires, the Duration of Copyright and Rights in Performances Regulations 1995<sup>46</sup> also introduced a new exception into the 1988 Act to allow a film to be copied at a time when it is reasonable to assume that copyright has expired.<sup>47</sup>

Not long after this attempted implementation, the Court of Appeal recognized that cinematographic works benefit from copyright not merely through fixation as films, but also as dramatic works.<sup>48</sup> While this decision moved British law some way towards compliance with international and regional obligations, it also exposed further the oddness of the British attempt to give effect to the Term Directive. This is because the term of copyright in the cinematographic work as a dramatic work is left to be determined by reference to the life of the 'author'. In British law, this might well include the director and authors of scripts for the film (as long as they do not exist before the film-making process) and possibly the editors or director of cinematography, but it is highly unlikely to include the composer of music. If normal principles were to be applied, the term of protection would be unlikely to be that required by Article 2(2). If the legislation is not amended, it is not unlikely that a court will be faced with the choice of applying these normal principles and acknowledging failed implementation, or reading the term 'author' in this context as being open-textured enough to take its meaning from the Directive. Moreover, once a *post mortem* term is acknowledged to exist in relation to the cinematographic work as a dramatic work, the wrong-headedness of extending the term of the section 5B film copyright is apparent. If the section 5B copyright is to reflect the Directive's demands in relation to related rights in the first fixation of a film, the period should be confined to 50 years from the making of the fixation.<sup>49</sup>

## 4 ENTREPRENEURIAL WORKS

Because entrepreneurial works need not necessarily have human authors, the period of protection is calculated using different trigger points.

### 4.1 SOUND RECORDINGS

For sound recordings, copyright expires 50 years from the end of the year in which the recording was made.<sup>50</sup> If, during that period, the sound recording was published, copyright expires 70 years from the year of such publication. If, during the 70 years from making, the work is not published, but is made available to the public by being played in public or communicated to the public, copyright expires 70 years from the year of

<sup>44</sup> CDPA 1988, s. 13B (4)(a), (10).

<sup>45</sup> CDPA 1988, s. 13B(4)(b), (10). The requisite 'making available to the public' includes showing in public or communicating to the public, if authorized: CDPA 1988, s. 13B(6). <sup>46</sup> SI 1995/3297.

<sup>47</sup> CDPA 1988, s. 66A. <sup>48</sup> *Norowzian v. Arks (No. 2)* [2000] FSR 363.

<sup>49</sup> Term Dir., Art. 3(3). See Kamina, 123.

<sup>50</sup> CDPA 1988, s 13(b) and (c) (introduced with effect from 1 November 2013) by the Copyright and Duration Regs, reg. 6, to implement Directive 2011/77/EU.

communication or playing in public.<sup>51</sup> Thus if a sound recording was made in 1964 (for example unreleased Beatles recordings), but first published in 2013, then copyright might last until the end of 2083—giving a total period of 119 years.

The term of protection for sound recordings is, however, subject to one important—and conceptually quite innovative—qualification. Once 50 years has run from publication (or if there has not been publication, communication to the public),<sup>52</sup> the copyright in the sound recording might be determined by a performer whose performance is embodied on the sound recording if the sound recording is not being exploited.<sup>53</sup> This has been referred to as the ‘use it or lose it’ provision.<sup>54</sup> The effect of such action is that rights in the phonogram as such expire, leaving the performers with rights in the fixation of the performance embodied therein.<sup>55</sup> However interesting the device may be, its practical effects are likely to be minimal. This is because the conditions in which a performer can terminate the assignment are strictly defined.<sup>56</sup> In particular the right to terminate does not exist if the recording is accessible over the Internet.<sup>57</sup>

## 4.2 BROADCASTS

The duration of broadcasts is 50 years from when the broadcast was first made.<sup>58</sup> Where the author of a broadcast is not a national of an EEA state, the duration of copyright is that to which the broadcast is entitled in the country of which the author is a national (provided that the period of protection does not exceed 50 years).<sup>59</sup>

## 4.3 TYPOGRAPHICAL ARRANGEMENTS

For typographical arrangements of published editions, copyright expires 25 years from the year of first publication.<sup>60</sup> This right should be distinguished from the publication right conferred on the publisher of a previously unpublished work in which copyright has expired, which also lasts for 25 years from publication.<sup>61</sup>

# 5 MORAL RIGHTS

In the United Kingdom, moral rights of integrity and attribution subsist as long as copyright subsists.<sup>62</sup> The right to object to false attribution is less extensive, lasting for only 20 years after the author’s death. In some other countries, moral rights are capable of

<sup>51</sup> CDPA 1988, s. 13A(2) (as amended by SI 2003/2498, with transitional provisions in regs 30–32, 36–9), implementing Term Dir., Art. 3(2) (as amended by Info. Soc. Dir.); and re-amended by the Copyright and Duration Regs (implementing Directive 2011/77/EC). Note that an original collection of recordings would constitute a database and therefore be protected as a literary work.

<sup>52</sup> The eighth recital explains that these are situations in which, ‘but for’ the term extension, the phonogram would be in the public domain.

<sup>53</sup> CDPA 1988, s. 191HA(3); Directive 2011/77/EU, Art. 1(2)(c), introducing new Art. 3(2a) into Directive 2006/116. Often, there will be multiple performers. Each is entitled to terminate, but all will need to act collectively to exploit the fixation of the performance.

<sup>62</sup> See Chapter 10.

operating in perpetuity. The Term Directive made no attempt to harmonize the duration of moral rights and was expressed to be without prejudice to them.<sup>63</sup>

## 6 PUBLICATION RIGHT IN WORKS IN WHICH COPYRIGHT HAS LAPSED

In order to give effect to Article 4 of the Term Directive, a new property right equivalent to copyright, called a 'publication right', was introduced in the United Kingdom.<sup>64</sup> The right is granted without formality to any person who, after the expiry of copyright protection, publishes for the first time a previously unpublished literary, dramatic, musical, or artistic work, or film. This new right lasts for 25 years from the end of the year in which the work was first published.

In order to have the right, a publisher must publish a 'public domain' literary, dramatic, musical, or artistic work, or a film for the first time.<sup>65</sup> The right is acquired only where the work is previously unpublished. It should be noted that 'publication' in this context has a special meaning.<sup>66</sup> When determining whether the work is previously unpublished, no account is to be taken of any unauthorized act done at a time when there is no copyright in the work. An 'unauthorized act' means an act done without the consent of the owner of the physical medium in which the work is embodied or on which it is recorded.

The publication right that vests in the publisher is available only 'after the expiry' of copyright protection.<sup>67</sup> This means that the publication right is unlikely to be of great significance in the United Kingdom for some time. This is because of the dual effect of the changes made as regards unpublished works in the 1988 Act and the other changes made to the copyright term introduced to give effect to the Term Directive. The effect of these transitional provisions is that the publication right is currently restricted to unpublished artistic works other than engravings.<sup>68</sup>

Another consequence of limiting the availability of the publication right to cases in which copyright has expired is that it may exclude works in which copyright has never subsisted. Since the majority of existing unpublished works received statutory copyright protection in 1911, it will normally be possible to resolve the question of whether a work ever enjoyed copyright protection without too much difficulty (although problems exist in relation to artistic works). It seems that no statutory copyright existed in unpublished paintings, drawings, and photographs created before 1862 by an artist who died before 1855, nor in unpublished sculptures created prior to 1 July 1862.

While the publication right may supplement existing rights given to publishers in their typographical arrangement of published editions, it differs from these rights in three regards. First, the publication right is available only for the first publication of a previously unpublished work. Second, while the new publication right may apply where the publication relates to an artistic work, the typographical arrangement right is not relevant in such circumstances. This is because the right in typographical arrangement is

<sup>63</sup> Term Dir., Art. 9. <sup>64</sup> Rel. Rights Regs, reg. 16.

<sup>65</sup> The publication right does not arise from the publication of a work in which Crown copyright or parliamentary copyright subsisted: Rel. Rights Regs, reg. 16(5).

<sup>66</sup> It includes any making available to the public and, in particular, includes the issue of copies to the public, making the work available by means of an electronic retrieval system, the rental or lending of copies of the work to the public, the performance, exhibition, or showing of the work in public, or communicating the work to the public: Rel. Rights Regs, reg. 16 (as amended). <sup>67</sup> Ibid.

<sup>68</sup> For an elaboration of the reasoning that leads to this conclusion, see Copinger, [17–29]–[17–32], 1031–4.

confined to ‘a published edition of the whole or any part of one or more literary, dramatic or musical works’.<sup>69</sup> Third, the publication right is much more extensive than the right to prevent facsimile copying of a typographical arrangement.

A work qualifies for a publication right<sup>70</sup> only if the first publication occurs in the EEA and the publisher of the work at the time of first publication is a national of an EEA state.<sup>71</sup> Publication has a more extended meaning than that discussed in relation to copyright. Where two or more people jointly publish a work, it is sufficient if any of them is a national of an EEA state. No provision is made for the extension of the publication right so as to recognize equivalent rights for foreign publishers, where the country of publication provides reciprocal rights to publishers in the EEA.<sup>72</sup>

## 7 OPTIMAL TERM

There is now an extensive literature debating the optimal term of copyright protection.<sup>73</sup> The arguments divide, in the first place, over understandings of the very nature and purpose of copyright. An initial distinction can be drawn between the ‘natural rights’ thinkers and those who regard copyright as an ‘instrument’ by which to achieve specific policy aims.

Natural rights approaches can be divided into two types: ‘personality’-based thinking; and ‘labour’-based thinking. For those who see copyright as the legal reflection of the ‘natural right’ of an author to protect their ‘personality’, a term equivalent at the very least to the lifetime of the author seems appropriate.<sup>74</sup> This, after all, is the period for which the law of defamation protects the reputation of individuals. For those who see copyright as a natural right in the product of one’s labour, it is common to claim that the term of copyright should be indefinite.<sup>75</sup> Others counter that this may fail to recognize that works are rarely, if ever, the products of a single author and that there are important competing natural rights (for example to education).<sup>76</sup> Thus some who accept the argument that copyright law is justified as reflecting natural rights in the products of one’s labour nevertheless take the view that such protection is justified for only a limited period in time.

For those who view copyright as a legal device that gives effect to public policy, the optimal term depends on a number of matters. First is the starting point: is copyright an incentive to create (or to invest in creation) that is to be accepted only insofar as it is necessary to achieve those ends? Such a view might suggest a very short term, similar to that conferred by patent law, and certainly much shorter than those recognized at present by copyright. Or, alternatively, is private ownership of intellectual goods generally desirable as securing the optimal use of those goods, and the ‘public domain’ necessary only where the value of such goods is so low that the costs of transacting itself prevents the optimal use of such goods? Such a view might support a system of perpetual copyright, subject

<sup>69</sup> CDPA 1988, s. 8(1).

<sup>70</sup> For general analysis of concepts relevant to protecting foreign claims, see Chapter 4, section 5.

<sup>71</sup> Rel. Rights Regs, reg. 16(4). <sup>72</sup> Ibid.

<sup>73</sup> For an overview, see S. Ricketson, ‘The Copyright Term’ (1992) 23 *IIC* 753.

<sup>74</sup> In some countries, such as France, the moral rights of authors are perpetual, being exercised after the author’s death by heirs and by the state.

<sup>75</sup> This was the basis of much of the argument for perpetual copyright at common law.

<sup>76</sup> H. Breakey, ‘User’s Rights and the Public Domain’ (2010) 3 *IPQ* 312; H. Breakey, *Intellectual Liberty* (2012).

perhaps to requirements of registration<sup>77</sup> or compulsory licensing to ensure that transaction costs are kept to a minimum.

Second is the question of empirical evidence: what evidence is there that increasing term in fact increases the quantity of creative activity? What evidence is there as to the social costs associated with longer terms? Is the idea that intellectual goods will not be optimally exploited unless they are privately owned borne out by evidence as to the exploitation of public domain materials?

The arguments as to the effect of increasing term were extensively ventilated in the US literature surrounding the Supreme Court case of *Eldred et al. v. Ashcroft*.<sup>78</sup> One important point that was made was that no incentive to create is conferred by extending copyright protection for works that are already in existence.<sup>79</sup> Thus some alternative justification needs to be offered for any such legislative changes. Another important insight offered by economists was that increasing term will not necessarily increase incentives. This is because increasing term leads to potential payments in the distant future, and when a present value is calculated for such returns, it is likely to be much reduced. A sum of £10,000 received in 100 years' time is not worth £10,000 today: depending on how one does the calculation (in particular the 'discount rate'), it might be worth very little indeed. In fact, if the discount rate is 7 per cent, the present-day value of £10,000 in 100 years' time is a mere £12.<sup>80</sup> While present-day incentives might thus be minimal, considerable debate surrounds the social costs of increasing copyright term. Those campaigning for increased terms have often argued that the price of 'public domain' works does not differ from the price of copyright-protected works and thus that there are no real 'social costs'. In a remarkable study, however, Paul Heald has showed that copyright protection often simply means that protected works are unavailable.<sup>81</sup> Heald randomly sampled fiction works on Amazon, identifying the publication dates and from that determined their copyright status (in the United States). The evidence shows that copyright works tend to be unavailable from a short time after publication and that they only really become available again once copyright lapses. For example, he has found that more than twice as many new books originally published in the 1890s are for sale by Amazon than books from the 1950s, even though, in quantitative terms, far fewer books were published in the 1890s. This suggests that copyright protection has a considerable social cost, in that it impedes exploitation without offering returns to anyone.

Heald has also studied the counter claims that, in the absence of private ownership, intellectual goods will not be used 'optimally', but will also either be underexploited or overused. In one study, he compared works published between 1913 and 1922 (which fell into the public domain in the United States from 1988 to 1998—essentially meaning that they had a 75-year term) with those published between 1923 and 1932 (which will be in copyright until at least 2018).<sup>82</sup> The study shows that a higher proportion of the works in

<sup>77</sup> See W. Landes and R. Posner, 'Indefinitely Renewable Copyright' (2003) 70 *U Chi L Rev* 471. For a compelling critique, see M. Lemley, 'Ex Ante versus Ex Post Justifications for Intellectual Property' (2004) 71 *U Chi L Rev* 129.

<sup>78</sup> [2003] 123 S Ct 769 (in which the US Supreme Court, Stevens J and Breyer J dissenting, held Congress's extension of copyright for extant works to life plus 70 years to be constitutional).

<sup>79</sup> See especially the amicus brief from Akerlof et al., available online at <<https://cyber.law.harvard.edu/openlaw/eldredvashcroft/supct/amici/economists.pdf>>

<sup>80</sup> A standard way in which to calculate present value is  $FV \div (1 + DR)^n$ .

<sup>81</sup> P. Heald, 'How Copyright Keeps Works Disappeared' (2013) Illinois Public Law Research Paper No. 13-54, available online at <[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2290181](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2290181)>

the public domain were in print and that, while the average prices of works in and out of the public domain were the same, for a sample of the most-popular works, the price of the public domain editions was substantially lower. In a further study, Heald analysed the use of popular songs from the same period, 1913–32, in films.<sup>83</sup> This study confirmed the finding of the previous study that a work's status as a public domain work did not in fact lead to its 'underexploitation'; public domain songs were no less likely to be in a film than those that were still in copyright. These studies thus flatly contradict the empirical premise of the neoliberal arguments that perpetual copyright is desirable to avoid under-exploitation of works.

The question of optimal term will no doubt resurface before long. Indeed, the European Commission asks questions relating to the term of protection for film fixations in its 2013 Consultation.<sup>84</sup> The economic and empirical evidence, at the very least, suggests that further term extensions are unjustifiable.

## INFRINGEMENT

### CHAPTER CONTENTS

1 Introduction	189	3 Secondary Infringement	217
2 Primary Infringement	190		

### 1 INTRODUCTION

This chapter examines when copyright is infringed. We begin by discussing ‘primary’ infringement—that is, the activities of those involved in infringing the copyright owner’s exclusive rights (which we described in Chapter 6). We then discuss the statutory provisions that render accessories—whether before or after the act of primary infringement—liable for assisting in the making or distribution of infringing copies or the giving of infringing performances. These liabilities are referred to as ‘secondary infringements’.

Before examining ‘primary’ infringement in detail, it is worth observing that, while there has been a great deal of norm-setting in relation to the rights of the copyright owner, the question of what amounts to copyright infringement has not generally been the subject of international attention and has only recently been regarded as a matter that has been the subject of regional harmonization. The relevant tests for infringement have largely been developed locally and, for the most part, by the judiciary. Having acknowledged that British law on infringement has taken its own course, it is worth noting two recent developments. First, the rule that copyright does not protect ideas has found its way into both regional and international arrangements, and has been interpreted as establishing an outer limit to the scope of protection that any state may grant through copyright.<sup>1</sup> Second, regional harmonization initiatives seem to require that copyright infringement be found to occur where ‘any part’—as opposed to any ‘substantial part’—of a work is reproduced.<sup>2</sup> This second development is already transforming the fundamental principles by which infringement is analysed.<sup>3</sup> Students should anticipate that many of the propositions contained in this chapter will likely be subject to change over the next decades, as the Court of Justice elaborates further guidance on infringement of copyright under the various directives, in particular the Information Society Directive of 2001.

## 2 PRIMARY INFRINGEMENT

In an action for primary infringement, the onus falls upon the claimant to show on the balance of probabilities that:

- (i) the defendant carried out one of the activities that falls within the copyright owner's control;
- (ii) the defendant's work was *derived* from the copyright work (a 'causal connection'); and
- (iii) the restricted act was carried out in relation to the *work* or a *substantial part* thereof.<sup>4</sup>

### 2.1 RESTRICTED ACTIVITIES

The first question that needs to be asked in considering whether copyright in a work has been infringed is whether the defendant carried out one of the activities that falls within the copyright owner's rights. This topic was discussed in Chapter 6.

### 2.2 A 'CAUSAL CONNECTION'

The second matter that needs to be proved in order to establish infringement is that the defendant's work was *derived* from the claimant's work<sup>5</sup>—that is, it is necessary to show that there is a causal link between the work used (that is, reproduced, issued, rented, performed, communicated, or adapted) by the defendant and the copyright work. This means that, unlike patent law, copyright law does not protect a copyright owner against independent creation. It is important to note that it is not necessary for the defendant's work to be derived directly from the original of the work;<sup>6</sup> it is possible for a defendant to infringe where they base their work on a copy of the work. It is also important to note that it does not matter if the intermediate reproduction is itself a legitimate or a pirated copy.<sup>7</sup> This means, for example, that where a person photographs a three-dimensional object (such as sculpture), they may infringe the copyright in the drawings on which the sculpture was based, even though they have never seen those drawings.<sup>8</sup>

Whether a defendant's material was derived from a claimant's copyright work is a matter of fact, and it is for the claimant to persuade the tribunal that this has occurred.<sup>9</sup> In order to do so, the claimant may use different forms of evidence. First, and most convincing, is direct evidence that the defendant utilized the claimant's work in producing their own. For example, an ex-employee may be able to give evidence that they were asked by their employer to produce something similar to the claimant's work, or a third party may have witnessed the appropriation. Indeed, a defendant may, in some circumstances, admit that they drew upon the claimant's work.<sup>10</sup>

<sup>4</sup> CDPA 1988, s. 16(3).

<sup>5</sup> See, e.g., *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683 (failure to show a causal chain); *Sawkins v. Hyperion* [2005] 1 WLR 3281, 3288, [30]. As we saw at p. 149 above, the knowledge of the defendant is not important in determining whether an act of primary infringement has taken place, but see also pp. 159–60, above.

<sup>6</sup> CDPA 1988, s. 16(3)(b). <sup>7</sup> CDPA 1988, s. 16(3).

<sup>8</sup> *British Leyland v. Armstrong* [1986] AC 577 (production of replacement exhaust pipes for claimant's cars indirectly copied the claimant's original drawings). <sup>9</sup> *BBC v. Mitchell* [2011] EWPCC 42, [25].

<sup>10</sup> *SAS Institute v. World Programming* [2010] EWHC 1829 (Ch), [70], [2013] EWCA Civ 1482, [17].

However, such direct evidence is often unavailable. In these circumstances, the courts have sometimes been willing to infer derivation.<sup>11</sup> In order to persuade a court to infer copying, a claimant will typically rely on similarities between the works, coupled with evidence that the defendant had access and opportunity to copy the copyright work. A court is likely to accept that there is a causal connection between the two works if the similarities are very numerous, or so individual,<sup>12</sup> that the possibility of their having been independently conceived by the defendant is remote.<sup>13</sup> Even if the shared elements are less individual or numerous, an inference of derivation may be drawn where a claimant can positively demonstrate the defendant's familiarity with the copyright work.<sup>14</sup> Where such an inference of copying has been established by a claimant, the onus then shifts onto the defendant to prove that they created the work independently.<sup>15</sup> In order to do so, a defendant may claim that the similarities between the two works can be explained by factors other than copying. For example, a defendant may attempt to show that the similarities are attributable to the fact that the two works were inspired by the same source,<sup>16</sup> to the fact that both works were constrained by the functions that they perform,<sup>17</sup> or, less plausibly, to chance.<sup>18</sup> Such claims are likely to be undermined by evidence that the defendant has been engaged in similar acts of copying on previous occasions.

This process of inference can be well illustrated by the House of Lords' decision in *Designers Guild v. Russell Williams*.<sup>19</sup> The claimant had produced its fabric design, named 'Ixia', in 1994. The design was impressionistic in style, made up of roughly drawn pink and yellow stripes, with flowers scattered haphazardly across them (see Fig. 8.1).

The fabric was made available in shops from September 1995. A year later, the claimant discovered that the defendant was selling fabric with a design called 'Marguerite', also based on vertical stripes in alternating colours, with flowers and associated stalks and leaves scattered across the stripes (see Fig. 8.2).

There were, however, several differences between the two designs, and the defendant denied that 'Marguerite' had been copied from 'Ixia', asserting that its designer had developed it from her own 'Cherry Blossom' design. Nevertheless, Judge Lawrence Collins QC inferred from the evidence that 'Marguerite' in fact had been derived from 'Ixia',<sup>20</sup> a finding that the House of Lords approved. First, the judge found that there were seven similarities between the two designs:<sup>21</sup> both designs were based on stripes with scattered flowers; both were in an impressionistic style, showing brushwork; in

both, the stripes had rough edges; in both, the petals were executed in a similar way; in both, the stripes showed through some of the petals; in each, the flower heads comprised a ‘strong blob’; and in each, the leaves were in two shades of green. The judge concluded that these similarities went ‘far beyond the similarities which would be expected simply from both being based on an impressionistic style or from both being based on a combination of stripes and scattered flowers and leaves.’<sup>22</sup> Second, the judge found that the designer of ‘Marguerite’ had had an opportunity to copy ‘Ixia’, since she was at a trade fair in 1995 at which the ‘Ixia’ design was exhibited. Third, the judge rejected the defendant’s own account of how she came to produce the ‘Marguerite’ design, finding her story unconvincing. Consequently, he found that the defendant’s design was derived from the claimant’s.

*Designers Guild* can be contrasted with *Mitchell v. BBC*,<sup>23</sup> in which a claim that the defendant’s television cartoon had copied the claimant’s characters (as artistic works) was rejected. The claimant’s characters, named ‘The Bounce Bunch’, were a group of five student eco-rangers (see Fig. 8.3) The claimant had sent details to the defendant, who later produced its own cartoon characters, a group involved in a futuristic race, known as ‘Kerwhizz’ (see Fig. 8.4), which the claimant argued were so similar as to give rise to an inference of copying.

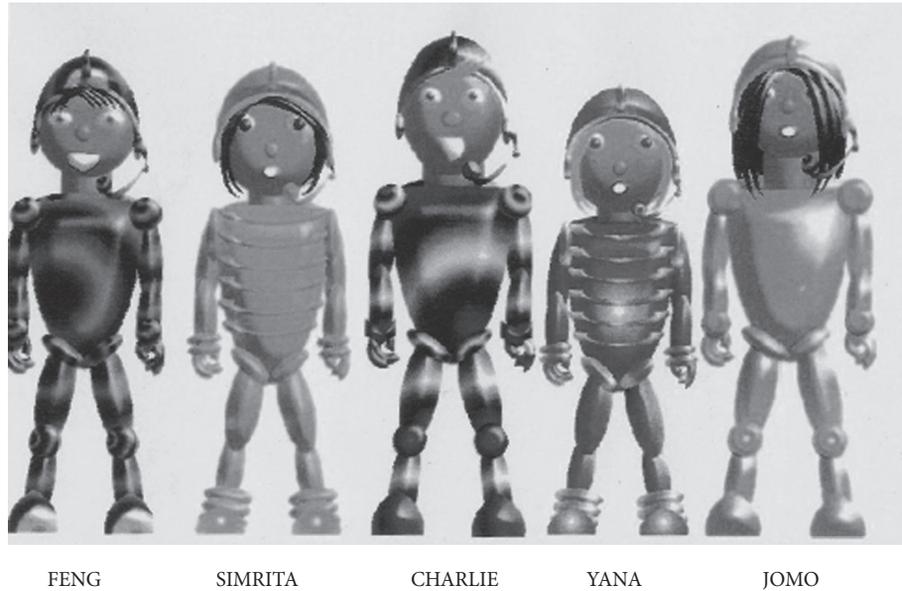

Judge Birss QC, sitting in what was then the Patents County Court (PCC), rejected the claim. Although he found that there were sufficient similarities between the characters—namely, the characters’ attire (a form of armour with helmets and microphones), the colour scheme used, and the characters’ ethnic mixture, as well as the blonde quiff of the blue character (Charlie/Twist)—to place the onus on the BBC to prove independent creation, the BBC was able to do so. Evidence from the creators of Kerwhizz established that they had begun work (in 2006) before The Bounce Bunch were accessible (they were on Mitchell’s website from 2007) and had already developed a series of characters that wore racing gear, with microphones attached to their helmets. While the design of some of the other features, such as chunky body armour and geometric shapes, had been added after ‘The Bounce Bunch’ was accessible, they were explained as having been inspired by shared sources—that is, Japanese anime and manga characters. The Court also heard evidence that made it highly unlikely that the design team for Kerwhizz had seen Mitchell’s proposal for The Bounce Bunch.

One factor that has been useful in proving derivation is the fact that the infringing work contains the same mistakes that occur in the original work. In these circumstances, it is assumed that the reason why the same mistakes appear in the two works is that they are copies of each other. If works involve low levels of innate individuality, in order to assist in the task of proving derivation, copyright owners sometimes place incorrect or meaningless information in their works. Where this incorrect or meaningless information appears in a defendant’s work, it is very difficult for them to argue that they created the work independently of the copyright work.<sup>24</sup>

In most cases, the process of copying will be a conscious act. In some cases, however, the courts have been willing to accept that the process of derivation may occur at a

<sup>22</sup> *Ibid.* <sup>23</sup> [2011] EWPC 42.

<sup>24</sup> *Waterlow Directories v. Reed Information* [1992] FSR 409; *Waterlow Publishers v. Rose* [1995] FSR 207.

**Fig. 8.4** Kerwhizz

Source: *Mitchell v. BBC* [2011] EWPC 42

subconscious level.<sup>25</sup> While a defendant may honestly not recall having seen or heard the copyright work, the courts seem open to the argument that the defendant subconsciously copied from the copyright work. This is particularly the case in relation to songs, where catchy—annoying even—tunes embed themselves in the subconscious. The acceptance of subconscious copying provides the courts with a way of reconciling the implausibility of independent creation with the conflicting evidence of a defendant who claims that

<sup>25</sup> *Francis Day v. Bron* [1963] Ch 587. According to Willmer LJ, at 614, to establish subconscious copying, it must be shown that the composer of the offending work was familiar with the work alleged to have been copied; cf. Upjohn LJ, at 621–2 (leaving undecided the issue of whether a different test applied for subconscious copying). In this case, there was not sufficient material from which such an inference could be drawn. See also *Sinanide v. La Maison Kosmeo* (1927) TLR 371; *John Richardson v. Flanders* [1993] FSR 497; *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 432.

they cannot remember having any contact with the work.<sup>26</sup> As with drawing inferences of deliberate copying, the court will consider the degree of familiarity that the defendant had with the claimant's work, the character of the work, and the degree of objective similarity between them.<sup>27</sup> However, it is worth noting that there is an important distinction between evidence that leads to a shift in the onus of proof and evidence that established a case of subconscious copying. As Judge Birss QC explained in *Mitchell v. BBC*,<sup>28</sup> while similarity combined with access may shift the onus of proof on to the defendant, the notion of subconscious copying is not concerned with the onus of proof, but depends 'on the evidence as a whole'. After all, the only way in which to rebut an inference of subconscious copying would be to demonstrate that it is impossible for the defendant to have ever come across the claimant's work, whether directly or indirectly. Consequently, the evidence that would be necessary to support an inference of subconscious copying is likely to be a good deal more substantial than the evidence needed simply to shift the onus onto a defendant in a copyright case. Even though, as noted above, Judge Birss found sufficient similarities between The Bounce Bunch (Fig. 8.3) and Kerwhizz (Fig. 8.4) to shift the onus onto the BBC, that was a long way from requiring a conclusion that there had been subconscious copying. Having found no evidence of familiarity on the part of the designers of Kerwhizz with The Bounce Bunch, that The Bounce Bunch characters were simple, generic, and unmemorable,<sup>29</sup> and that the similarities were at a rather abstract conceptual level that could readily be explained by reference to common influences, the judge concluded that the two sets of characters were a result of independent creative work and thus rejected the claim that there had been subconscious copying.

### 2.3 WHOLE WORK OR A (SUBSTANTIAL) PART THEREOF?

The third and final question that needs to be asked in an infringement action is whether the restricted act has been carried out in relation to the *work* or a *substantial part* thereof. Identical copying (that is, copying the totality of the claimant's work in an identical form—sometimes referred to as 'piracy') raises no analytical problems and thus, in the absence of an exception (on which, see Chapter 9), a finding of infringement follows inevitably. Copyright law, however, has long recognized that protection ought not to be limited to situations in which the defendant makes an exact copy of the work. One reason for this is that if copyright protection were limited to situations in which identical copies of the work are used, plagiarists would be able to escape infringement simply by making minor variations to the copied work.<sup>30</sup> Since 1911, UK copyright law has therefore provided protection not only where the whole work has been copied, but also where a defendant has used a substantial part of the protected aspects of the work.<sup>31</sup> In extending protection from identical copying to copying of 'any substantial part' of a work, the law enables a copyright owner to control situations in which a defendant takes *part of a work* (such as where half of a book is photocopied or a sample of a sound recording is copied) and those in which the defendant *changes the form of the work* (such as where a play is converted

<sup>26</sup> *Francis Day v. Bron* [1963] Ch 587, 619 per Upjohn LJ. The decision of Wilberforce J at first instance is called 'a wise judgment' by Mummery LJ in *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579, [122]. See also *Jones v. Tower Hamlets* [2001] RPC (23) 407, 432; *Elanco Products v. Mandops* [1980] RPC 213 (CA), 227.

<sup>27</sup> *Mitchell v. BBC* [2011] EWPC 42, [121]. <sup>28</sup> *Ibid.*, [39]. <sup>29</sup> *Ibid.*, [126], [143]–[146].

<sup>30</sup> As should be clear, the circumstances in which someone infringes copyright are different from the circumstances in which someone might be regarded as a 'plagiarist'. For discussions of the distinction, see I. Alexander, 'Inspiration or Infringement: The Plagiarist in Court', in L. Bently, J. Davis, and J. Ginsburg (eds), *Copyright and Piracy: an Interdisciplinary Critique* (2010).

<sup>31</sup> CDPA 1988, s. 16(3).

**Table 8.1** How UK and EU law govern the definition of partial copying

	Authorial works	Computer Programs	Databases	Sound recordings	Films (fixations)	Broadcasts	Typographical Arrangements

Distribution							N/A
Communication							N/A
Performance	UK substantial part test				N/A	N/A	N/A
Adaptation				N/A	N/A	N/A	N/A

into a film).<sup>32</sup> This move from protecting only against identical copying to also protecting partial copies or copies of the substance of a work has inevitably required the courts to make difficult value judgments.

It is in relation to the question of partial (and non-literal) copying that we face difficult questions as to the state of British law in the light of European harmonization (see Table 8.1). In particular, it has become clear that there is now a European test for assessing infringement of the reproduction right for authorial works protected under the Information Society Directive: the question is whether the defendant has reproduced ‘a part’ of the work. There are, as yet, only a few cases applying the latter standard, which may—or may not—turn out to produce different results from those that would arise under the British test. At present, it appears that some of the flexibility—some might say incoherence—inherent in the British approach may have been lost. In order to understand the current state of affairs, we deal initially with cases in which there has been an act in relation to a discrete part of the protected work (as opposed to the situation in which there has been ‘non-literal copying’).<sup>33</sup> In relation to acts in relation to discrete parts, we consider in turn:

- (i) the British position in relation to what counts as a substantial taking of a literary, dramatic, musical, or artistic works (which remains relevant at the very least to the unharmonized right of public performance and adaptation);<sup>34</sup>
- (ii) the European law as to what counts as ‘a part’ of an authorial work; and
- (iii) what counts as a substantial part of a film, sound recording, broadcast, or typographical arrangement.

There is as yet no case law on what amounts to reproduction of a ‘part’ of the subject matter of related rights (sound recordings, fixation of films, or broadcasts).

### 2.3.1 The ‘British’ approach

The ‘British’ approach (by which we mean the approach that had been developed prior to harmonization) was set out by Lord Millett in *Designers Guild*:

Once the judge has found that the defendants’ design incorporates features taken from the copyright work, the question is whether what has been taken constitutes all or a

<sup>32</sup> These two situations are sometimes referred to as cases of ‘literal copying’ and ‘altered copying’. See, e.g., *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 per Lord Scott.

<sup>33</sup> This is an artificial distinction, because rarely will there be cases of pure partial copying or non-literal copying; most cases involve taking some literal fragments and some aspects of structure, organization, plot, theme or idea. Nevertheless, the structure of EU law may imply such a distinction, and it will make the text relatively manageable.

<sup>34</sup> J. Griffiths, ‘Dematerialization, Pragmatism and the European Copyright Revolution’ (2013) 33(4) *OJLS* 767, 784 (‘part’ test in Info. Soc. Dir., Art. 2, applies also to Arts 3 and 4).

substantial part of the copyright work. This is a matter of impression, for whether the part taken is substantial must be determined by its quality rather than its quantity. It depends upon its importance to the copyright work. It does not depend upon its importance to the defendants' work . . . The pirated part is considered on its own . . . and its importance to the copyright work assessed. There is no need to look at the infringing work for this purpose.<sup>35</sup>

In principle, in order to answer this question, it is necessary to ask two subsidiary questions, as follows.

- (i) What is the claimant's work?
- (ii) Has the defendant utilized the whole of the claimant's work or a substantial part thereof?

*(i) What is the work for the purposes of infringement?*

Logically, the first task that arises when determining whether the defendant has utilized the whole or a substantial part of the copyright work is ascertaining the limits of the copyright work. To determine what the work is, it is necessary first to determine the parameters of the work and then to distinguish the protected from non-protected elements of the work. We will deal with each of these in turn.<sup>36</sup>

*(a) The parameters of the work* In many situations, the parameters of the work will not be in dispute. However, where a work is divisible into smaller elements, the question may arise as to whether the 'parts' should be treated as separate and distinct works. If we take the case of a book, for example, while it is clear that the book as a whole is a copyright work, what of the chapters, pages, paragraphs, sentences, or words that are included in the book? The decision as to the size of the copyright work may have an important bearing on the outcome of an infringement action. The reason for this is that the question of whether something is 'the whole or a substantial part' of something else depends on what it is being judged against. In this case, that something else is the copyright work.

The question of how the parameters of the work are to be determined was considered by Judge Laddie QC in *Hyperion Records v. Warner Music*.<sup>37</sup> This was an application for summary judgment brought by Hyperion Records, which owned copyright in a sound recording of the medieval chant, 'O Eucharisti'. The chant, which was 5 minutes 18 seconds long, appeared on the album *A Feather on the Breath of God*. Hyperion Records alleged that its copyright had been infringed when the electro-pop band, The Beloved, copied (or sampled) eight notes from 'O Eucharisti' and incorporated them into its record 'Happiness'.

While it was clear that the song 'O Eucharisti' was a work, Hyperion Records argued that the eight notes sampled by The Beloved also formed a distinct copyright work in their own right. If this were accepted, it would clearly have been an infringement, because 100 per cent of the 'work' would have been taken. Judge Laddie QC rejected the argument, saying: 'I do not accept that all copyright works can be considered as a package of copyright

<sup>35</sup> *Designers Guild v. Williams* [2000] 1 WLR 2426, 2426.

<sup>36</sup> The task of identifying the work is made easier because the claimants will specify in their statement of case the parameters of the work, as well as the parts of the work that they believe have been infringed. While not definitive, this provides a useful starting point for demarcating the scope of the work.

<sup>37</sup> (1991, unreported). See also *IPC Media Ltd v. Highbury-Leisure Publishing Ltd* [2005] EWHC 2985 (Ch), [2005] FSR (20) 434, [22] per Laddie J (copyright is not a legal millefeuille with layers of different artistic copyrights); *Spelling Goldberg Productions v. BPC Publishing* [1981] RPC 283 (Buckley LJ); *Merchandising Corporation v. Harpbond* [1983] FSR 32, 39; *Coffey v. Warner/Chappell* [2005] FSR (34) 747.

works, consisting of the copyright in the whole and an infinite number of subdivisions of it.<sup>38</sup> He added that ‘if the copyright owner is entitled to redefine his copyright work so as to match the size of the alleged infringement, there would never be a requirement for substantiality’.<sup>39</sup> More specifically, Judge Laddie did not accept that it was legitimate ‘to arbitrarily cut out of a large work that portion which has been allegedly copied and then to call that the copyright work’.<sup>40</sup> The eight notes sampled by *The Beloved* were not a work in their own right, because a work has a discrete, natural, or non-artificial shape. Thus a day’s footage on a film that is ‘a discrete product of the film-maker’s art’ may be treated as a distinct work. Presumably, the results of a recording session, as distinct from the final product, would also attract separate copyright protection.

Judge Laddie’s judgment provides us with some useful assistance in undertaking the (much neglected) task of defining the parameters of the work. In addition to focusing on whether a particular item can be seen as ‘natural’ or ‘non-artificial’, it seems that other relevant considerations would include the intention of the creator, the level of interdependence or independence of the units concerned, and the commercial form in which the work is to be published or made available. Given that one consequence of recognizing small units as discrete copyright works is potentially to increase the level of protection, a useful starting point should be that, where a work has been published, the form in which the work is first issued is presumed to determine the parameters of the work.

(b) *Distinguishing the protected parts from the non-protected parts* Once the ‘work’ has been identified, the question arises as to whether what aspects of the work are protected. In most cases, there will be certain parts of a work that are not protected (which form part of what is sometimes called the ‘public domain’). When deciding whether a copyright work has been infringed, copyright law is concerned only with the protected parts of the work—that is, those that are original.<sup>41</sup>

A person will infringe only if they appropriate a part of the work that is original.<sup>42</sup> This means that the copying of an unoriginal part of the work is not an infringement.<sup>43</sup> As an example, we might consider the situation if a person were to compile a list of the names of Arsenal supporters living in Australia. If the originality of the compilation were to lie in the way in which the information was arranged, third parties would not be able to make use of that arrangement. They would, however, be able to make use of the information (if, for example, they were to scramble the list). Alternatively, if the originality of the compilation were to stem from the selection of the material (but not its arrangement), third parties would not be able to make use of the information (although they would not be prevented from independently compiling the list themselves).

A great deal of care needs to be taken when distinguishing between original and non-original aspects of a work. Although, in some situations, the work as a whole can be

<sup>38</sup> *Hyperion Records v. Warner Music* (1991, unreported). <sup>39</sup> *Ibid.*

<sup>40</sup> *Ibid.* It is not always in the copyright owner’s interests to define the work in this way. Where a defendant has taken small helpings from a number of separate publications, there may be benefits from asserting that the separate publications were, in fact, one. See, e.g., *PCR v. Dow Jones Telerate* [1998] FSR 170, 183; *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401.

<sup>41</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 per Lord Pearce; *Warwick Film v. Eisenger* [1969] 1 Ch 508.

<sup>42</sup> *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 per Lord Scott; *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131; *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>43</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 per Lord Pearce; *Bowater Windows Ltd v. Aspen Windows Ltd* [1999] FSR 759, 781–2.

dissected and non-original aspects ignored for the purposes of the infringement analysis, such ‘dissection’ carries with it a potential danger. This danger arises from the fact that originality can be provided not merely from labour and skill (or, in European parlance, the ‘creative choices’) in the creation of new, original, material, but also from the collation or collection of existing, non-original, material. A process of dissection can cause a tribunal to overlook the creativity involved in such collation or arrangement. In other words, dissection may cause a tribunal to treat the whole incorrectly as merely the sum of its parts. However, if a defendant takes a number of elements from the claimant’s work, each of which might individually be non-original, there may well nevertheless be a taking of a substantial part of the labour and skill (or intellectual creativity) involved in collating the material.<sup>44</sup>

(ii) *Has the defendant taken the whole or a substantial part of the copyright work?*

Once the protected elements of the work have been identified, it is then possible to consider what the defendant has taken from the copyright work and to ask whether the defendant has used the whole or a substantial part of the claimant’s work.<sup>45</sup>

The term ‘substantial’ is one with a ‘wide range of meanings’ and the courts have preferred those at the lower end of the range.<sup>46</sup> This is not the place for a historical review of the case law, but it can be said that there has been a discernible shift towards allowing a copyright owner to control ever-smaller uses and reuses of their works. In the not-too-distant past, the courts often took the view that a person would infringe only where the part taken was an essential, vital, or important part of the work.<sup>47</sup> In recent years, however, tribunals have been willing to find infringement as long as the defendant’s use is not of an ‘insignificant’ part or *de minimis*.<sup>48</sup>

Although the answer to the question of whether a restricted act has been carried out in relation to a ‘substantial part’ of a work always depends on the facts of the case, in essence the fate of a defendant depends on the relative *importance* of the part that is taken.<sup>49</sup>

It is for the court to decide whether the part taken is important.<sup>50</sup> Although the focus of the tribunal should be on whether the part taken was important to the copyright work, in reaching a determination a court will inevitably be influenced by the surrounding circumstances, including: the way in which the claimant’s work was created; the nature of the work, for example whether it is a work of information or fiction; the relationship between the parties, in particular whether they are in competition; the conduct of the parties, in particular whether the defendant has copied merely to save itself effort; the

<sup>45</sup> *Designers’ Guild v. Williams* [2000] 1 WLR 2416, 2425 *per* Lord Millett.

<sup>46</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 *per* Peter Gibson LJ, 286–7 *per* Mance LJ.

<sup>47</sup> *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593, 606 *per* Slesser LJ (defendant’s broadcast of part of the claimant’s song, while not prolonged, was held to be ‘a substantial, vital and essential part’).

<sup>48</sup> *Designers’ Guild v. Williams* [2000] 1 WLR 2416, 2418 *per* Lord Bingham. See also *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 *per* Peter Gibson LJ, 287 *per* Mance LJ.

<sup>49</sup> *Sillitoe v. McGraw-Hill Book Co. (UK)* [1983] FSR 545, 549–50; *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593 (CA), 605–6.

<sup>50</sup> In cases involving technical or esoteric subject matter, the court might rely on expert evidence from computer programmers, musicologists, choreographers, and other specialists as to the relative importance of the part: *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 302; *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95; *The Newspaper Licensing Agency v. Marks and Spencer plc* [2003] AC 551, [21].

reason why the part was taken, for example whether it has been used for the purposes of parody; and whether the use is degrading.<sup>51</sup>

(a) *Importance to claimant's work* The importance of the part taken is judged in terms of its importance to the copyright work and not the defendant's work.<sup>52</sup> The reason for this is that the test imposed by the statute is whether the part used by the defendant is a substantial part of the *claimant's* copyright work, not whether it is a substantial part of the *defendant's* work.<sup>53</sup> This has two consequences. First, it means that it does not matter that the part taken forms an unimportant part of the defendant's work, nor that the defendant has expended considerable labour, skill, and effort themselves. The contributions of the defendant in transforming a copyright work have been regarded as largely irrelevant, the courts preferring merely to attend to what the defendant has taken. Translations and abridgements, however valuable, have for more than a century been regarded as infringements.<sup>54</sup> Equally, in the case of copying elements of an artistic work (as with that of 'Ixia' by 'Marguerite' in *Designer's Guild*<sup>55</sup>—see Figs 8.1 and 8.2), it is a matter of no relevance to a finding of substantial taking that the defendant's work gives off an overall different impression from that of the claimant. For the same reason, (most) parodic uses of copyright works are regarded as infringements, irrespective of the parodist's skill or the social value accorded to parody.<sup>56</sup> The second consequence of focusing on whether the part is important to the claimant's work is that if it is not, then, in principle, it does not matter whether the part is used repeatedly in the defendant's work (as often happens with the digital sampling of musical works).

(b) *Substantiality: a qualitative criterion* While the use of the term 'substantial' suggests that importance should be judged in terms of the amount taken, the inquiry is as much concerned with the *quality* as the *quantity* of the part taken.<sup>57</sup> Indeed, in two recent decisions, Lord Hoffmann went further, saying that the question of substantiality is a matter of quality *rather than* quantity.<sup>58</sup> So long as a part is qualitatively an important part of the work as a whole, even a very small part of a work may be a substantial part.

(c) *Assessing quality* To say that the issue is one of quality leaves open how quality is to be determined. In *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc*, Lord Hoffmann provided some guidance when he stated that the qualitatively important parts of a work were to be identified 'by reference to the reason why the work is given

<sup>51</sup> But note the emphatic statements of Lloyd LJ in *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579, 620, [95], [97], that the intention of the copier is 'irrelevant as a matter of law' and 'a red herring in modern English copyright law that . . . should not be invoked in the future'.

Sunday Pictorial Newspapers* [1960] 2 QB 60 (both suggesting that the defendant's effort is relevant, and if sufficient, parodies are non-infringing). On the efforts to add a new fair dealing defence for parody, see pp. 241–4.

<sup>57</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 276 per Lord Reid, 283 per Lord Evershed (not only physical amount, but also substantial significance).

<sup>58</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559, [19]; *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422, 2426 per Lord Millett; *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 288 per Lord Hodson; *L. B. (Plastics) v. Swish Products* [1979] FSR 145, 152 per Lord Wilberforce, 159 per Lord Hailsham.

copyright protection'.<sup>59</sup> He explained that, in the case of literary copyright, copyright is conferred (irrespective of literary merit) upon an original literary work, and it followed that the quality relevant for the purposes of substantiality is the 'literary originality' of that which has been copied.<sup>60</sup> In the case of an artistic work, Lord Hoffmann said, it is the 'artistic originality' of that which has been copied—which primarily relates to the visual significance of what has been copied.<sup>61</sup> However, it is not always easy to determine exactly which types of labour and skill are 'relevant'. This is because each category of works accommodates a whole variety of different genres—'literary works' include not only novels and poems, but also databases and computer programs; 'artistic works' include realist and abstract paintings and drawings, as well as engineering drawings and maps, and so on—and in turn there is potentially a wide variety of types of relevant skill and labour.<sup>62</sup>

(d) *Importance to audience* It is sometimes said that the importance of the part is judged from the point of view of the person to whom the work is addressed.<sup>63</sup> For example, in dealing with an infringement action brought in 1934 in relation to the copying of 28 bars from the well-known military march 'Colonel Bogey', the Court of Appeal concluded that the part was substantial because anyone hearing the part taken would recognize it.<sup>64</sup> It was also the part by which the march was chiefly known and the cause of its popularity.

This approach to the determination of the importance of a part may be misleading because the audience to whom the work is addressed might be interested in parts of the works that involve little *relevant* labour, skill, or investment. The key inquiry is that stated by Lord Hoffmann: the importance of a part of a work is to be judged in terms of criteria that are relevant to the type of work in question. In contrast, the mere fact that part of a work becomes commercially significant or that there is a market for it should not matter when deciding whether the part is substantial.

(e) *Functional importance* A similar difficulty has arisen in relation to determining the importance of parts of functional works. Here, the courts have held that while a part may be important to the functioning of the work, if it is not also significant in terms of the originality of the work, it will not be substantial.<sup>65</sup> The issue has arisen where a small part of a computer program is copied. Although the program will not function, or will not function properly, without the part,<sup>66</sup> this does not mean that every part, however small, should be treated as a 'substantial part' of the program.<sup>67</sup>

<sup>59</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559. Ascertaining parliamentary intention was relatively easy in relation to 'typographical arrangements', but may be less easy in relation to other works.

<sup>60</sup> At times, the courts come dangerously close to analysing quality in aesthetic terms and thus breaching the principle of 'non-discrimination', which they attempt to apply in the context of determining substance: cf. *Chappell v. D.C. Thompson* [1928–35] MacG CC 467 with *Kipling v. Genatosan* [1917–23] MacG CC 203.

<sup>61</sup> *Billhöfer Maschinenfabrik v. T. H. Dixon & Co.* [1990] FSR 105 (Hoffmann J).

<sup>62</sup> *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579. [145] per Mummery LJ.

<sup>63</sup> *Billhöfer Maschinenfabrik v. T. H. Dixon & Co.* [1990] FSR 105; *Francis Day & Hunter v. Bron* [1963] Ch 587, 623.

<sup>64</sup> *Hawkes & Sons v. Paramount Film Service* (1934) 1 Ch D 593 (CA), 609; *King Features v. Kleeman* [1941] AC 417.

<sup>66</sup> *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 130; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>67</sup> *Ibid.*; *Electronic Techniques Anglia v. Critchley Components* [1997] FSR 401; cf. *Data Access Corp. v. Powerflex Services* (1999) 45 IPR 353 (HCA), citing with approval *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95.

(f) *The part must itself be capable of being protected* In some cases, the courts have suggested that a part will not be substantial if the amount that is taken would not itself attract copyright.<sup>68</sup> This can be seen in *Francis Day & Hunter v. 20th Century Fox*,<sup>69</sup> in which the owners of copyright in the song ‘The Man Who Broke the Bank at Monte Carlo’ brought an infringement action against a person who made a film of the same name. In response, Lord Wright said that the ‘copying which is complained of is the use of the title, and that is too unsubstantial on the facts of this case to constitute infringement.’<sup>70</sup> In other words, Lord Wright thought that there was no copyright in the title by itself. A similar approach was adopted in the parody case of *Williamson Music v. Pearson*,<sup>71</sup> in which the only parts left in the defendant’s parody of the claimant’s song ‘There is Nothin’ Like a Dame’ were the words ‘we got’, which were repeated several times. Judge Baker QC held that the words were not a substantial part of the copyright work, noting that ‘in themselves the words would not be copyright as a literary work.’<sup>72</sup>

(g) *Repeated takings* In certain situations, the question has arisen as to whether the taking of an insubstantial part of the copyright work over a period of time amounts to the taking of a substantial part of the work. This question arises in two situations. The first is where a defendant regularly takes insubstantial amounts from a *single copyright work*. For example, while students might not infringe the copyright in a 300-page textbook if they were to copy five pages, what if, over the course of an afternoon, the same student were to go a photocopier 20 times and photocopy a different five-page section each time? While the copying of five pages may not amount to an infringement, what of the copying of 100 pages? The second scenario is where copyright works are created regularly and the defendant consistently takes insubstantial amounts from different works. For example, would it be an infringement for an evening newspaper to reproduce regularly an insubstantial amount taken from daily financial reports of foreign markets that appeared in a morning paper?

As regards the first situation—that is, where a defendant regularly takes insubstantial amounts from a *single copyright work*—the court in principle must decide whether there are a number of takings or only one: a person will infringe if the acts can reasonably be seen as a single act and the cumulative taking is ‘substantial’.<sup>73</sup> Relevant factors would presumably include whether the taking were used for the same purpose and the time frame within which the activities took place. Beyond those limited situations in which a series of acts could be interpreted as a single act, it seems that the courts recognize a broader doctrine of ‘repeated systematic copying from the same work’. Although Laddie J had observed that ‘the concept of infringement by taking small and regular amounts was problematical’,<sup>74</sup> the Court of Appeal in *Newspaper Licensing Agency (NLA) v. Marks & Spencer plc* stated that such systematic copying could be infringement.<sup>75</sup> (The issue was not discussed in the House of Lords.) The Court of Appeal found support for its view from a case in which a defendant was held to infringe copyright in the fixture lists for the football season, because it had copied

<sup>68</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 per Lord Pearce; *Designers Guild v. Williams* [2000] 1 WLR 2416, 2423 per Lord Hoffmann; *Merchandising Corp. v. Harpbond* [1983] FSR 32, 47; *IPC Media Ltd v. Highbury Leisure* [2005] FSR (20) 431, 443–4, [12]–[13]. <sup>69</sup> [1940] AC 112.

<sup>70</sup> *Ibid.*, 123–4. <sup>71</sup> [1987] FSR 97. <sup>72</sup> *Ibid.*, 107.

<sup>73</sup> *Electronic Techniques Anglia v. Critchley Components* [1997] FSR 401, 410. See further *Infopaq International A/S v. Danske Dagblades Forening*, Case C-5/08, [2009] ECR I–6569 (ECJ, Fourth Chamber), [49] (assuming that multiple searches of digitized version of daily paper, each followed by reproduction of an 11-word extract, might cumulatively infringe). <sup>74</sup> *Ibid.*

<sup>75</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 269, [33] per Peter Gibson LJ. See also *ibid.*, 288–9, [108] per Mance LJ.

a part of the list every two weeks.<sup>76</sup> Nevertheless, the comments in *NLA* were obiter and the Court gave no indication as to when (or why) copying would be treated as ‘systematic’.<sup>77</sup>

In contrast, where there is repeated copying of insubstantial parts from a series of the claimant’s works, there can be no finding of infringement (despite certain nineteenth-century cases to the contrary).<sup>78</sup> Dismissing those authorities on the basis of the different statutory terms, Peter Gibson LJ said: ‘I do not understand how in logic what is an insubstantial part of a work can when aggregated to another insubstantial part of another work become a substantial part of the combined work.’<sup>79</sup> Here, the only issue is whether, in each case, the claimant can show some use of a substantial part of the individual works.<sup>80</sup>

(iii) *Judicial and practical responses to the complicated inquiry*

Having set out a structured approach suited to a rigorous analysis of copyright infringement, we should conclude our discussion of the British approach to identifying whether a ‘substantial part’ has been taken by observing that courts have not always been as rigorous or structured in their analyses as we suggest is necessary in the preceding account. In most cases, in fact, the court has not examined carefully the nature of the claimant’s work, instead taking for granted the boundaries of the work and that the work as a whole is protected. In these cases, the courts have often gone straight to the issue of substantiality of the taking.<sup>81</sup> In yet other cases, the court has avoided examining the substantiality issue with any rigour. In some such cases, the courts deployed the ‘rough practical test’ that ‘what is worth copying is worth protecting’.<sup>82</sup> This might be thought to be justified where there is an indication that the defendant has deliberately copied, from which the court can at least draw an inference that the defendant regarded the material that they had appropriated as ‘worth taking’ and therefore as embodying original skill and labour.<sup>83</sup> In other circumstances, in particular where the issue of derivation has been determined through a process of inference from multiple similarities between the defendant’s material and the claimant’s work, the courts have sometimes indicated that further inquiry is superfluous.<sup>84</sup>

<sup>76</sup> *Football League Ltd v. Littlewoods Pools Ltd* [1959] Ch 637 (whether such fixture lists would now be protected by copyright depends upon whether, as a result of the selection or arrangement, they could be said to be their author’s own intellectual creation).

<sup>77</sup> Indeed, the fixture list case could have been an example of a single act, given that there was a preconceived course of action.

<sup>78</sup> *Cate v. Devon Constitutional Newspaper* (1889) 40 Ch D 500; *Trade Auxiliary v. Middlesborough* (1889) 40 Ch D 425. There is a possibility of infringing *sui generis* database right: see Chapter 13.

<sup>83</sup> For criticism, see *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 289; *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131 *per* Pumfrey J (test ‘proves too much’).

<sup>84</sup> This was the view of the majority of the House of Lords in *Designers Guild v. Williams* [2000] 1 WLR 2416, 2418 *per* Lord Bingham, 2426 *per* Lord Millett, 2435 *per* Lord Scott. But cf. *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579 (an inference of copying was drawn, but this was held not to be substantial) and *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 599, [26].

### 2.3.2 The European approach to authorial works

Article 4(1)(a) of the Software Directive,<sup>85</sup> Article 5(a) of the Database Directive,<sup>86</sup> and Article 2 of the Information Society Directive<sup>87</sup> all confer on the owners of copyright in computer programs, databases, and authorial works generally a right to control the reproduction of the work in whole or ‘in part’. Although the reference to ‘part’ appears only in the context of reproduction, it is inconceivable that a parallel criterion would not be applicable to other rights that are harmonized under European law (on which, see Chapter 6). The Court of Justice regards the question of what counts as a ‘part’ as a matter of European law.

In *Infopaq International A/S v. Danske Dagblades Forening*,<sup>88</sup> the Court was responding to a reference from Denmark in relation to a ‘press clippings service’, which informed subscribers when certain specified search terms appeared in the daily newspapers. Infopaq, which provided the service, would scan the papers into TIFF form, subject the digital version to optical character reading, and then execute searches. The searches would reproduce the search term and the five words either side of it. One of the questions referred to the Court was whether such segments amounted to reproduction ‘in part’ for the purposes of Article 2 of the Information Society Directive. The Court reasoned that, to understand the scope of protection, it was necessary to understand the subject matter. Noting that Article 2(a) protected ‘works’, the Court asserted (on the basis of various provisions in directives and the Berne Convention) that this referred to ‘intellectual creations’. The Court noted that there was nothing in the *acquis* that suggested that ‘parts are to be treated any differently from the work as a whole’, and concluded from this that parts ‘are protected by copyright since, as such, they share the originality of the whole work’.<sup>89</sup> The Court added that ‘the various parts of a work . . . enjoy protection . . . provided that they contain elements which are the expression of the intellectual creation of the author of the work’.<sup>90</sup>

The test established by the Court is not a model of clarity. In particular, the Court first talks about parts ‘sharing’ the originality of the whole—a standard that might be taken to imply that anything but a *de minimis* component of a work is protected. However, the Court goes on to indicate that a fragment of a work will be a protected ‘part’ only if that fragment itself contains elements that are themselves original. The latter understanding of the judgment seems preferable: if the fragment reproduced itself would be protected as original (in the European sense), then it is to be treated as a ‘part’ of the work that was reproduced.<sup>91</sup>

The approach in *Infopaq* has been followed by the High Court and the Court of Appeal in the United Kingdom, and by the Court of Justice (Grand Chamber). In *SAS Institute Inc v. World Programming Ltd (WPL)*,<sup>92</sup> Arnold J treated the question of whether parts of SAS’s computer manuals (literary works) reproduced by WPL were ‘substantial’ as requiring analysis of whether the sections that were reproduced were original.<sup>93</sup> On appeal, Lewison LJ observed:

In *Infopaq* the court said that parts of a work are entitled to the same protection as the work as a whole. But the parts in question must ‘contain elements which are the

<sup>85</sup> Software Dir., Art. 4(1)(a) (‘in part or in whole’).

<sup>86</sup> Database Dir., Art. 5(a) (‘in whole or in part’).

<sup>87</sup> Info. Soc. Dir., Art. 2 (‘in whole or in part’), Recital 21.

<sup>88</sup> Case C-5/08 [2009] ECR I-6569 (ECJ, Fourth Chamber).

<sup>89</sup> *Ibid.*, [38]; *Nintendo Co Ltd v. PC Box Srl*, Case C-355/12 (23 January 2014) (ECJ, Fourth Chamber), [22].

<sup>90</sup> *Infopaq International A/S v. Danske Dagblades Forening*, Case C-5/08 [2009] ECR I-6569, [39].

<sup>91</sup> See *ibid.*, [49] (perhaps suggesting that it is only in the case of ‘lengthy fragments’ that a finding of infringement would be routine).

<sup>92</sup> [2010] EWHC 1829 (Ch), [244], [263] *per* Arnold J.

<sup>93</sup> *SAS Institute v. World Programming Ltd* [2010] EWHC 1829 (Ch), [243], [244], [263] *per* Arnold J.

expression of the intellectual creation of the author of the work': [39]. This is now the test for determining whether a restricted act has been done in relation to a substantial part of a work.<sup>94</sup>

In *Newspaper Licensing Association v. Meltwater & PRCA*,<sup>95</sup> the Court of Appeal applied the *Infopaq* test and held that the defendant's news-alert system, which forwarded links to web pages containing news stories relating to particular, preselected search terms, and a 256-character excerpt (which included the title) from the story, would from time to time amount to reproduction of a substantial part of the news article (a literary work). It would do so where what was reproduced was the author's own intellectual creation. In *Football Association Premier League v. QC Leisure*,<sup>96</sup> the Court of Justice (Grand Chamber) held that there would be infringement of copyright works contained in films where the amount held simultaneously in the 'buffer' system of the decoder or on the screen amounted to 'the author's own intellectual creation'.

(i) *Differences from the British approach*

The *Infopaq* approach involves a quite different logic or approach to the question of what counts as infringement from that which formerly occurred in the United Kingdom. Two important dimensions are worth noting. First, in contrast to an approach that looks at whether the part taken comprises a substantial part of the protected work and thus requires some consideration of the parameters of the protected work, the *Infopaq* approach merely asks whether what is taken is itself original. *Infopaq* thus avoids a lot of difficult questions about the parameters of the work. Jonathan Griffiths refers to this as the 'dematerialization' of copyright.<sup>97</sup>

Second, while the originality of the part taken is a necessary requirement for a finding of infringement under UK law, it has not been regarded as the only consideration. Rather, under the British approach, a component was regarded as 'substantial' only if it was sufficiently important (from a qualitative viewpoint). The reproduction from a newspaper article of the phrase 'a forthcoming sale of the telecommunications group TDC which is expected to be bought' would be treated as substantial under current UK jurisprudence only if it were thought to be an 'important' part of the literary labour, skill, and judgment involved in creating the article. The shift to the test in *Infopaq* thus represents an expansion in the scope of protection.<sup>98</sup>

Having said this, the British approach was evolving quite rapidly in the last decades of the twentieth century. As we noted above,<sup>99</sup> there had been a discernible shift towards allowing a copyright owner to control ever-smaller uses and reuses of their works. In the 1980s, it was still arguable that 'substantiality' was a criterion that would enable third parties to make 'fair use' of a work. However, authorities such as *Designer's Guild* supported a view that the threshold would only exempt a use of an 'insignificant' part or *de minimis* part.<sup>100</sup> Moreover, Lord Hoffmann's speech in *Newspaper Licensing Agency Ltd v. Marks*

<sup>94</sup> [2013] EWCA Civ 1482, [38]. The broad terms of Lewison LJ's pronouncement may suggest that the English courts will apply the new European test even to parts of British law that have not been harmonized. One way in which to do so would be to highlight the similarities between the *Infopaq* test and that recognized by Lord Hoffmann in *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551.

<sup>95</sup> [2011] EWCA Civ 890, [24]–[28] per Chancellor Andrew Morritt.

<sup>96</sup> Case C-403/08 [2011] ECR I-9083 (ECJ, Grand Chamber), [156]–[159].

<sup>97</sup> J. Griffiths, 'Dematerialization, Pragmatism and the European Copyright Revolution' (2013) 33(4) *OJLS* 767, esp. 784ff.

<sup>98</sup> *Ibid.*, 788–90 (predicting judicial, or possibly legislative, responses).

<sup>99</sup> See p. 199.

<sup>100</sup> *Designers Guild v. Williams* [2000] 1 *WLR* 2416, 2418 per Lord Bingham. See also *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] *Ch* 257, 268, 287.

and *Spencer plc* offered up a similarly restrictive logic: copyright would be infringed by any use of a part that was qualitatively ‘substantial’, in the sense that it reproduced protected ‘labour, skill, and judgment’ of the author.<sup>101</sup> In so doing, he steered British law towards an understanding of ‘substantiality’ based on a logic that is close to that deployed by the Court of Justice in *Infopaq*.<sup>102</sup>

Although the *Infopaq* test is not without its attractions, it should be recognized too that it is a substantial expansion in the protective scope of copyright. Consequently, it is more important than ever for policymakers in this field to ensure that appropriate flexibility for users is provided by way of exceptions (discussed in Chapter 9).

### 2.3.3 Entrepreneurial works and related rights

Although UK law refers to infringement of copyright in sound recordings, films, broadcasts, and typographical arrangements as dependent on whether the defendant has carried out a restricted act in relation to the whole or ‘a substantial part’ of the subject matter, as we have already observed, Article 2 of the Information Society Directive harmonizes the reproduction right not only for authorial works, but also for ‘phonograms’ (that is, sound recordings), films, and broadcasts.<sup>103</sup> That legislation envisages infringement by reproduction of ‘a part’ of the subject matter. In due course, the Court of Justice is likely to develop jurisprudence on how to identify what constitutes a ‘part’ of these productions. The existing *Infopaq* case law is not directly relevant, because it concerns authorial works that are subject, at international and regional levels, to an ‘originality’ standard, whereas no equivalent standard is stated for related rights.<sup>104</sup> Pending guidance from the Court of Justice, analysis must be based on the existing case law on ‘substantial part’.<sup>105</sup> Even when such jurisprudence emerges, it will be worth noting that European law has for the moment left untouched the national rules that govern infringement of the copyright in typographical arrangements.

In determining the parameters of the protected subject matter, similar issues arise as with the ‘British’ approach to determining infringement of authorial works. Indeed, the *Hyperion Records* case<sup>106</sup> concerned questions of infringement of copyright in a sound recording. It is necessary first to identify what the work is and then to assess whether the defendant’s act (being a restricted act) employs a ‘substantial part thereof’.

<sup>101</sup> *Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551, [19].

<sup>102</sup> *SAS Institute v. World Programming Ltd* [2010] EWHC 1829 (Ch), [243] per Arnold J (opining that *Infopaq* took ‘the same approach’ as Lord Hoffmann). See further J. Griffiths, ‘Dematerialization, Pragmatism and the European Copyright Revolution’ (2013) 33(4) *OJLS* 767, 771ff.

<sup>103</sup> Info. Soc. Dir., Art. 2(c) (phonograms), (d) (films), (e) (broadcasts).

<sup>104</sup> In this respect, it is notable that there is no requirement of ‘substantial investment’ comparable to that referred to for ‘*sui generis* rights’ in databases. The Court of Justice has used that requirement as a mechanism by which to side-step the issue of what comprises a ‘database’: A. Ohly, ‘Economic Rights’, in E. Derclaye (ed.), *Research Handbook on the Future of EU Copyright* (2009), 212, at 215–16; *Apis Hristovich EOOD v. Lakorda ad*, Case C-545/07 [2009] ECR I-1627 (ECJ, Fourth Chamber). See further Chapter 13, p. 354.

<sup>105</sup> Speculating as to the appropriate approach, von Lewinski and Walter favour the view (discussed below) that there is infringement by use of any identifiable part: Walter and von Lewinski, 970, [11.2.21]. Ansgar Ohly, in contrast, proposes a test analogous to that for the *sui generis* database right—namely, whether the use endangers the ‘producer’s investment’: A. Ohly, ‘Economic Rights’, in E. Derclaye (ed.), *Research Handbook* (2009), 212, at 215–16.

<sup>106</sup> *Hyperion Records v. Warner Music* (1991, unreported). See pp. 197–8 above.

*(i) Identifying the work*

*(a) What is a sound recording?* As we noted already, sound recording is defined in the Copyright, Designs and Patents Act 1988 (CDPA 1988) as involving either:

- (a) a recording of sounds, from which the sounds may be reproduced, or
- (b) a recording of the whole or any part of a literary, dramatic or musical work, from which sounds reproducing the work or part may be produced.<sup>107</sup>

Where there is a recording of a ‘work’—or, more properly speaking, the performance of a work—it seems reasonable to define the ‘recording’ by reference to the ‘work’. So a sound recording of Beethoven’s *Fifth Symphony* might be said to be a single sound recording, particularly insofar as it records a single performance of a single work.<sup>108</sup> However, with recordings ‘of sounds’ that are not performances of works, it is less clear how a tribunal would identify the parameters of the recording. Significant considerations might be how the initial recording was produced: whether the recording took place at a particular time, or related to particular types of sound.<sup>109</sup> However, there seems in principle to be no reason why a very short recording, for example of a lion’s roar, should not count as a distinct recording.

*(b) What is a fixation of a film?* As observed in Chapter 3, section 5B(1) defines a film as ‘a recording on any medium from which a moving image may by any means be produced’. As with the requirements that are used to identify a sound recording, little guidance exists on how to identify a film. Of course, if issued to the public under a particular title, a movie will itself be a ‘film’, as will a short advertisement. In some cases, the subject matter being fixed will help to delineate the boundaries of a film; a film of a football match will thus likely be considered a single entity. However, the processes of production may give rise to possible distinct works, which then are combined into a composite: in *Hyperion Records v. Warner Bros.*,<sup>110</sup> Laddie J took the view that a film could include a single day’s rushes and thus might be regarded as works distinct from the final film as released. Indeed, a televised broadcast of a football match was found to transmit at least ten films, some of which were used in many of the broadcaster’s transmissions, others, prepared in advance for the particular transmission, and yet others, prepared contemporaneously.<sup>111</sup>

*(c) What is a broadcast?* In *Network Ten Pty Ltd v. TCN Channel Nine Pty Ltd*,<sup>112</sup> the Australian High Court was asked to determine the parameters of a television broadcast for the purpose of deciding whether there was infringement when excerpts of

<sup>107</sup> CDPA 1988, s. 5A. However, the European term, contained in Info. Soc. Dir., Art. 2(c), is ‘phonogram’. This would likely be understood in light of the international conventions: in the Rome Convention (1961) and Geneva Convention (1971), ‘phonogram’ is defined as an ‘exclusively aural fixation of sounds of a performance or of other sounds’. Moreover, ‘performance’ is further defined as a performance of a ‘literary or artistic work’.

<sup>108</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551, 557–8, [11] *per* Lord Hoffmann (a sound recording of one musical work is by definition different from the recording of another, even if they are issued on the same CD).

<sup>109</sup> *Hyperion Records v. Warner Bros* (17 May 1991, unreported) (Deputy Judge Laddie QC).

<sup>110</sup> (17 May 1991, unreported).

<sup>111</sup> *Football Association Premier League v. QC Leisure* [2008] EWHC 1411, [2008] FSR (32) 789, [180] (opening sequence film; opening sequence graphics film; previous highlights film; match highlights film; special features film; next match preview film; on-screen graphics film; match film—via action replays; clean live feed film; world feed film). In the same case, however, it was accepted, at [208], that an ‘action replay’ would not constitute a film of its own (presumably, in part, because it would comprise a copy of an existing film).

<sup>112</sup> [2004] HCA 14, reversing (2002) 118 FCR 417. For the first-instance decision of Conti J, see (2001) FCR 235.

between 8 and 42 seconds were used as objects of satirical comedy in another television programme (*The Panel*). The full Federal Court had held that each and every image fell to be protected, in effect denuding the notion of ‘substantial part’ of any content. The High Court, by a majority of three to two, reversed that decision, taking the view that the parameters of a ‘broadcast’ were to be defined by reference to the ‘programmes’ transmitted and thus that separate programmes, each with their own titles, were to be regarded as distinct broadcasts. Although much of the reasoning of the majority drew on the complex labyrinth of Australian legislation surrounding broadcasting,<sup>113</sup> two key points suggest that the finding could be a useful guide to the British position. First, the Australian Copyright Act 1968 was found to have been based on the British Copyright Act 1956, which, in introducing copyright protection for broadcasts, linked the subject matter of the right to the content—that is, ‘programmes’. Second, the High Court was clearly conscious of the fact that the structure of the legislation implied that protection of entrepreneurial works would be weaker than that afforded authorial works, yet the effect of the decision of the full Federal Court would have been to make protection of broadcasts the strongest form of protection.

It therefore seems that the decision may be a useful precedent.<sup>114</sup> The parameters of a broadcast will often be readily determined by reference to the programme, publicized under a particular name and referred to in television listings. A live broadcast of a football match will be defined by reference to the match itself, as well as typically some introductory and concluding commentary. In addition, broadcasts of advertisements might constitute distinct broadcasts.

(d) *What is a published edition?* In *Newspaper Licensing Agency Ltd v. Marks and Spencer plc*,<sup>115</sup> the issue was whether the copyright in the typographical arrangements in a number of the newspapers had been infringed by copying and distributing individual articles. As a result, the House of Lords was called upon to consider whether the NLA had typographical copyright in each of the individual articles in the newspapers or only in each newspaper as a whole. The House of Lords held that ‘the frame of reference for the term “published edition” is the language of the publishing trade’ and therefore that ‘the edition is the product, generally between covers, which the publisher offers to the public’.<sup>116</sup> Thus, each edition of the newspaper rather than each article benefited from the typographical copyright.

(ii) *A ‘substantial part’ (or ‘a part’)*

Once the parameters of the entrepreneurial works have been identified, it is necessary to assess whether what has been reproduced is a ‘substantial part’ or, under European law for phonograms, fixations of films, and broadcasts, ‘a part’.

A number of commentators (and some foreign courts) have suggested that it was not possible to speak in a meaningful way about the ‘important’ part of an entrepreneurial work, contending that the quality of the entrepreneurial work will not change throughout the work.<sup>117</sup> For example, it has been argued that, while a 3-second sample that contains the ‘hook’ of a song may be an important part of a musical work, it does not necessarily follow from this that the way in which the 3 seconds were recorded will be any different from the way in which the rest of the song was recorded. Indeed, it is more likely that the quality of the sound recording will be the same throughout the recording than that it

<sup>113</sup> The majority drew heavily on M. Handler, ‘The Panel Case and Television Broadcast Copyright’ (2003) 25 *Sydney L Rev* 391, while the minority, especially Kirby J, sought to refute Handler’s arguments.

<sup>114</sup> Note also the Satellite Convention 1974, as well as the Satellite Dir. (referring to protection of ‘programme-carrying signals’, indicating that the relevant unit is the ‘programme’).

<sup>115</sup> [2003] AC 551 (HL).

<sup>116</sup> *Ibid.*, [14].

<sup>117</sup> Laddie et al., 400, [6.29].

will change from part to part.<sup>118</sup> Moreover, if a brief recording of a bird chirping is itself protected, why should the equivalent part of any other recording (however long or sophisticated the remainder may be) also be regarded as protected? This analysis implies that the slightest shred of all of these productions should receive protection. Such an approach has been adopted in relation to films and phonograms in Germany.<sup>119</sup>

Whatever its logical attraction, such an approach is unattractive for three reasons. First, it would render the adjective ‘substantial’ in section 16(3) of the CDPA 1988 meaningless.<sup>120</sup> Second, it would confer stronger protection on ‘entrepreneurial work’ (related rights), which are mere products of investment, than on authorial works, which are the result of creative choices, and thus invert the conventional privileging of the latter.<sup>121</sup> Third, it would confer unnecessary and unjustified levels of control on such producers, given that only very limited freedoms are offered for downstream creators and users (on which, see Chapter 9).

In the United Kingdom, for the moment, the decision of the House of Lords in *Newspaper Licensing Agency* governs the issue. In that case, it was held in relation to typographical arrangements that it is necessary to assess whether there has been reproduction of a ‘substantial part’ from the perspective of the quality of the labour and skill invested in choosing the presentation and layout (as opposed to the particular words and images published in the edition).<sup>122</sup> One commentary says this suggests that the threshold may be set ‘fairly high’.<sup>123</sup> Unless and until the Court of Justice indicates otherwise, the better view is that the approach in *NLA* should also apply to fixations of films, sound recordings, and broadcasts.<sup>124</sup> The question would be whether a substantial part of the investment (whether technical or organizational) in producing the recording is appropriated.

Having said this, it is widely assumed that quite small parts of sound recordings, films, and broadcasts might be protected. The matter has been frequently canvassed in relation to sampling of sound recordings (although without generating useful judicial guidance).<sup>125</sup> The courts have indicated that expert evidence, for example from musicologists, might help to determine the issue of whether a part is a ‘substantial’ part of a sound recording.<sup>126</sup> In a case decided in the early 1990s, in which one television company had broadcast football matches from the 1990 World Cup and another broadcaster showed clips of between 14 and 37 seconds (comprising the goals or near misses), it was conceded by the defendant that these were ‘substantial’ reproductions (the Court, however,

<sup>118</sup> In the case of a sound recording, it seems that, on this basis, it would be wrong to treat the part that embodies the most distinctive, unusual, or catchy sounds as automatically representing the important part of the sound recording. This is because those parts may reflect, for example, the musical work, performance, and so on, rather than labour, skill, and judgement in creating the recording itself.

<sup>119</sup> *Metall auf Metall*, Case I ZR 182/11 (13 December 2012), I ZR 112/06 (20 November 2008) (BGH); *TV-Toyal*, Case I ZR 52/05 (20 December 2007). These cases are discussed in F. Niemann and L. Mackert, ‘Limits on Sampling Sound Recordings’ [2013] *EIPR* 356 and the first *Kraftwerk* decision is translated in N. Conley and T. Braegelmann, ‘*Metall auf Metall*: The Importance of the *Kraftwerk* Decision for the Sampling of Music in Germany’ (2009) 56 *J Copyright Soc’y USA* 1017.

<sup>120</sup> In *Hyperion Records v. Warner Bros* (17 May 1991) (unreported).

<sup>121</sup> A. Ohly, ‘Economic Rights’, in E. Derclaye (ed.), *Research Handbook* (2009), 212, 216.

<sup>122</sup> *Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 55.

<sup>123</sup> Laddie et al., 497, [9.20]. <sup>124</sup> *Ibid.*, 400, [6.29].

<sup>125</sup> *Produce Records Ltd v. BMG Entertainment Ltd* (unreported, 19 January 1999) (Jonathan Parker J) (‘plainly arguable’ that the sample amounted to a substantial part). For discussion, see R. Salmon, ‘Sampling and Sound Recording Reproduction: Fair Use or Infringement?’ [2010] *Ent L Rev* 174.

<sup>126</sup> *Produce Records Ltd v. BMG Entertainment Ltd* (unreported, 19 January 1999) (Jonathan Parker J); *Hyperion Records v. Warner Bros* (unreported, 17 May 1991) (Judge Laddie QC). See Laddie et al., 401, [6.30] (suggesting that many cases of use of samples will escape liability).

holding that it was fair dealing).<sup>127</sup> Such parts would have been of real interest to viewers. However, where four frames of a video stream were held in a decoder at a given moment, Kitchin J concluded that this was not a ‘substantial part’ of the film fixation, because it lasted ‘a fraction of a second’ and had ‘no inherent value’.<sup>128</sup> In another case concerning buffering, Floyd J held that while the buffer copies might be a ‘substantial part’ of a film, they would not have been in relation to the broadcast.<sup>129</sup> It appeared that the issue would, however, be the subject of a reference to the Court, but this was not pursued.<sup>130</sup>

In assessing substantiality in relation to films and broadcasts, account also needs to be taken of a special statutory provision.<sup>131</sup> Section 17(4) of the CDPA 1988 states that copying in relation to a film or television broadcast includes making a photograph of the whole or any substantial part of *any image* forming part of the film or broadcast.<sup>132</sup> This means that where someone takes a photograph of a single image from a film and reproduces it on a T-shirt, a poster, or a website, they could infringe (were that regarded as a substantial part).<sup>133</sup> Whether it would be so regarded depends, in the view of one leading commentary, on ‘whether the taking amounts to something real and consequential, as opposed to that which is trifling or insignificant’.<sup>134</sup>

#### 2.4 NON-LITERAL COPYING OF AUTHORIAL WORKS

As we explained in Chapter 6, the protection given to entrepreneurial works is limited to the form in which the work is fixed (in the case of a film, the specific images; in the case of a sound recording, the specific sounds recorded). As Mr Justice Richard Arnold has noted, extrajudicially, these are ‘signal copyrights’.<sup>135</sup> One of the consequences of this is that the only question that arises in relation to entrepreneurial works is whether a substantial part of the ‘signal’ has been taken. In relation to authorial works, however, the protection extends beyond the specific form in which the work is recorded or communicated to include other aspects—what Arnold calls ‘the content’—of the work. For example, the protection afforded to a literary work, such as a novel, may extend beyond

<sup>127</sup> *BBC v. British Satellite Broadcasting* [1992] Ch 141, 148. See also *Football Association Premier League v. QC Leisure* [2008] EWHC 1411, [2008] FSR (32) 789, [208]–[209] per Kitchin J (holding that ‘action replays’ lasting a few seconds were a ‘substantial part’ of a 90-minute film of a football match).

<sup>128</sup> *Football Association Premier League v. QC Leisure* [2008] EWHC 1411, [2008] FSR (32) 789, [234]. But cf. *Higgs* [2008] EWCA Crim 1324, [9] (suggesting that a single frame of a film might be protected, relying on CDPA 1988, s. 17(4)).

<sup>129</sup> *ITV Studios Ltd v. TV Catch Up Ltd* [2011] EWHC 1874 (Pat), [110], [112] per Floyd J. It seems that Floyd J accepted counsel’s submission that ‘[t]he copyright which arises in a broadcast arises because of the collocation of subject matter which makes up the broadcast’.

<sup>130</sup> *ITV Broadcasting Ltd v. TV CatchUp Ltd* [2011] EWHC 2977, [27] per Floyd J (‘I cannot see any basis on which it can sensibly be argued that there is a reproduction of a substantial part of a broadcast’).

<sup>131</sup> Some courts have treated this *sui generis* statutory provision as suggesting that a different test applies to ‘broadcasts’ and ‘film fixations’ from ‘typographical arrangements’ and ‘sound recordings’.

<sup>132</sup> This validity of this statutory provision may, in due course, need to be reconsidered if the Court of Justice offers different guidance on what counts as a ‘part’ for the purposes of Info. Soc. Dir., Art. 2(d), (e).

<sup>133</sup> For discussion of the apparent conflict between the decision in *R v. Higgs* [2008] EWCA Crim 1324, [9], and that of Kitchin J in *Football Association Premier League v. QC Leisure* [2008] EWHC 1411, [2008] FSR (32) 789, [234], see Laddie et al., 441–4, [7.61]–[7.65] (preferring *Higgs*). We think that Laddie et al. are mistaken, however, and prefer Kitchin J’s view that s. 17(4) has no bearing on the question of substantial taking of a film. Section 17(4) is directed to the ‘making’ of a photograph, i.e. a ‘recording of light . . . on any medium on which an image is produced’. In contrast, the decoder and console cases concern the generation of transient reproductions of images, which raise quite different policy concerns.

<sup>134</sup> Laddie et al., 444, [7.66].

<sup>135</sup> R. Arnold, ‘Content Copyrights and Signal Copyrights: The Case for a Rational Scheme of Protection’ (2011) 1(3) *QMJP* (explained in Chapter 6, pp. 144, 147).

reproduction of the printed words on the page to include copying of the storyline, plot, and characters that form part of the novel.

In this section, we try to explain first what counts as the ‘content’—that is, how far down beyond the ‘signal’ the protection of authorial copyright reaches. We go on to explain the principle that such protection does not extend to ‘ideas’, understood broadly as encompassing also facts and ‘functions’. Finally, we consider the impact of European harmonization on these rules.

#### 2.4.1 Non-literal components of an authorial work

Perhaps the best way in which to understand the scope of protection potentially available beyond the surface of the work is to provide some examples.

In relation to *literary and dramatic works*, as well as the words on the page (the literal aspect of the work), the non-literal elements of a novel or play (which may be protected by the copyright therein) may include the plot,<sup>136</sup> the storyline,<sup>137</sup> as well as the incidents and themes.<sup>138</sup> While the issue has not really been addressed in the United Kingdom, it is less likely that the characters of a novel or play will be protected.<sup>139</sup> As we explain below, the non-literal elements of a literary work do not include the general ideas that may have informed or underpinned a work.

In relation to *computer programs*, copyright protection potentially extends beyond the object and source code of the program to include non-literal elements such as the structure or architecture of the program.<sup>140</sup>

In relation to *musical works*, it seems that protection might include the melody, phrasing, or rhythm, the time, or the suggested orchestration, but not aspects such as timbre or pitch contour, which can be said to be purely aspects of performance style.

The question of the scope of protection available for *artistic works* was considered in *Krisarts SA v. Briarfine*.<sup>141</sup> The defendants commissioned an artist, G, to paint a number scenes, including one of the Houses of Parliament with Westminster Bridge in the foreground. They showed G postcards of the scenes that they wanted her to paint, as well as prints taken from the painting of another artist, L. Many of G’s paintings were made from the same view and the same angle as L’s paintings. While Whitford J stressed that other painters should not be prevented from painting the same scenes, he did accept that there could be certain elements of the scenes that were ‘distinctive’ enough to warrant being protected.<sup>142</sup> As he said:

When one is considering a view of a very well-known subject like the Houses of Parliament with Westminster Bridge and part of the Embankment in the foreground, the features in which copyright is going to subsist are very often the choice of viewpoint, the exact

<sup>136</sup> *Harman Pictures v. Osborne* [1967] 1 WLR 723, 728; *Rees v. Melville* [1914] MacG CC 168; *Brighton v. Jones* [2005] FSR (16) 288, [63]–[66]. In relation to literary works, the taking of a plot of a novel or play can certainly infringe—if the plot is a substantial part of the copyright work: *Designers Guild v. Williams* [2001] 1 WLR 2416; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 291.

<sup>137</sup> *Corelli v. Gray* (1913) 29 TLR 570; *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Kelly v. Cinema Houses* [1928–35] MacG CC 362.

<sup>138</sup> *Corelli* (1913) 29 TLR 570; *Rees v. Melville* [1914] MacG CC 168; cf. *Norowzian v. Arks (No. 2)* [2000] FSR 67, 74, 76 (rhythm and pace, theme, and editing style were not subjects of copyright).

<sup>139</sup> *Kelly v. Cinema House* [1928–35] MacG CC 362, 368. For a review, see J. McCutcheon, ‘Property in Literary Characters: Protection under Australian Copyright Law’ [2007] EIPR 140.

<sup>140</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 292, 302; *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 133–4.

<sup>141</sup> [1977] FSR 557.

<sup>142</sup> While Whitford J was not willing to reach a final decision on copyright infringement, he was sympathetic to such a finding.

balance of foreground features or features in the middle ground and features in the far ground, the figures which are introduced, possibly in the case of a river scene the craft on the river and so forth. It is in choices of this character that the person producing the artistic work makes his original contribution.<sup>143</sup>

In light of this, Whitford J held that it was arguable that G's use of L's work was sufficiently substantial to amount to infringement of copyright. While it is highly unlikely that the style used by an artist could be protected (style being the equivalent of an idea), it has been suggested that if the 'feeling and artistic character' of the claimant's work has been taken, infringement might have occurred.<sup>144</sup>

#### 2.4.2 Non-protection of ideas

Although copyright protection thus extends to copying of non-literal elements that fall below the 'surface' of a work, nevertheless it is a long-established principle that copyright protection is not granted to the ideas that are embodied in or which may have inspired the work.<sup>145</sup> In more positive terms, this means that third parties are able to make whatever use they wish of the ideas that are contained in a copyright work. Thus it is not an infringement for someone to take the ideas or concepts 'behind' a painting, a book, or a computer program and incorporate them into their own work. In this context, it is important to note that 'idea' is a shorthand expression that covers an array of different things such as the ideas that prompted the work (for example to explore the impact of copyright law on artists), the subject matter of the work (for example a book on intellectual property law),<sup>146</sup> or the general style in which the work is created (such as a Cubist painting).<sup>147</sup>

Sometimes, the principle that copyright law does not protect ideas is referred to as the 'idea-expression dichotomy'. This is usually taken to mean that what is protected is not an idea, but its expression. Insofar as the dichotomy implies that copyright predominantly protects the mode of expression used by the author, rather than the ideas, the dichotomy is not inaccurate. It is unhelpful, however, in that it wrongly suggests that copyright protection is limited to the form or expression used by the author and that copyright does not protect against change of form or against non-literal copying.<sup>148</sup> as we noted earlier, copyright law will protect many of the ideas expressed in a work. As Lord Hoffmann explained in the *Newspaper Licensing Agency* case, copyright infringement:

... is sufficiently flexible to include the copying of ideas abstracted from a literary, dramatic, musical or artistic work, provided that their expression in the original work has involved sufficient of the relevant original skill and labour [or presumably, now 'intellectual creation'] to attract copyright protection.<sup>149</sup>

In *Designers Guild v. Williams*,<sup>150</sup> Lord Hoffmann reviewed the case law on idea and expression, and concluded that it supported two quite distinct propositions. The first is that a copyright work may express certain ideas that are not protected 'because they

<sup>143</sup> [1977] FSR 557, 562.

<sup>144</sup> *Bauman v. Fussell* [1978] RPC 485; *Brooks v. Religious Tract Society* (1897) 45 WR 476.

<sup>145</sup> The principle that there can be no copyright in an idea has been described at the highest level as 'trite law': *L. B. (Plastics) v. Swish Products* [1979] FSR 145, 160 per Lord Hailsham, 165 per Lord Salmon.

<sup>146</sup> *Kenrick v. Lawrence* (1890) 25 QBD 99, 102.

<sup>147</sup> *Norowzian v. Arks* [2000] EMLR 67, 74, 76 (no copyright in film-editing style).

<sup>148</sup> For a warning about the use of this aphorism, see *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422 per Lord Hoffmann; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275 (Jacob J).

<sup>149</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 55, 560, [20].

<sup>150</sup> [2000] 1 WLR 2416.

have no connection with the literary, dramatic, musical or artistic nature of the work'.<sup>151</sup> Lord Hoffmann said that this would be the case with a literary work that described a system or invention: although the work would be protected, copyright would not entitle the author to claim protection for their system or invention as such. He gave, as a specific example, the case of *Kleeneze Ltd v. DRG (UK)*,<sup>152</sup> in which Whitford J found that there had been no infringement of copyright in the claimant's drawing of a letterbox draught excluder, where the defendant had merely taken the concept of the draught excluder.

The other proposition is that certain ideas expressed by a copyright work may not be protected because, although they are ideas of a literary, dramatic, or artistic nature, they are not original, or are so commonplace as not to form a substantial part of the work. Lord Hoffmann gave the example of *Kenrick v. Lawrence*.<sup>153</sup> This case concerned the copyright protection available for a rudimentary drawing of a hand pointing to a square on a ballot paper to be used by illiterate voters. While the court held that the drawing was protected by copyright, it also said that, because the level of skill, labour, and effort that was used in creating the work was minimal (it was a simple, functional work), nothing short of an exact literal reproduction of the drawing would constitute an infringement.<sup>154</sup> In that case, copyright subsisted in the drawing of a hand, but such copyright would not enable the copyright owner to object to other people drawing hands, if in so doing all that was reproduced was the idea. As Lord Hoffmann explained: 'At that level of abstraction, the idea, though expressed in the design, would not have represented sufficient of the author's skill and labour as to attract copyright protection.'<sup>155</sup>

Lord Hoffmann's articulation of the rule that ideas are unprotected is helpful in that it recognizes that the vagueness of the concept of 'idea' is likely to lead to misinterpretation of the nature and scope of the exclusion. In fact, the exclusion is a relatively narrow one and does not encompass everything that might be referred to, in common speech, as an idea. However, his attempt to pin down the rule that copyright is not infringed by the use of some ideas is open to the criticisms that it lacks clarity,<sup>156</sup> is incomplete,<sup>157</sup> and (by collapsing the rule on the non-protection of ideas into a rule on originality, rather than acknowledging its basis in public policy) might produce an unduly limited account of the exception. Failing to acknowledge that the rule is based in public policy suggests that if general ideas embody substantial labour and skill, they will benefit from protection (unless they are 'unconnected' with the work). This would be a novel, and undesirable, outcome. The exclusion of 'ideas' from the scope of protection is an important judicial technique that is used to reconcile the divergent interests of copyright owners with those of users, creators, and the public more generally.<sup>158</sup> These interests include, but are by no means confined to: the public interest in ensuring that new works can be made dealing

<sup>151</sup> *Ibid.*, 2423. Discussed by Jacob LJ in *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 601, esp. [35].

<sup>153</sup> (1890) 25 QBD 99.

<sup>154</sup> *Ibid.*, 104.

<sup>155</sup> [2000] 1 WLR 2416, 2423.

<sup>152</sup> [1984] FSR 399.

<sup>156</sup> In particular, his speech leaves unclear what kind of connections make ideas part of the protected elements.

<sup>157</sup> Lord Hoffmann's account seems to be incomplete, in that it omits techniques, methods, or style—matters that are usually considered unprotected: *Harman v. Osborne* [1967] 1 WLR 723, 728; *Norowzian v. Arks* [2000] EMLR 67, 74, 76; *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3288, [29]; *IPC Media v. Highbury Leisure Ltd* [2005] FSR (20) 434, 444; *Baigent v. Random House* [2007] EWCA Civ 247, [146].

<sup>158</sup> There is an abundance of US literature: A. Yen, 'A First Amendment Perspective on the Idea/Expression Dichotomy and Copyright in a Work's "Total Concept And Feel"' (1989) 38 *Emory LJ* 393 (emphasizing the role and limitations of dichotomy in protecting freedom of speech); J. Litman, 'The Public Domain' (1990) 39 *Emory LJ* 965 (explaining the law's reluctance to protect ideas, information, short phrases, simple plots, themes, stock scenes, and utilitarian solutions to concrete problems on the ground that they are difficult to

with the same topic, or subject matter;<sup>159</sup> the public interest in ensuring that copyright protection does not undermine the free use of functional ideas (other than those protected by designs);<sup>160</sup> the desirability of allowing multiple works using the same techniques of production (again, subject to the limitation of patent law); the public interest in free expression; and particularly the free dissemination of political and economic ideas and historical facts.<sup>161</sup> The rule on non-protection of ideas is thus primarily directed at leaving free from monopolization the building blocks of culture, communication, innovation, creativity, and expression.<sup>162</sup> It can be no surprise, then, that, given the potential variety of influences, the application of the rule has been somewhat unpredictable. Moreover, in an era in which there is increased international norm-setting in the definition of the rights of the copyright owner, the non-protection of ideas represents one of the few avenues by which the courts can take account of the individual circumstances and merits of particular decisions.

While *Designers Guild* might have heralded a narrow interpretation of copyright law's refusal to protect 'ideas', subsequent cases indicate that the lower courts prefer to take advantage of the flexibility that the 'idea-expression dichotomy' provides to dismiss speculative claims. In *Navitaire v. EasyJet*,<sup>163</sup> the owner of copyright in source code brought an action against a former licensee who, having never seen the source code, tried to emulate the functional behaviour of the program. Pumfrey J found no infringement, stressing that the functional behaviour of a program was different from the plot of a novel (which might gain protection) and that policy weighed against protecting the 'business logic' of a program through copyright.<sup>164</sup> In *Nova Productions Ltd v. Mazooma Games Ltd*,<sup>165</sup> Kitchin J held that similarities between video games were attributable to general ideas that had 'little to do with skill and effort' expended by the programmer. This was affirmed on appeal, Jacob LJ concluding that 'what was found to have inspired some aspects of the defendants' game is just too general to amount to a substantial part of the claimant's game'.<sup>166</sup> In *Baigent v. Random House* (the *Da Vinci Code* case),<sup>167</sup> Peter Smith J held that Dan Brown's book did not infringe copyright in Baigent and Leigh's *The Holy Blood and the Holy Grail*. In essence, Peter Smith J held that Brown had used Baigent and Leigh's book (along with other books), but that what was taken was facts and ideas at such a level of abstraction that there was no infringement.<sup>168</sup> In so holding, the judge observed that the line between idea and expression 'is to enable a fair balance to be struck between protecting the rights of the author and allowing literary development'.<sup>169</sup> The decision was affirmed on appeal, the Court unanimously agreeing that there was no reproduction of a substantial part of Baigent and Leigh's book because that which was in *The Da Vinci Code* was ideas rather than 'the form or manner in which ideas were expressed'.<sup>170</sup> Mummery LJ, in particular, emphasized that literary copyright does not give rights that enable persons 'to monopolise historical research or knowledge'.<sup>171</sup> A final example of a situation in which the defendant was 'inspired' by the claimant's copyright work, but was held not to

trace); S. Vaidhyanathan, *Copyright and Copywrongs: The Rise of Intellectual Property and How It Threatens Creativity* (2001) (arguing that the distinction has been steadily collapsing and that it is crucial that we rediscover, reinvent, and strengthen the idea-expression dichotomy).

<sup>171</sup> *Ibid.*, [156].

have taken a substantial part, is provided by the ‘World Cup Willie’ case.<sup>172</sup> The claimant’s work was the World Cup logo from 1966 comprising a lion in an England strip kicking a football. The defendant created a modernized version of a lion playing football for England. Although the defendant had copied the idea of a lion kicking a ball with its right foot, the postures were different (one leant back; the other, forward), the angle of the faces differed (the plaintiff’s drawing depicted the lion’s face from the side, whereas the defendant’s showed the whole face). While the stylization was similar, the High Court concluded that all that had been reproduced was ideas rather than ‘a substantial part of the original’.

On the other hand, in *Temple Island Collections v. New English Teas Ltd*,<sup>173</sup> the (then) Patents County Court took a rather narrow view of ‘ideas’ when it found infringement of copyright in a photograph of a red double-decker crossing Westminster Bridge (the background all in black and white) (see Fig 4.1, p. 109), when the defendants created a similar image (albeit from quite a different angle) of a red bus crossing Westminster Bridge with the background in black and white (Fig. 4.2, p. 109). The case received widespread criticism on the basis that what had been reproduced by the defendant was the commonplace idea of a red foreground and monochrome background, and the idea of creating an image of an iconic London bus coupled with the setting of Westminster Bridge. Certainly, each was a commonplace idea. Perhaps the better view is that, in a case of relatively limited originality, there should be infringement only where there is near-perfect copying.<sup>174</sup>

#### 2.4.3 European copyright law and non-literal copying

The *Infopaq* test has been developed primarily with copying of discrete parts or fragments of a work. However, as already noted, under traditional UK law, reproduction might also occur through copying ‘non-literal’ parts of a work (other than ‘ideas’). Consequently, reproducing the general structure of a work—the plot of a novel or the layout of an artistic work—might count as reproduction of a substantial part. As yet, we have little indication of how to approach such cases in the post-*Infopaq* era.

The starting point is that the European legislature has taken different approaches to harmonization of, on the one hand, computer programs and databases, and on the other, ‘authorial works’. As we saw in Chapter 6, in relation to computer programs and databases, the legislature harmonized both the reproduction right and the adaptation right. It also made express provision in the Software Directive to the effect that copyright did not protect ideas. In contrast, the Information Society Directive harmonized only the reproduction right and makes no explicit reference to non-protection of ideas. This structure might suggest that EU harmonization applies to non-literal copying of computer programs and databases, but not in relation to other authorial works.

However, in many countries (including the United Kingdom), the ‘adaptation’ right and the ‘reproduction’ right frequently overlap, the reproduction right also covering many non-literal uses.<sup>175</sup> It is quite conceivable that the Court of Justice will interpret Article 2 of the Information Society Directive broadly to cover non-literal copying (with

<sup>172</sup> *Jules Rimet Cup Ltd v. Football Association Ltd* [2008] FSR (10) 254.

<sup>173</sup> [2012] EWPCC 1. See also *Hodgson v. Isaac* [2010] EWPCC 37, in which the Patents County Court held that Isaac’s film script ‘Down among the Dead Men’, the story of a wheelchair-bound football fan, was an infringing adaptation of the claimant’s autobiography, *Flipper’s Side*. The parties had initially been working towards an adaptation of Hodgson’s story, but when the script began to deviate from his own account, Hodgson withdrew his consent. The judge rejected the defendant’s argument that it had relied on conversations with Hodgson as opposed to reading *Flipper’s Side*, and concluded that the amounts reproduced were substantial. More was taken than abstract biographical matters, including detailed incidents and, importantly, Hodgson’s interpretation of those events: see [80]–[81].

<sup>174</sup> *Kenrick v. Lawrence* (1890) 25 QBD 99.

<sup>175</sup> *IViR, Recasting Copyright*, 53.

the advantage that, by so doing, it will minimize the impact of the different approaches in the legislation).<sup>176</sup> Indeed, as we saw earlier, at least one Advocate-General has suggested that non-literal copying might be infringement of the reproduction right in authorial works. In *Painer v. SVGH*,<sup>177</sup> Advocate-General Trstenjak suggested that the making of a photofit image of a woman from a copyright-protected photograph such as to reflect the development of the woman's appearance might be a 'reproduction' if 'the personal intellectual creation which justifies the copyright protection of the photographic template is still embodied in the photo-fit'. If the photofit only appropriated raw data from the image (the size of the nose, the distance between the eyes) and none of the lighting, angle, etc., then the photofit would not count as a reproduction.

A second, related, matter is how the 'idea-expression dichotomy' applies to works falling within the Information Society Directive. The dichotomy is explicitly recognized in the Software Directive,<sup>178</sup> but does not feature in the Information Society Directive (perhaps for the reason that it covers only copying and not adaptation, and so was thought unlikely to be in issue).

However, the Court of Justice and English Court of Appeal decisions in *SAS Institute v. World Programming*<sup>179</sup> indicate that the exclusion from protection of 'ideas' applied in cases of non-literal copying of authorial works as much as in relation to infringement of copyright in computer programs. In that case, the defendants had developed a computer program that emulated the functioning of the claimant's integrated set of programs that was used in statistical analysis (and generated revenue for the claimant of more than £2 billion a year). There was no suggestion that the defendant had had access to the source code for the claimant's programs and the question arose whether, in creating the competing software, it had infringed copyright either in the computer program (protected under the Software Directive) or in the manuals for the SAS system, the latter being authorial works protected under the Information Society Directive.<sup>180</sup> SAS sought to distinguish between the law applicable to infringement under the Software Directive and that under the ordinary copyright rules (arguing that there was no exclusion of ideas from the latter or that it was a narrower exclusion).<sup>181</sup>

At first instance, Arnold J held that, whatever the position when enacted, the 1988 Directive must now be interpreted to give effect to Article 9(2) of TRIPS and Article 2 of the WIPO Copyright Treaty. Therefore copyright, whether in relation to software or generally, protects only expression, and does not protect 'ideas, procedures, methods of operation and mathematical concepts as such'.<sup>182</sup> Nevertheless, he referred various questions to the Court of Justice on the application of the idea-expression dichotomy within the Software Directive and its parallel application to the manual.

In relation to software, the Court of Justice explicitly held that neither the functionality of a computer program nor the programming language and the format of data files used in a computer program in order to exploit certain of its functions constitute a form of expression of that program. The Court's answer on the Information Society Directive was less clear-cut, merely reiterating the test of infringement that had emerged from *Infopaq*.<sup>183</sup>

<sup>176</sup> Walter and von Lewinski, 970, [11.2.22]; J. Griffiths, 'Dematerialization, Pragmatism and the European Copyright Revolution' (2013) 33(4) *OJLS* 767, 784.

<sup>180</sup> [2010] *EWHC* 1829 (Ch), [64] *per* Arnold J (explaining that there was no dispute that copyright subsisted in the manuals as original literary works). <sup>181</sup> *Ibid.*, [251]; [2013] *EWCA Civ* 1482, [67].

<sup>182</sup> [2010] *EWHC* 1829 (Ch), [205], [254] *per* Arnold J.

<sup>183</sup> *SAS Institute v. World Programming*, Case C-406/10 (2 May 2012). In the Court of Appeal, Lewison LJ called it 'disappointingly compressed, if not obscure': [2013] *EWCA Civ* 1482, [5].

The English Court of Appeal focused on the fact that Recitals 20 and 50 of the Information Society Directive specifically refer to the Software Directive.<sup>184</sup> Bearing in mind the international standards applicable and the jurisprudence of the Court of Justice (in particular as to originality), the Opinion of Advocate-General Bot in the SAS case, and ‘well-established principles of copyright law’, Lewison LJ concluded that:

[T]he same concept of what is capable of protection (as a form of expression rather than as an idea) applies to both the Software Directive and the Information Society Directive. Since the court’s avowed intention was to establish a harmonized legal framework for copyright, this is not surprising.<sup>185</sup>

However, the Court of Appeal emphasized the Court of Justice’s reference to reproduction of the ‘expression of the intellectual creation’, not merely reproduction of the intellectual creation.<sup>186</sup> In the view of Lewison LJ, the simple answer to the question of whether copying the compilation of functional elements was infringing was that the copying was not a copying of ‘the form of expression’ of the intellectual creation. Thus it was unnecessary for Arnold J to have rejected the claim on the ground that the intellectual creation that was copied lay in the programs rather than the manual.<sup>187</sup>

### 3 SECONDARY INFRINGEMENT

In an attempt to inhibit the negative impact that illegal acts have upon copyright owners, copyright law recognizes that it is not enough merely to provide remedies against those who copy or perform the copyright work. Instead, copyright law recognizes that it is also necessary to provide owners with protection against those who aid and abet the primary infringer. Such accessory infringement is known as ‘secondary infringement’.

There are two important differences between primary and secondary infringement. The first relates to the scope of protection: primary infringement is concerned with people who are directly involved in the reproduction, performance, etc. of the copyright work; in contrast, secondary infringement is concerned with people in a commercial context who either deal with infringing copies, facilitate such copying, or facilitate public performance. The second difference between the two forms of infringement relates to the mental element that the defendant must exhibit in order to infringe. As we explain below, the state of mind of the defendant is not formally taken into account when deciding whether an act of primary infringement has occurred. In the case of secondary infringement, however, liability is dependent on the defendant knowing, or having reason to believe, that the activities in question are wrongful.<sup>188</sup>

#### 3.1 TYPES OF SECONDARY INFRINGEMENT

Secondary infringement can be divided into two general categories: those who distribute or deal with infringing copies once they have been made; and those who facilitate copying by providing the equipment or means that enable the copying to take place.

<sup>184</sup> [2013] *EWCA Civ* 1482, [27], [68].      <sup>185</sup> *Ibid.*, [69].      <sup>186</sup> *Ibid.*, [61], [63].

<sup>187</sup> [2010] *EWHC* 1829 (Ch), [260] *per* Arnold J, rejected at [2013] *EWCA Civ* 1482, [74].

<sup>188</sup> CDPA 1988, ss 22–4, 27. See Laddie et al., ch. 20.

### 3.1.1 The distribution of infringing copies

The first general category of secondary infringement is concerned with people who deal with infringing copies of the work in a commercial context. To this end, sections 22 and 23 of the CDPA 1988 provide that the copyright in a work is infringed by a person who, without the licence of the copyright owner:

- (i) *imports* an infringing copy into the United Kingdom otherwise than for their private and domestic use;<sup>189</sup>
- (ii) *possesses* an infringing copy in the course of business;<sup>190</sup>
- (iii) *sells* or *lets for hire*, or offers or exposes for sale or hire, an infringing copy;
- (iv) in the course of business, *exhibits* in public or distributes an infringing copy;<sup>191</sup> or
- (v) *distributes* an infringing copy, otherwise than in the course of a business, to such an extent as to affect the copyright owner prejudicially.

Section 27(2) provides that an article is an ‘infringing copy’ if its making constituted an infringement of the copyright in the work in question.<sup>192</sup> In the case of imported copies, infringing copy also includes ‘notional infringements’—that is, copies that, if they had been made in the United Kingdom, would have infringed copyright at the time of making or would have constituted a breach of an exclusive licence agreement relating to the work.<sup>193</sup> This provision has proved to be problematic.<sup>194</sup> Its significance has been reduced, however, by the extension of liability for primary infringement to include the issuing of copies, including the importing of copies from outside the European Economic Area (EEA). Liability for secondary infringement by import remains important in cases of import from one EEA state to another; however, this right is subject to the TFEU and the principle of exhaustion.<sup>195</sup>

### 3.1.2 Providing the means for making infringing copies or performances

The second general category of secondary infringement is concerned with people who facilitate copying. This occurs, for example, where someone provides the equipment or the means that enables the copying to take place. There are a number of different situations in which the provision of the means for making infringing copies or performances will amount to a secondary infringement.

Section 24(1) of the CDPA 1988 provides that a person is liable for infringement where they supply an article that is specifically designed or adapted for making copies of the copyright work. More specifically, section 24(1) provides that:

Copyright in a work is infringed by a person who, without the licence of the copyright owner—

<sup>189</sup> CDPA 1988, s. 22.

<sup>190</sup> Business is defined in CDPA 1988, s. 178, as including a ‘trade or profession’. See *Pensher Security Doors v. Sunderland City Council* [2000] RPC 249, 280–2.

<sup>191</sup> An art gallery carries on business even though certain paintings are not for sale: *ibid.*, 282.

<sup>192</sup> However, note the many situations in which the making of a copy is not infringing because of the existence of a defence, but the statute requires the copy be treated as an infringing copy when subsequently dealt with in specified ways: CDPA 1988, s. 27(6) referring to ss 32(5), 35(3), 36(5), 37(3), 56(2), 63(2), 68(4), and 141.

<sup>193</sup> CDPA 1988, s. 27(3), Sch. 1, para. 14(3).

<sup>194</sup> Described by Laddie et al., 818, [20.18]. as ‘far from straightforward’. One question that has been debated is who does the hypothetical making: the maker abroad, the importer, or someone else? Laddie et al. argue that the identity of the maker is not in issue; what is in issue is the purpose that the import is intended to fill.

<sup>195</sup> CDPA 1988, s. 27(5). See above at pp. 12–15, 151–3.

- (a) makes,
  - (b) imports into the United Kingdom,
  - (c) possesses in the course of business, or
  - (d) sells, or lets for hire, or offers or exposes for sale or hire,
- an article specifically designed or adapted for making copies of that work . . .*<sup>196</sup>

It should be noted that section 24(1) states that the article must be *specifically* designed or adapted for the purpose of copying. This means that it is not enough that an article, such as a photocopier or a tape-to-tape recorder, has the potential to copy; rather, for the section to operate, the article must be specifically designed for the copying of a particular work. This would be the case, for example, if someone were to make a template or a mould of a copyright work that is used to create infringing copies.

Special provisions are also made for people who *transmit the work* without the appropriate permission. Section 24(2) states that copyright in a work is infringed by a person who, without licence, transmits the work by means of a telecommunications system (such as a fax). It does not apply, however, to communications to the public. As with all forms of secondary infringement, infringement is dependent upon the defendant 'knowing or having reason to believe that infringing copies of the work will be made by means of the reception of the transmission in the United Kingdom or elsewhere'.

Where the copyright in a literary, dramatic, or musical work is infringed by a performance at a 'public place of entertainment',<sup>197</sup> any person who gave permission for that place to be used for the infringing performance is also liable for infringement. This does not apply, however, where the defendant gave permission on reasonable grounds that the performance would not be infringed.<sup>198</sup>

Special provisions also apply to those who facilitate an infringing performance. Section 26 deals with the situation in which copyright is infringed by a public performance or by the playing or showing of the work in public by means of apparatus for '(a) playing sound recordings, (b) showing films, or (c) receiving visual images or sounds conveyed by electronic means'. In these situations, the following people will infringe.

- (i) The person who *supplies the apparatus* that enables the act of primary infringement to take place is liable for infringement. This covers someone who supplies equipment to play records or show films. Infringement here is conditional on the fact that, where an apparatus is normally used in public, the defendant did not believe on reasonable grounds that it would be used to infringe copyright.<sup>199</sup>
- (ii) An occupier of premises who gave permission for an apparatus to be brought on to the premises will be liable if they knew or had reason to believe that the apparatus was likely to be used to infringe copyright.<sup>200</sup>
- (iii) A person who *supplies a copy* of a sound recording or a film will be liable if they knew or had reason to believe that the copy was likely to be used to infringe copyright.<sup>201</sup>

Finally, it should be noted that special rules, analogous to provisions on secondary infringement, apply where persons do various acts that facilitate access to or duplication

<sup>196</sup> Emphasis added.

<sup>197</sup> Defined in CDPA 1988, s. 25(2), to include premises occasionally used for public entertainment.

<sup>198</sup> CDPA 1988, s. 25(1). <sup>199</sup> CDPA 1988, s. 26(2).

<sup>200</sup> CDPA 1988, s. 26(3). For a possible example, see *PRS v. Kwik-Fit Group Ltd* [2008] ECDR (2) 13 (OH CS).

<sup>201</sup> CDPA 1988, s. 26(4).

of works that have been protected by technological measures. We deal with these in detail in Chapter 13. For the moment, we merely need to note that these rights cover:

- (i) acts that circumvent technological measures;<sup>202</sup>
- (ii) the manufacture and distribution of devices either ‘primarily designed, produced, adapted . . . for the purpose of enabling and facilitating’ circumvention, or ‘promoted, advertised or marketed’ for that purpose, and having ‘only a limited commercially significant purpose or use other than to circumvent’;<sup>203</sup> and
- (iii) the provision of services for the purpose of enabling or facilitating circumvention.

Distinct, and narrower, provisions apply where the measures protect computer programs.<sup>204</sup>

### 3.2 ACTUAL OR CONSTRUCTIVE KNOWLEDGE

One of the notable features of secondary infringement is that liability is dependent on the defendant ‘knowing or having reason to believe’ that the activities in question are wrongful—that is, liability is dependent on the defendant having either actual or constructive knowledge. The question of whether a defendant has the requisite knowledge is decided objectively.<sup>205</sup> As such, it does not matter that the defendant may not have believed that the act in question was wrongful; all that matters are the conclusions that a reasonable person would have reached in the circumstances.

The question that needs to be asked is whether the defendant knew or had reason to believe that they were dealing with or helping to facilitate the creation of an ‘infringing copy’ of the copyright work. In answering this question, the courts have stressed that the defendant must be in a position from which they are able to evaluate the information that is given to them.<sup>206</sup> This means that they must be given a reasonable period of time within which to consider the information.<sup>207</sup> It also means that the information that they are given must be sufficiently detailed as to the nature of the work in question: general allegations about infringement will not suffice.<sup>208</sup> The courts have also said that it is *not* enough for the facts to lead a reasonable person to *suspect* the relevant conclusion.<sup>209</sup> Although it will enhance the claimant’s case if the defendant is supplied with a copy of, or given reasonable access to, the copyright work, the circumstances of the case may be such that the reasonable defendant could have ‘known’ about the wrongful nature of their activities without ever having seen the copyright work.<sup>210</sup>

### 1 INTRODUCTION

This chapter considers the exceptions on which a defendant may rely when sued for infringement of copyright. Most of these exceptions are found in Chapter III of Part 1 the Copyright, Designs and Patents Act 1988 (CDPA 1988), as amended, where they are referred to as ‘permitted acts’. The exceptions come into play only once a claimant has established that copyright has been infringed. Where this occurs, the onus of proof falls on the defendant to prove that one of the exceptions applies.

At the most abstract level, the exceptions in the CDPA 1988 attempt to ‘balance’ the rights of copyright owners with a multiplicity of other rights, freedoms and interests. The resulting body of legislation appears as anything but a rational scheme; rather, it is a strange collection of exceptions, many defined with ‘extraordinary precision and rigidity’.<sup>1</sup> In 2006, the Gowers Review concluded that the law was unduly rigid and proposed that copyright exceptions be reformed to introduce more flexibility into UK law.<sup>2</sup> Five years later, the Hargreaves Review restated the need to reform the exceptions, particularly highlighting the impact of over-regulation on emerging business sectors.<sup>3</sup>

<sup>1</sup> *Pro Sieben Media v. Carlton UK Television* [1998] FSR 43, 48 per Laddie J.

<sup>2</sup> Gowers Review, ch. 4, 39, [3.26].

<sup>3</sup> Hargreaves Review, 3, 8.

Despite the calls for reform, the legislative freedom to develop such flexibilities at a national level is rather limited. As we have observed in Chapter 6, the Information Society Directive harmonizes the rights of reproduction, communication, and distribution, and regulates the circumstances in which exceptions to such rights may be recognized.<sup>4</sup> The Directive ‘is intended to make concessions to the public’s justified interest in access to such subject-matter’,<sup>5</sup> and thus provides ‘for numerous exceptions’.<sup>6</sup> More precisely, the Directive contains one mandatory exception as regards transient or incidental acts of reproduction,<sup>7</sup> and a list of optional ‘exceptions or limitations’, many covering the analogue environment.<sup>8</sup> On the whole, member states have the choice not only whether to implement the optional exceptions, but also in relation to how the exception is implemented.<sup>9</sup> The list is exhaustive: member states may not maintain any other exceptions or limitations,<sup>10</sup> nor may they develop new ones in response to changes in the technological environment and cultural practices.

The interpretation of exceptions permitted under the Directive is a matter for the Court of Justice. In a number of cases, the Court has indicated a preference for a ‘narrow’ interpretation,<sup>11</sup> primarily on the basis that these are derogations from general rules.<sup>12</sup> However, in at least one case, the Court has rejected such a proposition, instead preferring a purposive interpretation.<sup>13</sup> In other cases, the Court has emphasized the need to ensure a ‘fair balance’ between the rights and interests of authors and those of users.<sup>14</sup> The defences listed in the Directive are also additionally declared subject to the so-called ‘three-step test’ (which requires that exceptions must be confined to ‘certain special cases’, must not interfere with the ‘normal exploitation’ of the work, and must not prejudice the ‘legitimate interests’ of authors).<sup>15</sup> It remains unclear whether (or when) this constitutes an additional limitation,<sup>16</sup> and whether it is directed at the

The Newspaper Licensing Agency Ltd (NLA) and ors* [2013] UKSC 18, [25]; *ibid.*, Case C-360/13 (5 June 2014) (ECJ, Fourth Chamber), [53] (treating 3 step test as additional requirement).

legislature of member states when drafting exceptions,<sup>17</sup> or at the courts of member states when applying them,<sup>18</sup> or at both the legislatures *and* the courts of member states.

In June 2014, one new exception concerning so-called ‘data mining’ was introduced into UK law, while four others, relating to education, libraries, persons with disability, and the administration, were substantially reformulated.<sup>19</sup> These changes were all effected within the flexibility left to the United Kingdom by the Information Society Directive. Three further exceptions, also within the scope of the Directive, were before Parliament and will come into force on October 1, 2014. These relate to personal copying, quotation, and parody.<sup>20</sup> There was intense lobbying against these exceptions by rights holders, and considerable criticism was voiced as to their form and content as they passed through the legislature.

Before examining the exceptions contained in the CDPA 1988 individually, we begin by outlining some concepts that feature in many of the exceptions—fair dealing, non-commercial use, lawful use, and sufficient acknowledgment—as well as the rule, applicable to certain exceptions, that seeks to ensure that users’ freedoms are not limited by contractual agreement.

## 2 BASIC CONCEPTS

In this section, we want to introduce six basic concepts that are frequently deployed in the specific exceptions.

### 2.1 ‘FAIR DEALING’

Perhaps the most significant concept in Chapter III is the concept of ‘fair dealing’.<sup>21</sup> This requirement limits the operation of four defences:

- (i) fair dealing for the purposes of research or private study (section 29(1) and (1C));
- (ii) fair dealing for the purposes of criticism or review (section 30(1));
- (iii) fair dealing for the purpose of reporting current events (section 30(2)); and
- (iv) fair dealing for the purposes of illustration for instruction (section 32).

<sup>17</sup> *Stichting de Thuiskopie v. Mijndert van der Lee*, Case C-462/09 [2011] ECR I-5331, [AG42] (AG Jääskinen) (Art. 5(5) is ‘in general aimed at national legislatures’, but judges may also ‘need to take account’).

<sup>18</sup> *ACI Adam BV and ors v. Stichting de Thuiskopie*, C-435/12 (10 April 2014) (ECJ, Fourth Chamber), [24]–[25] (member states must consider when applying exceptions); *Painer*, [AG148] (member states must take into account when interpreting exceptions); *Deckmyn and Vrijheidsfonds v. Vandersteen*, Case C-201/13 (22 May 2014) (Opinion of AG Cruz Villallón), [AG29] (national courts must consider when applying an exception).

<sup>19</sup> The Copyright and Rights in Performances (Research, Education, Libraries and Archives) Regulations 2014 (SI 2014/1372), The Copyright and Rights in Performances (Disability) Regulations 2014 (SI 2014/1384), and The Copyright and Rights in Performances (Public Administration) Regulations 2014 (SI 2014/1385).

<sup>20</sup> The Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014; Copyright and Rights in Performances (Quotation and Parody) Regulations 2014.

<sup>21</sup> R. Burrell and A. Coleman, *Copyright Exceptions: The Digital Impact* (2005), ch. 9; M. de Zwart, ‘An Historical Analysis of the Birth of Fair Dealing’ [2007] *IPQ* 60; A. Sims, ‘Strangling Their Creation: The Courts’ Treatment of Fair Dealing in Copyright Law Since 1911’ [2010] *IPQ* 192; A. Sims, ‘Appellations of Piracy: Fair Dealing’s Prehistory’ [2011] *IPQ* 3.

From October 1, 2014, further fair dealing exceptions will be available for ‘quotation’ (a new section 30(1ZA)) and ‘parody, caricature or pastiche’ (a new section 30A(1)).

In this context, all that is meant by ‘dealing’ is that the defendant has made use of the work. Dealing does not imply that there has to be some sort of transaction between the parties. Under these provisions (with the exception of fair dealing *by* quotation), ‘fair dealing’ is permitted only for the purposes specifically listed in the 1988 Act. This means that the dealing must be fair for the purpose of research or private study, criticism or review, quotation, the reporting of current events, parody, or ‘illustration for instruction’. As such, it is irrelevant that the use might be fair for a purpose not specified in the Act, or that it is fair in general. The restricted approach adopted in the United Kingdom should be contrasted with US copyright law, which has a general defence of *fair use* such that if the court is satisfied that the use is fair, then there will be no infringement.<sup>22</sup>

In deciding the purpose for which the work was used, the test does not depend on the subjective intentions of the alleged infringer;<sup>23</sup> rather, a more objective approach is adopted, so that the question is whether the dealing is ‘in the context of’ research, criticism, instruction, parody or reporting.<sup>24</sup>

If a dealing falls within one of the specified purposes, it needs to be considered whether the dealing is fair.<sup>25</sup> ‘Fairness’ is said to be a question of degree and impression.<sup>26</sup> The courts have sometimes adopted the perspective of whether a ‘fair-minded and honest person’ would regard the dealing as ‘fair’, but whether this takes the analysis very far might be doubted.<sup>27</sup> As Lord Phillips MR stated: ‘It is . . . essential not to apply inflexibly tests based on precedent, but to bear in mind that considerations of public interest are paramount.’<sup>28</sup> A number of factors might influence the way in which this question is answered,<sup>29</sup> although the relative importance of each of these factors will vary according to the case in hand and the type of dealing in question.

### 2.1.1 Amount taken<sup>30</sup>

The quantity and quality of what is taken will be a crucial factor in deciding whether a dealing is fair. As Lord Denning MR said in *Hubbard v. Vosper*,<sup>31</sup> you ‘must consider the number and extent of the extracts’ and ask: are ‘they altogether too many and too long to be fair’? This is because lengthy and numerous extracts, or extracts of the most important parts of a work, will reduce the expected returns to the copyright owner. By focusing on the quantity and quality of what is taken, the courts have recognized that fair dealing should not undermine the role that copyright plays in encouraging creativity. In general, therefore, the defence will apply only where part of a work was taken. Nevertheless, the

<sup>22</sup> US Copyright Act of 1976, §107.

<sup>23</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, [21].

<sup>24</sup> *Pro Sieben* [1999] FSR 610 (CA), 620.

<sup>25</sup> ‘Fairness’ here is primarily a British concept, although it also appears in Art. 10 Berne and Info. Soc. Dir., Art. 5(3)(d). The concept of fairness, in contrast with the three-step test (in Art. 9(2) Berne, and Info. Soc. Dir., Art. 5(5)), is a ‘multifactor’ test rather than a set of cumulative steps or conditions.

<sup>26</sup> *Hubbard v. Vosper* [1972] 2 QB 84.

<sup>27</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, [38] *per* Aldous LJ; *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239 (CA), [44] *per* Peter Gibson LJ.

<sup>28</sup> *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 173, [71]; J. Griffiths, ‘Copyright Law after *Ashdown*: Time to Deal Fairly with the Public’ [2002] IPQ 240.

<sup>29</sup> Many countries offer a statutory list of factors and it seems surprising that such an approach was not adopted in the 2014 reforms.

<sup>30</sup> In terms of Info. Soc. Dir., Art. 5(5), the factors listed at sections 2.1.1–2.1.3 relate to whether the defendant’s use interferes with the normal exploitation of the work.

<sup>31</sup> [1972] 2 QB 84, 94.  
© L. Bently and B. Sherman 2014

courts have acknowledged that, in some cases, such as where the work itself is short, it may be fair to reproduce the whole work.<sup>32</sup>

### 2.1.2 Use made of the work

Another factor that may influence the decisions as to whether a dealing is fair is the use that is made of the work in question. In some instances, it may be ‘fair’ merely to reproduce someone else’s work without comment or analysis (for example for research or instruction). However, in many cases, a use is more likely to be fair if the defendant can show that they have added to or recontextualized the part taken—that is, a defendant will have a stronger case if they can show that the dealing was transformative.<sup>33</sup> This is particularly the case with fair dealing for criticism or review, quotation, or parody.

It seems that the fact that a defendant derives a commercial benefit from the dealing will weigh against them when attempting to show that the dealing was fair.<sup>34</sup> As Chadwick LJ said in the Court of Appeal decision of *Newspaper Licensing Agency v. Marks & Spencer plc*:

[A] dealing by a person with a copyright work for his own commercial advantage—and to the actual or potential commercial disadvantage of the copyright owner—is not to be regarded as a ‘fair dealing’ unless there is some overriding element of public advantage which justifies the subordination of the rights of the copyright owner.<sup>35</sup>

### 2.1.3 Consequences of the dealing

Another factor that will influence the decision as to whether a dealing is fair relates to the impact that the dealing will have upon the market for the work. This is particularly important where the parties are in competition and the defendant’s use of the work acts as a substitute for the purchase of the original work.<sup>36</sup> This would be the case, for example, if, in criticizing it, a defendant were to show all of a film.

### 2.1.4 Is the work unpublished?<sup>37</sup>

Where the dealing takes place in relation to a work that has not been published or made widely available to the public, this will weigh against the dealing being fair. In fact, in the case of fair dealing for criticism or review, the defence is specified to be unavailable if the work has not been previously ‘made available’ to the public.<sup>38</sup> In other cases, particularly that of reporting current event, the fact that a work has not been published will certainly stand against a defendant.<sup>39</sup> In this respect, it is likely that the weight that a court gives to

<sup>32</sup> Ibid., 94–5, 98 *per* Megaw LJ (example of a parishioner quoting an epitaph on a tombstone in the churchyard); *Sillitoe v. McGraw Hill* [1983] FSR 545; *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515, 520.

<sup>34</sup> But note CDPA 1988, s. 29(1) (fair dealing for research defence applies only to research for a non-commercial purpose); Database Dir., Art. 6(2)(b)).

<sup>35</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239 (CA), 257.

<sup>36</sup> *Hubbard v. Vosper* [1972] 2 QB 84.

<sup>37</sup> The factors considered at sections 2.1.4–2.1.7 may be thought of as relating the prejudice to the legitimate interests of the author or right holder.

<sup>38</sup> CDPA 1988, s. 30(1), (1A) (as amended to give effect to Info. Soc Dir., Art. 5(3)(d)); cf. Lord Denning in *Hubbard v. Vosper* [1972] 2 QB 84.

<sup>39</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, 378, [34] *per* Aldous LJ; *HRH the Prince of Wales v. Associated Newspapers* [2007] 3 WLR 222, 264, [174] *per* Blackburne J, 288, [78]–[79] *per* Lord Phillips MR. But cf. *CCH Canadian v. Law Society of Upper Canada* [2004] SCC 13, [58].

the fact that a work is unpublished will vary according to the nature of the work in question, giving more weight in relation to private letters than it would for official reports that revealed matters of public importance.

### 2.1.5 How the work was obtained

The method by which the copyright material has been obtained has also been a factor in determining whether the dealing is fair.<sup>40</sup> It is less likely for a dealing to be fair if the dealing relates to a work that is leaked or stolen, or obtained by unauthorized access to a database, than to a work that is obtained legitimately.<sup>41</sup>

### 2.1.6 Motives for the dealing

Another factor that may influence the decision as to whether a use is fair relates to the motive of the alleged infringer.<sup>42</sup> For example, where a person acts dishonestly or for a motive that the court finds questionable (such as being primarily motivated by financial gain), it is likely to weigh against them. In contrast, if an alleged infringer can show that they were acting benevolently or were motivated by some altruistic or noble cause, this will increase the chances of their establishing that the dealing was fair.

### 2.1.7 Could the purpose have been achieved by different means?

In some cases, the courts have asked whether the purpose could have been achieved in a manner that is less intrusive on the copyright holder's rights.<sup>43</sup> While there can be few objections to this test being used to determine whether a dealing is fair, problems may arise in the way in which it is applied by the courts. This can be seen in *Hyde Park Residence v. Yelland*.<sup>44</sup> This case concerned an application for summary judgment against *The Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant. The defendant argued that the stills revealed the times when Fayed and Diana were present at Villa Windsor and therefore exposed the falsehood of statements made by Mohammed Al Fayed. The Court of Appeal held that it was not necessary for *The Sun* to have published the images taken from the video; the same result could have been achieved via written word. As Aldous LJ said:

The information as to the timing of arrival and departure of Dodi and Princess Diana could have been given in the articles by the reporter in *The Sun* stating that he had seen the photographs which proved the Princess and Mr Dodi only stayed at the Villa for 28 minutes.<sup>45</sup>

<sup>40</sup> *Beloff v. Pressdram* [1973] 1 All ER 241.

<sup>41</sup> *Ibid.*; *The Controller of Her Majesty's Stationery Office, Ordnance Survey v. Green Amps Ltd* [2007] EWHC 2755 (Ch), [54]; *Queensland v. TCN Channel Nine* [1993] IPR 58 (Supreme Court of Queensland); *British Oxygen v. Liquid Air* [1925] 1 Ch 383; cf. *Time Warner v. Channel 4* [1994] EMLR 1.

<sup>42</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363 (CA), [36]; *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 614 per Walker LJ; *Beloff v. Pressdram* [1973] 1 All ER 241, 263.

<sup>43</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382–3 per Lightman J. Note also Info. Soc. Dir., Art. 5(3)(a), (c), (d). There is a tension between such an approach and ECHR-informed jurisprudence, which gives journalists leeway to determine what is necessary for a particular purpose: *Fressoz & Roire v. France* [2001] 31 EHRR 28, 60, [54]; *A v. B & C* [2002] 3 WLR 542, [11].

<sup>44</sup> [2000] EMLR 363. <sup>45</sup> *Ibid.*, 379.

## 2.2 NON-COMMERCIAL USE AND NOT-FOR-PROFIT USERS

Many of the exceptions depend on the use being ‘non-commercial’.<sup>46</sup> This is said to cover not only uses that are directly commercial, but also uses that are indirectly commercial. The notion of ‘commerce’ here is almost certainly similar to the concept of ‘trade’ in trade mark law, which has been said to refer to ‘economic activity’.<sup>47</sup> In these contexts, commerce is understood as more than a few one-off sales.<sup>48</sup>

Recital 42 of the Information Society Directive indicates that the test of non-commerciality relates to ‘the activity as such’. The organizational structure and means of funding ‘are not the decisive factors in this respect’. It is worth observing that Recital 42 does not say that organizational structure and means of funding are not relevant: many activities by public sector and/or charitable and not-for-profit organizations will be ‘non-commercial’, and most activities of private sector, profit-making businesses will be *per se* commercial. Rather, the implication of Recital 42 is that an activity (such as in-house education) can be non-commercial even if it takes place in a for-profit, private sector, organization, or in an environment in which students pay fees. Conversely, a not-for-profit organization might be involved in commercial use, for example where a university publisher makes and sells copies of a work.

Further problems exist in determining whether a use is to be regarded as ‘indirectly commercial’: how remote can the commercial benefit be and still be relevant? In our view, the answer is that the use must be closely integrated with a commercial activity before a use can be categorized as ‘indirectly’ commercial. For example, if a public house attracts customers by showing copyright films, this could be said to be indirectly commercial even if the pub does not charge directly, because it hopes to make money from the sale of food and drinks.<sup>49</sup> But if a person is studying law with a view to becoming a commercial lawyer, or researching a topic in the hope of publishing a book for which they might receive substantial royalties, we think that the commercial benefit is too remote for it to be said that the use is for a ‘commercial purpose’, even indirectly.

Other exceptions, such as that relating to making and supplying accessible copies to persons with a disability, are limited to not-for-profit organizations.<sup>50</sup> In many cases, this limitation replaced former requirements on the Secretary of State to designate or certify the scheme, and the reform is aimed at reducing bureaucracy.

## 2.3 LAWFUL USER

A number of exceptions under European law depend on the user being regarded as a ‘lawful user’ or ‘lawful acquirer’.<sup>51</sup> Whether there was meant to be any distinction between

<sup>46</sup> CDPA 1988, ss 28B (personal copying), 29(1) (research for a ‘non-commercial purpose’), 29(1C), 178 (private study, defined as non-commercial), 29A(1)(a) (data analysis), 32(1)(a) (fair dealing for instruction), 35(1)(a) (recording of broadcasts for education), 36(1)(a) (copying for education), 42A(3)(c) (library making and supplying copies to users), 43(2)(c), and 61(4)(c) (library supply of unpublished works). Cf. CDPA 1988, s. 40B(3)(b) (not limiting research uses to ‘non-commercial’). The limitation to non-commercial research is required under a number of the EU law provisions: Info. Soc. Dir., Art. 5(2)(b), (c), (e), 5(3)(a), (b); Database Dir., Art. 6(2)(b). See S. Karapapa, *Private Copying* (2012), ch. 4.

<sup>47</sup> See Chapter 40, pp. 1047–8.

<sup>48</sup> Some further idea of what is meant might be gleaned from Recital 14 of the Enforcement Directive. Various provisions of that Directive, such as the availability of orders freezing bank accounts, apply in the case of infringement on ‘a commercial scale’. Recital 14 equates this with ‘acts carried out for direct or indirect economic or commercial advantage’, which ‘this would normally exclude acts carried out by end consumers acting in good faith’.

<sup>49</sup> *The Controller of Her Majesty’s Stationery Office, Ordnance Survey v. Green Amps Ltd* [2007] EWHC 2755 (Ch), [23].

<sup>50</sup> CDPA 1988, s. 61 (recording of folk songs). See Info. Soc. Dir., Recital 40.

<sup>51</sup> CDPA 1988, ss 28B(2) (proposed personal use defence restricted to lawfully acquirer), 31A, as amended (accessible copies must be made from copy in lawful possession or lawful use of disabled person); Software Dir., Art. 5(1) (lawful acquirer), 5(2) (person having ‘right to use’); Database Dir., Arts 6(1), 8(1), (2).

these concepts may be regarded as doubtful.<sup>52</sup> The term ‘lawful acquirer’ covers a purchaser of a work, a subsequent recipient (such as a second-hand purchaser or borrower), and a licensee.<sup>53</sup> In *UsedSoft GmbH v. Oracle International Corp.*,<sup>54</sup> the Court of Justice held that a transferee of software from an original purchaser is a ‘lawful acquirer’ (even though a licence term affecting the original purchaser purported to prevent such transfer).<sup>55</sup> This is so even in the case of sale of software in intangible form and even after it has been subsequently patched or updated.<sup>56</sup>

Some of the UK provisions use other terms in the same ‘family’: the text and data analytics defence is available only to a person who has ‘lawful access’;<sup>57</sup> the exceptions for persons with disabilities require ‘lawful possession or lawful use’;<sup>58</sup> and the personal copying for private use defence requires the person to have a ‘lawfully acquired’ copy on a permanent basis (thus excluding borrowers).<sup>59</sup> The differences, if they exist, between lawful acquisition, possession, access, and use, seem very subtle and such differentiation makes for an unnecessarily complex set of rules.

## 2.4 SUFFICIENT ACKNOWLEDGEMENT

In certain situations, for a defence to apply, the use must be accompanied by a ‘sufficient acknowledgement’.<sup>60</sup> In essence, this means that the author and the work must be identified. It should be noted that even where sufficient acknowledgement is required as a general matter, the defence will still usually be available if ‘this turns out to be impossible for reasons of practicality or otherwise’.<sup>61</sup> Moreover, section 178 of the CDPA 1988 indicates that there is no need for the author to be identified where a work is published anonymously or, in the case of an unpublished work, where it is not possible for a person to ascertain the identity of the author by reasonable inquiry.<sup>62</sup>

Where required, the defendant must show that they have identified both the work and the author of the work.<sup>63</sup> A work can be identified by its title or by some other

<sup>52</sup> W. Blocher, ‘Computer Program Directive’, in Walter and von Lewinski, [5.5.39]; T.-E. Synodinou, ‘The Lawful User and a Balancing of Interests in European Copyright Law’ (2010) 41(7) *IIC* 819, 824.

<sup>53</sup> The Commission has said that ‘lawful acquirer’ meant a ‘purchaser, licensee, renter or a person authorized to use the program on behalf of the above’: *Report on the Implementation and Effects of Directive 91/250/EEC* (April 2000) COM(2000) 199 final, 12. description.<sup>64</sup> The author can be identified by name, pseudonym, or by other means, such as a photograph or a logo.<sup>65</sup> Whatever method is chosen, it must convey ‘to a reasonably alert member of the relevant audience that the identified person is the author.’<sup>66</sup> It is important to note that it is the author and not the owner of the copyright work who must be identified.<sup>67</sup>

## 2.5 RELATIONSHIP WITH CONTRACT

As the CDPA 1988 reminds us, the mere fact that an activity falls within one of the permitted acts does not mean that it does not contravene some other legal right,<sup>68</sup> an obvious example being breach of contract. With the increasing use of digital means to make works available, users are often confronted by attempts to limit their freedoms under the Act. In some situations, European law has specified that particular exceptions may not be prevented by contract;<sup>69</sup> in other cases, it has left the matter to member states.<sup>70</sup> The 1988 Act goes beyond the EU requirements and, in a number of other situations, applies restrictions to contractual provisions that seek to override exceptions.<sup>71</sup>

The Act uses two different techniques. Sometimes, contractual provisions are declared to be ‘void’.<sup>72</sup> In other cases, the same goal is achieved by stating that the relevant terms are ‘unenforceable’ (rather than void) insofar as they purport to restrict the availability of the particular exception.<sup>73</sup>

A related problem is that raised by the interface between the exceptions to copyright and technological measures of protection. If a person cannot take advantage of a defence because of the application of access or copy control mechanisms, can that person legally circumvent the measure in order to do so? So far, the UK legislature has answered this question with a clear ‘no’, leaving users deprived of the ability to utilize some of the exceptions, with the possibility of applying to the Secretary of State.<sup>74</sup> These provisions are reviewed in Chapter 13.

<sup>64</sup> *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 616 per Walker LJ.

<sup>65</sup> *Ibid.*, 625; *Newspaper Licensing Agency* [1999] EMLR 369, 384 (Ch).

<sup>66</sup> *Pro Sieben Media* [1997] EMLR 509, 597 per Laddie J.

<sup>67</sup> *Express Newspapers v. Liverpool Daily Post* [1985] 3 All ER 680; cf. *Forensic Telecommunication Services v. Chief Constable of West Yorkshire* [2011] EWHC, [2012] FSR (15) 428, [114] (although presumably Arnold J meant that the author, Seyton Bradford, should have been credited, rather than his employer, FTS).

<sup>68</sup> CDPA 1988, s. 28(1). <sup>69</sup> Software Dir., Arts 5(2), 9; Database Dir., Art. 15 (‘null and void’).

<sup>70</sup> Info. Soc. Dir., Art. 9 (provisions in Directive without prejudice to ‘law of contract’).

<sup>71</sup> Hargreaves Review, 8. Bizarrely, and presumably until the government embarks on the much-needed codification, the effect is that contractual limitations remain possible in relation to the core public interest exceptions—fair dealing for criticism and review and reporting current events—unless they can be subsumed within it.

<sup>72</sup> CDPA 1988, ss 36(4), 50A, 50B, 296A(1)(a), 296A(1)(b), 296A(1)(c), and 296B. See also Broadcasting Act 1996, s. 137.

<sup>73</sup> CDPA 1988, 29(4B) (research and private study), 29A(5) (data analytics), 32(3) (teaching), 31F(8) (disability), 32(3) (instruction), 41(5) (library copying for other libraries), 42(7) (library copying to replace missing parts), and 42A(6) (library copying of published works for user research). But not CDPA 1988, ss 40B (use on-site in cultural institutions), 43(3)(b) (prohibited copying of unpublished works), which are not capable of being overridden by contract. The Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014, which add a s. 28B(10) (personal copying) into the CDPA 1988, and the Copyright and Rights in Performances (Quotation and Parody) Regulations 2014, which add ss 30(4) (quotation) and 30A(2) (parody, caricature, pastiche), contain similar contractual overrides.

<sup>74</sup> CDPA 1988, ss 296ZA and 296ZE, Sch. 5A (as amended by SI 2014/1372, Sch., para. 10, and SI 2014/1384, Sch., para. 7, on disability); Info. Soc. Dir., Art. 6. See below pp. 329–30.

## 2.6 DEALINGS WITH COPIES MADE UNDER EXCEPTIONS

Because many of the permitted acts allow for the making of copies by particular people in specific circumstances and for particular purposes, the legislature has frequently sought to indicate that subsequent use beyond the purpose,<sup>75</sup> or dealing that places the copy in the hands of another person,<sup>76</sup> renders the copy an ‘infringing copy’.<sup>77</sup> In other words, just because a copy has been made under an exception does not mean that the copy is able to circulate freely in the market. The precise language by which the legislature has sought to achieve this result is not always consistent.<sup>78</sup>

## 3 TEMPORARY TECHNOLOGY-DICTATED COPIES

In extending the notion of ‘reproduction’ to encompass transient copying,<sup>79</sup> the European legislature inevitably extended the remit of copyright into just about every corner of the digital world. This is because digital communication—and digital tools generally—function through the generation of temporary copies. For example, digital networks operate processes of ‘caching’—that is, the temporary storage of information in the user’s computer or server, which allows for speedier access to websites.<sup>80</sup> Such activities are positively desirable, since they enable the Internet to function speedily and efficiently, and seem to have no obvious impact on the economic interests of content holders.

Recognizing this, the European legislature sought to exclude from copyright liability certain temporary copies that are transient or incidental to other activities.<sup>81</sup> Importantly, this was the only exception that was regarded as so significant that all member states were obliged to implement it. Nevertheless, the exception is subject to a number of conditions, so that its precise remit is uncertain. According to Article 5(1) of the Information Society Directive (implemented in the United Kingdom by section 28A of the 1988 Act<sup>82</sup>), a person making a temporary copy will escape liability only if:

- (i) the copy is transient or incidental;
- (ii) the making of the copy is an ‘an integral and essential part of a technological process’;
- (iii) the copying either occurs to enable either transmission of the work in a network between third parties and an intermediary, or to enable a lawful use of the work; and
- (iv) the temporary copy has ‘no independent economic significance’.

<sup>75</sup> CDPA 1988, s. 29A(2)(b) (copy for data analysis, use beyond purpose is infringement).

<sup>76</sup> CDPA 1988, ss 28B (personal copy is transferred ‘to another person otherwise than on a private and temporary basis’), 29A(2)(a) (where copy made for data analysis, infringement occurs if copy is transferred to ‘any other person’), and 31A(4) (transfer of accessible copies to non-entitled persons).

<sup>77</sup> In many cases, the ‘dealing’ is an infringing act, being either a distribution or communication to the public.

<sup>78</sup> CDPA 1988, ss 29A(4) (data analytics), 31A(6) (disability), 31B(12) (defining ‘dealt with’ as sale), 35(6), and 36(9) (defining ‘dealt with’ to cover sale or communication).

<sup>80</sup> See P. B. Hugenoltz, ‘Caching and Copyright: The Right of Temporary Copying’ [2000] *EIPR* 482, 483; *Newspaper Licensing Agency Ltd v. Public Relations Consultants Association* [2013] UKSC 18, [2] per Lord Sumption.

<sup>81</sup> Info. Soc. Dir., Recital 33.

<sup>82</sup> CDPA 1988, s. 28A, does not, on its face, extend the exception to broadcasts. However, Floyd J has held that it must be interpreted to apply to broadcasts: *ITV Studios Ltd v. TV CatchUp Ltd* [2011] EWHC 1874 (Pat), [47], [121].

The conditions have made it difficult to predict when temporary acts of reproduction will be legitimate. Perhaps not surprisingly, the meaning of Article 5(1) has been considered a number of times already by the Court of Justice. The first three cases were *Infopaq I* and *Infopaq II*, and *Football Association Premier League (FAPL) v. QC Leisure*.<sup>83</sup> The first two concerned temporary copies made at various stages in an electronic news-clippings service (scanning, undertaking optical character recognition, or OCR, searching, and printing out), whereas *FAPL* related to copies created in the buffer of a satellite broadcast receiver. Importantly, the Court of Justice indicated that the goal of Article 5(1) was to ‘ensure the development and operation of new technologies’.<sup>84</sup> The conditions thus need to be interpreted to ensure that the goal is achieved.

The first requirement—that the copy be transient or incidental<sup>85</sup>—was considered in *Infopaq I*. In that case, the Court indicated that, to be transient, the duration of an act must be limited to that necessary for completion of the process, and the copy must subsequently be deleted automatically and without human intervention.<sup>86</sup> A printout would clearly not be a transient copy, but a scan might (depending on the details of the process).<sup>87</sup>

The second requirement—that the reproduction be an ‘integral and essential’ part of a technological process—was considered in *Infopaq II*, in which the Court of Justice said that this ‘requires the temporary acts of reproduction to be carried out entirely in the context of the implementation of the technological process and, therefore, not to be carried out, fully or partially, outside of such a process’.<sup>88</sup> Despite this language, the Court indicated that the condition could be satisfied even though the process is initiated by a human being, such as the scanning of the newspapers.<sup>89</sup> The copies so created could fall within the defence if the other requirements were met.<sup>90</sup>

The third requirement—that the purpose must be to enable a transmission in a network between third parties and an intermediary or to enable a ‘lawful use’—was considered in *FAPL* and *Infopaq II*.<sup>91</sup> Both indicated a broad construction of lawful use. In *FAPL*, it was held that receipt of a satellite broadcast was lawful and thus the creation of the buffer copies did not give rise to liability.<sup>92</sup> In *Infopaq II*, it was suggested that the making of a summary of a newspaper article, being a use that the copyright owner could not prevent, might justify the making of temporary copies by a technological process that facilitated that use.<sup>93</sup>

The fourth requirement—that the acts be of no ‘independent economic significance’—was also considered in both *FAPL* and *Infopaq II*. In *FAPL*, the Court of Justice indicated that, for a copy to have such significance, it must be attributable to the copy itself rather than the lawful use (in the case, the reception of the broadcast). Because the buffer copies had no such value, the Court indicated that they fell within the exception.<sup>94</sup> In *Infopaq II*, the Court elaborated on the reasoning in *FAPL*, stating that the defence would not apply if there were any economic benefit that was either distinct or separable from the economic advantage derived from the lawful use of the work concerned, or went beyond

<sup>83</sup> *Infopaq I*; *Infopaq International A/S v. Danske Dagblades Forening*, Case C-302/10 (17 January 2012) (*Infopaq II*); *FAPL*.

<sup>84</sup> *FAPL*, [179]. <sup>85</sup> *VG Wort*, [AG73] (AG Sharpston).

<sup>86</sup> *Infopaq I*, [61], [64]. The Court assumed that caching and other acts that enable browsing would have this character: [63].

<sup>87</sup> *Infopaq I*, [67]. <sup>88</sup> *Infopaq II*, [30]. <sup>89</sup> *Infopaq II*, [36]. <sup>90</sup> *Infopaq II*, [37]–[38].

<sup>91</sup> Lawful use is defined to include uses ‘authorised by the rightholder or not restricted by law’: Info. Soc. Dir., Recital 33.

<sup>92</sup> *FAPL*, [171]–[173]. <sup>93</sup> *Infopaq II*, [44]. <sup>94</sup> *FAPL*, [175]–[177].

that derived from that use of the protected work.<sup>95</sup> Efficiency gains, for example that it was quicker or easier to search newspapers by digitizing them, were not relevant.<sup>96</sup>

The question of whether the exception allows for electronic copies that facilitate acts of browsing has been referred to the Court of Justice by the UK Supreme Court in *Newspaper Licensing Agency Ltd (NLA) v. Public Relations Consultants Association (PRCA)*.<sup>97</sup> In that case, an electronic news-monitoring service used sophisticated search engines to identify stories contained in online versions of newspapers relating to particular search topics. The news-monitoring service sent its clients links to the relevant stories, accompanied by the titles and brief extracts surrounding the search term. In addition to raising controversial questions as to whether newspaper titles were original works,<sup>98</sup> the courts were asked to rule on whether the recipient of links infringed when they clicked on the links and visited the sites. In turn, this raised the issue, in effect, of whether browsing websites might infringe copyright. Given the way in which digital technologies operate, browsing inevitably involves making temporary copies, in an Internet cache and on a browser's hard drive. The NLA argued that the browsing did not comply with the conditions of Article 5(1) and the Court of Appeal agreed. Relying heavily on *Infopaq I*, the Court stated that the copies in question met none of the conditions.<sup>99</sup>

The Supreme Court recognized that the case raised an issue of general public importance, Lord Sumption explaining that:

[T]he . . . question potentially affects millions of non-commercial users of the internet who may, no doubt unwittingly, be incurring civil liability by viewing copyright material on the internet without the authority of the rights owner, for example because it has been unlawfully uploaded by a third party.<sup>100</sup>

Not insignificantly, by the time the case was heard by the Supreme Court, the Court of Justice had issued its decisions in *Infopaq II* and *FAPL*, both of which seemed to indicate a trend towards flexible purposive interpretation of Article 5(1). In light of these, the Supreme Court held that the acts of members of the PRCA in clicking on the links were not infringing. Giving judgment, Lord Sumption reasoned that the various components of Article 5(1) were overlapping and needed to be read together, rather than merely ticked off like separate items on a shopping list.<sup>101</sup> Having regard in particular to Recital 33 and also to *FAPL*, it was clear to the Supreme Court that Article 5(1) was intended to cover the making of copies to enable end-user acts of viewing content on the Internet (and was not confined, as NLA suggested, to copies created in transmission networks). Accordingly 'the various conditions laid down by that Article must be construed so far as possible in a manner consistent with that purpose'.<sup>102</sup> Lord Sumption said that it was beyond argument that the temporary copies were created as an integral part of a technological process and that they had no economic significance beyond that from the lawful act of viewing; the key question was whether they were temporary and 'transient or incidental'.<sup>103</sup> He explained that he thought there was no difference between a temporary and a transient copy.<sup>104</sup> Given that the copy could remain in the cache for a considerable length of time, the Court recognized that it was difficult to fit the circumstances within the literal term 'transient'. Nevertheless, because the cache copies are eventually, in the normal course of affairs, destroyed automatically, the Court found them to be transient in the sense (stated in *Infopaq I*) that the copies would be deleted without human

<sup>101</sup> *Ibid.*, [11].

<sup>102</sup> *Ibid.*, [28].

<sup>103</sup> *Ibid.*, [29].

<sup>104</sup> *Ibid.*, [30].

intervention. Lord Sumption argued that, looked at in the round, the jurisprudence of the Court of Justice sought to elaborate a distinction between ‘the use of a computer or other equipment simply to view the relevant material, and its use to record it’.<sup>105</sup> In his view, the case concerned the former not the latter. He also indicated that even if the copy was not transient, it was incidental to the technological process;<sup>106</sup> therefore the copies all fell within the exception.

However, recognizing that the conclusion was not completely *acte claire* and that the matter was one that needed to be decided for the whole of the European Union, the Supreme Court decided to refer the matter to the Court of Justice.<sup>107</sup> On 5 June 2014, the Court affirmed the conclusion of the Supreme Court, finding the copies made to facilitate browsing to be both transient and incidental to the process of viewing the material which had been placed on the Internet with the rightholder’s assent. The Court conducted an additional analysis in which it found the conclusion consistent with the ‘three step test’.

#### 4 PERSONAL COPYING FOR PRIVATE USE

Prior to October 1, 2014, apart from the exceptions relating to private study,<sup>108</sup> back-up copies of computer programs,<sup>109</sup> and time shifting of broadcasts,<sup>110</sup> UK law contained no exception permitting private or personal use. Consequently, acts such as making a copy of legally purchased, copyright-protected CDs for use on a portable device, such as an MP3 player, iPhone, or iPod, constituted illegal acts of ‘copying’ the recording (and possibly the musical and literary works performed and recorded therein). This was so even though it is clear that the record industry neither offers licences to make such copies, nor would enforce the rights that exist in the recordings against such uses.

Article 5(2)(b) of the Information Society Directive allows member states to offer exceptions that permit the making of ‘reproductions on any medium by a natural person for private use and for ends that are neither directly nor indirectly commercial’. In many EU member states, a broad private copying exception exists, coupled with a levy system.<sup>111</sup> Some impose levies on blank media (such as blank CDs); some, on mp3 players; some, on printers; and some, on personal computers. This type of scheme is clearly what the EU legislature envisaged for Article 5(3)(b), and the details of many such schemes have already been ruled on by the Court of Justice.<sup>112</sup> That case law establishes that ‘fair compensation’ is intended to compensate right holders and must be calculated on the basis of the criterion of the harm caused to authors of protected works, although there is some inconsistency as to whether the harm for which compensation must be paid is merely the harm caused by the introduction of the private copy exception, or any harm caused by

<sup>105</sup> *Ibid.*, [31].      <sup>106</sup> *Ibid.*, [33].      <sup>107</sup> *Ibid.*, [38]. Case C-360/13.

Karapapa, *Private Copying* (2012). For background, see B. Hugenholtz, ‘The Story of the Tape Recorder and the History of Copyright Levies’, in B. Sherman and L. Wiseman (eds), *Copyright and the Challenge of the New* (2012), ch. 7.

<sup>112</sup> *Padawan*, Case C-467/08 [2010] ECR I-10555 (ECJ, Third Chamber), [32]–[33]; *Amazon.com Interntional Sales Inc v. Austr-Mechana Gesellschaft zur Wahrnehmung mechanisch-musikalischer Urjheberrechte Gesellschaft hbG*, Case C-521/11 (11 July 2013) (ECJ, Second Chamber) (*‘Amazon.com’*); *ACI Adam BV and ors v. Stichting de ThuisKopie*, C-435/12 (10 April 2014) (ECJ, Fourth Chamber) (such schemes cannot be applied to copying from illegal material); *Copydan Båndkopi v. Nokia Danmark A/S*, Case C-463/12 (pending); *Hewlett-Packard Belgium SPRL v. Reprobel SCRL*, Case C-572/13 (pending).

unauthorised reproduction.<sup>113</sup> Although, in principle, the compensation should be paid by end users who take advantage of the exception (and thus cause the harm),<sup>114</sup> it might alternatively be paid by those who are in possession of equipment and who make it available, or those who provide services to private users (the assumption being that they pass the charge on to purchasers),<sup>115</sup> or those who sell recording media (even if they do so from outside the country with the private copy exception).<sup>116</sup> Sales of such equipment other than to those involved in making private uses, for example to businesses, would not warrant such a levy.<sup>117</sup> Member states have a ‘wide discretion’ when deciding who must discharge the obligation to pay compensation,<sup>118</sup> but have an obligation to ensure that the mechanism is effective to secure the compensation to the authors.<sup>119</sup> The compensation collected need not be paid directly to right holders, so can be paid to social and cultural establishments to be used for the benefit of ‘those entitled’.<sup>120</sup>

A statutory instrument has now been adopted by Parliament to create a narrow personal copying exception (section 28B of the CDPA 1988), allowing an individual to copy content that they own and which they acquired lawfully to another medium or device for their own private use.<sup>121</sup> The exception, which gives effect to the recommendations of the Hargreaves Review,<sup>122</sup> is justified as aligning copyright law with ‘the reasonable expectations and behaviour of most people’.<sup>123</sup> The exception allows the making of ‘a copy’ of any work other than a computer program,<sup>124</sup> but it is clear that this can include multiple copies.<sup>125</sup> The conditions for so doing are that:

- (i) the person is an individual;

<sup>113</sup> *Padawan*, [38], [42] (harm caused by introducing exception); cf. *Stichting de Thuiskopie v. Mijndert van der Lee*, Case C-462/09 [2011] ECR I-5331 (ECJ, Third Chamber) (*‘Thuiskopie’*), [24] (‘harm resulting for the author from the reproduction for private use of his protected work without authorization’); *VG Wort*, [37], [49] (harm caused by introducing the measure), [31], [75] (harm caused by unauthorized reproduction); *Amazon.com*, [47] (harm caused by unauthorized private use). The significance of the distinction is that there will be harm caused by unauthorized copying whether there is an exception or not; on introducing an exception, the question arises as to whether compensation must cover only the new harm that results from legitimate private copying (but which would not have occurred had copying been prohibited), or also the harm that would have occurred whatever the legal position, but which is now legitimized.

The right to receive remuneration may not be waived, nor may it be the subject of any presumption of transfer: *Martin Luksan v. Petrus van der Let*, Case C-277/10 (9 February 2012) (ECJ, Third Chamber), [101], [109]; *Amazon.com*, [48]. In a pending case, the Court of Justice has been asked whether statutory rules requiring the compensation to be divided between publisher and author are permissible: *Hewlett-Packard Belgium SPRL v. Reprobel SCRL*, Case C-572/13 (pending).<sup>114</sup> *Padawan*, [45]; *Thuiskopie*, [26].

<sup>115</sup> *Padawan*, [46]–[48]; *VG Wort*, [76]–[78].<sup>116</sup> *Thuiskopie*, [39] (sellers into the Netherlands).

<sup>117</sup> *Padawan*, [52]–[53]. However, an indiscriminate approach might be permissible, so long as those who were not implicated in facilitating private copying can gain reimbursement of compensation that has been paid: *Amazon.com*, [31]–[37].<sup>118</sup> *Thuiskopie*, [23]; *Amazon.com*, [20].

<sup>119</sup> *Thuiskopie*, [23], [39].<sup>120</sup> *Amazon.com*, [49].

<sup>121</sup> The Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014 (laid before Parliament in April 2014).

<sup>122</sup> Hargreaves Review, 43, [5.10].

<sup>123</sup> Hargreaves Review, 43, [5.10].<sup>124</sup> The Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014, which introduces CDPA 1988, s. 28B(1). Uses of computer programs are covered by CDPA 1988, ss 50A, 50BA, and 50C.

<sup>125</sup> Under the Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014, introducing CDPA 1988, s. 28B(1(a), the personal copy may be made either from the ‘individual’s own copy’ or from a ‘personal copy’, where the latter is a copy made under the provision. Thus a person could make multiple personal copies, whether directly from the originally acquired copy or from personal copies of that originally acquired copy. This is what was indicated by the Hargreaves Review, 44, [5.14] (which referred to ‘transferring CD files to a laptop and MP3 player’).

- (ii) they have lawfully acquired an initial copy ('the individual's own copy');<sup>126</sup>
- (iii) they hold the initial copy on a permanent basis (rather than on loan);<sup>127</sup>
- (iv) the further copy is for the individual's private use;<sup>128</sup> and
- (v) the further copy is made for non-commercial ends.<sup>129</sup>

However, in contrast with Article 5(2)(b), which requires that 'right holders receive fair compensation', section 28B makes no provision for 'compensation'. The reluctance to introduce levies in part derives from experiences with proposals to introduce a blank-tape levy in the 1980s, when it was highlighted that such levies were, in effect, 'taxes' on purchasers, many of whom had no intention of using the blank media for infringing purposes. The decision not to compensate rights holders has, however, proven controversial with rights holders. The UK government has claimed that no compensation is required, given the narrowness of the exception. Recital 35 of the Information Society Directive states that 'where the prejudice to the rightholder would be minimal, no obligation for payment may arise'. The United Kingdom says that this is applicable, because the narrow copying exception in section 28B 'corresponds to what consumers [were] already doing'.<sup>130</sup> As a result, these acts are already 'priced into the purchase' and so entail no loss requiring compensation.<sup>131</sup> If the Court sticks to its definition of harm—that is, harm that results from introducing the exception—this argument seems plausible.

Contracts that purport to restrict the making of a personal copy which is permitted under the exception will be unenforceable. This is the case even with pre-existing contracts. Special provision has also been made if technological measures impede access to the personal copy defence.<sup>132</sup>

## 5 RESEARCH OR PRIVATE STUDY

Section 29(1) of the CDPA 1988 provides that fair dealing with a work for the purpose of non-commercial research or private study does not infringe copyright in the work.<sup>133</sup> The defence is of limited application to computer programs.<sup>134</sup> Contracts that attempt to exclude the operation of the defence are unenforceable.<sup>135</sup>

The rationale for this defence lies in the belief that research and study is necessary to generate new works. It also recognizes that non-commercial research and study does not normally interfere with the incentives and rewards that copyright provides to creators

<sup>126</sup> CDPA 1988, s. 28B(4) (excluding copies that have been borrowed, rented, broadcast, or streamed).

<sup>127</sup> CDPA 1988, s. 28B(2).

<sup>128</sup> CDPA 1988, s. 28B(1)(b). If a personal copy is transferred 'otherwise than on a private temporary basis', an infringement occurs and the copy becomes an infringing copy: proposed CDPA 1988, s. 28B(6), (7). See Technical Review, 3, 6; cf. Hargreaves Review, 49, [5.31].

<sup>129</sup> CDPA 1988, s. 28B(1)(c). <sup>130</sup> Hargreaves Review, [5.30].

<sup>133</sup> Limitations as to the types of work to which the defence applied were removed by SI 2014/1372, reg. 3(1). For the previous position, see Bently and Sherman (2008), 207. For a background to the reforms, see UK IPO, *Modernising Copyright* (2012), 5, 32–3; UK IPO, *Taking forward the Gowers Review of Intellectual Property* (2008), 21–7.

<sup>134</sup> CDPA 1988, s. 29(4)–(4A), excluding from the fair-dealing exceptions acts, which are permitted in relation to computer programs under CDPA 1988, ss 50B (decompilation) and 50BA (observing, testing, etc.), neither of which are limited to non-commercial acts. See below pp. 261–4.

<sup>135</sup> CDPA 1988, s. 29(4B) (added by SI 2014/1372, reg. 3(e)).

and owners. In effect, the defence helps to achieve copyright's goal of maximizing the production of works. The defence also takes account of the fact that dealings of this kind would often be difficult to detect.

In order for a defendant to rely upon the research or private study defence, they must show that the use made of the copyright work was either (i) for the purpose of non-commercial research or (ii) for private study, that (iii) the purpose was 'non-commercial', and that (iv) the dealing was 'fair'. In the case of research, the work and the author must be sufficiently acknowledged (with certain exceptions).

### 5.1 IS THE DEALING FOR THE 'PURPOSE OF RESEARCH'?

To fall within section 29(1), the defendant must show that the dealing was for the purpose of research.

An Australian case suggested that 'research' meant a systematic inquiry into a question.<sup>136</sup> This would certainly cover photocopying documents for the purposes of an academic research project, whether by a professor, doctoral student, or undergraduate researching an essay. It would also cover the acts of independent researchers investigating topics, as well as people researching their family history. There seems no reason why a research assistant, or designated agent, might not benefit from the exception when acting on behalf of the researcher (and a person who requests such copying will not be liable for authorization).

### 5.2 IS THE DEALING FOR 'PRIVATE STUDY'?

Although the 'private study' exception has existed since 1911,<sup>137</sup> its meaning has yet to be elaborated upon judicially. Giving the words 'private study' their normal meaning, the exception could cover any copying by a student when preparing for a seminar, or to assist in the writing of an essay, or even to help them to decide what type of stove to buy.<sup>138</sup> However, as a general rule, in order to come within the defence, the dealing must be for a person's *own* study. Consequently, a publisher cannot rely on the exception to justify reproducing parts of copyright-protected works in 'study guides' for students.<sup>139</sup> Although it is possible for an agent to do the copying on behalf of the student, an important limitation to this possibility is imposed by section 29(3)(b).<sup>140</sup> This provides that copying by a person other than a researcher or student is not a fair dealing if the person doing the copying knows that it will result in 'copies of substantially the same material being provided to more than one person at substantially the same time and for substantially the same purpose'.<sup>141</sup> This means that lecturers are unable to use the research or private study defence where they make multiple copies of a work for their students.

<sup>136</sup> *De Garis v. Neville Jeffress Pidler* (1990) 18 IPR 292 (FCA). The 'research' exception is said to be justified by reference to Art. 5(3)(a) of the Directive, which refers to 'scientific research'. The term 'illustration' in Info. Soc. Dir., Art. 5(3)(a), qualifies the exception to 'teaching' not research: *Forensic Telecommunication Services v. Chief Constable of West Yorkshire* [2011] EWHC 2892 (Ch), [2012] FSR (15) 428, [109]; S. von Lewinski, 'Information Society Directive', in Walter and von Lewinski, 733–5, [9.6.27]–[9.6.29].

<sup>137</sup> Like the private copying exception under CDPA 1988, s. 28B, this is permissible under the Info. Soc. Dir, Art. 5(2)(a) and (b).

<sup>138</sup> Technical Review, 11 (stating that the term 'private study' has long been understood).

<sup>139</sup> *Sillitoe v. McGraw Hill* [1983] FSR 545; *Longman Group v. Carrington Technical Institute* [1991] 2 NZLR 574 (CANZ).

<sup>140</sup> See also CDPA 1988, s. 36, discussed at p. 256.

<sup>141</sup> CDPA 1988, s. 29(3); cf. *Longman v. Carrington*, [1991] 2 NZLR 574.

### 5.3 IS THE PURPOSE OF THE ACTIVITY ‘NON-COMMERCIAL’?

Both provisions are limited to ‘non-commercial’ activities. Private study is defined, in section 178, as not including any study that is directly or indirectly for a commercial purpose. The exceptions cover most research or private study for academic purposes or personal edification. In contrast, where a work (such as a database) is used in the market-testing of new drugs or for a commercial training course, the defence would not apply. Much research, however, will occupy a difficult middle ground.<sup>142</sup> In a recent case, the High Court appears to have approved the test of whether it is contemplated that the research will ultimately be used for a purpose that has some commercial value.<sup>143</sup>

### 5.4 DEALING MUST BE ‘FAIR’

The mere fact that a defendant can show that the work was used for private study or non-commercial research does not necessarily mean that the dealing will be exempt from liability; it is also necessary to show that the dealing was fair. As explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context, the most important are likely to be the amount taken,<sup>144</sup> whether the work is readily available, and the effect that the dealing has on the market for the original work.

### 5.5 SUFFICIENT ACKNOWLEDGEMENT

Where a dealing is for purposes of non-commercial research, it can benefit from the exception only if there is ‘sufficient acknowledgement’.<sup>145</sup> However, this can be dispensed with where the acknowledgement is impossible for reasons of practicality or otherwise. This requirement for sufficient acknowledgement seems to take account of the fact that research output, whether papers or articles, is often circulated. No such requirement must be satisfied as regards ‘private study’.

## 6 TEXT AND DATA ANALYSIS

The Hargreaves Review identified a need to create a new exception to permit data analysis. Evidence was offered that scientists are now able to create digital tools that can scan massive amounts of data (more than a human being could read in a lifetime) and identify hitherto unrecognized relationships between different pieces of data. A classic example would be a search tool that identifies a relationship between a particular trait or symptom and a disease.<sup>146</sup> The problem facing the use of such research tools is that they may require digitization of text, involve the generation of temporary copies, and breach the terms of licences with publishers. Nevertheless, considered from the point of view of the incentives that copyright is supposed to provide, permitting such uses would have no obvious detrimental effect.

<sup>142</sup> See above p. 227.

<sup>143</sup> *The Controller of Her Majesty’s Stationery Office, Ordnance Survey v. Green Amps Ltd* [2007] EWHC 2755 (Ch), [23]. <sup>144</sup> *Universities UK v. Copyright Licensing Agency Ltd* [2002] RPC 693, 702, [34].

<sup>145</sup> Database Dir., Art. 6(2)(b); Info. Soc. Dir., Art. 5(3)(a). See above pp. 228–9.

<sup>146</sup> See further JISC, *The Value and Benefits of Text Mining* (2012), available online at <<http://www.jisc.ac.uk/publications/reports/2012/value-and-benefits-of-text-mining.aspx>>

Nevertheless, the publishers seem concerned by the idea of an exception for several reasons. First, they are concerned about security of their existing rights (fearing wholesale distribution online). More significantly, some publishers argue that they have been developing their own platforms to allow these kinds of activities in a controlled way and that introducing an exception will prejudice this. Third, they are worried that their platforms might not cope technologically with unregulated text analysis. The publishers therefore have argued that these activities are best facilitated by voluntary licensing, not by an exception. The European Commission has been trying to broker such licence arrangements.<sup>147</sup>

The UK government, however, has accepted the case for an exception. From June 2014, a new section 29A has been introduced into the CDPA 1988 allowing a person to copy a work for the purposes of carrying out a 'computational analysis of anything recorded in the work', as long as it is done 'for the sole purpose of non-commercial research'.<sup>148</sup> The exception is subject to two further qualifications: first, the person must have 'lawful access' to a copy of the work; and second, any copy must be accompanied by sufficient acknowledgement.

The exception is limited, in part because of the constraints of the Information Society Directive, to non-commercial research. This will restrict the value of the defence considerably. Nevertheless, the contractual override, contained in section 29A(5), will be of particular significance to those in research institutes who have acquired the right to use databases of material, but subject to restrictions that do not allow data mining.<sup>149</sup> However, licences may still impose conditions of access to the licensor's computer system, for example to maintain security or stability.

## 7 CRITICISM AND REVIEW, PARODY AND QUOTATION

Section 30(1) of the CDPA 1988 provides that fair dealing with any work for the purpose of criticism or review does not infringe the copyright in the work. The defence prevents copyright owners from using copyright to control who should review their works, when they may do so, and what parts of the work may be used.<sup>150</sup>

In order to rely upon the defence, a defendant must show that (i) the dealing is for the purpose of criticism or review, (ii) the work has previously been made available to the public, (iii) the dealing is 'fair', and (iv) the dealing is accompanied by sufficient acknowledgement.

### 7.1 IS THE DEALING OF AN APPROPRIATE TYPE?

To fall within the exception provided by section 30(1), the dealing must be for the purpose of 'criticism or review' of the work, or of another work,<sup>151</sup> or the performance of a

<sup>147</sup> *Licences for Europe: Structured Stakeholder Dialogue* (2013), available online at <<http://ec.europa.eu/licences-for-europe-dialogue/en>> WP4 was one the least successful of the 'dialogues'.

<sup>148</sup> CDPA 1988, s.29A, added by the Copyright and Rights in Performances (Research, Education, Libraries and Archives) Regulations 2014 (SI 2014/1372), reg. 3(2).

<sup>149</sup> Further, third parties who are developing data mining tools will at least be able to supply them to non-commercial users, confident that, by so doing, they will not incur accessory liability (because use of the tools is not infringing).

<sup>150</sup> *Time Warner v. Channel 4* [1993] *EMLR* 1, 14; *Banier v. News Group Newspapers* [1997] *FSR* 812.

<sup>151</sup> *Beloff v. Pressdram* [1973] 1 *All ER* 241; *Associated Newspapers Group v. News Group Newspapers* [1986] *RPC* 515.

work. Although the courts have also said that criticism and review should be construed liberally,<sup>152</sup> it has been understood as requiring identification of a work or performance as the focus of the criticism or review. Thus it has been held to exclude criticism at large, for example of behaviour or political activity,<sup>153</sup> unless that can be connected plausibly to a work or performance.<sup>154</sup>

The limitation of the fair dealing defence to criticism or review of a work or performance has itself been the subject of a fair amount of criticism. In particular, doubts have been raised as to whether it offers sufficient scope for freedom of expression. The current UK law is significantly narrower in scope than the exception for quotation that is required by the Berne Convention, which is not limited by purpose, and the corresponding provision of the Information Society Directive, which refers to ‘criticism or review’ as examples of possible legitimate uses of quotations.<sup>155</sup>

The government has responded to these criticisms by introducing a statutory instrument that adds an additional component to the fair dealing exceptions. From October 1, 2014, a new section 30(1ZA) provides that copyright is not infringed by the use of a quotation from the work, whether for criticism, review, or otherwise.<sup>156</sup> Importantly, the exception is subject to requirements of fair dealing and that the quotation is no more than required for the specific purpose for which it is used. The addition of the ‘quotation’ exception, not limited by purpose, but by extent,<sup>157</sup> is a valuable liberalization (and gives full effect to the freedom recognized in the Information Society Directive).<sup>158</sup> A quotation may be used for any purpose, but it must extend no further than is required to achieve that purpose.

Because the new exception overlaps considerably with the existing ‘criticism or review’ exception, its availability is subject to a number of parallel qualifications. More specifically, the fair dealing for quotation exception will apply only if (i) the work has previously been made available to the public, (ii) the dealing is ‘fair’, and (iii) the dealing is accompanied by sufficient acknowledgement.

## 7.2 WORK MUST HAVE BEEN MADE AVAILABLE

The criticism or review defence is available only where the work has been made available to the public.<sup>159</sup> ‘Making available’ is broadly defined to include the issuing of copies, making

<sup>152</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239 (CA), 257 per Chadwick LJ; *Pro Sieben Media v. Carlton Television* [1999] FSR 610 (CA), 620. Criticism or review may be of the work as a whole or a single aspect of a work, the thought or philosophy underpinning a work, or its social and moral implications: *Hubbard v. Vosper* [1972] 2 QB 84, 94ff; *Time Warner v. Channel 4* [1994] EMLR 1, 15; *Pro Sieben Media v. Carlton Television* [1999] FSR 610 (CA), 621.

<sup>153</sup> *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 171, [2002] RPC 235, 251.

<sup>154</sup> Cf. *Time Warner v. Channel 4* [1994] EMLR 1, 15 (defence applied ‘equally where the criticism is of the decision to withdraw from circulation a film in the public domain, and not just the film itself’); *Pro Sieben* [1999] FSR 610 (CA); *Fraser-Woodward v. BBC* [2005] FSR 762.

<sup>155</sup> Berne, Art. 10(1) (‘It shall be permissible to make quotations from a work which has already been lawfully made available to the public, provided that their making is compatible with fair practice, and their extent does not exceed that justified by the purpose’); Info. Soc. Dir., Art. 5(3)(d) (‘quotations for purposes such as criticism or review . . . to the extent required by the specific purpose’).

<sup>156</sup> CDP A 1988, s. 30(1ZA), added by the draft Copyright and Rights in Performances (Quotation and Parody) Regulations 2014.

<sup>157</sup> CDP A 1988, s. 30(1ZA)(c).

<sup>158</sup> The government wanted to retain the existing defence to cover acts other than quotation, e.g. the summary of works: Technical Review, 9.

<sup>159</sup> CDP A 1988, s. 30(1), (1ZA)(a).

the work available by an electronic retrieval system, rental, or lending of copies to the public, the performance, exhibition, playing, or showing of the work, and the communication to the public.<sup>160</sup> Nevertheless, the condition limits the potential operation of the defence in relation to ‘leaked’ material. For example, in *HRH the Prince of Wales v. Associated Newspapers*,<sup>161</sup> it was held that Prince Charles’s ‘Hong Kong journals’ had not been made available to the public, even though they had been distributed to as many as 75 people, because the recipients understood that the work was being disclosed in confidence.

The quotation exception is also subject to this condition.

### 7.3 WAS THE DEALING FAIR?

Once a defendant has shown that the dealing was for the purpose of criticism or review, they must then show that the dealing was fair.<sup>162</sup> As we explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context, the most important of these are likely to be the amount taken, the effect on the market,<sup>163</sup> and the nature of the dealing.<sup>164</sup> When deciding whether dealing for the purpose of criticism or review is fair, the courts have not tended to consider whether the criticism itself is fair;<sup>165</sup> rather, they take account of whether the extent of the copying is fair to illustrate or support the criticism. As such, the criticism may be malicious, unbalanced, or motivated by insecurity without forfeiting the defence.<sup>166</sup>

A ‘quotation’ is usually understood as the use of a part of a work. As with the ‘criticism or review’ defence, in some cases it might be fair to reproduce or make available the whole work (most obviously, perhaps, with visual works). A key limitation on the fair dealing for quotation exception is that the defence will operate only if the quotation is no more than required for the specific purpose for which it is used. Thus in the context of fair dealing for the purpose of quotation the issue of proportionality is explicitly addressed independently from the requirement that the dealing be ‘fair.’

It thus seems possible that ‘fairness’ will become a mechanism for determining what ‘specific purposes’ justify quotation at all, rather than merely (as has been the case hitherto) whether the precise dealing was fair for the given statutory purpose. One test that might be considered useful is whether a given use provides some social, cultural, or informational benefit. If the use offers no such benefit, any dealing with the work for such purpose might be regarded as unjustified and unfair on its face. Applying such a standard, quotation for artistic purposes, to achieve an expressive goal, or for the purposes of providing information (including bibliographies and hyperlinking) would seem to be fair on its face. Aggregating quotations, as with a ‘book of quotations’, might also be regarded as a fair purpose, particularly if the effect is to highlight the different opinions of a collection of people on similar topics.<sup>167</sup>

Although ‘fairness’ may well come to play an important part in ensuring that the quotation defence applies primarily to quotation for purposes that provide some social,

<sup>160</sup> CDPA 1988, s. 30(1A) (added by SI 2003/2498 to give effect to Info. Soc. Dir., Art. 5(3)(d)).

<sup>161</sup> [2007] 3 WLR 222, 265, [176] *per* Blackburne J.

<sup>162</sup> CDPA 1988, s. 30(1), (1ZA)(b). Cf. Info. Soc. Dir., Art. 5(3)(d) (‘in accordance with fair practice’).

<sup>163</sup> *IPC Media Ltd. v. News Group Newspapers Ltd* [2005] FSR 752 (copying for own competing commercial purpose unfair); cf. *Pro Sieben v. Carlton UK Television* [1999] FSR 610 (CA).

<sup>164</sup> *Fraser-Woodward v. BBC* [2005] FSR 762.

<sup>165</sup> There is no need for the critical work to be representative of the original: *Time Warner v. Channel 4* [1994] EMLR 1, 12.

<sup>166</sup> *Pro Sieben Media v. Carlton Television* [1999] FSR 610 (CA), 619. An author’s remedy for unjustified criticism lies in the law of defamation.

<sup>167</sup> CDPA 1988, s. 30(1ZA)(b), (c).

cultural, or informational benefit, the fairness condition will also have a role in regulating the manner in which the quotations are presented. In the context of literary works, ‘fair dealing for the purpose of ‘quotation’ would likely be regarded as demanding the use of grammatical conventions such as the use of quotation marks. Such conventions do not exist in the fields of music and the visual arts, so other criteria will have to be invoked.

#### 7.4 SUFFICIENT ACKNOWLEDGEMENT

To fall within the exception, criticism or review must be accompanied by ‘sufficient acknowledgement’ unless this would be impossible for reasons of practicality or otherwise.<sup>168</sup> The same condition applies to the quotation defence.<sup>169</sup> The issue of sufficient acknowledgement was discussed above.

Contracts are unenforceable to the extent to which they purport to restrict the freedom to quote provided under the section.<sup>170</sup> For reasons of history, rather than logic, no such rule applies to contracts excluding the criticism or review defence. No provision is made in relation to technological measures.

#### 7.5 PARODY, CARICATURE, AND PASTICHE

Where parodies breach the rule against substantial taking,<sup>171</sup> it is necessary to consider whether such uses avoid liability through the ‘fair dealing’ exception. Prior to October 1, 2014, this involved assessing whether parody could count as criticism or review of a work, whether it is fair for that purpose, and whether implicit acknowledgement that is a prerequisite of effective parody is sufficient to comply with the sufficient acknowledgement requirement.<sup>172</sup> Meeting these conditions was anything but straightforward.<sup>173</sup> First, there are judicial statements under a parallel Canadian version of the ‘criticism or review’ defence that indicate that ‘parody’ is not within the meaning of ‘criticism or review’.<sup>174</sup> Second, there are difficult issues surrounding whether parodic uses are ‘fair’, particularly in the situation in which the lyrics of a song are parodied, but the musical work with which the lyrics are associated is reproduced *in toto* and precisely.<sup>175</sup> Third, there are doubts about whether acknowledgement must be explicit (as a Canadian case suggests<sup>176</sup>),

<sup>168</sup> CDPA 1988, s. 30(1). <sup>169</sup> CDPA 1988, s. 30(1ZA).

<sup>170</sup> CDPA 1988, s. 30(4). <sup>171</sup> See above pp. 195–206.

<sup>174</sup> *Cie Générale des Établissements Michelin v. CAW Canada* (1996) 71 *CPR* (3d) 348 (Fed Ct of Canada), a case on Canadian Copyright Act 1921, s. 27 (reasoning that the choice of the terms ‘criticism and review’ indicated a desire that parody not be treated as excepted and, in the judge’s view, exceptions to property rights were to be construed narrowly); cf. *Geva v. Walt Disney Co.*, PLA 2687/92, 48 *PD* (1) 251, [38] (Israeli court, applying law derived from the UK Copyright Act 1911, found that criticism can include parody). See M. Birnhack, ‘Israel’, in M. B. Nimmer and P. E. Geller (eds), *International Copyright Law and Practice* (2013), ISR-37. An Australian decision suggests that, whatever the position in relation to parody, the ‘criticism or review’ defence is available for satire: *TCN Channel Nine v. Network Ten* [2001] *FCA* 108, (2001) 108 *FCR* 235 (Conti J); (2002) 118 *FCR* 417, [2002] *FCA* 146. See M. Handler ‘A Real Pea Souper: The Panel Case and the Development of the Fair Dealing Defences to Copyright Infringement in Australia’ [2003] *Melb UL Rev* 15.

<sup>175</sup> *Williamson Music v. Pearson* [1987] *FSR* 97.

<sup>176</sup> *Cie Générale des Établissements Michelin v. CAW Canada* (1996) 71 *CPR* (3d) 348 (Fed Ct of Canada) (rejecting the possibility of ‘implicit acknowledgement’ on the basis that it is only in the case of successful

or might be implicit (as some commentators assert).<sup>177</sup> This is important because, in the case of a successful parody, the audience understands that the parodist's work is referring to an earlier work and is expected to know the authorship of that earlier work. To require a parodist to identify expressly the authorship of the work being parodied would (in some circumstances) seem to require them to admit that the parody had failed.<sup>178</sup> Commentators have long complained that the resulting legal position is unsatisfactory (and in tension with freedom of expression).<sup>179</sup>

Following the recommendations of both the Gowers and Hargreaves Reviews,<sup>180</sup> a new fair dealing exception for 'caricature, parody or pastiche' has been introduced.<sup>181</sup> This takes advantage of the freedom provided by Article 5(3)(k) of the Information Society Directive, but qualifies the breadth of that freedom by adding a requirement of fairness.<sup>182</sup> To benefit from this defence, there is no express requirement that a parodist acknowledge the work that is parodied or its authorship.

It is not easy to predict when something will be regarded as 'caricature, parody, or pastiche'. 'Parody', most especially, seems to raise questions that are essentially ones of artistic or literary intent and effect.<sup>183</sup> One issue of importance is whether it will be understood as limited to uses that parody the work itself (so-called 'target parody') or whether it extends to situations in which the work is used to target something else (sometimes called 'weapon parody'). Another question is whether there must be an intention to be 'humorous', or even to have comic effect. Further difficulties surround the definition of the limits of pastiche: would it cover, for example, so-called 'mash-ups' of sound recordings?

The government, perhaps wisely, decided that it was best if the new legislation did not define the terms 'parody', 'caricature', or 'pastiche'. Indeed, the meaning of 'parody' is being considered by the Court of Justice in a pending case, *Deckmyn*.<sup>184</sup> The reference concerns a modified version of a comic book that caricatures the behaviour of a politician. The publisher of a Belgian comic book, *Spike and Suzy*, (Fig. 9.1), brought an action against a member of a Flemish nationalist party, Johan Deckmyn, for copyright infringement, in relation to a calendar and brochure that were based on the cover of an issue of the comic entitled 'De Wilde Weldoener' (meaning 'The Wild Benefactor'). The defendant's image (Fig. 9.2) replaced the central figure from the comic, a man in a bowler hat scattering money, with the face of the mayor of Ghent, highlighting his wastefulness with public funds (which he distributes to a multi-ethnic public). Deckmyn claimed that this fell within the Belgian parody defence. Advocate-General Cruz Villalón, has

parodies of famous works that the audience would appreciate the authorship of the parodied work, and thus the court would be forced to make impossible distinctions between famous and less famous works, as well as between successful and unsuccessful parodies).

confirmed that parody is an autonomous concept of European law, although one accompanied by a wide margin of appreciation as to its application. In his view, parody has both a structural and functional component. Structurally, a parody involves addition of original material to an imitation of an existing work (with at least the consequence that the two works cannot be confused). Functionally speaking, a parody requires a 'burlesque intention'. The Advocate-General would not limit the concept of parody to situations of target parody—that is, poking fun at the style or content of the parodied work itself—so that the object of the 'burlesque intention' might be, as in the case itself, the behaviour of a politician, rather than the cartoon on which the parody is based. That is a welcome flexibility. More controversially, the Advocate-General has suggested that the legitimacy of a parody may need to be viewed through the lens of all fundamental rights, not only rights of property and freedom of expression.

The question as to when 'caricature, parody, and pastiche' must be regarded as 'fair' is unelaborated in the UK legislation,<sup>185</sup> so it is expected that the courts will rely on jurisprudence from other areas of 'fair dealing'. The UK government had indicated that the 'fair dealing' condition would ensure that the exception would not be 'misused, and will preclude the copying of entire works where such taking would not be considered fair (for example if such works were already licensable for a fee)',<sup>186</sup> It seems unlikely that use in commercial advertising would be regarded as fair, but likely that a liberal approach will be taken with user-generated content.

## 8 REPORTING OF CURRENT EVENTS

Section 30(2) of the CDPA 1988 provides that fair dealing with any work (other than a photograph)<sup>187</sup> for the purpose of reporting current events does not infringe the copyright in the work, provided that it is accompanied by a sufficient acknowledgement. No acknowledgement is required, however, in connection with the reporting of current events by means of a sound recording, film, or broadcast where this would be impossible by reason of practicality or otherwise.<sup>188</sup>

As Gibson LJ has explained, the reporting of current events defence aims to strike a 'balance between protection of rights of creative authors and the wider public interest (of which free speech is a very important ingredient)'.<sup>189</sup> The courts have also said that the reporting of current events should be construed liberally.<sup>190</sup>

In order to rely upon the defence, a defendant must show that (i) the dealing was for the purpose of reporting current events, (ii) the dealing was 'fair', and (iii) there was sufficient acknowledgement.<sup>191</sup> Contractual restrictions on what would otherwise fall within the defence of fair dealing for the purpose of reporting current events are void insofar as

<sup>185</sup> Other member states operate qualifications of this sort. In Belgium, parodic use must accord with 'fair practice'; in France, it must have 'due consideration for the laws of this genre'; in the Netherlands, it must be 'in accordance with what the rules of social intercourse reasonably permit'.

<sup>186</sup> UK IPO, *Modernising Copyright* (2012), 31.

<sup>187</sup> This means that a newspaper is not able to take photographs from another paper and claim this defence; Hence the need to rely on the criticism or review defence in *Banier v. News Group Newspapers* [1997] FSR 812. See C. Kelly, 'Current Events and Fair Dealing with Photographs: Time for a Revised Approach' [2012] 4 IPQ 242 (reviewing exclusion).

<sup>188</sup> CDPA 1988, s. 30(3).

<sup>189</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239 (CA), 249.

<sup>190</sup> The value placed on freedom of information and freedom of speech requires that gateway to be wide: *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 382; *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172.

<sup>191</sup> CDPA 1988, s. 30(2).

the restriction relates to the inclusion of visual images taken from a broadcast in another communication to the public.<sup>192</sup>

### 8.1 WAS THE DEALING FOR THE PURPOSE OF REPORTING A CURRENT EVENT?

To fall within the defence, the dealing must take place (i) in relation to an event, (ii) which is *current*, and the dealing must be (iii) for the purpose of reporting such an event.

It seems that certain matters, by their very nature, will be treated as events. Thus matters of national or political importance,<sup>193</sup> as well as major sporting contests, such as the World Cup, are likely to be events.<sup>194</sup> In contrast, matters that are trivial, ephemeral, or immaterial will not be treated as events. For example, it has been said that comparisons of food products,<sup>195</sup> articles on clothing, and the times of television programmes are not ‘events’.<sup>196</sup> The fact that a matter is currently of interest or in the press does not mean that it is a current event.<sup>197</sup> The mere fact that a fashion editor of a journal featured a Marks & Spencer garment did not make it a current event.<sup>198</sup> Occasionally, a trivial matter may be transformed into an ‘event’ through media coverage. This can be seen in *Pro Sieben Media v. Carlton UK Television*,<sup>199</sup> in which the sale to German television by a member of the public of an interview about a woman pregnant with octuplets was nonetheless treated as an ‘event’. On this occasion, the volume and intensity of the media coverage was such as to justify its treatment as an ‘event’.

An event will be *current* if it deals with a contemporary issue. The older the issue, the less likely it is that it will be treated as having any currency. An event that took place some time ago may, however, be current if it is still under discussion. For example, in *Hyde Park*, it was accepted, both at first instance and by the Court of Appeal (albeit grudgingly), that although the stills in *The Sun* were published more than a year after the visit by Fayed and Princess Diana to Villa Windsor, the events still had some currency.<sup>200</sup> As Jacob J said: ‘[A]t the time of publication the events were still very much under discussion that it would be pedantic to regard them as anything other than current.’<sup>201</sup>

The dealing must be concerned with ‘reporting’ the event. In *Newspaper Licensing Agency Ltd v. Marks & Spencer plc.*,<sup>202</sup> the Court of Appeal held that private circulation of articles selected from newspapers was not *reporting* of current event. Similarly, in the more recent Court of Appeal decision in *Newspaper Licensing Agency Ltd v. Meltwater Holding*,<sup>203</sup> it was held that the distribution to commercial organizations of electronic links and text extracts from news websites was outside the defence, either because there was no reporting or because the passage might not relate to current events.

The material dealt with by the defendant must relate to or be relevant to the current event in question. Thus it was held that the *Daily Mail* newspaper was unable to rely on the

<sup>192</sup> Broadcasting Act 1996, s. 137 (as amended).

<sup>193</sup> *Newspaper Licensing Agency* [2000] 4 All ER 239 (CA), 267 per Mance LJ.

<sup>199</sup> [1999] FSR 610. <sup>200</sup> *Hyde Park Residence v. Yelland* [1999] RPC 655.

<sup>201</sup> *Ibid.*, 661. See also *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172.

<sup>202</sup> [2001] RPC 76, 87–88 per Gibson LJ, cf. 105–6 per Mance LJ.

<sup>203</sup> [2011] EWCA Civ 890, [2012] RPC 1, [39] (not considered on appeal).

death of the Duchess of Windsor to justify the republication of correspondence between the Duchess and her husband.<sup>204</sup> Similarly, in *Hyde Park*, the Court of Appeal held that the publication of the driveway stills that showed the arrival and departure times of Fayed and Princess Diana did not fall within the current events defence. This was because the material in question (the driveway stills) did not correlate with the event in question (the purpose being to expose the lies of Mohammed Al Fayed).<sup>205</sup> However, in other circumstances in which historical material is pertinent to current event,<sup>206</sup> its use would clearly fall within the defence.<sup>207</sup>

## 8.2 WAS THE DEALING FAIR?

Once a defendant has shown that their dealing was for the purpose of reporting current events, they must then show that the dealing was fair. According to the Court of Appeal, the defence should be available ‘where the public interest in learning of the very words written by the owner of the copyright is such that publication should not be inhibited by the chilling factor of having to pay damages or account of profits.’<sup>208</sup> Although a number of different factors will influence the decision as to whether a particular dealing is fair, including whether the work is published or unpublished,<sup>209</sup> the amount taken, and the motive for the dealing,<sup>210</sup> the most important is likely to be whether it is reasonably necessary to refer to the work in order to deal with the events in question.<sup>211</sup> It also seems that the courts will be influenced by what is taken to be normal behaviour in the circumstances. Thus, in the *World Cup* case, it was fair for the defendant to reshoot the goals and match highlights, typically 30 seconds of a 90-minute match, even though these were clearly the most important extracts. This was because the sequences were the normal and obvious means of illustrating the news report.<sup>212</sup>

Reporting current events is frequently carried out by commercial operators, most obviously newspaper publishers and news broadcasters. Despite occasional suggestions to the contrary,<sup>213</sup> the commercial nature of a reporting organization rarely is a relevant factor against a finding of ‘fair dealing.’<sup>214</sup> As Jacob J has noted, when newspapers publish stories, ‘they will always expect to make money. They are not philanthropists.’<sup>215</sup>

## 8.3 SUFFICIENT ACKNOWLEDGEMENT

In order to benefit from the exception, the dealing must be accompanied by ‘sufficient acknowledgement’ (which was discussed earlier).<sup>216</sup> However, no acknowledgement is required in connection with the reporting of current events *by means* of a sound recording, film, or broadcast, where this would be ‘impossible for reasons of practicality or otherwise’.<sup>217</sup>

<sup>217</sup> CDPA 1988, s. 30(3) (as amended to give effect to Info. Soc. Dir., Art. 5(3)(c)).

## 9 INCIDENTAL USES

The urban landscape is full of works that are protected by copyright (such as murals, buildings, sculptures, and advertisements).<sup>218</sup> This creates a potential problem for those who wish to represent that landscape. For example, if a movie is filmed in a public place, it is highly likely that the final product will include a number of different copyright works. This gives rise to a potential problem in that the recording of these works is on its face an infringement of copyright.

To minimize such problems, section 31(1) of the CDPA 1988 provides that copyright in a work is not infringed by its ‘incidental inclusion’ in an artistic work, sound recording, film, or broadcast.<sup>219</sup> This means that a defence is available where a copyright work, such as a painting, is incidentally included in the background of another work, such as a film. Section 31(2) extends the defence to include the exploitation of works that incidentally include other works. This ensures that the showing, as distinct to the making, of a film does not infringe.

The question of when a work is ‘incidentally included’ in another work was considered in *Football Association Premier League Ltd v. Panini UK*.<sup>220</sup> In that case, the FAPL, its members, and Topps brought an action alleging that Panini had infringed copyright in their club emblems and the Premiership heraldic lion emblem by distributing stickers depicting well-known footballers, for purchase and collection in a book. Topps had obtained an exclusive licence from the claimant to use the emblems in this way and Panini had lost out in the tendering process for the licence, but had nevertheless gone ahead and produced an ‘unofficial’ product. In Panini’s product, most players were in club strip, with their club emblems and the Premiership heraldic lion emblem often visible. The defendant argued that the emblems were artistic works that were incidentally included in other artistic works (photographs). Smith J rejected the defence and this was affirmed by the Court of Appeal. Mummery LJ declined to define the term ‘incidental’, stating that the term is ‘sufficiently clear to enable the courts to apply it to the ascertainable objective context of the particular infringing act in question’.<sup>221</sup> The question of whether the uses were incidental did not have to be determined at the time that the photograph was taken, but rather when the sticker was created. The question was why one work was included in another, and the court could take account of commercial as well as artistic or aesthetic reasons. Given that a player in authentic club strip was ‘something which would be attractive to a collector’, the Court concluded that the inclusion of the emblem was ‘essential to the object for which the image . . . was created’ rather than incidental.<sup>222</sup> In an earlier case, the High Court held that, by featuring the claimant’s magazine, *Woman*, in a television advertising campaign run for the defendant’s own magazine, the defendant had infringed the claimant’s artistic copyright in the masthead, the layout, and the photographs on the magazine cover. The defendant’s argument that the use was incidental was rejected:

. . . since the impact of the advertisement would be lost entirely if the front cover of *Woman* was not used. The inclusion of the copy of *Woman* was an essential and important feature of the advertisement. The impact could not be more obvious.<sup>223</sup>

<sup>218</sup> See also CDPA 1988, s. 62 (public display of artistic works).

<sup>219</sup> CDPA 1988, s. 31(1). There is no defence of incidental inclusion in a website, because Internet transmissions fall outside the scope of the meaning of ‘broadcast’ in CDPA 1988, s. 8. However, the inclusion in a website of a work that incidentally includes another work and thus benefits from the exception in CDPA 1988, s. 31(1), will not infringe: CDPA 1988, s. 31(2).<sup>220</sup> [2004] FSR 1.

<sup>221</sup> *Ibid.*, [39] *per* Mummery LJ. <sup>222</sup> *Ibid.*, [27] *per* Chadwick LJ.

<sup>223</sup> *IPC Magazines v. MGN* [1998] FSR 431, 441. This was, evidently, a case of comparative advertising: the argument that it should therefore be permitted under the MCAD was rejected at 447. But cf. *O2 Holdings v.*

The defence will apply irrespective of whether a work is accidentally or deliberately included.<sup>224</sup> This is not the case, however, with musical works or lyrics (as well as a sound recording, or broadcast of a musical work or lyrics). The reason for this is that section 31(3) says that musical works or lyrics shall not be regarded as being incidentally included if they are deliberately included. This means that the defence is not available where a song is chosen for the background of a film, or a song from a radio is deliberately played in the background to a broadcast. Thus if the makers of television soap opera *Eastenders* decide to have a scene in which a character is listening to a radio playing a Rolling Stones' song, this is not an incidental inclusion. However, if a musical work is accidentally included in a live broadcast, this is within the defence. Thus a broadcast of a football match that accidentally includes a sound recording played over the public address system falls squarely within the defence.

## 10 DISCLOSURE IN THE PUBLIC INTEREST

Despite the lack of any statutory provision on point,<sup>225</sup> a defendant may resist an action for copyright infringement—probably, though, only in very rare instances—on the grounds that the use is justified ‘in the public interest’. Although such a defence was recognized by the High Court in the 1970s and the Court of Appeal in the 1980s, the existence and scope of this defence has been heavily debated.<sup>226</sup> There are three key Court of Appeal decisions: *Lion Laboratories v. Evans*;<sup>227</sup> *Hyde Park Residence v. Yelland*;<sup>228</sup> and *Ashdown v. Telegraph Group Ltd*.<sup>229</sup>

In *Lion Laboratories v. Evans*, the manufacturers of a breathalyser sought to prevent the defendant newspaper from publishing extracts of a confidential internal memorandum that cast doubt on the accuracy of the device. The defendant claimed that the public had an interest in knowing that the breathalyser might be faulty. All three members of the Court of Appeal accepted that the public interest defence was available in an action for infringement of copyright. According to the Court of Appeal, if the alleged fault with the breathalyser were not investigated, a significant number of motorists could have been wrongly convicted of driving with excess alcohol. On the basis that there was a seriously arguable case that the disclosure was justified in the public interest, the Court refused to grant interim relief.

It will be recalled that *Hyde Park Residence v. Yelland* concerned an application for summary judgment against *The Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant. The defendant argued that the stills revealed the times when Fayed and the Princess were present at Villa Windsor, and therefore exposed the falsehood of statements made by Mohammed Al Fayed; as such, the publication was in the public interest. The Court of Appeal found that there was no arguable defence. The Court did not consider that it was in the public interest to publish the stills to prove that Fayed's statements were false: the information could easily have been made available by *The Sun* without

*Hutchison 3G Ltd* [2007] *RPC* (16) 407 [45]–[47], [55] (indicating that this question will have to be answered one day by the Court of Justice). See pp. 1072–6 below.

<sup>224</sup> *Football Association Premier League Ltd v. Panini UK Ltd* [2004] *FSR* 1, [24].

<sup>225</sup> The validity of the common law defence recognized in case law under the 1956 Act seemed to have been accepted by CDPA 1988, s. 171(3).

<sup>226</sup> See *Lion Laboratories v. Evans* [1985] *QB* 526, 536 *per* Stephenson LJ, 550 *per* Griffiths LJ.

<sup>227</sup> [1985] *QB* 526. <sup>228</sup> [2000] *EMLR* 363. <sup>229</sup> [2002] *Ch* 149.

infringing the claimant's copyright. While the Court could have argued that the public interest defence did not succeed on the facts, the majority (Aldous LJ, with whom Stuart-Smith LJ agreed) said that there is no general public interest defence to an action for infringement of copyright in the United Kingdom (although this was not how *Ashdown*, a later case at which we look next, interpreted him). Aldous LJ gave three reasons: (i) on the basis that the statutory regime was exhaustive, he observed that no such defence is recognized in the code; (ii) he said that the defence of disclosure of information in the public interest was inappropriate, because copyright restricts reproduction of the form of a work, not the information that it contains; and (iii) he argued that the defence was incompatible with the Berne Convention.<sup>230</sup> In addition, Aldous LJ held that the reasoning in *Lion Laboratories* lacked any substantial basis in precedent.<sup>231</sup> In contrast, Mance LJ accepted that Parliament had intended, via section 171(3), that the courts should retain some discretion to refuse to enforce copyright on public interest grounds.

In *Ashdown v Telegraph*, a differently constituted Court of Appeal<sup>232</sup> rejected the approach of the majority in *Hyde Park*, preferring that of Mance LJ and referring with approval to *Lion Laboratories*. The *Ashdown* case concerned the publication in the *Sunday Telegraph* of sections of a secret memorandum written by Paddy Ashdown, leader of the Liberal Party, about a meeting that had taken place with Tony Blair concerning a possible pact between the Liberal Party and the Labour Party. Ashdown sought summary judgment and the newspaper sought to justify its infringement on the basis of the public interest defence (the criticism defence having failed because there was no criticism of a work and the current events reporting defence had failed because the use was not fair). Although the Court of Appeal rejected the *Sunday Telegraph's* arguments on the facts, it reviewed the law relating to the 'public interest defence' in the light of the Human Rights Act 1998. While the Court explained that copyright was not normally in conflict with freedom of expression, because copyright does not prevent the publication of information,<sup>233</sup> there could be such a conflict where expression required reproduction of specific text or images.<sup>234</sup> In such cases, if fair dealing and refusal of discretionary relief would not protect the public interest, a defendant could invoke the public interest defence, as developed by the common law and acknowledged by section 171(3) of the CDPA 1988.<sup>235</sup>

In the absence of a decision of the House of Lords on this issue, the view favoured by the majority of the Court of Appeal over the three cases thus seems to be that a 'public interest' defence might justify an act otherwise infringing copyright—but in what circumstances? The Court of Appeal in *Lion Laboratories* failed to draw any distinction between the application of the public interest defence to a case of breach of confidence and one based upon copyright. The Court was clear that the defence was not confined to cases of iniquity, but covered situations in which there was 'just cause or excuse' for breaking confidence.<sup>236</sup> In *Hyde Park*, Mance LJ had declined to define the exact circumstances in

<sup>230</sup> Cf. Berne, Art. 17. See Ricketson and Ginsburg, 842ff, [13.88].

<sup>231</sup> Although Aldous LJ denied the existence of a public interest defence, he recognized that the courts do retain a power under their 'inherent jurisdiction' to refuse to enforce copyright where it offends against the 'policy of the law'. For Aldous LJ, the courts would refuse to enforce copyright on the basis that it would be against the 'policy of the law' where the work is scandalous, immoral, or contrary to family life, where the work itself is injurious to public life, public health, and safety, or the administration of justice, or where a work incites or encourages others to act in a way that is injurious to public life, public health, and safety, or the administration of justice: *Hyde Park Residence v. Yelland* [2000] EMLR 363, 389.

<sup>232</sup> Lord Phillips MR, Keene LJ, and Robert Walker LJ.

<sup>233</sup> *Ibid.*, 163, [31]. <sup>234</sup> *Ibid.*, 166, [39]. <sup>235</sup> *Ibid.*, 164, [34], 170–1, [58]–[59].

<sup>236</sup> See *Lion Laboratories v. Evans* [1985] QB 526, 538 per Stephenson LJ, 548 per O'Connor LJ, 550 per Giffiths LJ.

which the defence would be available, but said that this discretion is much more limited than the defence recognized in breach of confidence cases. According to Mance LJ, the countervailing public interest was of more limited scope in the case of copyright, given that it is a property right and regulated by statute.<sup>237</sup> The Court of Appeal in *Ashdown* said that it agreed with Mance LJ that the circumstances in which the public interest may override copyright are not capable of precise categorization or definition, but indicated that the defence would succeed only in 'very rare' circumstances.<sup>238</sup> The more recent decisions therefore offer little assistance as to when the 'public interest defence' would apply, except to indicate that the circumstances are more limited than in cases of breach of confidence.<sup>239</sup>

The Treaty on the Functioning of the European Union (TFEU) renders the European Charter of Rights and Fundamental Freedoms, and thus freedom of expression, part of the European legal order (and thus capable of direct application). According to Jonathan Griffiths, this means that the public interest defence is no longer needed to ensure that copyright does not interfere unduly with freedom of expression.<sup>240</sup> However, he has suggested a different role for section 171 of the CDPA 1988: to regulate the relationship between copyright and other national or EU norms. Thus where copyright and other intellectual property rights overlap, exceptions to those other rights may take precedence over, or 'pre-empt', copyright: for example, the repair exception to design rights, or the comparative advertising defence to use of trade marks, might be treated as equally applicable to copyright (even though no such exceptions are provided for in relevant national or EU regimes). Some basis for this approach might be found in Article 13 of the Database Directive and Article 9 of the Information Society Directive. Griffiths identifies a body of cases in which he claims copyright is 'disapplied' because the action is, in essence, one for breach of confidence, and in which the disclosure is not to be regarded as an actionable breach of confidence because the public interest in disclosure outweighs that of protecting confidentiality. From this basis, he suggests further situations in which the public interest defence might, in future, play a role in permitting the pre-emption of copyright law, for example where disclosure is required under the Freedom of Information Act 2000, but might involve the making and distribution of copies.

## 11 USES OF WORKS FOR PEOPLE WITH DISABILITIES

People with disabilities have been poorly served by copyright law. While the markets provided by such groups are rarely sufficient to attract private, market-based, suppliers, copyright law significantly impedes the capacity of others to provide access to such works that are commercially available. The CDPA 1988, as enacted, contained only one exception designed to help people with disabilities to gain access to copyright-protected

<sup>237</sup> *Hyde Park v. Yelland* [2000] *EMLR* 363, 392. See R. Burrell, 'Defending the Public Interest' [2000] *EIPR* 394.

<sup>238</sup> *Hyde Park v. Yelland* [2000] *EMLR* 363 (Mance LJ); *Ashdown v. Telegraph Group Ltd* [2002] *Ch* 149, 170, [59].

<sup>239</sup> The closest that a court has come to accepting the defence was in *In the Petition by the BBC in the Case of HM Advocate v. Hainey* [2012] *HCJDV* 10, [2012] *SLT* 476 (12 January 2012) (Lord Woolman) (allowing publication of photographs of child taken by mother who had been convicted of his murder), although even there the judge had accepted a defence of reporting judicial proceedings.

<sup>240</sup> J. Griffiths, 'Pre-empting Conflict' [2014] *34 Legal Studies* 76, 95–6.

material—a provision relating to subtitling or modifying broadcasts.<sup>241</sup> Further exceptions were added in 2002 for the benefit of the visually impaired.<sup>242</sup> The Information Society Directive allows for the adoption of exceptions to the three harmonized rights for ‘uses, for the benefit of people with a disability, which are directly related to the disability and of a non-commercial nature, to the extent required by the specific disability’.<sup>243</sup> The Hargreaves reforms seek to ‘broaden and simplify the disability exceptions’, with a view to giving ‘more people equal access to cultural materials’.<sup>244</sup> However, as in the case of educational exceptions, it has been thought desirable to leave space for profit-making efforts to supply these markets, so the exceptions are subject to qualifications.

Section 31A, as amended, seeks to allow the making of modified versions of publicly available works that enable persons with a physical or mental impairment (‘disabled persons’) to have improved level of access to the work.<sup>245</sup> The provision applies to all disabilities that prevent a person from enjoying a copyright work to the same degree as a person who does not have the impairment,<sup>246</sup> and so would justify the making of Braille or sound versions of works for those with some impairment that makes reading print problematic (‘the print-disabled’), or the making of subtitled versions of audiovisual works for those with impaired hearing. It contains one provision that allows for ‘personal use’ by a disabled person, and another that allows third parties to make and supply copies to such disabled persons.

### 11.1 PERSONAL USE BY PERSONS WITH DISABILITIES

Section 31A(1) deals with the creation of versions of works (of all types) for personal use. This is permitted where a person is disabled and that disability impairs access to a work that is lawfully in the possession of the disabled person (or of which they have lawful use).<sup>247</sup> Any creation of a copy of such a work that improves access is permitted, as long as four conditions are met: (i) the copy is for personal use;<sup>248</sup> (ii) it is derived from a copy of which the disabled person has lawful possession or use;<sup>249</sup> (iii) that a copy that would give the same level of access is not commercially available on reasonable terms with the authority of the copyright holder;<sup>250</sup> and (iv) where a person charges for making the copy, that charge does not exceed the cost of so doing.<sup>251</sup>

### 11.2 MAKING COPIES FOR PEOPLE WITH DISABILITIES

In addition, an educational establishment, or a body not conducted for profit,<sup>252</sup> is permitted to make and supply, other than for profit, accessible copies of commercially published works for the use of disabled persons.<sup>253</sup> The exemption does not apply if copies

<sup>241</sup> CDPA 1988, s. 74 (as enacted). This has been repealed by SI 2014/0000. The general failure of copyright regimes to provide mechanisms that facilitate access to work by people with disabilities has now started to receive international attention, most importantly with the signing in 2013 of the Marrakesh Treaty.

<sup>242</sup> Copyright (Visually Impaired Persons) Act 2002. <sup>243</sup> Info. Soc. Dir., Art. 5(3)(b).

<sup>244</sup> UK IPO, *Modernising Copyright* (2012), 43. <sup>245</sup> CDPA 1988, s.31.

<sup>246</sup> CDPA 1988, s. 31F(2). This avoids complex definitions, e.g. of visual impairment. Cf. CDPA 1988, s. 31F(9) (as introduced in 2002, but now repealed). <sup>247</sup> CDPA 1988, s. 31A(1)(a).

<sup>248</sup> CDPA 1988, s. 31A(2)(b). <sup>249</sup> CDPA 1988, s. 31A(2). <sup>250</sup> CDPA 1988, s. 31A(2)(c).

<sup>251</sup> CDPA 1988, s. 31A(3). The original CDPA 1988, s. 31A(4) (as added by the Copyright (Visually Impaired Persons) Act 2002), which applied to visual disability, contained two further requirements: (i) that the copy states that it was made under s. 31A; and (ii) that there is acknowledgement of author and title.

<sup>252</sup> CDPA 1988, s. 31F(6) (defining ‘authorised body’).

<sup>253</sup> CDPA 1988, s. 31B (added by SI 2014/0000).

making the works accessible are already commercially available.<sup>254</sup> Where the copy is made by an educational establishment, its use must be for educational purposes.<sup>255</sup> The making and supply of accessible copies is subject to a number of conditions: the body must have ‘lawful possession’ of a copy of the work;<sup>256</sup> the ‘accessible copies’ must state that they were made under section 31B, and must acknowledge the authorship and title of the work from which they were made;<sup>257</sup> the cost charged must not exceed the cost of making an supplying the accessible copy;<sup>258</sup> the records of to whom such copies have been supplied must be kept and made available to rights holders;<sup>259</sup> and the body making and supplying copies is under an obligation to contact a representative of the copyright owner or the copyright holder, notifying them.<sup>260</sup>

## 12 EDUCATIONAL USES

Education constitutes a particularly complex environment for copyright regulation.<sup>261</sup> On the one hand, it is an environment in which the transmission and use of information is at the very heart of what goes on. Access to relevant materials—in fact to as much material as possible for all concerned—is critical to the success of the process. For example, law students need to be able to read, examine, and appraise all relevant cases, legislation, statutory instruments, and commentaries. On the other hand, educational activities are served by a host of tailored services, such as those provided by educational publishers (offering textbooks, journals and so forth) and those who broadcast educational programmes. These providers need to be able to stay in business and, without them, the information environment would likely be poorer.<sup>262</sup> One challenge is to establish a set of arrangements that allows for as much access as possible without jeopardizing the involvement of private interests in providing information services; another is to do so in way that allows flexibility for individual instructors and is responsive to new technological opportunities. Rights holders tend to favour ‘licensing’ solutions, while those representing educational interests argue for broad, flexible, exceptions. The UK government has stated that ‘educational exceptions are intended both to complement and underpin educational licensing schemes’.<sup>263</sup> It rejects proposals for wide exceptions permitting mass copying as likely to cause unreasonable

<sup>254</sup> CDPA 1988, s. 31B(2), (4) (broadcasts).

<sup>255</sup> CDPA 1988, s. 31B(6). <sup>256</sup> CDPA 1988, s. 31B(1), (3) (broadcasts).

<sup>257</sup> CDPA 1988, s. 31B(7). <sup>258</sup> CDPA 1988, s. 31B(10).

<sup>259</sup> CDPA 1988, s. 31BB. <sup>260</sup> CDPA 1988, s. 31BB(3).

<sup>261</sup> The international norms governing educational defences are obscure in meaning. In particular, Berne, Art. 10(2), which explicitly permits use ‘of illustration for . . . teaching’ can be understood in different ways. For a valuable study, see R. Xalabarder, *Study on Copyright Limitations and Exceptions for Educational Activities in North America, Europe, Caucasus, Central Asia and Israel* (2009) SCCR/19/8. See also M. Chon, ‘Intellectual Property “from below”: Copyright and Capability for Education’ (2007) 40 *U Cal Davis L Rev* 803.

<sup>262</sup> In some areas of education, particularly tertiary education, the role of private providers is being challenged. In part in response to increased pressure on library budgets, there has been a move to incentivize, or even compel, academics to publish materials by way of ‘open access’. One way in which to do this is to pay publishers to publish work, but to require that they give access to all (immediately or after an embargo period).

<sup>263</sup> UK IPO, *Modernising Copyright* (2012), 40. See further R. Hooper, *Rights and Wrongs* (2012), 25–8, [65]–[71] (identifying 12 different organizations requiring licences in the schools sector and 10 in further education colleges). See also R. Hooper and R. Lynch, *Copyright Works: Streamlining Copyright Licensing for the Digital Age—An Independent Report* (July 2012), 4, Recommendation 18 (calling for simplification of educational licensing schemes by the creation of a ‘one-stop shop’, such as the Centre for Education and Finance Management, aggregating necessary licences), 25–8, [102]–[119].

damage to rights holders and to undermine incentives, while at the same time attempting to offer flexibility to educators to use material in ways that ‘modern technology allows’.<sup>264</sup>

Individual student activities are facilitated by the fair dealing for research and private study defences and the defences for library copying. Our concern here is with the activities of individual teachers and the institutions. These are governed by a complex web of provisions (although they are somewhat simpler after the Hargreaves reforms of 2014 than they were before):

- (i) a general provision permitting fair dealing for purposes of illustration for instruction (section 32);
- (ii) a narrow, virtually pointless, provision relating to educational anthologies (section 33);
- (iii) a provision allowing performances at educational establishments (section 34);
- (iv) an exception allowing for the recording and showing of educational broadcasts, but which gives way to various licensing schemes (section 35);
- (v) an exception allowing for reprographic copying, but which underpins various licensing arrangements (section 36); and
- (vi) an exception allowing for lending of copies by an educational establishment (section 36A).

Sections 34–36A apply only in relation to ‘educational establishments’ (which includes universities and colleges of further education).<sup>265</sup>

## 12.1 FAIR DEALING FOR INSTRUCTION AND EXAMINATION

Section 32 gives a ‘fair dealing’ exemption to those involved in ‘instruction’ and ‘examination’.<sup>266</sup> The defence is applicable to all types of work and to all possible restricted acts.<sup>267</sup> The defence applies to dealings by the person giving instruction (the teacher or lecturer) and the person receiving instruction (the pupil or lecturer). Contracts that purport to exclude acts within the scope of the exception are unenforceable.

A key limitation is that the dealing must be ‘for the sole purpose of illustration for instruction’.<sup>268</sup> Both the term ‘instruction’ and ‘illustration’ are awkward. ‘Instruction’ suggests a rather outdated understanding of learning, in which the student is a rather passive recipient of information or guidance. In turn, this might indicate that defence is limited to use by the teacher of copyright-protected material to ‘illustrate a point’, such as use of the materials in handouts and slides.<sup>269</sup> We suggest that this would be too narrow a

<sup>264</sup> UK IPO, *Modernising Copyright* (2012), 41.

<sup>265</sup> As specified by the Secretary of State under powers under CDPA 1988, s. 174(1)(b), (3). ‘School’ is defined by reference to the Education Act 1996, the Education (Scotland Act) 1962, and the Education and Libraries (Northern Ireland) Order 1986 (SI 1986/59: NI 3). Universities, theological colleges, and various institutions providing further education are ‘educational establishment(s)’: Copyright (Educational Establishments) Order 2005 (SI 2005/223). These provisions have been extended to apply to teachers employed by a local authority to give instruction to pupils unable to attend an educational establishment: Copyright (Application of Provisions relating to Educational Establishments to Teachers) (No. 2) Order 1989 (SI 1989/1067).

<sup>267</sup> In this respect, it is much more significant that the provision in force prior to June 2014 that applied only to copying by non-reprographic processes.

<sup>268</sup> Info. Soc. Dir., Art. 5(3)(a) (illustration for teaching).

<sup>269</sup> See the Technical Review, which refers to the ‘narrow focus’ of the exception, and suggests that if private music tutors were to reproduce sheet music and give it to their students to play, this would fall outside the exception ‘as it is . . . unlikely to be considered either illustrative or fair dealing’.

view. First, the statutory provisions themselves acknowledge that the exemption includes the acts of the person ‘receiving instruction’ and preparing to receive instruction, as well as pupils’ answers to exam questions. Thus some broader idea of ‘illustration for instruction’ seems intended. Second, the language in fact reflects the terms of the Information Society Directive and, in turn, Article 10(2) of the Berne Convention. In the latter, the permitted exception is ‘by way of illustration *in publications, broadcasts or sound or visual recordings* for teaching’.<sup>270</sup> Immediately, it can be seen that the scope is much broader than offering examples ‘in class’. Moreover, the legislative history of Article 10(2) of Berne supports a broad interpretation, so that the terms should be read to mean ‘any reasonable use for the purpose of education or teaching’.<sup>271</sup>

The defence permits any ‘fair dealing’ by the instructor in preparing to teach or carrying out the act.<sup>272</sup> Thus making copies of materials with a view to deciding what to teach, and how to teach it, are covered. The defence also encompasses any fair dealing by the person receiving instruction,<sup>273</sup> for example, taking down notes, recording a lecture, singing a song or playing a piece of music. The exception also permits fair dealing in preparation to receive instruction, for example making a copy of a document to take to class.<sup>274</sup> The ‘fair dealing’ exemption also covers examinations and indicates that there is no infringement in either setting or answering exam questions.<sup>275</sup>

The key qualification for the defence is ‘fairness’, a concept that is not elaborated.<sup>276</sup> The criteria explained already will likely be relevant.<sup>277</sup> The most important issue in assessing fairness will be whether the relevant act was proportionate to the use for instruction.<sup>278</sup> In addition, the exception will not apply unless the dealing is for a non-commercial purpose<sup>279</sup> and accompanied by a sufficient acknowledgement (where this is possible).<sup>280</sup> No acknowledgement is required where this would be impossible for reasons of practicality or otherwise.<sup>281</sup>

## 12.2 COPYING SHORT PASSAGES IN ANTHOLOGIES AND COLLECTIONS

Section 33 provides that copyright is not infringed where a ‘short passage’ from a published literary or dramatic work is included in a collection that is intended for use in an educational establishment.<sup>282</sup> This is subject to the proviso that (i) the collection consists

<sup>270</sup> Emphasis added.

<sup>271</sup> See R. Xalabarder, *Study on Copyright Limitations and Exceptions for Educational Activities in North America, Europe, Caucasus, Central Asia and Israel* (2009) SCCR/19/8, 15 (evidence from the Stockholm Conference suggests that this was not intended to limit the scope of the exception); cf. Ricketson and Ginsburg, 794, [13.45].

<sup>272</sup> CDPA 1988, s. 32(1)(b). <sup>273</sup> CDPA 1988, s. 32(1)(b).

<sup>274</sup> It is not obvious that this would be fair dealing for the purpose of ‘private’ study within CDPA 1988, s. 29, although it might be so construed. <sup>275</sup> CDPA 1988, s. 32(2).

<sup>276</sup> In this respect, the defence could conceivably be narrower than the old defence in s. 32(1) (as enacted). Although that applied only to non-reprographic copying, there appeared to be no limit on the quantity of copying. <sup>277</sup> See above pp. 224–6.

<sup>278</sup> ‘Fairness’ might justify use of reasonable portions of works and sometimes (e.g. with artistic works and photographs) whole works; cf. UK IPO, *Modernising Copyright* (2012), 40 (‘*de minimis*’); Technical Review, 7 (‘minor reasonable uses’).

<sup>279</sup> Cf. Technical Review, 7 (a private music tutor would be using material for a commercial purpose). However, the status of the organization is not supposed to be determinative. See above p. 227.

<sup>280</sup> CDPA 1988, s. 32(1)(a), (c). See above pp. 228–9.

<sup>281</sup> CDPA 1988, s. 32(1)(c) (as amended by SI 2014/1372).

<sup>282</sup> CDPA 1988, s. 33; CA 1956, s. 6(6); CA 1911, s. 2(1)(iv).

mainly of material in which no copyright subsists, (ii) the inclusion is acknowledged, and (iii) the inclusion does not involve more than two excerpts from copyright works of the same author in collections published by the same publisher over any period of five years. These restrictions greatly restrict the utility of the defence.<sup>283</sup> The defence could be used, for example, to compile a collection of cases, many of which were out of copyright.

### 12.3 PERFORMING, PLAYING, OR SHOWING WORKS

A special defence exists to protect the performing, playing, or showing of literary, dramatic, or musical works before an audience consisting of teachers and pupils at an educational establishment.<sup>284</sup> Section 34(1) operates by deeming certain performances not to be public performances and hence not to be infringements of the performing right. To fall within the defence, the performance must be before an audience consisting of teachers and pupils at an educational establishment. The performance must be carried out either by a teacher or a pupil, or by any other person for the purposes of instruction. This will exempt performances, whether by students or outsiders, before students in a drama class. It does not cover pupil performances to audiences of parents.<sup>285</sup>

A similar defence exists with regard to the showing of films and broadcasts and the playing of sound recordings before an audience of teachers and pupils for the purposes of instruction.<sup>286</sup> While this would cover the showing of a documentary about the first moon landing to a primary school class, it presumably would not cover school film societies, since they are for pleasure and not instruction. Both provisions appear to permit the use of material in (computer or projector) slide shows (although the making of the slides—involving reproduction— as well as the distribution of copies or the making available online would not fall within the exception).

### 12.4 RECORDING OF BROADCASTS

Section 35 provides that, in the absence of a licensing scheme,<sup>287</sup> educational establishments may make a recording of a broadcast, or a copy of such a recording, for the educational purposes of that establishment, provided that there is sufficient acknowledgement of the broadcast and that the educational purposes are non-commercial.<sup>288</sup> Section 35(1A) permits the playing or showing of the recording not merely on the premises, but also off-site by means of a secure electronic network that is only accessible to staff or pupils of the establishment.<sup>289</sup> Because a number of broadcasters offer licences through

<sup>283</sup> The work from which the passage is taken must itself not be intended for use in an educational establishment and no more than two excerpts from copyright works by the same author may be published in collections by the same publisher over any period of five years. Moreover, the collection in question must be described as being for use in educational establishments, must consist mainly of material in which no copyright subsists, and there must be a sufficient acknowledgement. <sup>284</sup> CDPA 1988, s. 34(1).

<sup>285</sup> CDPA 1988, s. 34(3).

<sup>286</sup> CDPA 1988, s. 34(2). These are deemed not to be public performances. However, in light of *FAPL*, such acts might count in EU law as 'communication to the public', in which case an exemption would need to be justified under the Info. Soc. Dir.—possibly Art. 5(3)(o). However, it may now be arguable that this act also falls within CDPA 1988, s. 20, and that because the s. 34 exception is an exception only to the s. 19 right (it says that the act is 'not a playing or showing of the work in public'; cf. CDPA 1988, s. 72), the immunity no longer survives. However, the reformed s. 32 would seem to cover some such acts.

<sup>287</sup> CDPA 1988, s. 35(4) (as amended). <sup>288</sup> CDPA 1988, s. 35(1).

<sup>289</sup> CDPA 1988, s. 35(3), introduced by SI 2004/1372. See Gowers Review, 47–8,[4.15]–[4.19], Recommendation 2; UK IPO, *Taking forward the Gowers Review of Intellectual Property* (2008), 9–11; UK IPO, *Modernising Copyright* (2012), 38–41. The 'fixation' of the broadcast would be permissible based on

the Educational Recording Agency (ERA), the practical importance of the section often concerns incidental material, such as advertisements, which do not fall within the licensing arrangements.<sup>290</sup> The extension of the exception in 2014 to secure networks offers some assurances as regards those incidental materials: the ERA had offered licences of this type from as early as 2007.<sup>291</sup>

## 12.5 MAKING AND SUPPLY OF COPIES

Section 36, much expanded by the 2014 amendments,<sup>292</sup> provides that, to the extent that licences are unavailable, educational establishments may copy 5 per cent of a work (other than an artistic work or broadcast) in any given year for the purposes of instruction without infringing copyright.<sup>293</sup> The copies may be distributed either as physical copies or electronically, as long as access is provided through a secure digital network that is accessible only to members of staff or pupils.<sup>294</sup> The exception operates only where the copies are accompanied by sufficient acknowledgement (unless this would be impossible), and the instruction is for a non-commercial purpose.<sup>295</sup> Again, the operation of the section 36 defence is limited as a result of the fact that educational establishments have entered into a number of relevant licensing schemes,<sup>296</sup> although it is significant that the terms of any such licence are ineffective insofar as they purport to restrict copying to less than that permitted under the section.<sup>297</sup>

## 12.6 LENDING OF COPIES

Copyright in a work is not infringed by the lending of copies of the work by an educational establishment.<sup>298</sup>

Rel. Rights Dir., Art. 10(2) (in combination with Info. Soc. Dir., Art. 5(2)(c)), while Rel. Rights Dir., Art. 8, would require a right to control further communication of a broadcast only where the public 'is made in places accessible to the public against the payment of a licence fee'. However, because broadcasts usually contain authorial works and the making available of broadcasts is covered within Info. Soc. Dir., Art. 3(2)(d), freedom to give access to broadcasts via secure networks probably has to be justified within Art. 5(3) of the Directive. Article 5(3)(a) ('illustration for teaching') and 5(3)(n) seem the most promising avenues. The latter is, in terms, limited to 'dedicated terminals on the premises' of the establishment. The Court of Justice will elaborate on this in *Technische Universität Darnstadt*, Case C-117/13 (pending).

<sup>290</sup> The Educational Recording Agency Ltd licences cover broadcasts on the BBC, ITV, Channel 4, Five Television, s4C, and (from 2013) the Open University. For details on the ERA, see its website.

<sup>291</sup> The so-called 'ERA Plus agreement'.

<sup>292</sup> Section 36, as enacted, related only to 'reprographic copying' and only to extracts from 'published literary, dramatic and musical works'. See UK IPO, *Taking forward the Gowers Review of Intellectual Property* (2008), 11–14; UK IPO, *Modernising Copyright* (2012), 16.

<sup>293</sup> CDPA 1988, s. 36.

<sup>294</sup> CDPA 1988, s. 36(3). It is not entirely clear where the freedom to so provide comes from: Art. 5(2)(c) permits only 'reproduction' by educational establishments, and Art. 5(4) 'distribution', but electronic distribution probably implicates the right of communication to the public. Article 5(3)(a) allows exception to the latter right for the purpose of 'illustration for teaching', the meaning of which phrase seems very obscure.

<sup>295</sup> CDPA 1988, s. 36(1).

<sup>296</sup> CDPA 1988, s. 36(6). The key administrator here is the Copyright Licensing Agency, which operates as agent for the Authors Licensing and Collecting Society, the Publishers Licensing Society, and the Design and Artistic Copyright Society. Examples of its licences for education can be seen on its website.

<sup>297</sup> Compare the CLA–HE Licence (2013–16), [3.4] (referring to a maximum of 5 per cent or, in the case of published law reports, a single case).

<sup>298</sup> CDPA 1988, s. 36A, was introduced into the 1988 Act by the Rel. Rights Regs, reg. 11. See Rel. Rights Dir., Art. 5(3).

## 13 LIBRARIES, ARCHIVES, AND MUSEUMS

Public libraries have long had a vital role, both as repositories of cultural output and as providers of public access to works. The former role has been achieved historically through legal deposit requirements, in particular requirements to deposit books with specified libraries.<sup>299</sup> On the whole, the ability of libraries to provide access has been secured by the principle of exhaustion, which meant that reading a book or magazine, or lending a work, did not implicate copyright. Objections that authors lost out as a result of such lending were met, in 1979, with the provision of a ‘public lending right’ (PLR) scheme paid for by taxpayers. Moreover, as photocopying technology became available, it became evident that certain freedoms should also be granted to libraries, for example to facilitate users creating copies for research purposes.<sup>300</sup>

The CDPA 1988 provided librarians and archivists with a number of defences, to facilitate use by readers, to maintain stocks, and to allow for cooperation between libraries.<sup>301</sup> These immunities, however, became outdated as digital technologies began to present new ways for libraries to fulfil their mission, for example by supplying digital copies. These technologies also mean that many acts that previously did not seem to implicate copyright (such as on-site browsing in electronic form) now do so. Following the Hargreaves Review<sup>302</sup> and reflecting the flexibility available under the Information Society Directive, the exceptions in the 1988 Act have been modified and extended (in particular to encompass a wider range of copyright works), while new freedoms are offered to other cultural institutions.<sup>303</sup>

### 13.1 LENDING OF WORKS

Historically, a key function of libraries has been to lend books to members of the public. As we saw in Chapter 6, as a consequence of EU harmonization, copyright owners were given the right to control public lending of their works.<sup>304</sup> In order to ensure continued public access to literature, section 40A of the 1988 Act provides that copyright in a work of any description is not infringed by the lending of a *book* by a *public library* if the book is eligible to be within the PLR scheme.<sup>305</sup> In addition, section 40A(2) provides that copyright is not infringed by the lending of copies of the work by a library or archive (other than a public library) that is not conducted for profit.<sup>306</sup>

<sup>299</sup> Deposit requirements were initially in the 1710 Statute of Anne and the beneficiary libraries are commonly known as ‘deposit libraries’. But it became clear that while the deposit was not a condition for protection, failure to deposit would lead to statutory penalties. See I. Alexander, *Copyright and the Public Interest in the Nineteenth Century* (2010), ch. 3, 47–63. The modern regime is contained in the Legal Deposit Libraries Act 2003 (requiring deposit of print works with the British Library and, on request, five other libraries: University of Oxford; University of Cambridge; the National Library of Scotland; the National Library of Wales; and Trinity College, Dublin).

<sup>300</sup> WIPO’s Standing Committee on Copyright and Related Rights is in the process of discussing a possible ‘new instrument’. However, at its 26th meeting (December 2013), the EU delegation opposed solutions involving exceptions, indicating that it favoured licensing in this area.

<sup>301</sup> CDPA 1988, ss 37–44 (as enacted).

<sup>302</sup> UK IPO, *Taking forward the Gowers Review of Intellectual Property* (2008), 28–30.

<sup>303</sup> UK IPO, *Modernising Copyright* (2012), 32–5. Such exemptions are permitted by Info. Soc. Dir., Art. 5(2)(c).

<sup>304</sup> CDPA 1988, s. 18A; see above, pp. 153–4.

<sup>305</sup> Rel. Rights Dir., Art. 5; see below, pp. 368–9.

<sup>306</sup> CDPA 1988, s. 40A(2), as amended by SI 2014/1372, Sch., para. 3.

### 13.2 ON-SITE REFERENCE

Although not explicitly foreshadowed in the Hargreaves Review,<sup>307</sup> during the subsequent consultation process, it was decided to introduce a new exception permitting cultural institutions to make works available from dedicated terminals,<sup>308</sup> thus taking advantage of the freedom provided in Article 5(3)(n) of the Information Society Directive.<sup>309</sup> This could allow libraries to give on-site access to e-books or to offer users facilities to listen to sound recordings in a sound archive, or to browse digital images of artworks in art museum or gallery.<sup>310</sup>

The new exception is narrow. First, it applies only with respect to the act of communicating or ‘making available’.<sup>311</sup> Whether this would include the initial digitization of the work when carried out with a view to making available the work of dedicated terminals is unclear. Second, the work or a copy of it must have been ‘lawfully acquired’ by the institution.<sup>312</sup> Although this might at first sight suggest that the cultural institution must possess its own physical copy, there is no reason to regard the word ‘copy’ as so limited. Thus if one museum sends another museum a digital copy of a work, so that the latter copy is lawfully acquired, there seems nothing to preclude the recipient from making the work available. Third, the making available must be only to ‘individual members of the public’.<sup>313</sup> Fourth, it must be made available for ‘research or private study’.<sup>314</sup> This condition would appear to allow for works to be made available in a research library, but preclude the use of the work on terminals at a public exhibition (where members of the public might be present for purposes of recreation or entertainment). Fifth, access to the work must be provided through ‘dedicated terminals on [the institution’s] premises’. Whether the term ‘dedicated’ (which derives from the Directive) precludes the possible printing or downloading by the researcher is an issue that is before the Court of Justice in *Technische Universität Darnstadt*.<sup>315</sup> Finally, it is provided that the act must comply with any purchase or licensing terms to which it is subject.<sup>316</sup> This reflects the limitation in Article 5(3)(n) of the Information Society Directive that the works or subject matter in issue are ‘not subject to purchase or licensing terms’.

### 13.3 INSTITUTIONAL AND PRESERVATION COPYING

Because library holdings vary, it may be that some works are contained in some libraries, but not others. In order to ensure that users of one library can benefit from the collections of others, provision is made for materials to be copied by one library and supplied to another. Under section 41, libraries are allowed to make copies of the whole or part of a published work in order to supply a not-for-profit library.<sup>317</sup> To ensure that this freedom does not become an opportunity to avoid paying for material provided by existing publishers (but is limited to old and obscure holdings), the exception does not apply if, at the time that the copy is made, the librarian knows or could reasonably ascertain the name and address of a person entitled to authorize the making of the copy.<sup>318</sup>

<sup>307</sup> UK IPO, *Modernising Copyright* (2012), 35.

<sup>308</sup> CDPA 1988, s. 40B (as added by SI 2014/1372).

<sup>309</sup> Various aspects of the interpretation of this Article are before the Court of Justice in *Technische Universität Darnstadt*, Case C-117/13 (pending). <sup>310</sup> CDPA 1988, s. 43A(3) (definitions).

<sup>311</sup> CDPA 1988, s. 40B(1). But if a person can access the work only from a dedicated terminal, can it be said that the work can be accessed from a place and at a time chosen by that person?

<sup>312</sup> CDPA 1988, s. 40B(3)(a). <sup>313</sup> CDPA 1988, s. 40B(3)(b).

<sup>314</sup> CDPA 1988, s. 40B(3)(bb). It is curious that this is not limited to non-commercial research.

<sup>315</sup> Case C-117/13 (pending) (concerning educational distribution). <sup>316</sup> CDPA 1988, s. 40B(3)(c).

<sup>317</sup> CDPA 1988, s. 41, (2)(a) (defining recipient as ‘not-for-profit’).

<sup>318</sup> CDPA 1988, s. 41(2)(b). This condition does not apply in relation to parts of periodicals: s. 41(3).

Libraries, archives, and museums also encounter situations in which material in their collections becomes fragile, is damaged, or is lost.<sup>319</sup> Examples include old newspapers starting to fade, old books becoming difficult to handle without disintegrating, or pages having been deliberately torn from a book. Section 42 provides that these institutions are free to copy from any ‘item’ in their permanent collection in order to preserve or replace that item or to replace an item from another institution’s permanent collection that has been lost, destroyed, or damaged.<sup>320</sup> This does not apply to institutions that lend items to the public,<sup>321</sup> nor where it is reasonably practicable to purchase a replacement.

### 13.4 COPIES FOR RESEARCH OR PRIVATE STUDY

In many libraries, users are free to use photocopying machines, scanners, and cameras to copy works insofar as they are permitted to do so under the section 29 exception. However, many libraries also offer copying services, in part to ensure that materials are appropriately handled when being copied. The Act makes provision for the making and supply of such copies if a series of prescribed conditions are complied with.<sup>322</sup> The copies can be supplied in any medium.

First, librarians are permitted, in specified circumstances, to copy published works and to supply them to individuals at cost *and* for purposes of non-commercial research or private study.<sup>323</sup> In the case of articles, they may copy up to one article in an issue of a periodical.<sup>324</sup> In the case of other published works, they may copy no more than a reasonable proportion of the work.<sup>325</sup> This latter criterion will prove problematic where the work is, for example, an illustration and thus an independent work in its own right.<sup>326</sup> Copying such a work by an individual researcher might well amount to fair dealing within section 29, and a librarian should be able to make and supply any copy that the recipient could themselves make within the latter provision. The person making a request must make a declaration stating, among other things, that the copy is required for ‘the purposes of research for a non-commercial purpose or private study’.<sup>327</sup>

In the case of unpublished works,<sup>328</sup> librarians or archivists may make and supply single copies of a work as long as the copyright owner had not prohibited copying thereof.<sup>329</sup> A similar declaration is required of the recipient.<sup>330</sup>

The librarian (or archivist) is not required to investigate the truth of the recipient’s statement and benefits from the defence as long as they are ‘not aware that the declaration

<sup>319</sup> Info. Soc. Dir., Art. 5(2)(c), refers explicitly to libraries, archives, museums, and educational establishments, while Recital 40 talks of ‘publicly accessible libraries or equivalent institutions, as well as archives’. CDPA 1988, s. 42, applies to libraries, archives, and museums, as defined in s. 43A(2), (3).

<sup>320</sup> CDPA 1988, s. 42.

<sup>321</sup> CDPA 1988, s. 42(2). This requires that the item be either for reference, inaccessible to the public, or available for loan only to other cultural institutions.

<sup>322</sup> CDPA 1988, s. 42A.

<sup>323</sup> CDPA 1988, s. 42A. This much simplified provision, introduced by SI 2014/0000, reg. 5(2), replaces ss 37–40 (as enacted).

<sup>324</sup> CDPA 1988, s. 42A(1)(a), formerly dealt with in s. 38 (as enacted).

<sup>325</sup> CDPA 1988, s. 42A(1)(b). <sup>326</sup> Cf. CDPA 1988, s. 36(5).

<sup>327</sup> CDPA 1988, s. 42A(2) (declaration), (3) (identifying recipient and stating purpose of use, that it has not received the copy previously, and that others will not request the same material at the same time). CDPA 1988, s. 42A(4), limits the charges that a library may make when supplying copies under the section, but this is not expressed as a condition for operation of the defence.

<sup>328</sup> CDPA 1988, s. 43, is not in terms limited to unpublished works, but it offers no defence where a work ‘has been published or communicated to the public before the date it was deposited in the library or archive’: s. 43(3)(a).

<sup>329</sup> CDPA 1988, s. 43 (as amended by SI 2014/0000).

<sup>330</sup> CDPA 1988, s. 43(2). A parallel rule applies in relation to charging by the library for the copy: CDPA 1988, s. 43(4).

is false in a material particular.<sup>331</sup> This will not merely save librarians from having to make judgments that even specialists on copyright law find difficult (such as what is a 'non-commercial' purpose). It will also keep talking in libraries to a minimum.

### 13.5 ARCHIVE CREATION

In addition to section 42, which allows for the making of preservation copies, a number of defences aid in the preservation of cultural objects.<sup>332</sup> A non-profit organization may record a song and make copies available for non-commercial research or private study even though there is copyright in the words or music. This is subject to the proviso that the words are unpublished and are of unknown authorship.<sup>333</sup> In addition, where an article of cultural or historical importance cannot lawfully be exported from the United Kingdom unless a copy of it is made and deposited in an appropriate library or archive, it is not an infringement to make that copy.<sup>334</sup> Finally, a recording of a broadcast, or a copy of such a recording, may be made for the purpose of being placed in an archive maintained by a non-for-profit body without thereby infringing any copyright in the broadcast or in any work included in it.<sup>335</sup>

Although the legal deposit provisions ensure that the main libraries have a complete record of print works published in the United Kingdom,<sup>336</sup> the advent of digitization has led to huge amounts of non-print material. The Legal Deposit Libraries Act 2003 established a framework for collecting non-print publications and this has been put into operation from 6 April 2013.<sup>337</sup> This allows for the deposit of off-line non-print works (such as works published on CD-ROM) under similar conditions to print works. The Regulations also cover online publications and facilitate automated 'web-harvesting' (including works that are subject to conditional access). The obligations to permit web-harvesting apply in regard to online works that are published in the United Kingdom, and a provision elaborates on the localization of the activity.<sup>338</sup> The permissible uses of non-print works are defined restrictively,<sup>339</sup> and publishers may apply to have use by the public embargoed altogether for periods of three years at a time.<sup>340</sup> Section 44A of the 1988 Act, introduced by the 2003 Act, confers immunities on creators or users of non-print material archives that fall within the Regulations.

## 14 PUBLIC ADMINISTRATION

The CDPA 1988 contains a number of defences that facilitate involvement in, and the dissemination of information about, public administration.<sup>341</sup> To this end, the Act

<sup>331</sup> CDPA 1988, ss 42A(2)(b), 43(1)(b).

<sup>332</sup> These have been amended in 2014 to render them simpler: SI 2014/1372.

<sup>333</sup> CDPA 1988, s. 61 (as amended by SI 2014/1372, Reg. 7). The making of the recording must not infringe any other copyright and must not have been prohibited by any of the performers. A special provision, s. 61(3), permits the supply of copies of such recordings under virtually identical terms to CDPA 1988, s. 43.

<sup>334</sup> CDPA 1988, s. 44. <sup>335</sup> CDPA 1988, s. 75 (as amended by SI 2014/1372, Reg. 8).

<sup>336</sup> Legal Deposit Libraries Act 2003, s. 1(1). Films and sound recordings are not subject to the obligation.

<sup>337</sup> Legal Deposit Libraries Act 2003, s. 6 (but subjecting such material to restrictions on its use under s. 7); The Legal Deposit Libraries (Non-Print Works) Regulations 2013 (SI 2013/777).

<sup>338</sup> SI 2013/777, reg. 18 (referring to the domain name and the activities of the publisher).

<sup>339</sup> Most notably, a deposit library may allow a particular work to be accessed at only one computer terminal at any one time. <sup>340</sup> SI 2013/777, regs 23–5.

<sup>341</sup> Info. Soc. Dir., Art. 5(3)(e).

provides that copyright is not infringed by anything done for the purposes of parliamentary or judicial proceedings,<sup>342</sup> or for proceedings of a Royal Commission or statutory inquiry.<sup>343</sup> This means that copyright is not infringed if a barrister digitally scans a case report, or if a police officer photocopies a statement for use in a trial.<sup>344</sup> The 1988 Act also provides that copyright is not infringed by anything done for the purposes of reporting such proceedings.<sup>345</sup> This means that law reports do not infringe copyright in the barristers' statements, a defendant's evidence, or a speech of a judge. It should be noted that these defences do not extend to the copying of the published reports of such proceedings. As such, the defence does not apply, for example, to the photocopying of law reports.

Special defences also enable the copying of material that is open to public inspection pursuant to a statutory requirement,<sup>346</sup> to material that is communicated to the Crown in the course of public proceedings,<sup>347</sup> and (in certain circumstances) to material on public records.<sup>348</sup>

## 15 EXCEPTIONS FOR COMPUTER PROGRAMS

Special provisions in the CDPA 1988, which follow from the Software Directive, govern how far it is permissible to copy and otherwise use computer programs without infringing. These defences ensure that a lawful user is able to make a back-up copy, to decompile a program for certain purposes, to study the program, and to adapt or copy the program where necessary for the lawful use of the program. The first three of these exceptions cannot be excluded or restricted by contract, and provisions attempting so to do are to be treated as null and void.<sup>349</sup>

### 15.1 MAKING BACK-UP COPIES

Section 50A(1) provides that it is not an infringement of copyright for a 'lawful user'<sup>350</sup> of a copy of a computer program to make any back-up copy of it, which is necessary for them to have for the purpose of their lawful use.<sup>351</sup> By enabling users to make back-up

<sup>342</sup> CDPA 1988, s. 45(1). This includes arbitration proceedings: *London & Leeds Estates v. Paribas (No. 2)* [1995] 1 *EGLR* 102, 106.

<sup>343</sup> CDPA 1988, s. 46(2).  
<sup>344</sup> *A v. B* [2000] *EMLR* 1007 (copying diary for use in divorce proceedings); *Vitof Ltd v. Altofti* [2006] *EWHC* 1678 (Ch), [175]; *Television New Zealand v. Newsmonitor Services* [1994] 2 *NZLR* 91, 100 (High Court of Auckland) (copying by legal advisers before proceedings start).

<sup>345</sup> CDPA 1988, ss 45(2), 46(2). The latter, which relates to Royal Commissions and statutory inquiries, is limited to the reporting of any such proceedings held in public.

<sup>346</sup> CDPA 1988, s. 47 (as amended by SI 2014/1385, to facilitate the relevant registry or public authority making the material available online). For background, see UK IPO, *Modernising Copyright* (2012), 46–7. This would seem to justify the making available of patent, trade mark, and design documentation: RDA 1949, s. 17(4); PA 1977, s. 118 (once published, patent documents can be requested); TMA 1994, ss 40(4), 63(3)(a). If a third party makes the material commercially available to the public with the authority of the copyright holder, the exception does not apply: s. 47(2)(c).

<sup>347</sup> CDPA 1988, s. 48.  
<sup>348</sup> CDPA 1988, ss 47 and 49. CDPA 1988, s. 50, provides a defence for acts specifically authorized by an Act of Parliament.

<sup>349</sup> CDPA 1988, ss50A(3), 50BA(2), s50B(4), 296A(1), reflecting Software Dir., Art. 9(1), Recital 26.

<sup>350</sup> Defined as a person who has a right to use the program: CDPA 1988, s. 50A(2). See above pp. 227–8.

<sup>351</sup> The Commission said that the notion of 'back-up' meant 'for security reasons' and that only one copy is permitted under Art. 5(2): *Report on the Implementation and Effects of Directive 91/250/EEC* (April 2000) COM(2000) 199 final, 18.

copies, it provides a form of insurance in case a computer program fails or is corrupted. Importantly, section 50A(3) provides that any term or condition in an agreement that purports to prohibit or restrict an act that is permitted under section 50A is void.<sup>352</sup>

The scope of the defence will depend on when it is ‘necessary’ for a lawful user to make a back-up copy. It is likely that this will depend on factors such as the relative stability of the program (the more vulnerable the program, the more the need for back-up), the environment in which the program operates, and the consequences of a program failing (it is more likely that a court will consider it necessary to make a back-up copy where the program is used for air traffic control or to assist in heart surgery than where it is a computer game). Indeed, in *Sony Computer Entertainment Inc. v. Owen*,<sup>353</sup> it was held that when a person buys a computer game on a CD, it is not ‘necessary’ for that person to make a back-up copy of the disk.

## 15.2 DECOMPILATION

One of the problems facing creators of computer programs is that they have to ensure that their creations can be used in conjunction with existing products and processes. In the same way as a manufacturer of spare parts for cars needs to ensure that its products are the appropriate size and shape, so too producers of computer programs and devices used in conjunction with existing programs need to ensure that their products comply with the existing standards. While some of this information will be generic and widely available, some of it may be hidden in the program. For a producer to ensure that its creations are compatible (or interoperable) with existing systems, it needs to have access to the information that is hidden in the program. Some developers (most famously IBM) publish such information to encourage others to construct further application programs or add-on devices, whereas others license the information. In some circumstances, the only way in which the relevant information can be obtained is by decompiling or reverse engineering the program. The process of decompilation reduces the object code in the program to a form that approximates with the source code. The potential problem with this is that, because decompilation involves intermediate copying of a program, it is on its face an infringement of copyright.<sup>354</sup>

After considerable debate, it was decided to include a defence for decompilation in the Software Directive.<sup>355</sup> This found its way into British law via section 50B of the CDPA 1988. Before looking at the defence, it should be noted that the parties cannot contract out of the decompilation defence.<sup>356</sup> It should also be noted that the importance of section 50B is reinforced by the fact that fair dealing for the purpose of research and study does not apply to the decompilation of computer programs.<sup>357</sup>

Section 50B provides that it is not an infringement of copyright for a lawful user of a copy of a computer program expressed in a low-level language to convert it into a higher-level language (that is, to ‘decompile’ it) or, incidentally in the course of converting the program, to copy it. This is subject to the proviso that:

- (a) it is necessary to decompile the program to obtain the information necessary to create an independent program which can be operated with the program decompiled or with another program (“the permitted objective”); and

<sup>352</sup> CDPA 1988, ss 50A(3), 296A. <sup>353</sup> [2002] EMLR 742.

<sup>354</sup> See P. Samuelson, ‘The Past, Present and Future of Software Copyright: Interoperability Rules in the European Union and United States’ (2012) 34(4) *EIPR* 229.

<sup>355</sup> Software Dir., Art. 6. <sup>356</sup> CDPA 1988, ss 50A(3), 50B(4), 50D(2). <sup>357</sup> CDPA 1988, s. 29(4).

- (b) the information so obtained is not used for any purpose other than the permitted objective.<sup>358</sup>

These conditions will be not be met, for example, where (i) the relevant information is readily available to the lawful user, (ii) the decompilation is not confined to acts necessary to achieve the permitted objective, (iii) the lawful user supplies the information to any person to whom it is not necessary to do so in order to achieve the permitted objective, or (iv) the lawful user uses the information to create a program that is substantially similar in its expression to the program decompiled, or to do any act restricted by copyright.<sup>359</sup>

The European Commission has criticized the way in which the decompilation exception has been implemented in the United Kingdom. In particular, the Commission has said there are four reasons why section 50B may be non-conforming.<sup>360</sup> First, section 50B's use of 'lawful user' appears not to include a 'person authorized on behalf of the licensee or person having a right to use a copy of the program'. Second, while Article 6 of the Software Directive mentions 'reproduction of the code and translation of its form', this has been implemented in section 50B of the 1988 Act as 'expressed in a low-level language to convert it into a higher-level language'. Third, there is no restriction in the United Kingdom to 'parts' of the decompiled program; instead, section 50B is restricted to 'such acts as are necessary to achieve the permitted objective'. The final criticism is that the section 50B defence is not expressly subject to the three-step test (as is required under Article 6(3)). It is therefore likely that British courts will construe section 50B in such a way as to comply with many of the criticisms (if this were considered desirable).<sup>361</sup>

### 15.3 OBSERVING, STUDYING, AND TESTING PROGRAMS

Section 50BA, introduced in October 2003,<sup>362</sup> implements Article 5(3) of the Software Directive by providing that a lawful user of a copy of a program is not liable for infringement if, when carrying out an act that they are entitled to do (such as loading, displaying, running, transmitting, or storing the program), that person observes, studies, or tests the functioning of the program in order to determine the ideas or principles that underlie any element of the program. In *SAS Institute v. World Programming Ltd (WPL)*,<sup>363</sup> the defendant had developed its competing (but non-infringing) statistics program by studying the 'learning edition' issued by the claimant. The terms of the licence for the learning edition limited its use to purposes of learning how to use the SAS system.<sup>364</sup> Because WPL's purpose went well beyond learning how to use the system, there was an apparent breach of the licence terms.<sup>365</sup> The question thus arose as to whether the terms were valid in the light to the Directive and whether the defence of studying was nevertheless available. Arnold J found himself unable to reach a conclusion confidently and referred the question to the Court of Justice.

<sup>358</sup> CDPA 1988, s. 50B(2). <sup>359</sup> CDPA 1988, s. 50B(3).

<sup>360</sup> *Report on the Implementation and Effects of Directive 91/250/EEC* (April 2000) COM(2000) 199 final, 14.

<sup>361</sup> U.-M. Mylly, 'An Evolutionary Economics Perspective on Computer Program Interoperability and Copyright' (2010) 41(3) *IIC* 284.

<sup>362</sup> The specific implementation of Software Dir., Art. 5(3), seems to have been required now that the notion of fair dealing for research and private study in CDPA 1988, s. 29, has been limited to non-commercial ends. See *Navitaire Inc. v. Easy Jet Airline Co. & BulletProof Technologies Inc.* [2006] *RPC* (3) 111, [77].

<sup>363</sup> [2010] *EWHC* 1829 (Ch). <sup>364</sup> *Ibid.*, [271], [282], [286]. <sup>365</sup> *Ibid.*, [290].

Unfortunately, he found that neither the Court of Justice's reasoning, nor its answer was 'very clear'.<sup>366</sup> Nevertheless, Arnold J and the Court of Appeal interpreted the decision as drawing a distinction between 'acts' that were within the scope of a licence and a 'purpose' that formally took the acts outside the scope thereof. As long as the person with the licence was entitled to do the relevant acts, then the Article 5(3) defence operated.<sup>367</sup>

#### 15.4 COPYING AND ADAPTING FOR LAWFUL USE

In the absence of contractual terms to the contrary, section 50C(1) allows a lawful user of a computer program to copy or adapt it if 'it is necessary for his lawful use'.<sup>368</sup> An example of a situation in which it will be necessary to copy for a lawful use given by section 50C(2) is where a person needs to correct errors in the program. Another obvious example is copying that occurs in the random-access memory (RAM) of a computer that enables the program to run. In contrast, it has been held that a licence to use a computer game in Japan did not justify adaptation to circumvent copy protection so as to enable its use in the United Kingdom.<sup>369</sup> Given the limits of the licence to Japan, there was no lawful use in the United Kingdom.

## 16 EXCEPTIONS FOR DATABASES

Section 50D of the CDPA 1988 provides that it is not an infringement of copyright in a database for a person who has a right to use the database or any part of the database (whether under a licence to do any of the acts restricted by the copyright in the database or otherwise) to do, in the exercise of that right, anything that is necessary for the purposes of *access to* and *use of* the contents of the database or of that part of the database. This means that if, in the course of searching a database, the database is downloaded into the memory of a computer, this will not be an infringement. Although in situations in which the copyright owner and the user are in a contractual relation (as a subscriber to *Lexis* would be), the user would have, at the very least, an implied licence covering these acts, this exception seems to operate in favour of others with a right to use the database, such as transferees of material copies of databases (for example the purchaser of a second-hand CD-ROM of the *Oxford English Dictionary*). It is important to bear in mind that fair dealing for the purposes of research and study is not available for databases. This increases the relative importance of the section 50D defence. As with the defences for the making of back-up copies and decompilation, it is not possible to contract out of the section 50D defence.<sup>370</sup>

<sup>366</sup> [2013] *EWHC* 69 (Ch), [64] *per* Arnold J; cf. [2013] *EWCA Civ* 1482, [98] (saying that the Court of Justice gave a clear answer at [61]).

<sup>367</sup> [2013] *EWHC* 69 (Ch), [71] *per* Arnold J; cf. [2013] *EWCA Civ* 1482 [101]. The Court of Appeal found that there was nothing in the licence to prevent the licensee from being a legal person, such as WPL, so that it was unnecessary to grapple with the issue that Arnold J had considered, as to what happens if the user is not the formally recognized licensee.

<sup>368</sup> Note the contradictory provisions of Software Dir., Art. 5(1) and Recital 18. This defence does not apply to the making of back-up copies (s. 50A), to the decompilation of programs (s. 50B), or to acts carried out to study or test the program (s. 50BA).

<sup>369</sup> *Sony Computer Entertainment Inc v. Owen* [2002] *EMLR* 742, 747. See B. Esler, 'Judas or Messiah? The Implications of the Mod Chip Cases for Copyright in an Electronic Age' (2003) *Hert LJ* 1.

<sup>370</sup> CDPA 1988, s. 50D(2). See Davison, 77–8.

## 17 EXCEPTIONS FOR WORKS IN ELECTRONIC FORM

Under section 56 of the CDPA 1988, if the purchaser of a work in electronic form (such as a computer program or an e-book) is entitled to make further copies or adaptations of the work, then, unless there is an express stipulation to the contrary, so too is anyone to whom the ownership of the copy has been transferred—that is, the defence applies when a back-up copy is transferred if the original copy is no longer usable. Any copies remaining with the original purchaser after transfer are infringing.<sup>371</sup>

## 18 EXCEPTIONS FOR ARTISTIC WORKS

A number of defences exist in relation to artworks. Given that artistic works protect a broad array of subject matter, from paintings and sculpture through to typefaces and industrial designs, it not surprising that these defences are similarly eclectic. In addition to the defences listed below, it should be noted that a number of defences exist in relation to industrial designs. These are discussed in Chapter 29.<sup>372</sup>

### 18.1 REPRESENTATION OF WORKS ON PUBLIC DISPLAY

A special defence exists in relation to the representation of artistic works on public display.<sup>373</sup> Section 62 of the CDPA 1988 provides that copyright in (a) buildings and (b) sculptures, models for buildings, and works of artistic craftsmanship if permanently situated in a public place or in premises open to the public, may be represented in a graphic work, photographed, filmed, or broadcast without a licence. The defence also applies to subsequent dealings with the representation. Thus a postcard of a sculpture in Trafalgar Square can be reproduced and distributed without infringing copyright in the sculpture. Similarly, a film of a new building could be made or broadcast without the consent of the owner of copyright in the building.<sup>374</sup> It seems that the defence applies to both private and public buildings. If so, this means that a company taking photographs of private homes to be stored on a database for use by real estate agents could rely upon the defence to avoid a claim for infringement of any copyright in the building.

One potential problem with the defence is that section 62 says that copyright in such a work is not infringed. As such, the defence seemingly would not apply to any preliminary drawings or plans that were used to create the public work. If so, it greatly reduces the scope of the defence.<sup>375</sup>

### 18.2 ADVERTISEMENTS FOR SALE OF AN ARTISTIC WORK

Section 63 declares that it is not an infringement of copyright in an artistic work to copy it or to issue copies to the public in order to advertise the sale of the work. This means that it is permissible, when selling a painting, to take a photograph of the painting and

<sup>371</sup> CDPA 1988, s. 56(2)–(3). <sup>372</sup> CDPA 1988, ss 51 and 53. See below Chapter 29, section 3.

<sup>373</sup> See also incidental use defence in CDPA 1988, s. 31, discussed at pp. 247–8 above (but with CDPA 1988, s. 62, there is no need for the use to be incidental: Info. Soc. Dir., Art. 5(3)(h)).

<sup>374</sup> While a film of a building could be placed on a website without infringing, a direct live feed of images of the building would appear to fall outside the scope of the exception.

<sup>375</sup> R. Burrell and A. Coleman, *Copyright Exceptions: The Digital Impact* (2005), 233.

to publish it in a catalogue. Section 63 serves to reconcile the conflict that may arise where the artistic work and the copyright in that work are owned by different parties. It does this by preventing the copyright owner from exercising their copyright so as to hinder the owner of the artistic work from selling it. It should be noted that subsequent uses of the copy, such as selling it, are not covered by the defence.<sup>376</sup> This means that the sale of a catalogue formerly used to advertise the sale of the work is an infringement of copyright.<sup>377</sup>

### 18.3 SUBSEQUENT WORKS BY THE SAME ARTIST

It is common practice for artists to build upon and develop earlier works that they have created. A potential problem that arises for artists who sell the copyright in their works is that copyright owners may object to the artist continuing to work in the same style. Under general copyright principles, artists are able to develop the same ideas as long as they do not copy a substantial part of the expressive form of the earlier work. To ensure that owners of copyright in an earlier work are unable to stifle an artist's ability to work in the same style, section 64 adds that an artist is able to copy their earlier works, provided that they do not repeat or imitate a work's main design.

### 18.4 RECONSTRUCTION OF BUILDINGS

Section 65 allows for the reconstruction of a building without infringement of any copyright in the building or in the original drawings or plans for it.<sup>378</sup> This ensures that an owner of a building is able to carry out repairs without having to seek the approval of the copyright owner.

### 18.5 USE OF TYPEFACES IN THE ORDINARY COURSE OF PRINTING

A special defence exists where typefaces (which are protected as artistic works) are used in the ordinary course of printing. Section 54 provides that it is not an infringement of copyright in an artistic work consisting of the design of a typeface to use the typeface in the ordinary course of printing activities. The section also provides that it is not an infringement to possess or do anything in relation to the material produced by such a use.<sup>379</sup>

## 19 BROADCASTS

Various acts are permitted in relation to the making, retransmission, and reception of broadcasts. In addition to the provisions at which we have already looked in relation to archives,<sup>380</sup> education, and people with disabilities,<sup>381</sup> the following defences may apply.

<sup>376</sup> CDPA 1988, s. 63. <sup>377</sup> Info. Soc. Dir., Art. 5(3)(j).

<sup>378</sup> CDPA 1988, s. 65; Info. Soc. Dir., Art. 5(3)(m).

<sup>379</sup> CDPA 1988, s. 54. The typeface itself may be reproduced 25 years after the year of authorized marketing: CDPA 1988, s. 55. See J. Watts and F. Blakemore, 'Protection of Software Fonts in UK Law' [1995] 3 *EIPR* 133.

<sup>380</sup> CDPA 1988, s. 75, discussed above at p. 260.

<sup>381</sup> CDPA 1988, ss 31A, 32, 34(2), 35.

### 19.1 INCIDENTAL RECORDING FOR THE PURPOSE OF BROADCASTING

A person authorized to broadcast a work may make a recording of it for purposes of the broadcast.<sup>382</sup> This is subject to the requirement that the recording should not be used for any other purpose and should be destroyed within 28 days of first being used.<sup>383</sup> This ensures that any temporary copies that are made in the course of broadcasting will not infringe.

### 19.2 RECORDING FOR PURPOSES OF SUPERVISION

As part of the regulatory framework that governs the broadcasting industry, a number of organizations are given the task of supervising broadcast programmes. To ensure that these bodies are able to perform these tasks, the 1988 Act provides that supervisory bodies (in particular, after the Communications Act 2003, the unitary body, Ofcom) may make recordings of broadcasts for the purpose of controlling broadcasting.<sup>384</sup>

### 19.3 TIME SHIFTING

Section 70 provides for a time-shifting defence, which allows for the private recording of broadcasts so that they may be watched at a later time. The making of a recording of a broadcast in domestic premises for private and domestic use, solely in order to view it or listen to it at a more convenient time, does not infringe any copyright in the transmission or of works included in the transmission.<sup>385</sup> This enables a person to record a television programme to watch at a more convenient time or to record a radio programme to which they want to listen later. Since broadcasts do not include most 'Internet transmissions', this defence cannot be employed to justify private copying from websites. Moreover, the limitation of the defence to recordings made 'in domestic premises' means that it cannot justify acts of recording broadcasts in commercial establishments, such as the recording of simultaneous Internet broadcasts in Internet cafes. Rather strangely, however, it means that if a person tapes a radio programme on a cassette recorder situated in their office, they will infringe, whereas they would not do so were they at home. In an era in which it is increasingly important for the rules relating to copyright liability to make sense to the public, this different treatment seems regrettable.

### 19.4 FREE PUBLIC SHOWING OR PLAYING

Although running a radio or television in public normally infringes the public performance right in the broadcast and any works therein, a special defence limits the scope of such liability where a broadcast is shown or played to a non-paying audience.<sup>386</sup>

<sup>382</sup> CDPA 1988, s. 68; Info. Soc. Dir., Art. 5(2)(d); Rel. Rights Dir., Art. 10(1)(c); Berne, Art. 11bis(3). See *DR, TV2 Danmark A/S v. NCB-Nordisk Copyright Bureau*, Case C-510/10 (26 April 2012) (ECJ, Third Chamber).

<sup>383</sup> *Phonographic Performance v. AEI Rediffusion Music* [1998] Ch 187, [1997] RPC 729.

<sup>384</sup> CDPA 1988, s. 69; Info. Soc. Dir., Art. 5(3)(e); Communications Act 2003, Sch. 17, para. 91(3).

<sup>385</sup> CDPA 1988, s. 71 (justified possibly by Info. Soc. Dir., Art. 5(2)(b), and Recital 35).

<sup>386</sup> CDPA 1988, s. 72. In EU terminology, such playing appears to implicate the harmonized communication right, rather than the public performance right: see Chapter 6, pp. 155–6. However, even though the Info. Soc. Dir. makes no provision for a defence of this sort, the terms of CDPA 1988, s. 72, are unequivocal

An audience will be paying if they have paid admission, or if goods or services are supplied at that place at prices that are substantially attributable to the facilities afforded for seeing or hearing the broadcast or programme, or at prices exceeding those usually charged there and which are partly attributable to those facilities.<sup>387</sup> So a wine bar wishing to offer a television for the benefit of customers, but which does not alter its prices, would fall within the exception, whereas a bar that charges an entry fee when broadcasts are being shown would not. The ‘free showing’ defence also covers the showing or playing of broadcasts to residents of hotels, inmates in prisons, patients in hospitals, and members of clubs, and it covers free demonstrations of broadcast-receiving equipment, for example in shop windows.

The ‘free playing’ defence applies only to claims relating to infringement of copyright in the broadcast or any film included in it and, in certain specified situations, to the copyright in sound recordings. Permissions as regards other works included in the broadcast, for example music and lyrics of songs, will be required (so a licence from the Performing Right Society will be required).<sup>388</sup> In the case of sound recordings, the section distinguishes between two categories of recording. If they either are not recordings of music or songs (for example recorded interviews with politicians), or are musical recordings of which the author is also the author of the broadcast (such as sound recordings created as theme music for the channel or to accompany a programme), it is not an infringement of the copyright in the recording to show in public a broadcast that includes the recording.<sup>389</sup> The exception does not, however, excuse any infringement of the copyright in other sound recordings—that is, those that are recordings of music and songs where the author of the recording is not the author of the music (termed ‘excepted sound recordings’). These excepted sound recordings encompass most commercially distributed popular and classical music, so that the general ‘free playing’ defence would not apply to sound recordings featured on the radio or *Top of the Pops*. For these ‘excepted sound recordings’, a much more limited exception exists as regards the free playing or showing of a broadcast for the purposes of repairing equipment for the reception of broadcasts, demonstrating that such repair has been carried out, or demonstrating such equipment.<sup>390</sup> So, while a wine bar, hotel, or even a National Health Service hospital or government-run prison will benefit from the broad ‘free playing’ defence as regards broadcasts and films included therein, a Phonographic Performance Ltd licence will need to be obtained to cover the ‘excepted sound recordings’ included in the broadcast.

## 19.5 PHOTOGRAPHS OF TELEVISION BROADCASTS

The taking of a photograph of an image from a broadcast, in domestic premises for private and domestic use, is not an infringement of copyright in the broadcast or any film included in it.<sup>391</sup> The exception does not extend to photographs of artistic works included in television broadcasts.<sup>392</sup>

in permitting such acts and cannot be ‘read down’: *Football Association Premier League Ltd. v. QC Leisure* [2012] EWHC 108 (Ch), [78], affirmed [2012] EWCA Civ 1708. At time of writing, there is lobbying by the FAPL to have the section repealed: see *The Daily Telegraph*, 27 January 2014.

<sup>387</sup> CDPA 1988, s. 72(2)(b).

<sup>388</sup> Hence many electrical retailers allow the demonstration of television equipment with the sound off.

<sup>389</sup> CDPA 1988, s. 72(1A), introduced by SI 2003/2498 to implement Rel. Rights Dir., Art. 10(3).

<sup>390</sup> CDPA 1988, s. 72(1B)(b). A broader provision was removed in 2010: Copyright, Designs and Patents Act 1988 (Amendment) Regulations (SI 2010/2694), reg. 4.

<sup>391</sup> CDPA 1988, s. 71 (justifiable, possibly, under Info. Soc. Dir., Art. 5(2)(b) or (3)(i)).

<sup>392</sup> Other defences might assist, e.g. CDPA 1988, s. 31.

## 19.6 RECEPTION AND RETRANSMISSION OF WIRELESS BROADCAST BY CABLE

A special defence in section 73 deals with the retransmission of wireless broadcasts by cable operators. The defence helps to ensure that people in areas in which reception of the broadcast is very poor or restricted are able to get access to programmes.<sup>393</sup> The defence also takes account of the fact that certain cable operators are under a ‘must carry’ obligation.<sup>394</sup>

Section 73 applies where a wireless broadcast made from a place in the United Kingdom is received and immediately retransmitted by cable. Such retransmissions, in the absence of any exceptions, would infringe copyright in the broadcast and any works included therein.<sup>395</sup> However, retransmissions are often made merely to enable potential customers of a broadcast to obtain reception in areas in which the signal is weak. In these cases, where there is no alteration of the transmission at all, it is difficult to see in what way the copyright owners in the works included in the broadcast are prejudiced by the act of retransmission (after all, they have been paid by the initial broadcaster). Consequently, the 1988 Act provides that copyright in any work included in the broadcast is not infringed when the broadcast is retransmitted by cable if and to the extent that the broadcast is made for reception in the area in which it is retransmitted by cable.<sup>396</sup> The broadcaster’s permission is required, however, unless the broadcast is part of a qualifying service (such as the BBC, ITV, or Channels 4, or 5), and was made for reception in the area in which the retransmission is provided.<sup>397</sup>

The provision has, however, been used for largely unforeseen purposes. In *ITV Studios Ltd v. TV CatchUp Ltd*,<sup>398</sup> the High Court found that a service that captured and retransmitted free-to-air digital broadcast to subscribers fell within the defence. The claimants objected to the service because although the retransmissions contained the broadcasts in unaltered form, they were preceded by (and framed by) advertisements, so that both parties were competing to attract advertising. The Court rejected arguments that section 73 must be interpreted not to apply to digital transmissions and that it was limited to ‘cable services’ as opposed to Internet services.<sup>399</sup> However, it held that there would be liability if retransmissions were to subscribers outside the area of original distribution and insofar as the retransmissions could be received by mobile rather than wire-based systems.

Some acts of transmission are obligatory under the Communications Act 2003. Because it would be grossly unfair to make a person who is obliged to transmit a broadcast liable to the copyright owner, either in the broadcast or the works contained therein, the Act exempts such a person from infringement. As regards copyright in the broadcast itself, retransmission is permitted if the retransmission takes place in pursuance of a ‘relevant requirement’ (whether the transmission extends beyond the intended broadcast area or not).<sup>400</sup> As regards copyright in the underlying works, retransmission in the same area as the broadcast is exempted by section 73(3). Where a cable retransmission goes beyond the area of reception of the broadcast and the retransmission has been required under a ‘relevant requirement’, the Act provides that the retransmission of any work included in

<sup>393</sup> Copinger, [9–226], 659ff.

<sup>394</sup> Such obligations are imposed under the Communications Act 2003, s. 64.

<sup>395</sup> CDPA 1988, ss 20(1), 6(5A). <sup>396</sup> CDPA 1988, s. 73(2). <sup>397</sup> CDPA 1988, s. 73(2)(b).

<sup>398</sup> [2011] EWHC 1874 (Pat), [143] *per* Floyd J.

<sup>399</sup> *Ibid.*, [134]. Perhaps not surprisingly, ITV is campaigning to have this exception limited or deleted: see Hansard, Public Bill Committee, col. 93ff (30 January 2014) (Committee stage of Intellectual Property Bill 2013–14). The government proposed to wait for further review until after the conclusion of the litigation in *ITV v. TV CatchUp*: Hansard (20 January 2014), col. 53ff (Second Reading).

<sup>400</sup> CDPA 1988, s. 73(2)(a).

the broadcast is to be treated as licensed by the owner of copyright, subject to the payment of a reasonable royalty by the person making the broadcast.

## 20 MISCELLANEOUS DEFENCES

### 20.1 NOTES OR RECORDINGS OF SPOKEN WORDS

As a result of changes introduced by the CDPA 1988, it is now possible for a person who makes a speech to have copyright in the speech. This innovation gave rise to a concern that speakers would be able to use the new copyright to restrict people who record speeches (such as journalists) from making use of their recordings. To avoid this, section 58 provides that the copyright that vests in a person who makes a speech cannot be used to restrict the use of recordings made of their speech for the purpose of reporting current events, or recordings made for communicating to the public the whole or part of the work.<sup>401</sup> For the defence to operate, the recording must be a direct record of the spoken words and the speaker must not have prohibited the recording of their speech.<sup>402</sup>

### 20.2 PUBLIC RECITATION

Section 59(1) of the 1988 Act provides that the reading or recitation in public by one person of a reasonable extract from a publicized literary or dramatic work does not infringe any copyright in the work so long as it is accompanied by a 'sufficient acknowledgement'.<sup>403</sup> Section 59(2) provides that copyright in a work is not infringed where a recording or recitation covered by section 59(1) is included in a sound recording or communicated to the public.

### 20.3 ABSTRACTS

Where an article on a scientific or technical subject is published in a periodical accompanied by an abstract indicating the contents of the article, it is not an infringement of copyright in the abstract or in the article to copy the abstract or to issue copies of it to the public.<sup>404</sup> This provision does not apply, however, if or to the extent that there is a relevant licensing scheme certified under section 143 of the Act.<sup>405</sup> Because no licensing scheme has been established in this area, the defence plays an important role in ensuring the circulation of scientific information.

### 20.4 DIFFICULTIES WITH IDENTIFYING AUTHORS

Where works are of unknown authorship, a fixed term of copyright replaces the normal *post mortem* term.<sup>406</sup> Similarly, in the case of films, where it is not possible to identify any of the persons by whom the calculation of the term of protection is normally made, a fixed term operates. In both situations, the possibility arises that while a user may rely on the fixed term, the author might later become known. If so, the longer conventional term

<sup>401</sup> CDPA 1988, s. 58; cf. Info. Soc. Dir., Art. 5(3)(f) (which requires that the source, including the author's name, is indicated).

<sup>402</sup> CDPA 1988, s. 58 (justifiable under Info. Soc. Dir., Art. 5(3)(o)).

<sup>403</sup> Defined in CDPA 1988, s. 178.

<sup>404</sup> CDPA 1988, s. 60(1) (justified under Info. Soc. Dir., Art. 5(3)(a) or (o)).

<sup>405</sup> CDPA 1988, s. 60(2). <sup>406</sup> CDPA 1988, s. 12(3).

would apply.<sup>407</sup> In order to ensure that this does not create problems, there is a defence to infringement where reasonable inquiry cannot ascertain the identity of any author of a work and it is reasonable to suppose that copyright has expired in the work.<sup>408</sup> This provision should now be viewed alongside the provisions relating to orphan works that are discussed in Chapter 12.

## 20.5 EXPIRY OF FILM COPYRIGHT

As we saw earlier, one of the changes brought about as a result of the Term Directive is that copyright in films expires 70 years from the end of the calendar year in which the death of the last of the following occurs: the principal director; the author of the screenplay; the author of the dialogue; or the composer of any music specifically created.<sup>409</sup> One of the consequences of this is that it may be difficult to determine when copyright in a film actually expires. To ensure that this uncertainty does not unduly hinder subsequent uses of the film, section 66A provides that copyright in a film is not infringed if (i) it is not possible by reasonable inquiry to ascertain the identity of any of the relevant persons, and (ii) it is reasonable to assume that the copyright has expired *or* that the last relevant person has been dead for longer than 70 years.

## 20.6 RIGHT OF REPAIR

As part of the general jurisdiction to refuse to enforce copyright where it would contravene public policy, the courts have sometimes treated a person as having a right to repair their property even though to do so would be a direct or indirect reproduction of a copyright work.<sup>410</sup> This was taken furthest by the House of Lords in *British Leyland v. Armstrong*,<sup>411</sup> in which it was held that manufacturers were entitled to make spare parts for motor vehicles (even though to do so would be to reproduce the claimant's design drawings indirectly), so as to facilitate the repair of such vehicles. However, the defence enunciated in *British Leyland* has subsequently been qualified to such an extent that it is hard to imagine any situations in which it might apply. In *Canon Kabushiki Kaisha v. Metro-Goldwyn-Mayer Inc.*,<sup>412</sup> Lord Hoffmann said that, for the defence to apply, it must be plain and obvious that the circumstances are unfair to customers and that the monopoly is anti-competitive. Soon after that decision, the scope of the repair defence was further restricted in *Mars v. Teknowledge*.<sup>413</sup> In that case, Jacob J held that the *British Leyland* defence could not be applied to claims for infringement of copyright in computer software or to rights in databases because those rights stemmed from exhaustive European statutory regimes.<sup>414</sup> The upshot of this is that the right of repair has effectively been abolished.<sup>415</sup>

<sup>407</sup> CDPA 1988, ss 12(4), 13(4); cf. s. 13(9) where there is no person.

<sup>408</sup> CDPA 1988, ss 57, 66A (justifiable under Info. Soc. Dir., Art. 5(3)(o)).

<sup>409</sup> CDPA 1988, s. 13B(2). See Chapter 7, pp. 182–3.

<sup>410</sup> See Info. Soc. Dir., Art. 5(3)(l) (allowing exceptions relating to use in relation to repair of equipment).

<sup>411</sup> [1986] *RPC* 279. <sup>412</sup> [1997] *FSR* 817. <sup>413</sup> [2000] *FSR* 138.

<sup>414</sup> *Ibid.* (the defence was unlikely to succeed unless the court can be reasonably certain that no right-thinking member of society would quarrel with the result).

## MORAL RIGHTS

### CHAPTER CONTENTS

1 Introduction	272	3 Right to Object to False Attribution	280
2 Right of Attribution (or Paternity)	275	4 Right of Integrity	282

### 1 INTRODUCTION

Once a work qualifies for copyright protection, two distinct categories of right may arise. In addition to the economic rights that are granted to the first owner of copyright, the 1988 Act also confers moral rights on the authors of certain works.<sup>1</sup>

Moral rights<sup>2</sup> protect an author's non-pecuniary or non-economic interests.<sup>3</sup> The Copyright, Designs and Patents Act 1988 (CDPA 1988) provides authors and directors with the right to be named when a work is copied or communicated (the right of attribution), the right *not* to be named as the author of a work that they did not create (the right to object against false attribution), and the right to control the form of the work (the right of integrity). The moral rights recognized in the United Kingdom are more limited than the rights granted in some other jurisdictions, where, for example, authors are provided with the rights to publish or divulge a work, to correct the work, to object to the alteration or destruction of the original of a work, to object to excessive criticism of the work, and to withdraw a work from circulation on the ground that the author is no longer happy with it (because, for example, it no longer reflects the author's world view or because the person to whom the economic rights in the work have been assigned has failed to exploit it).

Infringement of a moral right in the United Kingdom is actionable as a breach of a statutory duty<sup>4</sup> and will result in an award of damages. The moral rights of integrity and attribution recognized under the 1988 Act last for the same time as the copyright in the relevant work. The right to object to false attribution is less extensive, lasting for only

<sup>1</sup> See E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006); G. Davies and K. Garnett, *Moral Rights* (2010); W. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449; R. Durie, 'Moral Rights and the English Business Community' [1991] *Ent L Rev* 40; J. Ginsburg, 'Moral Rights in a Common Law System' [1990] 1 *Ent L Rev* 121; Copinger, ch. 11; Laddie et al., ch. 13.

<sup>2</sup> The term 'moral rights' is derived from the French *droit moral*.

<sup>3</sup> J. Ginsburg, 'Moral Rights in a Common Law System' [1990] 1 *Ent L Rev* 121, 121. This does not mean that they cannot be used to secure economic benefits. The estate of French painter Maurice Utrillo has benefited considerably from the grant of the right to use Utrillo's name in relation to certain paintings: see J. Merryman, 'The Moral Right of Maurice Utrillo' (1993) 43 *Am J Comp L* 445; A. Dietz, 'The Artist's Right of Integrity under Copyright Law: A Comparative Approach' (1994) 25 *IIC* 177.

<sup>4</sup> CDPA 1988, s. 103.

20 years after the author's death.<sup>5</sup> After the author's death, moral rights usually are exercised by their heirs,<sup>6</sup> but in some countries may be enforced by executive bodies such as the Ministry for Culture.

The moral rights in the 1988 Act were introduced to give effect to Article 6*bis* of the Berne Convention,<sup>7</sup> which requires that members of the Berne Union confer on authors the right of attribution and integrity.<sup>8</sup> More specifically, it states that:

Independently of the author's economic rights, and even after the transfer of the said rights, the author shall have the right to claim authorship of the work, and to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honour or reputation.

Instead of replicating Article 6*bis* verbatim, the British legislature chose to introduce a series of detailed statutory provisions, each of which contains a number of conditions, limitations, and exceptions.<sup>9</sup> This has led commentators to suggest that the manner in which Article 6 has been implemented in the United Kingdom is 'cynical, or at least half-hearted'.<sup>10</sup> Given that failure to give effect to Article 6*bis* does not represent a ground of complaint to the World Trade Organization (WTO),<sup>11</sup> it is unlikely that much will come of these criticisms.

While moral rights have received a considerable amount of support,<sup>12</sup> particularly from creators, they have also been subject to a degree of criticism.<sup>13</sup> At a general level, moral rights have been criticized for the fact that they are founded upon a romantic

<sup>5</sup> UK law also describes a further right, that of privacy in photographs, as a 'moral right': CDPA 1988, s. 85. Breach of confidence may provide something akin to a divulcation right: see, e.g., *Prince Albert v. Strange* (1848) 2 *De G & Sm* 652, (1849) 1 *MacG CC* 25 (preventing unauthorized disclosure of previously unpublished artwork on grounds of common law copyright and breach of confidence).

<sup>6</sup> The rights pass on death to the person nominated by testamentary disposition, or else to the person to whom copyright is being passed; otherwise, they are to be exercised by personal representatives: CDPA 1988, s. 95(1). As an exception, the right against false attribution passes to the author's personal representatives: CDPA 1988, s. 95(5).

<sup>7</sup> While various moral rights existed in the United Kingdom prior to 1989, it was widely believed that the protection was not sufficient to meet the criteria in the Berne Convention. The Gregory Committee, [219]–[226], had been reluctant to introduce such rights in 1956, anticipating difficulties in their drafting. The Whitford Committee, [51]–[57], impressed by the form of their implementation in Dutch law, recommended their adoption in 1977. See G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 11; E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006), ch. 13.

<sup>8</sup> These were introduced at the Rome Conference in 1928. See Ricketson and Ginsburg, [3.28], 108, [10.07], 590–4; Adeney, *op. cit.*, ch. 6. Article 6*bis* was, in many ways, a compromise. Durie tells us that the terms 'honour and reputation' were introduced in place of 'moral interests of the author' to satisfy objections of the common law jurisdictions: R. Durie, 'Moral Rights and the English Business Community' [1990] *Ent L Rev* 40; Ricketson and Ginsburg, [10.36], 614. Most importantly, Art. 6(3) leaves Union countries free to determine the conditions under which the rights are exercised.

<sup>9</sup> CDPA 1988, Ch. IV. The criticisms are that the provisions do not implement Berne, do not improve the position of authors, are, in practical terms, ineffective, and neglect the essential characteristics of moral rights.

<sup>10</sup> J. Ginsburg, 'Moral Rights in a Common Law System' [1990] *Ent L Rev* 121, 129.

<sup>11</sup> Cornish has suggested that the express recognition of moral rights might lay the foundation for less meagre treatment in future—particularly by penetrating judicial attitudes: W. R. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449.

<sup>12</sup> Although TRIPS requires member states to comply with Arts 1–21 Berne, it is notable that the agreement says that 'members shall not have rights or obligations under this Agreement in respect of the rights conferred under Art. 6*bis* of that Convention'.

<sup>13</sup> G. Dworkin, 'Moral Rights and the Common Law Countries' [1994] *AIPJ* 5, 34 (opposition to moral rights has at times bordered on the hysterical).

image of the author as an isolated creative genius who in creating a work imparts their personality upon the resulting work. Under this model, moral rights enable the author to maintain the ‘indestructible creational bond’ that exists between their personality and the work.<sup>14</sup> The notion of the romantic author, which became unfashionable in the second half of the twentieth century, has been criticized because it presents an unrealistic image of the process of authorship. In particular, it has been criticized for the fact that it fails to acknowledge the collaborative and intertextual nature of the creative process.<sup>15</sup>

Another criticism made about moral rights focuses on what is perceived as their foreign or alien nature.<sup>16</sup> More specially, it has been suggested that moral rights, which have their origin in continental copyright systems,<sup>17</sup> cannot readily be absorbed or transplanted into a common law system.<sup>18</sup> Any attempt to do so will not only fail, but will also upset the existing copyright regimes.

Moral rights have also been criticized on the basis that they represent an unjustified legal intervention in the working of the free market. Such arguments highlight the fact that moral rights typically secure authors’ interests at the expense of entrepreneurs, disseminators, and exploiters of copyright.<sup>19</sup> Given this, it is not surprising that while authors’ groups argue for further entrenchment of the rights (so that they are inalienable), the entrepreneurial interests lobby for further restrictions on the rights and their subjugation to voluntary market transactions.<sup>20</sup> Another criticism made of moral rights is that they prioritize private interests over the public interest. More specifically, it has been suggested that moral rights may inhibit the creation and dissemination of derivative creations, such as multimedia works and parodies.<sup>21</sup> For example, if an author were to use their moral right of integrity to prevent the publication of a parody of their work, this would conflict with the right to free expression, and thus with broader public interests.<sup>22</sup>

With these initial points in mind, we now turn to look at the moral rights that are recognized in the United Kingdom.

<sup>14</sup> A. Dietz, ‘The Artist’s Right of Integrity under Copyright Law’ (1994) 25 *IIC* 177, 182.

<sup>15</sup> P. Jaszi, ‘On the Author Effect: Contemporary Copyright and Collective Creativity’ (1992) 10 *Cardozo AELJ* 293.

<sup>16</sup> For a discussion of tension along such ‘comparative’ lines, see I. Stamatoudi, ‘Moral Rights of Authors in England: The Missing Emphasis on the Role of Creators’ (1997) 4 *IPQ* 478. For a less caricatured approach, see G. Dworkin, ‘Moral Rights and the Common Law Countries’ (1994) 5 *AIPJ* 5, 6.

<sup>17</sup> For the French and German histories, see D. Saunders, *Authorship and Copyright* (1992), chs 3 and 4. For a statement of the position in France, see P. Dulian, ‘Moral Rights in France through Recent Case Law’ (1990) 145 *RIDA* 126. For an exhaustive (if dated) account, see S. Stromholm, *Le Droit Moral de L’Auteur en droit Allemand, Française et Scandinave* (1966).

<sup>18</sup> While historically, there have been those who have wished to confine copyright to the protection of an author’s pecuniary interests, they have not in general succeeded. The Engravings Act of 1735, for example, was directed, in part, to protecting an engraver against ‘base and mean’ imitations. See *Gambart v. Ball* (1863) 14 *CB (NS)* 306, 143 *ER* 463 (submission that Engravings Act could not be relied on to prevent photography on grounds that the Act’s sole purpose was protection of reputation and quality, which was not diminished in a photograph, was rejected).

<sup>19</sup> Moral rights have been characterized as limits on the ‘right of the owner of the copyright to do what he likes with his own’: *Preston v. Raphael Tuck* [1926] *Ch* 667, 674.

<sup>20</sup> G. Dworkin, ‘Moral Rights and the Common Law Countries’ (1994) 5 *AIPJ* 5 36.

<sup>21</sup> G. Pessach, ‘The Author’s Moral Right of Integrity in Cyberspace: A Preliminary Normative Framework’ (2003) 34 *IIC* 250.

<sup>22</sup> See *Confetti Records v. Warner Music UK Ltd* [2003] *EMLR* (35) 790, [161] (declining to ‘read down’ the integrity right to give effect to Art. 10 ECHR).

## 2 RIGHT OF ATTRIBUTION (OR PATERNITY)

The right of attribution or (as the statute prefers) the right of paternity is perhaps the best-known of all of the moral rights recognized in the United Kingdom. In essence, the right of attribution provides the creators of certain types of work with the right to be identified as the author of those works.<sup>23</sup> While the right of attribution cannot be assigned, as we will see, it can be waived. The moral right of attribution lasts for the same period of time as the copyright in the relevant work.

The right to be named as author of a work carries with it a number of symbolic, economic, and cultural consequences.<sup>24</sup> The reason for this is that the name of the author performs a number of different roles. It facilitates: the management of intellectual works (through indexes, catalogues, and bibliographies);<sup>25</sup> the channelling of royalties (for example from the public lending right scheme); the interpretation of the work (insofar as it provides a psychological or biographical history of the author); the celebration, reward, and sustenance of authorial talent or genius;<sup>26</sup> and the construction of the individual as the creator of an intellectual *oeuvre*. In many cases, the right to be named as author of a work will be unnecessary because it is in the interests of all of the parties concerned in the exploitation of the work to attribute it. Where this is not the case, however, the right of attribution is potentially a very important right.

Before looking at the right of attribution in more detail, it should be noted that an author may be able to rely on a number of mechanisms other than the right of attribution to ensure that they are named as author. Publishing contracts, for example, will often contain terms dealing with attribution that may be enforced against a publisher<sup>27</sup> and possibly also against third parties who knowingly induce such breaches. In some circumstances, such a term might be implied into a contract.<sup>28</sup> The right to be named as author of a work may also be ensured by other means such as union power and industry standards.<sup>29</sup> The law of reverse passing off might also be used to prevent another person from falsely claiming that they are the author of a work.

### 2.1 SUBSISTENCE OF THE RIGHT OF ATTRIBUTION

In order for the right of attribution to arise, it is necessary to show two things: that the work in question is the type of work to which the right applies; and that the right of attribution has been asserted.<sup>30</sup> We will deal with each of these requirements in turn.

<sup>23</sup> Cf. the information protected by rules on 'rights-management information' discussed in Chapter 13. See J. Ginsburg, 'Have Moral Rights Come of (Digital) Age in the United States?' (2001) 19 *Cardozo AELJ* 9; S. Dusollier, 'Some Reflections on Copyright Management Information and Moral Rights' (2003) 25 *Colum JL & Arts* 377.

<sup>24</sup> For experimental analysis of how such attribution is 'valued', see C. Buccafusco, C. Sprigman, and Z. Burns, 'What's a Name worth?' (2013) 93 *Boston UL Rev* 1.

<sup>25</sup> See R. Chartier, 'Figures of the Author', in Sherman and Strowel, ch. 1.

<sup>26</sup> A link is frequently drawn between the right to be named and the ability to gain a reputation and make an income as an author or artist: see *Tolnay v. Criterion Film Productions* [1936] 2 *All ER* 1625.

<sup>27</sup> *Ibid.* <sup>28</sup> *Miller v. Cecil Film Ltd* [1937] 2 *All ER* 464.

<sup>29</sup> See D. Read and D. Sandelson, 'Credit Where Credit's Due' [1990] *Ent L Rev* 42.

<sup>30</sup> The requirement of assertion and the rules governing who is bound by an assertion have the effect that the attribution right occupies a grey area between property rights and rights *in personam*. In many cases, third parties will be bound by the attribution right, whereas an author who was forced to rely on contract law might not succeed.

### 2.1.1 Relevant works

The right of attribution is granted to the creators of only a limited number of works. More specifically, the right is recognized only in relation to original literary, dramatic, musical, and artistic works, and in films. In the case of literary, dramatic, musical, and artistic works, the right is granted to the author of the work. In the case of films, the right of attribution is granted to the director.<sup>31</sup>

Within these general categories, a number of specific types of work do not give rise to a right of attribution. The right of attribution does not arise in relation to works made for the purpose of reporting current events; nor does it apply to contributions to a newspaper, magazine, or periodical, or an encyclopaedia or similar work.<sup>32</sup> These exceptions, which are difficult to reconcile with the Berne Convention, reflect government concessions to the lobbying power of the newspaper and other publishing industries. The objections were informed by fears that the need to name the author of a work would interfere with the prompt delivery of news.<sup>33</sup> It was also feared that enabling an author of a news story to be named would undermine the image of the news as being objective and neutral.

The CDPA 1988 also states that the right of attribution does not apply to computer programs,<sup>34</sup> computer-generated works,<sup>35</sup> typefaces,<sup>36</sup> or works protected by Crown or similar copyright.<sup>37</sup> No satisfactory policy-based justification has been given for denying authors of computer programs or typefaces a right of attribution.

### 2.1.2 The requirement of assertion

The right of attribution does not arise until it has been asserted.<sup>38</sup> Even if it has been asserted, in an action for infringement of the attribution right, the courts take into account any delay in asserting the right when considering remedies.<sup>39</sup> The imposition of the requirement of assertion is said to be justified because Article 6*bis* merely requires members of the Union to confer on authors the right 'to claim' authorship.<sup>40</sup> However, it has been suggested that such an interpretation is unsustainable given that Article 5(2) of the Berne Convention requires that an author's 'enjoyment and exercise of these rights shall not be subject to any formality'.<sup>41</sup> Because the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS) does not require that Article 6*bis* of Berne be implemented, the merits of these arguments are unlikely to be tested before the WTO.

In general, the right can be asserted in one of two ways. First, when copyright in a work is assigned, the author or director includes a statement that asserts their right to be

<sup>31</sup> For such works created prior to 1 August 1989, see CDPA 1988, Sch. 1, para. 23(2)–(3) (the right applies: except in the case of a film made before that date, and other works the author of which died before that date or the author of which had assigned the copyright before that date).

<sup>32</sup> CDPA 1988, s. 79(6). <sup>33</sup> Copinger, 725, [11–31].

<sup>34</sup> TRIPS Art. 10 states that computer programs shall be protected as literary works under the Berne Convention. Thus while TRIPS Art. 9 does not require that members apply Art. 6*bis*, it seems (somewhat counter-intuitively) that Art. 10 requires that Art. 6*bis* be applied as regards computer programs.

<sup>35</sup> Perhaps on the ground that such works do not fall within Berne, i.e. a Union for the protection of the rights of authors: Berne Art. 1.

<sup>36</sup> CDPA 1988, s. 79(2). Typefaces are probably within the scope of Art. 2(7), which requires members to protect such works by copyright only if they do not offer protection as designs and models. Typefaces also fall under the remit of the Vienna Convention.

<sup>37</sup> CDPA 1988, s. 79(7). Perhaps justified because of Berne Art. 2(4). <sup>38</sup> CDPA 1988, s. 78(1).

<sup>39</sup> CDPA 1988, s. 78(5).

<sup>40</sup> The requirement of assertion also helps to overcome some of the problems that may arise in tracing authors: Laddie et al., [27.10].

<sup>41</sup> See J. Ginsburg, 'Moral Rights in a Common Law System' [1996] *Ent L Rev* 121, 128.

identified.<sup>42</sup> Second, the right may be asserted by an instrument in writing signed by the author or director. The form of assertion has an important impact on the extent to which third parties are bound to comply with the right.<sup>43</sup> If the first mode of assertion is chosen, it binds the assignee and anyone claiming through them, whether or not they have notice of the assertion. If the second mechanism is employed, however, the assertion binds only those who have notice of the assertion. The former is consequently the more effective mode of assertion. There seems to be no reason why an author or director should not use both methods or make a number of assertions.

Two additional modes of assertion exist in relation to artistic works.<sup>44</sup> First, the right will have been asserted if the artist is identified on the original, copy, frame, mount, or other attachment when the artist or the first owner of copyright parts with possession of the original.<sup>45</sup> Such an assertion binds anyone into whose hands the original or copy comes (including borrowers and purchasers), whether or not the identification is still present or visible.<sup>46</sup> If the work is exhibited in public thereafter, the artist should be named.<sup>47</sup> Second, the right may be asserted by the inclusion of a specific statement to that effect in a licence that permits copies of the work to be made.<sup>48</sup> This kind of assertion binds the licensee and anyone into whose hands a copy made in pursuance of the licence comes, whether or not they have notice of the assertion.<sup>49</sup>

## 2.2 INFRINGEMENT

The attribution right provides that, when the work is dealt with in certain ways, authors and directors have the right to be identified as author of the work. In order for the right of attribution to be infringed, it is necessary to show that:

- (i) the author has not been properly identified;
- (ii) the work has been dealt with in circumstances under which attribution is required; and
- (iii) none of the defences or exceptions applies.

### 2.2.1 Nature of the identification

For the attribution right to be infringed, it is necessary to show that the author has not been properly identified as an author. Merely thanking a person for ‘preparing materials’ was held not to have identified that person’s authorship.<sup>50</sup> In order to be properly identified, the name of the author must appear in or on each copy of the work in a clear and reasonably prominent manner.<sup>51</sup> Where it is not appropriate for the name of the author to appear on each copy of the work, the name must appear in a manner that is likely to bring their identity to the notice of a person acquiring a copy of the work.<sup>52</sup> So long as the name becomes apparent during its use, there does not seem to be any need for the author to be named in a way that can be ascertained prior to acquisition of the copy.<sup>53</sup> Thus an author of a book might be named on the inside of the work. Where a performance, exhibition,

<sup>42</sup> This may be difficult because the author need not be a party to such an assignment, e.g. where they are not first owner. But, in such circumstances, if there is an assertion, it does not seem to matter that the author was not party to the assignment. <sup>43</sup> CDPA 1988, s. 78.

<sup>44</sup> See 491 Hansard (HL) cols 346–56. <sup>45</sup> CDPA 1988, s. 78(3)(a).

<sup>46</sup> CDPA 1988, s. 78(4)(c). <sup>47</sup> Described as ‘ill-drafted’ by Copinger, 720, [11–22].

<sup>48</sup> CDPA 1988, s. 78(2)–(3). <sup>49</sup> CDPA 1988, s. 78(4)(d).

<sup>50</sup> *Sawkins v. Hyperion Records* [2005] 1 WLR 3281. <sup>51</sup> CDPA 1988, s. 77(7).

<sup>52</sup> CDPA 1988, s. 77(7)(a).

<sup>53</sup> Cf. Copinger, 716, [11–16] (arguing that identification needs to be outwardly apparent).

showing, broadcast, or cable transmission is involved, the author has the right to be identified in a manner likely to bring their identity to the attention of a person seeing or hearing the communication. Where the relevant work is a building, the identification should be visible to persons entering or approaching the building.<sup>54</sup>

If, in asserting the right of attribution, the author specifies that a pseudonym, initials, or some other form of identification such as a symbol be used (as the musician Prince required between 1993 and 2000), then that form of identification should be adopted.<sup>55</sup> Otherwise, any reasonable form of identification may be used. It is not clear whether the attribution right gives rise to a right of anonymity, which may be valuable in raising public curiosity about the work and in protecting the author from vilification or criticism. However, it seems unlikely from the wording of the provisions that if an author were to make it clear that they wanted the work to be published anonymously, this would be treated as the particular form of identification that had to be used.

### 2.2.2 Circumstances under which attribution is required

The right to be identified as author or director of a work arises only when the work is dealt with in certain ways. While the particular circumstances in which the right arises vary depending upon the type of work in question, in all cases the right applies whether the act is carried out in relation to the whole work or a substantial part thereof.

An author of *literary or dramatic work* has the right to be identified whenever copies of the work are published commercially, or the work is performed in public or broadcast.<sup>56</sup> This means, for example, that the author of a play has the right to be named when copies of the play are sold in bookshops or the play is performed in public. Similarly, the writer of a film script has the right to be named when videos are sold to the public or the film is broadcast on television (but not, it seems, on rental copies).<sup>57</sup> The right applies equally to adaptations of the work—so the author of a French novel has the right to be named on copies of an English translation.

Songwriters are treated slightly differently. The author of the music or lyrics of a song has the right to be named on commercial publication of copies of the song—such as the issue of songbooks, sound recordings, or films containing a recording of the song. However, the right of attribution given to the author of a song does not extend to circumstances under which the song is performed in public or broadcast.<sup>58</sup> This limitation, often dubbed the ‘disc jockey exception’, was introduced so that DJs and broadcasters would not have to name the songwriters when songs are broadcast or played at clubs. It thus allows them to continue the current practice whereby only the name of the recording artist is mentioned.<sup>59</sup>

Where a right of attribution relates to an *artistic work*, the artist has the right to be identified where the work is published commercially, is exhibited in public, or where a visual image of it is broadcast or included in a cable transmission. If an artwork is filmed, the artist should be identified when copies of the film are issued to the public or if the film is shown in public. The 1988 Act also specifies that the creator of a building, sculpture, or work of artistic craftsmanship should be named where ‘copies of a graphic work representing it, or of a photograph of it’ are issued to the public.<sup>60</sup> The author of a work of architecture has the right to be identified on the building as constructed. If a series of

<sup>54</sup> CDPA 1988, s. 77(7)(b).      <sup>55</sup> CDPA 1988, s. 77(8).      <sup>56</sup> CDPA 1988, s. 77(7)(a).

<sup>57</sup> Although the practice of renting copies of films in plain packaging is common, this does not depend upon the absence of a right of attribution in relation to rental; in such cases, the director of a film, or the author of other works included therein, will usually be identified in the film credits.

<sup>58</sup> CDPA 1988, s. 77(2), (3).

<sup>59</sup> WPPT, Art. 5, now confers moral rights on the performers of ‘performances fixed in phonograms’. See pp. 345–6.

<sup>60</sup> CDPA 1988, s. 77(4).  
© L. Bently and B. Sherman 2014

buildings are made, however, the architect needs to be identified on only the first building to be constructed.

The director of a *film* has the right to be identified whenever the film is publicly shown, broadcast, or included in a cable service. The director also has the right to be named on copies of the film, but not (it seems) where the films are rented.

### 2.2.3 Exceptions

A number of exceptions and qualifications are placed upon the scope of the right of attribution by the 1988 Act. The right of attribution is constrained by section 79(3), which provides that if the employer or copyright owner authorized reproduction, etc. of the work, then the right does not apply.<sup>61</sup> It has been suggested that this exception can be explained on the basis that, because an employer has paid for the creation of the work, it should have complete freedom to exploit it. It is also said that the employer should not be required to keep detailed records of who contributes to a collaborative work.<sup>62</sup> Insofar as the right of attribution plays a role in the establishment of an author's or artist's reputation, the link between authorship and livelihood is less important when the creator is employed.

The 1988 Act also provides that the right of attribution will not be infringed where the act in question amounts to fair dealing for the purpose of reporting current events by means of a sound recording, film, broadcast, or cable programme.<sup>63</sup> The Act provides too that the attribution right is not infringed where the work is incidentally included in an artistic work, sound recording, film, broadcast, or cable programme.<sup>64</sup> Exceptions also exist where the work is used for the purposes of examinations, parliamentary or judicial proceedings, and government inquiries.<sup>65</sup> It should be noted that while section 30A permits use of a work for 'caricature, parody or pastiche' without requiring 'sufficient acknowledgement' (on the basis that this would undermine a parody), no exception is provided to the moral right of attribution, with the effect that, in practice, parodists will take a risk of acting unlawfully if they do not make the authorship of the parodied work clear.

Further exceptions to the right of attribution exist in relation to works that lie at the interface between design law and copyright law. The defences to infringement of copyright granted by section 51 (and formerly also section 52) of the 1988 Act also apply to infringement of the attribution right. Consequently, if a person makes an article to a design document, there is no need to name the author of the design.

### 2.2.4 Waiver

Finally, it should be noted that an author can waive their right of attribution.<sup>66</sup> Waiver of the right of attribution, which is relevant for activities such as 'ghostwriting', is discussed in more detail below in the context of the integrity right.

<sup>61</sup> CDPA 1988, s. 79(3). <sup>62</sup> Laddie et al., 661, [13.22].

<sup>63</sup> CDPA 1988, s. 79(4)(a). This corresponds with CDPA 1988, s. 30(2)–(3), which requires 'sufficient acknowledgement' in cases of fair dealing for reporting current events by other means, such as in newspapers. The effect is that the fair-dealing defences parallel the moral rights provisions: fair dealings for which acknowledgement is required, but not provided, are likely to be infringements of both the copyright and the author's moral right. <sup>64</sup> CDPA 1988, s. 79(4)(b).

<sup>65</sup> CDPA 1988, s 79(4A) (as inserted by SI 2014/0000, Sch. 00, para. 4). The right of attribution applies to cases that would not infringe copyright because they amount to cases of fair dealing for purposes of criticism or review. However, because a finding of fair dealing requires 'sufficient acknowledgement' of the author, most cases of fair dealing will not infringe the moral right of attribution. See also E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006), 401, [14.44]. These provisions relate to Berne Art. 10, which is intended to protect the author's attribution right: see Gregory Committee, [42]. <sup>66</sup> CDPA 1988, s. 87(2).

### 3 RIGHT TO OBJECT TO FALSE ATTRIBUTION

The right to object to false attribution is the oldest of the United Kingdom's statutory moral rights.<sup>67</sup> Re-enacted in section 84 of the CDPA 1988, this right is effectively the flip side of the attribution right: the right of attribution provides authors with the right to be named on works that they have created, whereas the right to object to false attribution provides individuals with the right *not* to be named on works that they have *not* created.<sup>68</sup> Unlike the right of attribution, the right to object to false attribution applies whether or not the claimant is an author. The right to object to false attribution applies to persons<sup>69</sup> wrongly named as the authors of literary, dramatic, musical, or artistic works, or as the directors of films.<sup>70</sup> The right of false attribution lasts for only 20 years after the death of the person who is falsely said to be the author.

The right is infringed by a person who issues copies of a work to the public, or exhibits in public an artistic work, on which there is a false attribution (rather than by the person who makes the false attribution). The right can also be infringed by a person who performs, broadcasts, or shows the work and who knows that the attribution is false. Section 84(5) also provides for infringement where certain commercial acts are done with the knowledge that the attribution is false.<sup>71</sup>

Whether a work has been attributed to the wrong person depends on 'the single meaning which the . . . work conveys to the notional reasonable reader'.<sup>72</sup> There is no need for the complainant to prove that the attribution actually caused them any damage.<sup>73</sup> Examples of situations in which the right has been violated include the attribution to a member of the public of a newspaper article written by a journalist, but based on conversations between the two,<sup>74</sup> and a newspaper parody of a politician's diaries (see Fig. 10.1).<sup>75</sup>

In another decision, an author's work was held to be falsely attributed when it was attributed to the author after having been substantially added to by another person without the author's consent.<sup>76</sup> On this basis, it seems that a replica of a painting that included

<sup>67</sup> CDPA 1988, s. 84(6), re-enacts CA 1956, s. 43, which, in turn, was an expansion to literary, dramatic, and musical works of the Fine Art Copyright Act 1862, s. 7(4); Gregory Committee, [225]; CDPA 1988, Sch. 1, para. 22.

<sup>68</sup> For discussion of whether the Berne Convention implicitly requires recognition of such a right, see Ricketson and Ginsburg, 601, [10.19] (suggesting that Berne does not cover the case in which an author is seeking to deny rather than establish their authorship).

<sup>69</sup> *Clark v. Associated Newspapers* [1998] 1 All ER 959, 964. According to Lightman J, at 965, the section confers a personal or civic right.

<sup>70</sup> The provision does not contain the usual exceptions for computer programs or computer-generated works, so that while the author of a program has no right to be named, a person who is not the author of a program has the right not to be named as its author.

<sup>71</sup> CDPA 1988, s. 84(5), (6) (possessing or dealing with a falsely attributed copy of the work in the course of business or, in the case of an artistic work, dealing with it in business as the unaltered work of the artist when in fact it was altered after leaving their possession, knowing or having reason to believe that there is false attribution).

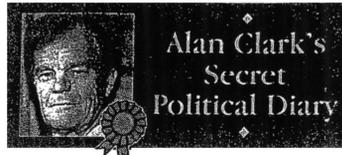

<sup>72</sup> *Clark v. Associated Newspapers* [1998] 1 All ER 959, 968.

<sup>73</sup> *Ibid.*, 965.

<sup>74</sup> *Moore v. News of the World* [1972] 1 QB 441 (finding false attribution in a newspaper article entitled 'How my love for the Saint turned sour by Dorothy Squires', written in the first person by journalist on basis of conversations with Squires). It is not altogether clear whether the work was falsely attributed because Squires had not written the words or because she had not spoken them. In light of the changes in the 1988 Act, which confer copyright on spoken words, it seems that a verbatim account of a speech by a journalist should not be treated as having been falsely attributed to the speaker.

<sup>75</sup> *Clark v. Associated Newspapers* [1998] 1 All ER 959, [1998] RPC 261.

<sup>76</sup> *Noah v. Shuba* [1991] FSR 14 (finding no false attribution of 17 words added to passage extracted from the plaintiff's work, since these words did not constitute a work, but that there was false attribution of the

On the historic day Tony Blair made his Commons debut as Prime Minister, Alan Clark found himself in the ignominious position of sitting on the Opposition benches. PETER BRADSHAW imagines how the great diarist would record the event

## It's wonderful to be back in the old place

Tuesday 6th May

*Albany*  
Well, the Tory political landscape is a smoking ruin.

But as the dawn comes up, and Blair's Messerschmitts drone away over the horizon, I am delighted to report that the smart shops and elegant terraces of Kensington and Chelsea are unscathed. The only vote I seem to have lost is that of Michael Winner, the film director, who cut up rather rough over my comments about his house in this Diary.

We are in a mess, though, and every revolting little BBC functionary and Guardian scribbler with a colleague or homosexual "partner" on the New Labour benches is gloating.

Little Major has mumbled something about the show being over and it being time to leave the stage. This apparently was a phrase he learned at his father's knee as the old boy, wearing smeared make-up and floppy-toed clown shoes, hid in his dressing room with the lights off while the angry audience demanded their money back.

We have now started a spastic "leadership contest", which has about as much political significance as the election of a refreshments secretary in a suburban golf club. Heseltine is *hors de combat*, and while he was delirious with pain-killers on his hospital bed, his lady wife Anne typed out his withdrawal statement, then gripped his writing hand and wrote out his signature underneath. I'm not sure how he took the news of his standing down.

Clarke is standing for the collaboration with Kohl faction, Michael Howard is running on his iron-fist-in-the-iron-glove ticket, apparently with fresh-faced, apple-cheeked young Hague as his supporter, an arrangement toasted over champagne earlier this evening.

No one seems to be begging me to stand.

Wednesday 7th May

*Albany*  
*Morning*  
Hague has dumped.

His clique of admirers encouraged him to think of himself as the Young Pretender, and he is believing this publicity whole-heartedly. So the engagement is broken off.

Now Dorrell is courting the bore vote and Redwood's candidacy is gravely damaged by the support of The Times.

A complete shower. I am going to the Commons.

House of Commons

*Evening*  
*Extraordinary.*

In the Commons I saw what appeared to be a crocodile of schoolchildren in the Central Lobby, moving unimpeded into the Chamber. When I complained, someone explained that this was the New Labour intake, all polytechnic lecturers, media folk and trades union press officers, with their electronic pagers dutifully turned off, and the person at their head banking instructions was little Mandelson — although what he knows about Parliament could be written on the back of a stump.

It is *marvellous* to be back in the House; I simply can't believe it has been five years, although it was *very* strange to see the sides reversed. I couldn't get used to the through-the-looking-glass effect — I felt dizzy and disorientated and had a slight nose bleed.

We were in opposition when I first arrived in '74, when Ted Heath was Leader and it was a disagreeable shock to see that he is *still here*, Sir Edward Heath, Father of the House, still pompous and slow-witted — visibly bridling when Gwyneth Dunwoody, in her speech proposing dear Betty Boothroyd as Speaker, called him "Mr" Heath.

Later I was strolling towards the Strangers Bar, whistling a lively air, when I came across a *very* pretty girl in tears. "What's the matter?" I asked. The dear little thing gulped and pouted and said: "It's my first day, I'm lost..." I twinkled, like Alec d'Urberville. "Never mind," I said, proffering a hanky. "It's easy for a secretary to get lost on her first day." She turned on me, her beautiful eyes flashing angrily. "I am the New Labour Member for Watford!" she shouted, and ran off down the corridor.

But she still has my handkerchief — an excuse to get back in touch!

How have I existed out of this place?

the signature of the original artist could be said to be falsely attributed, since the replica painting would not be solely made by the original artist.<sup>77</sup> In the case of artistic works, the right to object to false attribution is extended by a special provision to circumstances in which the work has been altered, even if that alteration amounts only to deletion of part of the work. This would be the case, for example, if a detail were to be cut from a broader canvas and sold as an unaltered original.<sup>78</sup> The right would also be infringed where a black-and-white drawing was colourized.<sup>79</sup>

The right to object to false attribution of authorship is supplemented by various non-statutory causes of action, such as the action for passing off or defamation. Under the former, a person can complain where a work is misrepresented as being by the claimant, when it is in fact the work of the defendant.<sup>80</sup> In *Ridge v. English Illustrated Magazine*,<sup>81</sup> the defendant published a story that they attributed to the plaintiff, a well-known author, which in fact had been written by a grocer's assistant from Bournemouth. The court instructed the jury to find the publication to be defamatory if 'anyone reading the story would think that plaintiff was a mere commonplace scribbler'.<sup>82</sup> The jury awarded £150 in damages.

#### 4 RIGHT OF INTEGRITY

The right of integrity is one of the most important of the innovations in the CDPA 1988. The moral right of integrity lasts for the same time as the copyright in the relevant work. The right of integrity is the right to object to derogatory treatment of a work, or any part of it. The basis for this authorial prerogative is that the artist, through the act of creation, has embodied some element of their personality in the work, which ought to be protected from distortion or mutilation.<sup>83</sup> In some cases, this carries with it the corollary that the artist feels some degree of responsibility for the work.<sup>84</sup> The desire to protect the reputation of authors was also a factor used to support the right.

extract as a whole as attributed solely to the plaintiff). In effect, the plaintiff succeeded in protecting his right to endorse the defendant's services, and thus this indicates a potential usefulness in the context of 'personality merchandising'.

<sup>77</sup> *Preston v. Raphael Tuck* [1926] Ch 667 (replica with no signature would not be falsely attributed).

<sup>78</sup> CDPA 1988, s. 84(6) (introduced in response to a complaint of this sort by the English painter Landseer). For discussion of the extent of such alterations, see *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (alteration must be material in the sense that it might affect the credit and reputation of the artist).

<sup>79</sup> *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (a case in which colour was taken to be a very important element).

<sup>80</sup> See Chapters 32–34. Passing off requires a claimant to demonstrate not merely a misrepresentation, but also the existence of goodwill and likelihood of damage. It is broader than s. 84 in that s. 84 relies on a single meaning, whereas a misrepresentation can be established in passing off in circumstances under which a substantial or large number of consumers are likely to be misled. See *Clark v. Associated Newspaper* [1998] 1 All ER 959.

<sup>81</sup> [1911–16] MacG CC 91 (KB, with special jury).  
<sup>82</sup> *Ibid.*, 92. See also *Marengo v. Daily Sketch* (1948) 65 RPC 242 (a cartoonist known as 'KIM' succeeded in a passing off action against another cartoonist using the name 'KEM'); *Samuelson v. Producers Distributing* [1932] 1 Ch 201 (passing off by giving film similar title to play).

<sup>83</sup> A. Dietz, 'The Artist's Right of Integrity under Copyright Law' (1994) 25 IIC 177, 181. See also B. Ong, 'Why Moral Rights Matter: Recognising the Intrinsic Value of Integrity Rights' (2003) 26 *Colum JL & Arts* 297.

<sup>84</sup> This is the case, e.g., with Stanley Kubrick's reaction to copycat violence (and the resulting media coverage) that followed the release of the film that he directed, *A Clockwork Orange* (1971).

#### 4.1 SUBSISTENCE OF THE RIGHT

As with the other moral rights recognized under the 1988 Act, the right of integrity is given to the author of a literary, dramatic, musical, or artistic work, and the director of a film.<sup>85</sup> It is not given to computer programs or to computer-generated works.<sup>86</sup> With respect to computer programs, the exclusion is justified on the basis that it might be necessary to alter, debug, improve, or modify a program to render it suitable to achieve its purpose.<sup>87</sup> The integrity right does not apply to a work made for the purpose of reporting current events,<sup>88</sup> to publications in newspapers, or to collective works of reference such as encyclopaedias.<sup>89</sup> In the latter case, the relevant publishers were keen to retain their power to edit or otherwise alter any submissions without having to consult contributing authors.<sup>90</sup>

#### 4.2 INFRINGEMENT OF THE RIGHT

In order for the right of integrity to be infringed, an author or director must be able to show that:

- (i) there has been a ‘derogatory treatment’ of the work;
- (ii) the work has been dealt with in circumstances under which the author is protected from derogatory treatment;
- (iii) none of the exceptions apply; and
- (iv) the right has not been waived or the action consented to by the author.

##### 4.2.1 Derogatory treatment

In order for an author or director to show that the right of integrity has been breached, it is necessary to show that there has been a ‘derogatory treatment’ of their work. Before looking at the meaning of ‘derogatory’, it is necessary to explore what the Act means when it refers to a ‘treatment’ of the work.

(i) *Treatment* ‘Treatment’ of a work means any ‘addition to, deletion from, alteration to or adaptation of the work’.<sup>91</sup> The concept of the work that is employed here is that of an autonomous artefact, which is born out of, tied to, or related to neither other works, nor its environment. Moreover, the work has its own internal integrity or logic (a beginning, middle, and end; a foreground, middleground, and background; line, shade, and colour).<sup>92</sup> For a treatment of the work to take place, it seems that the defendant must interfere

<sup>85</sup> CDPA 1988, s. 80(1). For such works created prior to 1 August 1989, see Sch. 1, para. 23(2)–(3) (the right applies except in the case of a film made before that date, and other works the author of which died before that date or the author of which had assigned the copyright before that date). Colourization of pre-1989 black-and-white films would not infringe the moral right of integrity: see Laddie et al., [27.21]. However, insofar as the film consists of photographs of which the director is the author, colourization might incur liability on the basis of ‘false attribution’ under CDPA 1988, s. 84(6): cf. *Carlton Illustrators v. Coleman* [1911] 1 KB 77 (on Fine Art Copyright Act 1862, s. 7). This last caveat would not apply to films made after 1956.

<sup>86</sup> CDPA 1988, s. 81(2).

<sup>87</sup> Cf. Copinger, 734, [11–55] (observing that inept alterations to a computer program that are still likely to be regarded as the work of the original author might be highly damaging to the author’s reputation). The right of integrity for the author of a computer program is limited even in France: A. Dietz, ‘The Artist’s Right of Integrity under Copyright Law’ (1994) 25 *IIC* 177, 184.

<sup>88</sup> CDPA 1988, s. 81(3).

<sup>89</sup> CDPA 1988, s. 81(4). <sup>90</sup> See Copinger, 1645–6, [26–133].

<sup>91</sup> CDPA 1988, s. 80(2)(a). <sup>92</sup> *Pasterfield v. Denham* [1999] *FSR* 168, 180.

with the internal structure of the work.<sup>93</sup> This idea of treatment, it seems, would cover a situation such as that in *Noah v. Shuba*,<sup>94</sup> in which 17 words were added to the claimant author's medical guide. It would also cover situations in which a portion of a painting was cut from its original canvas and exhibited, a song was chopped up and inserted into a megamix,<sup>95</sup> a drawing was reproduced in reduced size or recoloured,<sup>96</sup> or a black-and-white film was 'colourized'.<sup>97</sup> In these cases, the internal composition or structure of the work is changed.

The definition of treatment that is used in the United Kingdom is narrower than that which is employed in Article 6*bis* of the Berne Convention, which requires that the author be able to object to 'any . . . derogatory action' in relation to a work. The broader definition used in Berne seems to acknowledge that a treatment of a work can take place even though the composition or structure of the work is not altered. Importantly, it suggests that a treatment of a work can take place where the meaning and significance of the work is affected. It has been suggested, for example, that the mere act of placing a work in a new context, such as the hanging of a religiously inspired artistic work alongside a piece of erotic art, probably would not amount to a treatment of a work under UK law. It would, however, amount to a treatment of the work under the Berne Convention.<sup>98</sup>

In the absence of much case law, we can only speculate as to which of the following scenarios would be considered to be a 'treatment' under UK law: placing two written works side by side in a bound volume? Changing the title of a work? Placing a book in an offensive or vulgar dust jacket?<sup>99</sup> Placing a caption on the frame of a painting? Placing a caption beside a painting?<sup>100</sup> Placing a ribbon around the neck of a sculpture of a goose? Placing a sculpture designed for a particular location in a different location? Performing a song's lyrics to a different tune or adding different words to a song's music?<sup>101</sup> Performing a tragedy in such a manner that it seems like a farce?<sup>102</sup> Adding recordings of the claimant's

<sup>93</sup> No indication is given as to the degree of significance to be attached to changing the 'meaning' rather than the structure, sequence, and organization of the work: Laddie et al., [27.17] (actual physical treatment not as important as message).

<sup>94</sup> [1991] FSR 14.

<sup>95</sup> *Morrison v. Lightbond* [1993] EMLR 144.

<sup>96</sup> In *Tidy v. Trustees of the Natural History Museum* (1998) 39 IPR 501, 503, neither party disputed that a reduction was an alteration.

<sup>97</sup> *Huston v. Turner Entertainment* (1991) 23 IIC 702 (French *Cour de Cassation*) (injunction granted to prevent television broadcast of colourized version of film *The Asphalt Jungle*). See B. Edelman, 'Applicable Legislation Regarding the Exploitation of Colourized Films' (1992) 23 IIC 629; J. Ginsburg, 'Colors in Conflicts' (1988) 36 *J Copyright Soc'y USA* 810.

<sup>98</sup> See Copinger, 732, [11–48]; G. Davies and K. Garnett, *Moral Rights* (2010), [8.022]; E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006), 406, [14.63] (referring to the 'treatment' concept as 'unexpectedly narrow' in that it does not cover 'non-transformational uses of the work, such as its use in a particular context'). Thus playing electro-industrial music to inmates of a prison in order to 'torture them' would not breach the integrity right: a scenario suggested by S. Michaels, 'For Torture Services: Band Bill US for Use of Music at Guantanamo', *The Guardian* (8 February 2014).

<sup>99</sup> *Mosely v. Staley Paul & Co.* [1917–23] *MacG CC* 341 (such action was held to be defamatory).

<sup>100</sup> *Pasterfield v. Denham* [1999] FSR 168, 180.

<sup>101</sup> In *Confetti Records v. Warner Music UK Ltd* [2003] EMLR (35) 790, the defendants had 'rapped' over the claimant's 'track' (which comprised an insistent instrumental beat accompanied by the vocal repetition of the word 'burning'). The defendant accepted that this was a treatment, but the judgment of Lewison J leaves unstated what was 'treated': the musical work by the addition of the rap, or the literary work comprising the repetition of a single word? A more thorough analysis would have been helpful.

<sup>102</sup> Ricketson and Ginsburg, 603, [10.22].

music to a film of which they did not approve?<sup>103</sup> Interrupting a film for advertising breaks?<sup>104</sup>

In these cases, the internal composition or structure of the work is changed. In *Harrison v. Harrison*,<sup>105</sup> HH Judge Fysh observed:

‘Treatment’ of a work is . . . a broad, general concept; *de minimis* acts apart, it implies a spectrum of possible acts carried out on a work, from the addition of say, a single word to a poem to the destruction of the entire work. Where does one draw the line otherwise?<sup>106</sup>

The types of activity that will be considered to be a ‘treatment’ are further restricted by the fact that treatment is defined to exclude translations of literary and dramatic works, and arrangements or transcriptions of musical works involving no more than a change of key or register.<sup>107</sup> It is unclear why moral rights are deemed to be inappropriate here. One rather implausible explanation is that such acts never affect the internal structural or composition of a work.<sup>108</sup> Another possible explanation is that these activities would amount to adaptations of the work and, as such, require the consent of the copyright owner.<sup>109</sup> However, it is clear that an inaccurate translation may have a negative impact upon an author of a literary work.<sup>110</sup> It may be that, in order to minimize the incompatibility between UK law and Article 6*bis*, the courts might treat an inaccurate or poor-quality translation as if it were not a ‘translation’ at all, thus falling outside the scope of the exclusion.<sup>111</sup>

(ii) ‘Derogatory’ Once it has been shown that there has been a treatment of the work, it is then necessary to show that the treatment was ‘derogatory’. Section 80(2)(b) of the 1988 Act states that a treatment is derogatory if it amounts to a ‘distortion’ or ‘mutilation’ of the work, or if it is otherwise prejudicial to the honour or reputation of the author.<sup>112</sup>

As yet there is little indication of what the 1988 Act means when it talks about the ‘distortion’ or ‘mutilation’ of a work.<sup>113</sup> In *Tidy v. Natural History Museum*, the submission that the treatment was a ‘distortion’ was treated as an alternative to the submission that it was ‘otherwise prejudicial’.<sup>114</sup> The same approach was taken in *Delves-Broughton v. House of Harlot*,<sup>115</sup> in which the (then) Patents County Court found cropping of a photo to be a distortion and thus an infringement of the photographer’s moral right, even though it was not prejudicial to the honour or reputation of the author (although it is worth noting that neither party had legal representation in the latter case, so it must be regarded as of limited authority). The more prevalent view however, is that, in order for a work to be

<sup>103</sup> *Shostakovich v. Twentieth-Century Fox Film Corp.* 80 NYS (2d) 575 (Supreme Court, 1948) (failed). Apparently, the claim was successful in France: *Société le Chant de Monde v. 20th Century Fox* (Cour d’appel, Paris, 13 January 1953) DA 1954 16 80, cited in R. Durie, ‘Moral Rights and the English Business Community’ [1991] *Ent L Rev* 40, 42.

<sup>109</sup> See P. Goldstein, ‘Adaptation Rights and Moral Rights in the UK, the US and the Federal Republic of Germany’ (1983) 14 *IIC* 43.

<sup>110</sup> See, e.g., the French case of *Leonide Zorine v. Le Lucernaire* [1987] *ECC* 54.

<sup>111</sup> There is authority that suggests that a ‘translation’ must be accurate: *Wood v. Chart* (1870) *LR* 10 *Eq* 193, 205; *Lauri v. Renad* [1892] 3 *Ch* 402. <sup>112</sup> CDA 1988, s. 80(1), (2).

<sup>113</sup> In *Tidy v. Natural History Museum* (1998) 39 *IPR* 501, 503, it was accepted that a reproduction in reduced size is not a mutilation. <sup>114</sup> *Ibid.*, 504.

<sup>115</sup> [2012] UKPC 29, [24] (Douglas Campbell QC).

distorted or mutilated, the action must be prejudicial to the honour or reputation of the author.<sup>116</sup>

The question of what the phrase ‘prejudicial to honour and reputation’ means was considered in the Canadian case *Snow v. The Eaton Centre*.<sup>117</sup> Michael Snow, a sculptor of international repute, created a work entitled *Flight-Stop*, which he sold to a shopping complex in Toronto called the Eaton Centre. The work comprised 60 geese flying in formation. The Eaton Centre tied ribbons around the necks of the geese as a Christmas decoration. Snow argued that this was prejudicial to his honour and reputation (the Canadian Copyright Act being in similar terms to the British 1988 Act). Snow was adamant that his naturalistic composition was made to look ridiculous by the addition of the red ribbons, which he likened to the addition of earrings to the Venus de Milo. Snow’s views were shared by a number of well-respected artists and experts. Although the Eaton Centre produced another artist to deny the claim, the Ontario High Court ruled for Snow and ordered that the ribbons be removed. In so doing, the Court indicated that, so long as it was not irrational, the author’s word on the matter would be sufficient. More specifically, O’Brien J said that the words ‘prejudicial to honour and reputation’ involved a certain subjective element or judgment on the part of the author, so long as it was reasonably arrived at.

In ascertaining what is meant by the phrase ‘prejudicial to the honour or reputation of the author’, as used in the 1988 Act, British courts have shown little inclination to follow the emphasis in the *Snow* case. In *Tidy v. Trustees of the Natural History Museum*,<sup>118</sup> the cartoonist Bill Tidy gave the gallery of the Natural History Museum the right to exhibit a series of black-and-white cartoons of dinosaurs that he had drawn. Tidy claimed that his right to integrity in the drawings had been violated when, in putting the cartoons in a book, the gallery reduced the size of the cartoons from 420 mm × 297 mm to 67 mm × 42 mm and added coloured backgrounds to the black-and-white originals. Tidy complained that the reduced cartoons had less visual impact, that the captions were unreadable, and that the process led to the inference that he had not bothered to redraw the cartoons so as to ensure that they were suitable for publication in a book. In the High Court, Rattee J refused Tidy’s application for summary judgment for breach of his right of integrity, explaining that he was far from satisfied that the reductions amounted to a distortion of the drawings. The judge also suggested that, in order to find that the gallery’s treatment of the cartoons was prejudicial to Tidy’s honour, it was necessary to have

<sup>116</sup> *Confetti Records v. Warner Music UK Ltd* [2003] EMLR (35) 790, [149]–[150]; *Pasterfield v. Denham* [1999] FSR 168, 182; E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006), 408–9; Laddie et al., 664, [13.27]; Copinger, [11–38], 644; Ricketson, [8.107] (otherwise concepts of distortion and mutilation could lead to problems because they appear to be ‘highly subjective’). See also *Snow v. The Eaton Centre* (1982) 70 CPR (2d) 105 (Canada) (‘I am satisfied that the ribbons do distort or modify the plaintiff’s work and the plaintiff’s concern that this will be prejudicial to his honour or reputation is reasonable under the circumstances’). If this is right, then it is possible that highly distorting treatments, such as parodies, which might not be prejudicial to the author’s reputation, do not infringe the integrity right. An alternative view is that distortions and mutilations are to be treated as prejudicial *per se* and that prejudice need be proved only for lesser cases of ‘treatment’. The two views largely depend on differing interpretations of the words ‘or otherwise’, but also reflect disagreement as to interpretation of the Berne Convention itself: see Ricketson and Ginsburg, 609–10, [10.32], but note Adeney’s categorical view that the qualification that the act must have a prejudicial effect on the honour or reputation of the author applies to distortions and mutilations: E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006), [6.52], [14.72].

<sup>117</sup> (1982) 70 CPR (2d) 105 (Canada).

<sup>118</sup> [1996] EIPR D–86; (1998) 39 IPR 501 (reductions of cartoons). See also Laddie et al., [27.18] (court unlikely to treat author’s own reaction as determinative).

evidence as to how the public perceived the defendant's acts. Referring to *Snow*, Rattee J said that he would have to be satisfied that the view of the artist was one that is reasonably held, which 'inevitably involves the application of an objective test of reasonableness'.<sup>119</sup> Without further evidence, Rattee J said that he could not see how he could draw such a conclusion.

A county court judge has recently gone further and argued that, for a treatment to be derogatory:

... what the plaintiff must establish is that the treatment accorded to his work is either a distortion or a mutilation that prejudices his honour or reputation as an artist. It is not sufficient that the author is himself aggrieved by what has occurred.<sup>120</sup>

Applying that test, the judge took the view that certain colour variations between the original and the artwork in question (the design of a brochure), the omission of trivial matter, and the reduction in size were not derogatory. The judge added that while the changes to peripheral matters were of the kind that 'could well be the subject of a Spot the Difference competition in a child's comic', it would be wrong to elevate such differences to a 'derogatory treatment'.<sup>121</sup>

In a third UK case, *Confetti Records v. Warner Music UK Ltd*,<sup>122</sup> Lewison J held that the claimant, Andrew Alcee (a member of the 'Ant'ill Mob'), had not made out a sufficient case for a finding of derogatory treatment where his garage track 'Burnin', which comprised an insistent instrumental beat accompanied by the vocal repetition of the word 'burning', had been superimposed with a rap by another garage act, 'The Heartless Crew' (the words of which were difficult to make out). The defendant accepted that this was a treatment, so the crucial issue was whether it was derogatory. The claimant had argued that it was, first, because the rap contained references to violence and drugs, by using phrases such as 'mish mish man', 'shizzle [or sizzle] my nizzle', and 'string dem up one by one', which was, according to the claimant, an 'invitation to lynching'. Alternatively, it was argued that the rap affected the 'coherence of the original work'. Lewison J rejected the claimant's argument. First, he stated that the fact that the words were difficult to decipher militated against them being derogatory. Second, he noted that the meaning of the words, which he described as being 'in a foreign language', could be determined only by way of expert evidence and no such evidence had been offered. Third, Lewison J took the view that 'string dem up' was not necessarily an 'invitation to lynching' and could be heard as merely advocating the return of capital punishment. Most importantly, however, he rejected the claimant's argument because the claimant had failed to provide evidence of his honour or reputation. In the absence of such evidence, even by the complainant himself, the judge was not prepared to infer prejudice. Lewison J was confirmed in this view by the fact that the Ant'ill Mob itself utilized the imagery of gangsters. As regards the claim based upon the effect of the rap on the coherence of the song, Lewison J seems to have been strongly influenced by indications that the song was written as a background for rapping and that the Ant'ill Mob's own mixes added rapping over the whole track.

Despite these decisions, it is still unclear how derogatory treatment will be construed in the United Kingdom. In particular, there is still some uncertainty as to whether the question of whether a treatment is prejudicial to the honour or reputation of an author is to be judged from an objective or subjective standpoint. Under UK law, one would expect that the notion of reputation used in this context would be similar to that which is

<sup>119</sup> *Tidy v. Trustees of the Natural History Museum* [1996] EIPRD-86, (1998) 39 IPR 501.

<sup>120</sup> *Pasterfield v. Denham* [1999] FSR 168, 182.

<sup>121</sup> *Ibid.*, 182.

<sup>122</sup> [2003] EMLR (35) 790.

employed in defamation law.<sup>123</sup> If this were the case, one would expect that the question of whether or not conduct was prejudicial to an author's reputation should be judged from the viewpoint of right-thinking members of society (that is, objectively).

While 'reputation' is a familiar concept in British law, the same cannot be said for 'honour'. If 'honour' is taken to refer to what a person thinks of themselves (and is thus similar to the Roman law concept of *dignitas*), it would seem that prejudice to honour might well involve a strong subjective element.<sup>124</sup> This distinction might be important where a defendant parodies the claimant's work in such a way that a member of the public would not believe the parody to be the claimant's work, so would be unlikely to find that the claimant's reputation was harmed.<sup>125</sup> Nonetheless, the claimant might feel offended.

#### 4.2.2 Circumstances under which the author is protected from derogatory treatment

The right of an author or a director to object to, or prevent, the derogatory treatment of their work arises only when the work or copies thereof are dealt with in certain ways (section 80). While these acts vary according to the category of work involved, basically they arise where someone communicates, disseminates, or otherwise renders the derogatory treatment available *to the public*. As a result of this requirement, the right to integrity is not a right to prevent destruction of the work itself.<sup>126</sup>

In relation to *literary, dramatic, and musical works*, the right to object to derogatory treatment may be invoked when a derogatory treatment of the work is published commercially, performed in public, or communicated to the public. It is also triggered when copies of a film or sound recording embodying the derogatory treatment are issued to the public.<sup>127</sup> In turn, with an *artistic work*, the right may be invoked against a person who publishes commercially or exhibits in public a derogatory treatment of the work. The right is also triggered where someone communicates to or shows in public a film including a visual image of a derogatory treatment of the work.<sup>128</sup> Further acts are specified in relation to works of architecture, sculpture, and works of artistic craftsmanship.<sup>129</sup> In relation to *films*, the right of integrity is infringed whenever a derogatory treatment of the film is shown in or communicated to the public, or when copies of a derogatory treatment of the film are issued to the public.<sup>130</sup>

In addition, it should be observed that certain acts may amount to a secondary infringement of the right of integrity.<sup>131</sup> This will occur where, in the course of business, a person possesses, sells or lets for hire, offers or exposes for sale or hire, exhibits in public, or distributes an article that they know or have reason to know is an infringing article. In this context, an 'infringing article' means a work or a copy of a work that has been subjected to a derogatory treatment and has been, or is likely to be, the subject of any of the infringing acts in section 80. Secondary infringement takes place only if the dealing prejudicially affects the honour or reputation of the author. If the treatment itself is derogatory, it seems

<sup>123</sup> Ricketson, [8.110]; Ricketson and Ginsburg, 592–3, [10.09], 594–6, [10.11], 606, [10.27] (explaining that these terms were preferred to the wider concept of 'moral or spiritual interest of the author').

<sup>124</sup> Laddie et al., 666, [13.30] (honour refers to integrity as a human being); Ricketson and Ginsburg, 606, [10.27].

<sup>125</sup> Copinger, [11–41], 646.

<sup>126</sup> Such a right has been accepted in the US Visual Artists Rights Act of 1990. At the Brussels Revision of Berne, one of the *voeux* adopted said that countries introduce such a prohibition: see Ricketson and Ginsburg, 605, [10.26].

<sup>127</sup> CDPA 1988, s. 80(3)(a), (b). These are identical to the occasions on which an author has a right to be identified under CDPA 1988, s. 77(2); no differentiation is made for songs as in CDPA 1988, s. 77(3).

<sup>128</sup> CDPA 1988, s. 80(4)(a).

<sup>129</sup> CDPA 1988, s. 80(4)(c).

<sup>130</sup> CDPA 1988, s. 80(6).

<sup>131</sup> CDPA 1988, s. 83.

likely that the dissemination of the treatment will prejudice the honour or reputation of the author.

#### 4.2.3 Exceptions and defences

A number of exceptions are placed upon the right of integrity by the 1988 Act. It is notable that there are no defences for fair dealing or for the design–copyright interface. Some commentators have therefore suggested that the defences are ‘unduly narrow’.<sup>132</sup> In particular, objection is made that there is no transformative use exception, for example relating to parody.<sup>133</sup> Many other legal systems subject the moral right of integrity to a ‘reasonableness’ defence.<sup>134</sup>

In the case of works created by employees,<sup>135</sup> the right of integrity does not apply to anything done by or with the authority of the copyright owner except in two particular situations.<sup>136</sup> The general rule, then, is that an employer can deal publicly with derogatory treatments of an employee’s work. In these circumstances, the authorial prerogative gives way to the demands of the employer for control.<sup>137</sup> This means, for example, that artists who work for a design firm will not be able to use their right of integrity where their artworks are modified either by their employer or by other employees. Similarly, an employee who drafts a report will not be able to restrain publication of a version that is rewritten on behalf of the employer.

The exceptions to this general position relate to circumstances in which the author/employee has been, or is to be, identified. Although the law privileges the needs of the employer and the copyright holder, those needs do not extend as far as continuing to name the employee where the work has been modified. Consequently:

The right . . . does not apply to anything done in relation to such a work by or with the authority of the copyright owner unless the author or director—

- (a) is identified at the time of the relevant act, or
- (b) has previously been identified in or on published copies of the work . . .<sup>138</sup>

However, even in these cases, the right of integrity is not infringed if there is ‘sufficient disclaimer’—that is, if there is a clear and reasonably prominent indication that the work has been subjected to treatment to which the author or director has not consented.<sup>139</sup>

There are also special defences to infringement of the moral right of integrity. In particular, the right is not infringed by anything done for the purpose of avoiding the commission of an offence (such as under the Obscene Publications Act 1959 or the Public Order Act 1986), complying with a duty imposed by or under an enactment, or (in the

<sup>132</sup> Laddie et al., 674, [13.42].

<sup>133</sup> Many parodies might be said not to prejudice the honour or reputation of the author, because it would be understood that the parodic variation had been created by a third party. Prejudice caused to an author from the critical quality of the parody is, strictly speaking, not relevant to infringement of the right, which protects only against prejudice that results from the treatment being thought to be a work of the author. The proposed new parody exception in CDPA 1988, s. 30A, if adopted, will be applicable only to economic rights. However, resort could be made to CDPA 1988, s. 171(3), or more directly to freedom of expression norms (under Art. 10 ECHR or Art. 11 of the Charter).

<sup>134</sup> Australia; Israel Copyright Act 2007, s. 50. Under US law, ‘fair use’ operates as a defence to an action for infringement of the artists’ moral rights recognized under the US Visual Artists Rights Act.

<sup>135</sup> CDPA 1988, s. 82. The same rules apply to works in which Crown or parliamentary copyright subsist and works in which copyright originally vested in an international organization under CDPA 1988, s. 168.

<sup>136</sup> The provision refers to the circumstance under which works vested in the director’s employer by virtue of CDPA 1988, s. 9(2)(a). The Rel. Rights Regs amended the provisions on film authorship and ownership without altering the reference in CDPA 1988, s. 82(1)(a).

<sup>137</sup> Dworkin, (1994) 5 *AIPJ* 5, 27.

<sup>138</sup> CDPA 1988, s. 82(2). <sup>139</sup> CDPA 1988, s. 178.

case of the BBC), ‘avoiding the inclusion in a programme broadcast by them of anything which offends against good taste or decency or which is likely to encourage or incite crime or to lead to disorder or to be offensive to public feeling’.<sup>140</sup> In the case of a work of architecture, the right is limited. Where an architect is identified on a building that is subject to derogatory treatment, the architect is given the right to have their identification as architect removed from the building.<sup>141</sup>

#### 4.2.4 Waiver

Although the moral right of integrity, like the other moral rights, cannot be assigned, section 87 of the 1988 Act ensures that they can be waived by way of agreement in writing. Such a waiver can be specific or general, and relate to existing or future works. It has been said that most ‘objective observers would acknowledge that such wide waiver provisions, both in theory and in practice, erode significantly, indeed drive a coach and horses through the moral rights provisions’.<sup>142</sup> This is because the industries that exploit copyright works tend to oblige authors and artists to enter standard-form contracts that require them to waive the integrity rights. Even the requirement that waiver be in writing, which provides authors with some residual protection, is compromised by section 87(3), which states that the general law of contract and estoppel applies to informal waiver.

### 4.3 ALTERNATIVE AND RELATED FORMS OF RELIEF

If an argument based upon the moral right of integrity fails (or is dubious), an author may fall back on protection under common law or contract.<sup>143</sup> If a work is presented as being that of the author, but has been substantially altered, that representation could be defamatory. Thus, in *Humphries v. Thompson*,<sup>144</sup> a newspaper that serialized a story, but changed the names of the characters and omitted and added other text, was found by the jury to have defamed the author by damaging her literary reputation. Similarly, in *Archbold v. Sweet*,<sup>145</sup> an author successfully claimed that his reputation had been injured by the publication of a further edition of his work that contained a number of errors. The new edition would have been understood by the public to have been prepared by the author.<sup>146</sup>

Similarly, there are many situations in which an author may be able to rely on contract rather than moral rights to object to derogatory treatment of their work. In *Frisby v. BBC*,<sup>147</sup> the claimant had written a play for the BBC and the BBC had deleted the line ‘my friend Sylv told me it was safe standing up . . .’ on the ground that it was indecent.<sup>148</sup> The complex contractual arrangement prohibited the BBC from making ‘structural’, as opposed to ‘minor’, alterations to the script. The court decided that the contract was a licence and considered whether the alteration was structural or minor. The claimant alleged that it was essential to, and even the climax of, the play; in contrast, the BBC

<sup>140</sup> CDPA 1988, s. 81(6)      <sup>141</sup> CDPA 1988, s. 80(5).

<sup>142</sup> G. Dworkin, ‘Moral Rights and the Common Law Countries’ (1994) 5 *AIPJ* 5, 28; R. Durie, ‘Moral Rights and the English Business Community’ [1990] *Ent L Rev* 40, 48, calls this ‘the greatest compromise in the Act’.

<sup>143</sup> For a general review of the common law analogues to moral rights, see G. Dworkin, ‘Moral Rights: The Shape of Things to Come’ [1986] *EIPR* 329.      <sup>144</sup> [1905–10] *MacG CC* 148.

<sup>148</sup> The defence under CDPA 1988, s. 81(6)(c), means that claimant in *Frisby* would still have to rely on contract.

claimed that it was a minor deletion. Goff J granted the injunction, saying that the author 'prima facie would appear to be the best judge' of the significance of the line.<sup>149</sup>

#### 4.4 THE FUTURE: HARMONIZATION

The existing directives have steered clear of moral rights.<sup>150</sup> Nonetheless, one would have thought that, however politically difficult it may seem, there would be clear justification (in terms of the internal market) for activity in this sphere.<sup>151</sup>

<sup>149</sup> *Frisby v. BBC* [1967] Ch 932, 951.

<sup>150</sup> Term Dir., Art. 9, Recital 20; Database Dir., Recital 28; Info. Soc. Dir., Recital 19 ('moral rights remain outside the scope of this Directive'). The *travaux* indicate attempts to introduce moral rights provisions, but a failure to reach any consensus: see, e.g., the European Parliament amendment in the Related Rights Directive, which became Art. 4B of the Amended Proposal. However, note that the right of attribution is recognized in EU law insofar as the operation of a number of exceptions are conditioned on attribution: Database Dir., Art. 6(2) ('as long as the source is indicated'); Info. Soc. Dir., Art. 5(3)(a), (c), (d), (f) ('as long as the source, including the author's name, is indicated').

<sup>151</sup> Strowel et al., *Moral Rights in the Context of the Exploitation of Works through Digital Technology* (1990) (reviewing national laws and finding substantial differences in the detail of the laws of member states). Note M. Walter, 'Updating and Consolidation of the *Acquis*: The Future of European Copyright', Report of the Commission Meeting at Santiago de Compostela, June 2002 (proposing harmonization of moral rights). Cf. IViR, *Recasting Copyright*, 220, [7.3] (suggesting that, even with a European copyright code, moral rights might be left to member states).

### 1 INTRODUCTION

As we saw in Chapter 6, copyright law confers on the first owner of copyright certain exclusive rights over the exploitation of the work. These rights are capable of being exploited in a number of ways. Most obviously, the rights enable copyright owners to control the sale of both the original work and copies of the work. By selling copies of the work at an appropriate price, copyright owners can ensure that they reap a reward sufficient to cover the costs of producing the work. This form of exploitation is most important where the market for the work is limited and the owner can easily be linked to a purchaser, such as with sales of limited editions of engravings or prints by artists.

If copyright law were to give the author only the right to exploit the work, its economic usefulness would be limited. Few authors have the financial ability, economic acumen, or the willingness to print and sell their own works. Consequently, the law treats copyright as a form of personal property that can be exploited in a number of ways, most importantly by assignment or licence.<sup>1</sup> This enables copyright to be transferred to those who can exploit it more profitably. Where this occurs, the terms of the transfer agreement will determine how the profits are to be distributed. As we will see, such transfers are often arranged in advance of the creation of a work, for example where an author enters into a publishing contract prior to writing a book. Moreover, since some works can be exploited in a variety of ways, there may be many assignments, licences, and sublicences. With new forms of exploitation, the web of transactions is becoming ever more complex.

One of the characteristics of the intangible property protected by copyright is that it has the potential to be used by a range of different people at the same time. For example, a sound recording can be played in numerous public places (such as pubs, shops, and clubs)

<sup>1</sup> CDPA 1988, ss 1 and 90(1).

simultaneously. As works are increasingly exploited in this manner, the role of licensing in exploitation becomes ever more important. In some situations, the copyright owner will be able to license the use of the work by the customer directly (for example where sale of software on a floppy disc includes a licence to make the immaterial copies necessary to run the program). In other cases, owner–user relations are mediated by an agency or collective management systems.

In this chapter, we look at the ways in which copyright can be exploited or transferred. After exploring the most important forms of exploitation—namely, assignment and licensing<sup>2</sup>—we consider the transfer of copyright in the case of mortgages, bankruptcy, or death. In turn, we examine situations in which the rights are exploited by way of compulsory licence. We also consider briefly techniques for exploiting works that rely on the use of technological protection measures, techniques that are becoming increasingly important in the digital environment. (These are examined in detail in Chapter 13.) Finally, we look to the important role that collecting societies play in copyright exploitation.

Before doing so, it is important to note that assignment, licence, or other transaction in relation to copyright is effective only if the purported assignor was able to enter the transaction. Consequently, it is important to ensure that the person entering the transaction is the owner, or is appropriately authorized by the owner.<sup>3</sup> In this respect, it should be noted that where there are joint proprietors, all of them must consent to any transaction (if it is to affect more than their own share).<sup>4</sup> Particular difficulties may arise in relation to transactions made by minors. These are inviolable only if made for the benefit of the minor. If not so made, on reaching majority the minor can have such a transaction set aside.<sup>5</sup>

## 2 ASSIGNMENT

An assignment is a transfer of ownership of the copyright. As a result of an assignment, assignees stand in the shoes of the assignor and are entitled to deal with the copyright as they please. Although an assignment may be for payment of a royalty (as well as for a fixed sum), the nature of the assignment means that if the assignee transfers the copyright to a third party, the transferee takes free of the personal agreement to pay royalties.<sup>6</sup>

It is not necessary that all of the copyright be assigned.<sup>7</sup> In contrast with other types of property, where the tendency is to simplify transfers by limiting the ways in which the rights can be divided up, copyright law takes a liberal view of what may be assigned. In particular, copyright allows partial assignments by reference to ‘times, territories and classes of conduct’.<sup>8</sup> For example, an agreement to write a book might include an exclusive grant of all rights. In turn, the publisher might parcel out the exploitation of the work by way of hardback, paperback, newspaper serialization, audiotape, reprography, electronic distribution, dramatization, and translation, as well as by being filmed.<sup>9</sup> Restrictions that

are geographical in nature are subject to EU rules, so that agreements that are intended to divide up the Common Market will be prohibited.<sup>10</sup>

In order for an assignment to be valid, it must be in writing and signed by or on behalf of the assignor. It has been held that sufficient writing might be provided by an invoice or receipt.<sup>11</sup> The assignment should identify the work concerned with sufficient clarity that it can be ascertained, although the courts have admitted oral ('parol') evidence to assist in the process of identification.<sup>12</sup> No special form of words is required, so a transfer of 'all of the partnership assets' will include a transfer of any copyright owned by the partnership.<sup>13</sup> Assignment of copyright is a distinct legal transaction and is not effected by mere sale or transfer of the work itself.<sup>14</sup> Thus if a person sells an original painting or manuscript, this (of itself) transfers only the personal property right in the chattel; the copyright remains with its owner.<sup>15</sup> If a vendor wishes to transfer the copyright as well as the personal property in the chattel, this should be done explicitly.

Where an assignment is made orally, this will be ineffective *at law*. However, the general equitable rule that treats a failed attempt at a legal assignment as an oral contract to assign the interest will usually apply to attempted assignments of copyright. So long as there is valuable consideration, an oral contract of this nature will be specifically enforceable.<sup>16</sup> Where this occurs, a prospective assignee will be treated as the immediate equitable owner.<sup>17</sup> While such an equitable owner may commence an action against an infringer and secure interlocutory relief, the legal owner needs to be joined as a party before final relief can be secured.<sup>18</sup>

A prospective copyright owner (usually an author) can also make assignments of future copyright—that is, they can assign the copyright in works not in existence at the time of the agreement.<sup>19</sup> This will be useful, for example, where a painting is commissioned, or where a music publishing agreement is entered into before a songwriter creates the songs. However, it seems that the assignment of future copyright operates only where the agreement is for valuable consideration, since it is only in these circumstances that the assignee would be 'entitled as against the whole world'.<sup>20</sup>

An assignment does not need to be registered to be valid. Priority is determined by reference to rules as to 'first in time' and bona fide purchase. In the case of legal assignments, the first transfer in time has priority over claims deriving from subsequent purported transfers of the same rights. Assignments effective in equity will be defeated only at the hands of a later bona fide purchaser for value without notice of the earlier assignment.

## 2.1 PRESUMED TRANSFERS

Although transfer of ownership of copyright (or its component rights) is usually governed by contract, an important exception exists in relation to film production agreements. Where a contract concerning film production is concluded between an author and a film producer, the author is presumed to have transferred their *rental* right to the

<sup>10</sup> *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 ECR I-2789. It seems that geographical restrictions may not be imposed so as to subdivide the United Kingdom: *Copinger*, [5.103]. Cf. *British Actors Film Co. v. Glover* [1918] 1 KB 299.

<sup>11</sup> *Savoury v. World of Golf* [1914] 2 Ch 566.

<sup>12</sup> *Ibid.*; *Batjac Productions v. Simitar Entertainment* [1996] FSR 139, 146–7.

<sup>13</sup> *Murray v. King* [1986] FSR 116, 124, 128, 130, 134–5 (FCA).

<sup>14</sup> Cf. CDPA 1988, ss 93 and 56.

<sup>15</sup> *Cooper v. Stephens* [1895] 1 Ch 567.

<sup>16</sup> *Western Front v. Vestron* [1987] FSR 66, 78.

<sup>20</sup> *Laddie et al.*, 1008, [24.6].

film producer.<sup>21</sup> The presumption operates only in relation to authors of literary, dramatic, musical, and artistic works, and therefore does not apply to the director of a film. Moreover, the presumption does not apply to the author of a screenplay, dialogue, or music specifically created for and used in a film.<sup>22</sup> The presumption is important in relation to the incorporation of existing works in films, for example where the author of a novel agrees to their work being made into a film, or a musical composer agrees to their work being used in a soundtrack. The presumption can be rebutted by an agreement to the contrary, which it seems can be express or implied.

### 3 VOLUNTARY LICENCES

The powers conferred on the copyright owner are most commonly employed by the copyright owner giving licences to particular individuals permitting them to carry out specified activities. At a basic level, a licence is merely a permission to do an act that would otherwise be prohibited without the consent of the proprietor of the copyright.<sup>23</sup> A licence enables the licensee to use the work without infringing. So long as the use falls within the terms of the licence,<sup>24</sup> it gives the licensee an immunity from action by the copyright owner.

In contrast with an assignment (where the assignor relinquishes all interest in the copyright), the licensor retains an interest in the copyright. Indeed, no proprietary interest is passed under a licence,<sup>25</sup> although in most circumstances a licence is binding on successors in title of the original grantor of the licence.<sup>26</sup> While the essential nature of a licence is that it is a mere permission, copyright law has developed a sophisticated repertoire of ways in which a work might be licensed.

Licences may take many forms, from a one-off permission through to an exclusive licence. Licences may be limited geographically, temporally, and in relation to specific modes of exploitation of the copyright work. A licence, even if non-exclusive, may (if the parties so choose) grant the licensee a right of action against infringers.<sup>27</sup> For the most part, the terms of a voluntary licence are up to the parties to choose. As such, terms will vary with the needs, capacities, and wishes of the parties.

#### 3.1 EXCLUSIVE LICENCES

Of the different forms of licence, perhaps the most significant is the 'exclusive licence'. An exclusive licence is an agreement according to which a copyright owner permits the licensee to use the copyright work. At the same time, the copyright owner also promises that they will not grant any other licences and will not exploit the work themselves. The

<sup>21</sup> CDPA 1988, s. 93A, implementing Rel. Rights Dir., Art. 2(6). See Copinger, [5.107].

<sup>22</sup> CDPA 1988, s. 93A(3).

<sup>23</sup> *British Actors Film Co. v. Glover* [1918] 1 KB 299; *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1997] AC 728, 735.

<sup>24</sup> Where a licensee breaches the agreement, the question arises whether there is an action merely for breach of contract or for infringement of copyright: if the act is outside the scope of the licence, it is an infringement; if the breach relates to a condition precedent for the licence, the action will also infringe (*Miller v. Cecil* [1937] 2 All ER 464); moreover, if the breach is sufficiently serious to amount to a repudiation of the contract, this may be accepted by the copyright owner and an action will lie for infringement of copyright as regards subsequent acts.

<sup>25</sup> *CBS v. Charmdale* [1980] FSR 289, 295.

<sup>26</sup> CDPA 1988, s. 90(4).

<sup>27</sup> CDPA 1988, s. 101A (added by SI 2003/2498).

legal consequence of this is that the licence confers a right in respect of the copyright work to the exclusion of all others including the licensor.<sup>28</sup> In some ways, it is the intangible property's equivalent of a 'lease'.<sup>29</sup>

While a bare licensee acquires the right not to be sued in relation to the acts set out in the licence, an exclusive licence confers on the licensee a 'statutory procedural status' that is equivalent to that of the proprietor.<sup>30</sup> One significant aspect of this status is that exclusive licensees can sue infringers without having to persuade the proprietor to take action on their behalf.<sup>31</sup> Section 101(1) of the Copyright, Designs and Patents Act 1988 (CDPA 1988) declares that an exclusive licensee has the same rights and remedies in respect of matters occurring after the grant of the licence as they would have if the licence had been an assignment.<sup>32</sup> An exclusive licensee is given the same rights as a copyright owner and therefore has the right to bring proceedings in respect of any infringement of the copyright after the date of the licence agreement. Indeed, an action can be brought by both the copyright owner and an exclusive licensee: special provisions dealing with this situation are set out in section 102. Exclusive licences of legal interests in copyright have to be in writing and signed by or on behalf of the assignor<sup>33</sup> if the licensee wishes to take advantage of their statutory entitlement to sue for infringement.<sup>34</sup> This is in contrast to a non-exclusive licence, which may be made orally or in writing, and might be contractual or gratuitous, express or implied.<sup>35</sup>

In practice, the grant of an exclusive licence can often be seen as equivalent to an assignment.<sup>36</sup> Consequently, publishers are often happy to be granted exclusive licences, rather than full assignments, by authors.<sup>37</sup> However, there are legal differences between an assignment and an exclusive licence. The first difference arises from the fact that an assignee becomes the copyright owner, whereas an exclusive licensee does not. One of the consequences of this is that the remedies available to the exclusive licensee are limited to those that arise in an action for breach of contract against the copyright owner.<sup>38</sup> The second difference is that the rights given to licensees are less certain and can be defeated at the hands of a bona fide purchaser for valuable consideration and without notice (actual or constructive) of the licence.<sup>39</sup> Third, an exclusive licensee may not always be able to grant a sub-licence or transfer the benefit of their licence to a third party.<sup>40</sup> Fourth, the rights of an exclusive licensee may be limited by implied terms.<sup>41</sup> Finally, a copyright owner who wishes to permit another to exploit a work can retain better protection by giving an exclusive licence.<sup>42</sup>

<sup>28</sup> Cf. *Sega Enterprises v. Galaxy Electronics* (1998) 39 IPR 577.

<sup>29</sup> D. Vaver, 'The Exclusive Licence in Copyright' (1995) 9 *IPJ* 163, 165. <sup>30</sup> Copinger, 350, [5.207].

<sup>31</sup> The copyright owner is made party to the proceedings, if necessary by joining as a defendant. But note that a mere licensee may be able to bring an action under CDPA 1988, s. 101A, if the infringing act was directly connected to a previous licensed act of the licensee, the licence is in writing signed by the copyright owners, and it expressly grants the right of action.

<sup>32</sup> Except that the exclusive licensee cannot sue the copyright owner for breach of copyright (although if the terms are breached, the copyright owner will be liable for breach of contract).

<sup>33</sup> CDPA 1988, s. 90(3). <sup>34</sup> CDPA 1988, s. 101. <sup>35</sup> *Godfrey v. Lees* [1995] *EMLR* 307.

<sup>36</sup> *R. Grigg v. Raben Footwear* [2003] *EWHC* 2914, [58]; *Chaplin v. Frewin* [1966] *Ch* 71, 93.

<sup>37</sup> The Publishers' Association Code of Practice (revised and reissued 2010), 1, [2] states that, in some fields of publishing such as trade publishing, an exclusive licence should be sufficient, but in other areas, it may be appropriate for the copyright to be vested in the publisher, to make it easier for the publisher to protect the work as a whole. <sup>38</sup> *CBS v. Charddale* [1980] *FSR* 289, 297.

<sup>39</sup> CDPA 1988, s. 90(4). <sup>40</sup> Publishing contracts are generally non-assignable.

<sup>41</sup> For example, in *Frisby v. BBC* [1967] *Ch* 932 (in the case of a licence, the courts will more readily imply a term limiting the right of the licensee to alter the work). <sup>42</sup> *Barker v. Stickney* [1919] 1 *KB* 121.

In some situations, it may be difficult to determine whether a copyright owner has assigned their copyright or merely granted an exclusive licence.<sup>43</sup> Whether a person is an exclusive licensee or an assignee is a matter of construction of the agreement. The question to be answered is whether there is evidence from which an intention to assign can be inferred. The way in which the parties describe the arrangement will be influential, but not conclusive. Use of terms such as ‘grant’, ‘sole’, and ‘exclusive rights’, and provisions on ‘retransfer’ if the copyright is not exploited, might indicate an assignment.<sup>44</sup> However, these descriptions may be ignored if the tenor of the agreement suggests that, in substance, there is an exclusive licence.<sup>45</sup> Occasionally, the courts have treated provisions concerning ‘royalties’ as suggesting that the arrangement is an exclusive licence rather than an assignment.<sup>46</sup> But in all cases the court should beware of linguistic formalism and infer the intention from all of the circumstances of the case.<sup>47</sup>

### 3.2 CREATIVE COMMONS, FREE SOFTWARE, AND VIRAL LICENCES

While it has been extremely common hitherto for an author to grant an exclusive licence to an exploiter, such as a publishing company, the last decade has seen the rise in popularity of ‘open access’ modes of distributing works—that is, the use of standardized licences allowing for particular reuses of works by any member of the public.<sup>48</sup>

The first popular version of such a licence was the so-called ‘General Public License’ (GPL) developed for use in relation to computer programs.<sup>49</sup> Given the manner in which computer programs build on existing programs, it was immediately evident to a few of those involved that the need to obtain copyright permissions could become a significant impediment to software development. Richard Stallman of the Free Software Foundation conceived that one way in which to avoid this would be to grant permission in advance allowing anyone to use and modify material, but to make it a condition of use that subsequent developers make their software available on the same terms.<sup>50</sup> The GPL therefore has been said to be ‘viral’ in nature, in that those who take advantage of the licences must subject their own work to the same conditions.<sup>51</sup> Developers are able to obtain remuneration by selling individual pieces of software, rather than by extracting licence fees based

<sup>43</sup> *Western Front v. Vestron* [1987] FSR 66, 75. Nevertheless, the Supreme Court of Canada has called the distinction between an assignment and an exclusive licence ‘important and meaningful’: *Euro-Excellence Inc v. Kraft Canada Inc* (2007) SCC 37, [85].

<sup>44</sup> *Jonathan Cape v. Consolidated Press* [1954] 3 All ER 253; *Messenger v. BBC* [1929] AC 151; *British Actors Film Co. v. Glover* [1918] 1 KB 299, 308.

<sup>45</sup> *Messenger v. BBC* [1929] AC 151.

<sup>46</sup> *Western Front v. Vestron* [1987] FSR 66, 75–6.

<sup>47</sup> *Ibid.*, 76.

<sup>48</sup> S. Dusollier, ‘Sharing Access to Intellectual Property through Private Ordering’ (2007) 82 *Chi-Kent L Rev* 1391.

<sup>49</sup> See <<http://www.gnu.org>> There are three versions of the GPL, the last from 2007. See M. O’Sullivan, ‘The Pluralistic, Evolutionary, Quasi-Legal Role of the GNU General Public License in Free/Libre/Open Source Software’ (2004) *EIPR* 340; T. Rychlicki, ‘GPLv3: New Software Licence and New Axiology of Intellectual Property Law’ [2008] *EIPR* 232.

<sup>50</sup> GPL (v.1) states that:

[Y]ou may modify your copy or copies of the Program or any portion of it, and copy and distribute such modifications . . . provided that you . . . cause the whole of any work that you distribute or publish, that in whole or in part contains the Program or any part thereof, either with or without modifications, to be licensed at no charge to all third parties under the terms of this General Public License.

<sup>51</sup> The characterization of such contracts as viral is attributed to M. J. Radin, ‘Humans, Computers, and Binding Commitment’ (2000) 75 *Indiana LJ* 1125. The term ‘copyleft’ is also frequently used to describe this feature of the GPL and other licences.

**Fig. 11.1** Logo of the Creative Commons movement

Source: Courtesy of Creative Commons, <<http://creativecommons.org>>

on copyright. The GPL has proved to be an amazing success,<sup>52</sup> although doubts exist over the enforceability of ‘viral’ clauses.<sup>53</sup>

Following in the wake of the GPL, the ‘Creative Commons’ movement (see Fig. 11.1) has attempted to develop similar standard open licences for other types of work.<sup>54</sup> In so doing, the Creative Commons movement has been forced to take account of different national legal systems.

In contrast with the GPL, Creative Commons offers copyright owners a menu of licences: some allow reuse of a work only in unmodified form (‘CC BY-ND’); some allow reuse only with attribution (‘CC BY’); some allow reuse only for non-commercial purposes (‘CC BY-NC’); and some attempt to impose a ‘share-alike’ condition on users (‘CC BY-SA’). As a result, a copyright owner has considerable flexibility and the take-up of such licences has been very widespread. Nevertheless, it should be observed that the most commonly adopted licence is the ‘attribution, non-commercial, no derivative works’ licence (‘CC BY-NC-ND’), which confers only the freedom to duplicate, distribute, play, or perform the work in an unmodified state, for non-commercial purposes and with attribution of authorship.<sup>55</sup>

While the use of both the GPL and the Creative Commons licences has become very widely used, these projects have not escaped criticism, even from those who share similar ideological goals or who desire similar practical results. Professor Elkin-Koren, for example, has emphasized the dangerous effect of ‘open licensing’ as constituting informational goods as property and creators as owners.<sup>56</sup> In fact, because Creative Commons licences depend on the prior existence of property right, there are those who advocate the expansion of such rights, for example the extension of legal protection to non-original databases, so that such products can effectively come within the terms of creative commons share-alike licensing schemes. More practically, Professor Dusollier has called attention to a number of potential limitations to the effectiveness of viral

<sup>52</sup> As of 2006, 50,013 projects—67 per cent of projects listed in the SourceForge open source repository—are released under the GPL.

<sup>53</sup> A. Guadamuz Gonzalez, ‘Viral Contracts or Unenforceable Document: Contractual Validity of Copyleft Licences’ (2004) *EIPR* 331; cf. G. Westkamp, ‘The Limits of Open Source’ [2008] *IPQ* 14.

<sup>54</sup> See <<http://creativecommons.org>> See S. Dusollier, ‘The Master’s Tools v. the Master’s House: Creative Commons v. Copyright’ (2005) 29 *Colum JL & Arts* 271; M. Fox, T. Ciro, and N. Duncan, ‘Creative Commons: An Alternative, Web-Based, Copyright System’ (2005) *Ent L Rev* 111.

<sup>55</sup> A. Chander and M. Sunder, ‘The Romance of the Public Domain’ (2004) 92 *Cal L Rev* 1331, 1361–2.

<sup>56</sup> N. Elkin-Koren, ‘What Contracts Cannot Do: The Limits of Private Ordering in Facilitating a Creative Commons’ (2005) 74 *Fordham L Rev* 375, 398. The dependence of open access licensing on copyright was earlier emphasized by Dusollier—S. Dusollier, ‘Open Source and Copyleft: Authorship Reconsidered’ (2003) 26 *Colum JL & Arts* 281, 286–7—but she also argues that creative commons may bring about a shift in the notion of the author from the romantic author-as-owner who controls the meaning of a text, to the post-modern author as the ‘founder of a discursivity’: S. Dusollier, ‘The Master’s Tools v. the Master’s House: Creative Commons v. Copyright’ (2005) 29 *Colum JL & Arts* 271, 285–6.

contracts,<sup>57</sup> in order to remind those in the open-access movement and beyond of the remaining importance of public law.

Others, more sympathetic to traditional avenues of copyright exploitation, have emphasized the dangers of ill-considered adoption of these licences by aspiring authors. While it may seem attractive for a young or naive author to adopt an easy-to-use Creative Commons licence at a time when many others seem to be so doing, it is by no means obvious that such a move is in their best interests. Rather, only those with a clear idea as to how they will be able to turn a profit if their works become popular should throw away the mechanism that has traditionally secured rewards to successful writers or composers. From this perspective, Creative Commons licences are primarily useful tools for those who do not need remuneration *from copyright* (or at all).

The popularity of Creative Commons licences amongst British academics seems likely to be endangered, too, by their use as what are, in effect, compulsory publication standards, by Research Councils UK (RCUK), and perhaps in the future by the Higher Education Funding Council for England (HEFCE). RCUK now requires that outputs of Council-funded research be published under CC BY licences, which expressly permit the making of derivatives and commercial use.<sup>58</sup> A number of representatives from the humanities and social sciences have argued that the CC BY does not require derivative users to demarcate the ways in which derivative works have altered the original, and thus they are being required to authorize a range of practices that conflict with their disciplinary norms. The protests seem likely to be ignored.

### 3.3 IMPLIED LICENCES

In certain circumstances, the court may see fit to imply a licence to use a copyright work. However, for the most part, the courts have been reluctant to imply licences from the circumstances.<sup>59</sup> They have indicated that they will normally imply terms into a contract only in two situations: terms may be implied 'by law' where they are 'inherent in the nature of the contract'; and terms may be implied to fill gaps left in an agreement where it is necessary to provide 'business efficacy'.

In relation to terms implied by law, the court is primarily concerned with whether the contract falls into a particular class. However, that is not to say that the express terms are not important. This is because they may indicate that the parties did not intend the normal incidents of a particular class of contract to apply. The classes subject to such implied terms are not closed and change with the necessities of the times. An Australian case has indicated that one such class of contracts concerns 'persons who prepared written material with the intention it should be used in a particular manner'.<sup>60</sup> The specific terms to be implied in this class then depend upon the 'particular purpose'. For example, where an architect provides a client with plans, the court might determine the purpose (and the

<sup>57</sup> Dusollier emphasizes three limits: the definition as to when the viral effect occurs; the validity of the licence itself; and the compatibility of different licences. On the potential problems posed by revocation, see L. P. Loren, 'Building a Reliable Semicommons of Creative Works: Enforcement of Creative Commons Licenses and Limited Abandonment of Copyright' (2007) 14 *Geo Mason L Rev* 271.

<sup>58</sup> See RCUK, *Policy on Open Access and Supporting Guidance* (2013), 7–8, available online at <<http://www.rcuk.ac.uk/RCUK-prod/assets/documents/documents/RCUKOpenAccessPolicy.pdf>>

<sup>59</sup> *Philips Electronique v. BSB* [1995] *EMLR* 472, 481; *Cescinsky v. Routledge* [1916] 2 *KB* 325, 319.

<sup>60</sup> *Acohs v. RA Bashford Consulting* (1997) 37 *IPR* 542 (FCA), [5.2].

extent of any licence) from the fee, when viewed in light of the standard professional fee scales operating.<sup>61</sup>

Where courts are implying terms for particular cases, they look at the existing express terms and the surrounding context. It has been said that, for a term to be implied, it must be reasonable and equitable, necessary to give business efficacy to the contract, obvious that it 'goes without saying', capable of clear expression, and must not contradict any express term of the contract.<sup>62</sup> In *Ray v. Classic FM*,<sup>63</sup> Lightman J found that an expert in music who had been engaged by a radio station to catalogue its musical recordings had copyright in the catalogues produced. While the terms of his consultancy were silent as to copyright, the court held that the expert had granted an implied licence to the radio station to do certain things with the catalogues. The scope of the licence was limited to use of the material for the purpose of broadcasting in the United Kingdom. This meant that the claimant's copyright was infringed where copies were made for the purpose of exploiting the database abroad.<sup>64</sup>

In less formal circumstances (particularly those involving consumers), the courts have tended to react flexibly in deciding the nature and extent of any licence. For example, it seems that sale of an article to a consumer usually carries with it a licence to repair that article,<sup>65</sup> and that sale of a knitting pattern might carry with it an implied licence to the effect that a person can make the pattern for domestic, but not commercial, purposes.<sup>66</sup> Where the licence is claimed by a competitor who could have entered formal contractual arrangements, but neglected to do so, the courts have been reluctant to imply a licence.<sup>67</sup>

## 4 MORTGAGES

Like other forms of property, copyrights may be mortgaged—that is, assigned as security for a debt.<sup>68</sup> This can be a useful technique that enables copyright owners to raise funds. It has proved to be particularly common where a work is extremely expensive to create, as in the film industry.<sup>69</sup> In this context, a mortgage is achieved by way of an assignment of the copyright by the copyright owner to the mortgagee (lender). This is subject to a condition that the copyright will be reassigned to the mortgagor when the debt is repaid (or, as the law describes this, on 'redemption'). In addition, it is important that the assignment reserves for the mortgagor a right to continue selling copies of the work. This is probably

<sup>61</sup> *Blair v. Osborne & Tompkins* [1971] 2 QB 78; *Stovin-Bradford v. Volpoint Properties* [1971] 1 Ch 1007. Note that *Ray v. Classic FM* [1998] FSR 622 treats these cases as ones in which the terms are implied to give business efficacy to the agreement.

<sup>62</sup> *BP Refinery (Westernport) v. Hastings Shire Council* (1977) 16 ALR 363, 376 per Lord Simon of Glaisdale; approved in *Ray v. Classic FM* [1998] FSR 622.

<sup>63</sup> [1998] FSR 622.  
<sup>64</sup> *Grisbrook v. MGN Ltd* [2010] EWCA Civ 1399 (interpreting a freelance photographer's oral licence as limited to publication in a newspaper, rather than to global delivery of them via back issues hosted on website); *Celebrity Pictures Ltd v. B. Hannah Ltd* [2012] EWPC 32 (implied licence to use photographs in magazine).

<sup>65</sup> *Solar Thomson v. Barton* [1977] RPC 537, 560–1; *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1997] AC 728, 735; cf. *Sony Entertainment Inc v. Owen* [2002] EMLR (34) 742, 747 (Jacob J holding that, because a licence is territorial, a licensee must prove that a Japanese licence to use a computer game extended to the United Kingdom).

<sup>66</sup> *Patricia Roberts v. Candiwear* [1980] FSR 352.  
<sup>67</sup> *Banier v. News Group* [1997] FSR 812; cf. *Express Newspapers v. News (UK)* [1990] FSR 359 (tit-for-tat defence).

<sup>68</sup> Copinger, [5–194]ff.  
<sup>69</sup> M. Henry, 'Mortgages and Charges over Films in the UK' [1992] *Ent L Rev* 115.

best achieved by reservation of an exclusive licence.<sup>70</sup> Alternatively, copyright can be used as security by way of a charge. While, in these circumstances, there is no assignment, the chargee does gain certain rights over the copyright as security.<sup>71</sup> In the case of both forms of security, the transaction must be in writing and signed by the parties in order to be valid. A mortgage or charge by a company of its copyright must also be registered within 21 days of its creation with the Registrar of Companies, if it is not to be void against the liquidator or a creditor of the company.<sup>72</sup> It has been assumed that a mortgagee has the powers of proprietor and is therefore able to sue infringers,<sup>73</sup> even though, as a matter of practice, the borrower is in a better position to police infringements.

‘Securitization’ is the name given to a further way of raising money from copyright. Typically, securitization involves selling tranches of (that is, defined periods of entitlement over) the rights to royalties accruing from bundles of copyrights, a well-known example being in relation to David Bowie’s recordings. The reasons for creating these financial arrangements stem from the desire to exchange future possible income for immediate capital, which will facilitate reinvestment of that capital in new projects.<sup>74</sup>

## 5 TESTAMENTARY DISPOSITIONS

Because copyright is personal property, it is capable of passing on the death of the proprietor either by will or according to the rules applicable in cases of intestacy. In the case of the death of one co-proprietor, because they hold copyright as tenants in common (rather than as joint tenants), the share of the deceased co-owner passes along with the rest of their estate.<sup>75</sup> A presumption exists that where a work is unpublished and a bequest is made of a document or other material thing containing the work, the bequest is to be construed as including the copyright in the work, insofar as the testator was the owner of the copyright immediately before their death.<sup>76</sup>

## 6 BANKRUPTCY

On bankruptcy, copyright passes to the trustee in bankruptcy by operation of law.<sup>77</sup> Where a court appoints a receiver to sell assets, both the appointment and subsequent sales by the receiver will involve transfers ‘by operation of law’ and therefore need not comply with the formal requirements.<sup>78</sup> Where copyright has been assigned in return for a royalty and the assignor subsequently becomes insolvent, that right also vests in the bankrupt’s trustee in bankruptcy.<sup>79</sup>

<sup>70</sup> On the importance and delicacy of the terms of the licence, see M. Antingham, ‘Safe as Houses? Using Copyright Works as Security for Debt Finance’ (1998) 78 *Copyright World* 31, 32.

<sup>71</sup> Copinger, 344, [5–197], seems to suggest that such a charge is equitable. While there is no definitional provision equivalent to PA 1977, s. 130, there seems no reason why it should not be legal.

## 7 COMPULSORY LICENCES

In general, if copyright owners choose not to allow others to exploit their rights, then that is their prerogative.<sup>80</sup> However, in certain exceptional circumstances, the law will intervene to force the copyright owner to license the work and require the ‘licensee’ to pay a fee. The basis for such action varies, as do the conditions on which the law permits the copyright owner’s wishes to be overridden. Provisions of this nature are called ‘compulsory licences’. In jurisprudential terms, the grant of a compulsory licence converts a property rule into a liability rule.<sup>81</sup> Compulsory licences can arise either as a result of various provisions in the CDPA 1988 or through the general powers of the European Commission. We discuss these in turn.

### 7.1 COMPULSORY LICENCES IN THE UNITED KINGDOM

Compulsory licences are made available under British law in only a small number of specifically defined circumstances. One reason why so few non-voluntary licences exist in the United Kingdom is because the international standards to which the United Kingdom has committed itself are generally incompatible with compulsory licensing. Although two provisions of the Berne Convention explicitly permit the national legislature to grant such licences,<sup>82</sup> the United Kingdom no longer takes advantage of these provisions. As regards rights in phonograms, the Rome Convention intimates that compulsory licences may be imposed only as regards the broadcasting or communication to the public of phonograms.<sup>83</sup>

Another reason for the limited circumstances in which compulsory licences are available is that they are generally seen as unsatisfactory when compared with full property rights. This is because, in contrast to exclusive property rights, the existence and terms of compulsory licences require some administrative procedure, which is costly and time-consuming when compared to negotiations in the free market. Critics of the compulsory licence also complain that the value of a licence can only ever be determined accurately by negotiations in the marketplace. It is also argued that compulsory licences unfairly deprive the copyright holder of the most significant element of their rights—namely, the right to bargain.

There are no common characteristics that explain the circumstances in which compulsory licences are granted.<sup>84</sup> In some cases, they are granted in response to past practices of ‘abuse’, usually where that abuse either prevented the production of a product for which there was a clear demand, or where the evidence showed that the copyright holder had imposed unjustifiable restrictive conditions. This is true of the compulsory licence relating to the publication of television schedules,<sup>85</sup> which was introduced to end the practice by television companies of licensing only the publication of daily listings, so that they could reserve for their own subsidiaries the market for weekly guides.<sup>86</sup> After a Monopoly

<sup>80</sup> *Oscar Bronner v. Mediaprint*, Case C-7/97 [1998] ECR I-7791, 7811 [AG-56].

<sup>81</sup> See further R. Merges, ‘Contracting into Liability Rules: Intellectual Property Rights and Collective Rights Organizations’ (1996) 84 *Cal L Rev* 1293.

<sup>82</sup> Berne, Arts 11bis(2) (aka the ‘jukebox licence’), 13 (aka the ‘mechanical licence’). Berne, Art. 17, is not intended to permit any general system of compulsory licences, but to cover such things as the maintenance of public order and morality.

<sup>83</sup> Rome, Art. 12. Note also Rome, Art. 15(2).

<sup>84</sup> For a full review, see Copinger, ch. 28.

<sup>85</sup> Broadcasting Act 1990, ss 175, 176, and Sch. 17.

<sup>86</sup> *ITP v. Time Out* [1984] FSR 64.

and Mergers Commission (MCC) report,<sup>87</sup> the Broadcasting Act 1990 introduced provisions entitling publishers, once certain conditions are satisfied, to reproduce that information.<sup>88</sup> On other occasions, compulsory licences are granted where changes in market conditions unduly strengthen the copyright owner's interest. This sort of consideration explains the introduction of compulsory licences where copyright had lapsed, but has been revived by the Duration Regulations.<sup>89</sup>

## 7.2 COMPULSORY LICENCES ORDERED BY THE EUROPEAN COMMISSION

Compulsory licences may also be made available by the European Commission if a copyright owner is found to have violated Article 102 TFEU which prohibits the 'abuse' of a 'dominant position'.<sup>90</sup> *RTE and Independent Television Publications v. Commission* (known as the 'Magill' case)<sup>91</sup> involved a battle between an Irish broadcaster (RTE), which produced copyright-protected television listings, but only licensed them on a daily basis (in order to reserve to itself the market for weekly guides to its own programmes), and a person wishing to publish a comprehensive weekly guide. The Commission held this refusal to license the copyright to be an abuse of the dominant position of the broadcaster and ordered it to license the listings.<sup>92</sup> The Court of Justice affirmed the legality of the action by the Commission. The substantive basis of this power to intervene—which it should be noted is limited to exceptional circumstances—is discussed in Chapter 12.<sup>93</sup> As Microsoft discovered, failure to comply with a Commission decision that it should grant a licence can result in a very substantial fine.<sup>94</sup>

## 8 TECHNOLOGICAL PROTECTION MEASURES

As already mentioned, copyright works have traditionally been exploited by the manufacture and sale of duplicated copies (where the processes of manufacturing and distribution have been controlled by the copyright owner). In light of the emergence of digital communication technologies and digital reproduction, many copyright owners are concerned that continued use of such a traditional model of exploitation will expose them to undue levels of infringement. More specifically, there is a concern that if digital versions of works are made available, it will result in widespread unauthorized copying,

particularly by individual users in private. Since these digital copies will be perfect, this is seen as a much greater threat than that previously posed by photocopiers, for example. Relying on copyright against widespread copying by individuals is not a realistic option. Copyright holders have consequently sought techniques outside copyright to protect their interests, in particular through the use of so-called ‘technological measures of protection’—that is, they have sought to make available works only when they have additional protection systems through technologies that prohibit access, encrypt, or control copying. A familiar example of such a technology is the encryption of satellite broadcast signals and the provision to authorized service subscribers of cards that enable the use of decoding technology. Another example is the ‘content scrambling system’ used to protect DVDs and to ensure they can be used only on authorized players with CSS-descrambling software.

Technological measures are regarded as critically important for the so-called ‘information society’, because the feared duplication of works is thought to be likely to take place in private and thus be impossible to police. Technological measures provide an opportunity to police private uses, by forcing users to enter contractual arrangements before they can use or copy works. If users do not contact the copyright owner, they do not get a set of keys to open the technological locks. However, the potential for technological measures is much more than operating only to solve the problem of the digital shift in replication from public to private arenas; it also poses the possibility of radical transformation among the ways in which works are delivered. For example, technological measures might mean that a person could buy a digital newspaper for a single read with the advantage that the proprietor would not need to set the price on the basis that other readers will look at the newspaper (and so will not buy their own copy). The potential of technological measures is to enable consumers to get works delivered in the form that they want, with costs to the user tailored more closely to the use of the work.

The use of technological measures to support copyright, however, is not a complete answer to the problems of digital distribution and replication. This is because for every lock, there is some enthusiast willing to pick it. Those wishing to rely on technological measures have therefore sought government support for the use of such measures through the passage of laws prohibiting circumvention of the measures.<sup>95</sup> They argue that, by providing protection now, copyright owners will be given appropriate incentives to develop such systems. If such legal protection is not provided, that investment is vulnerable to being undermined by the rapid spread of circumventing technology. So there has been felt to be a need to act immediately. The problem with formulating legal principles to prevent circumvention, however, is that it is the locking systems currently being used that are crude. Strong protection of crude systems carries two problems: it may give users of technological protection too much control (or control of public domain dimensions of content); and it provides developers with little reason to make the systems more sophisticated.

The CDPA 1988, as amended, contains a formidable array of civil and criminal provisions dealing with situations in which a person facilitates access to works that the person concerned is not entitled to use or receive. Some of these relate to the circumvention of effective technological measures applied to copyright works other than computer programs and are designed to implement Article 6 of the Information Society Directive.<sup>96</sup> Others, somewhat less prescriptive in scope, apply only to computer programs (and implement Article 7(1)(c) of the Software Directive). The third category, in sections

<sup>95</sup> S. Dusollier, ‘Technological Measures and Exceptions in the European Directive of 2001: An Empty Promise’ (2003) 34 *IIC* 62.

<sup>96</sup> See Chapter 13, pp. 358–63.

297–9, relates to reception of transmissions (and implements the Conditional Access Directive).<sup>97</sup> We consider these provisions in Chapter 13. Whether these provisions will give copyright owners the confidence to exploit works, particularly in electronic form, by utilizing technological protection remains to be seen.

## 9 COLLECTING SOCIETIES

One of the central problems facing copyright owners who wish to exploit their works is how to monitor or police infringements. Where the main form of copyright was the book and the main mode of exploitation the sale of printed copies, this policing (typically undertaken by a publisher) was ad hoc and depended on monitoring activities in the marketplace. However, as copyright expanded to encompass a wider array of subject matter and (particularly ephemeral) uses, the problems of policing copyright have changed. One of the main mechanisms developed by copyright owners to monitor infringement has been collective systems of management and enforcement of rights, in particular, the ‘collecting society’.<sup>98</sup>

Collective administration is a system whereby certain rights are administered for the benefit of authors and/or copyright owners. The organizations that administer the rights are empowered to authorize various specified uses of their members’ works, normally by way of a licence. The essential characteristic of these arrangements is that they are able to negotiate and act without individual consultation. In most cases, the copyright owner assigns their rights to the society. Where this occurs, the rights are pooled so as to create a repertoire of works at the disposal of potential users.

The main collecting societies in the United Kingdom are as follows.

- (i) The Performing Right Society (PRS), formed in 1914, administers, as assignee, the performing and broadcasting rights in music and song lyrics. PRS annual income from all sources is in the region of £600 million.<sup>99</sup>
- (ii) The Mechanical-Copyright Protection Society (MCPS), formed in 1924, administers, as agent, the ‘mechanical rights’ in music and song lyrics—that is, the right to make a sound recording (part of the reproduction right).<sup>100</sup>
- (iii) Phonographic Performance Limited (PPL), formed in 1934, administers, as assignee, the performing and broadcasting rights in sound recordings, and from 2007 (when it merged with Performing Artists Media Rights Association, or PAMRA, and the Association of United Recording Artists, or AURA) has also represented performers.<sup>101</sup> In 2012, PPL collected £170 million.
- (iv) Video Performance Limited (VPL), a sister company of PPL, administers, as agent, the performing and broadcasting rights in videos.
- (v) The Publishers Licensing Society (PLS), established in 1981, operates on behalf of the Publishers Association, the Association of Learned and Professional Society

<sup>97</sup> Directive 98/84/EC of the European Parliament and of the Council of 20 November 1998 on the legal protection of services based on, or consisting of, conditional access [1998] *OJL* 320/54 (29 November 1998).

<sup>101</sup> See <<http://www.ppluk.com>>

Publishers, and the Professional Publishers Association, in relation to the collective licensing of photocopying and digitization.<sup>102</sup>

- (vi) The Authors' Licensing and Collecting Society (ALCS), formed in 1977, represents writers and distributes the fees collected by the CLA for writers from photocopying, scanning, and so forth.<sup>103</sup>
- (vii) The Copyright Licensing Agency (CLA), formed in 1982, is owned by the PLS and ALCS, and collects on their behalf from various user constituencies involved on photocopying and scanning. It also operates as an agent for DACS. It enters blanket licences with educational authorities and universities.<sup>104</sup> In 2012–13, CLA collected £58 million.
- (viii) NLA Media access (formerly known as the Newspaper Licensing Agency) was established in 1996 by eight national newspapers to offer collective licences for news-clipping services. It now operates on behalf of 1,400 newspapers, offering a range of licences, and in 2012 it collected £30 million.<sup>105</sup>
- (ix) The Design and Artists' Copyright Society (DACS), formed in 1983, administers, as agent, the reproduction rights for painters, printmakers, sculptors, and photographers, as well as the resale royalty right.<sup>106</sup> In 2012, it collected £4.8 million from collective licences, £1.4 million in individual licensing fees, and £8 million from the resale royalty right.
- (x) The Artists Collecting Society (ACS), formed in 2006, administers the resale royalty right (in competition with DACS).<sup>107</sup>
- (xi) The British Equity Collecting Society (BECS) was established in 1998 by the actors union, Equity, primarily to collect and distribute monies payable to audiovisual performers, in particular remuneration payable in other EU countries when audiovisual works are copied in private or retransmitted. In 2013, it collected £8.6 million. The largest sums come from Spain and France.<sup>108</sup>
- (xii) Directors UK, launched in 2008, represents film and television directors for purposes similar to those of BECS.<sup>109</sup>
- (xiii) The Educational Recording Agency (ERA) licenses educational establishments to record broadcasts, distributing revenue to broadcasters and collecting societies (such as ALCS, DACS, MCPS, PPL, and PRS).<sup>110</sup>

## 9.1 ORGANIZATION

Because collecting societies are private organizations that have emerged in response to particular commercial environments, there is no great uniformity to their organizational structures. Nevertheless, it is worth considering the different dimensions of some of the existing societies.

### 9.1.1 Membership terms

In terms of copyright owner–collecting society relations, the relevant relationship will be determined in the membership agreement and the rules of the society. To ensure that

<sup>102</sup> See <<http://www.pls.org.uk>>

<sup>105</sup> See <<http://www.nlamediaaccess.com>>

<sup>106</sup> See <<http://www.dacs.org.uk>>

<sup>107</sup> See <<http://artistscollectingsociety.org>>

<sup>108</sup> See <<http://www.equitycollecting.org.uk>>

<sup>109</sup> See <<http://www.directors.uk.com>>

<sup>110</sup> See <<http://www.era.org>>. See further Chapter 9, pp. 255–6.

each collecting society is capable of licensing the relevant right on behalf of the copyright owner, the owner has to assign the right to the society or appoint the society as its agent. The scope of any such assignment or agency will depend on the proposed function of the society. For example, a copyright owner joining the PRS is required to assign the 'small rights' relating to non-dramatic performances; the 'grand rights' relating to dramatic performances, which are not included, are administered by individual agreements. The rules of a society might also make provision for a member to assign rights in relation to works not in existence at the time of joining. A society may have different categories of membership (for example author members and publisher members). As a member, a copyright owner will have power to vote at meetings and thus to influence the way in which the society operates. A collecting society will distribute any licensing revenues that it collects in accordance with the rules of the society. Often, this will involve some kind of sampling mechanism that enables the society to estimate the amount to which each member is proportionally entitled. Usually, a society will first deduct its administration expenses. In some jurisdictions, a portion of the revenue is used for 'cultural purposes' (for example to fund indigenous music culture in the country making the deduction), and for pension and welfare payments. Provisions exist within the rules of a society specifying the circumstances in which a person may leave the society, which will usually require a substantial period of notice.

### 9.1.2 Licensing arrangements

The collecting societies enter into negotiations with copyright users, either as associations of users or on an individual basis. Negotiations with associations of users will often result in the establishment of tariffs. Sometimes, a society-user agreement will cover more than just a licence fee. Some associations of users will involve themselves in ensuring that licence fees are paid by their members, or help in other ways with the administration, in return for a reduced tariff. Although the terms of licences will vary, it is common for collecting societies to grant a 'blanket' licence entitling users to use any work in the repertoire of the licensing body without restriction.

## 9.2 ASSESSMENT

At a practical level, collecting societies are a convenient way of resolving some of the difficulties faced by copyright owners and users in reaching appropriate arrangements.<sup>111</sup> Collecting societies are useful insofar as they provide users with a focal point to locate and transact with copyright owners. Collecting societies reduce the 'transaction costs' that would otherwise exist in ascertaining and negotiating individual licences with individual copyright owners. This is particularly important where a user wishes to utilize a large number of copyright works, so that transacting on an individual basis would be time-consuming and costly.<sup>112</sup> Moreover, where the society grants a user a blanket licence, this offers users a degree of flexibility. For example, where a blanket licence is granted to a nightclub or a radio station, it means that it does not need to determine in advance the works that it is going to play.

<sup>111</sup> G. Davies, 'The Public Interest in Collective Administration of Rights' (March 1989) *Copyright* 81.

<sup>112</sup> J. Fujitani, 'Controlling the Market Power of Performing Rights Societies: An Administrative Substitute for Antitrust Regulation' (1984) 72 *Cal L Rev* 103, 106 (breaking down the transaction costs in identifying and locating the copyright owner, obtaining the information necessary to negotiate a price, and transaction time costs).

For the copyright owner, collective administration relieves an otherwise impossible burden of policing and enforcing rights. It also provides copyright owners with a bargaining power that they would not possess as individuals. Moreover, the possibility of collective administration has enabled owners to argue for the extension of rights in relation to subject matter that might not otherwise have been protected on the basis that it was unenforceable.

Probably the most interesting thing about collecting societies is the way in which their emergence represents a significant shift in the character of copyright. As Thomas Streeter has observed, with collective administration, copyright loses much of its character as a property right exploited through distribution of copies bought and sold in the marketplace.<sup>113</sup> Instead, copyright becomes more like the legal underpinning of an institutional bureaucracy that attempts to simulate a market through statistical mechanisms. Each copyright loses its individuality and the ‘property form’ is replaced by a liability form. In effect, collecting societies turn an author’s property right into a right to receive welfare payments and a user’s licence fee into a tax upon their activities.

### 9.3 INTERNATIONAL DIMENSIONS

Although collecting societies tend to operate at the national level, they form part of a global network of collecting agencies. For example, while performing rights are administered in the United Kingdom by the PRS, there are equivalent societies in the United States (Broadcast Music, Inc., or BMI; the American Society of Composers, Authors and Publishers, or ASCAP), Australia (the Australasian Performing Right Association, APRA), Germany (*Gesellschaft für musikalische Aufführungs- und mechanische Vervielfältigungsrechte*, or GEMA), France (*Société des Auteurs, Compositeurs et Editeurs de musique*, or SACEM), Belgium (*Société d’Auteurs Belge—Belgische Auteurs Maatschappij*, or SABAM), and so on. Typically, there will be ‘reciprocal representation contracts’ between national copyright management societies.<sup>114</sup> Under these arrangements, which date back as far as 1936, one national society (A) undertakes, on a reciprocal basis, to manage the rights attached to the repertoire of a foreign society (B) within its sphere of operation, normally its national territory. Society A collects royalties on behalf of foreign society B, pursues infringers, takes any necessary proceedings in respect of infringement, and transfers sums collected to B. Effectively, these agreements can mean that a particular national society controls within the territory the entire world repertoire of works.<sup>115</sup>

### 9.4 EUROPEAN DEVELOPMENTS

These national arrangements—under pressure from the Community authorities, as well as from business—are giving way to more flexible options. As markets for particular

<sup>113</sup> T. Streeter, ‘Broadcast Copyright and the Bureaucratization of Property’ (1992) 10 *Cardozo AELJ* 567, 570, 576.

<sup>114</sup> The operation of CISAC and the role of such contracts, in described in *CISAC v. European Commission*, Case T-442/08 (12 April 2013) (General Court, Sixth Chamber).

<sup>115</sup> In the present state of affairs, the Court of Justice has held that legislation that provides that a collecting society is the only source of licences does not breach Art. 56 TFEU: *Ochranný svaz autorský pro práva k dílům hudebním, o.s. (OSA) v. Léčebné lázně Mariánské Lázně a. s.*, Case C-351/12 (27 February 2014) (ECJ, Fourth Chamber), [67]–[79].

uses have become increasingly transnational, attempts have been made to develop Community-wide licences (so that users do not have to get permission on a territory-by-territory basis). For such Community-wide licensing to be possible, the collecting societies must agree that they can grant licences permitting uses outside their territories—so, for example, that GEMA can authorize webcasting in the United Kingdom or the PRS–MCPS can do the same for Germany.<sup>116</sup> This sets the collecting societies up in competition with one another, which from one perspective could make them operate more efficiently. However, if collecting societies compete amongst themselves for users by reducing authors' (and copyright owners') remuneration, one might wonder whether the overall effect is in the public interest. One attempt to avoid this kind of competition was proposed by the music performing rights societies in an agreement that would have permitted all collecting societies to authorize Europe-wide licensing of public performance right, but would have required users to seek permission from their local society.<sup>117</sup> The Commission doubted whether this was compatible with competition law and has encouraged collecting societies to compete with one another.<sup>118</sup> The slow progress has led to the adoption of the Collective Rights Management Directive, to be implemented by April 2016, establishing requirements for the operation of multi-territorial licensing of music, and requiring collecting societies that offer such licensing also to administer the repertoire of any collecting society that requests that it do so (and which is not offering such licences itself).<sup>119</sup>

## 9.5 EXTENDED COLLECTIVE LICENCES

Perhaps most analogous to compulsory licences,<sup>120</sup> section 116B of the CDPA 1988 allows for licensing bodies to be authorized to grant copyright licences in respect of works in which copyright is neither owned by the body nor by any of the persons on behalf of whom it acts.<sup>121</sup> The idea is that bodies that operate collective licensing schemes will be permitted or enabled to grant blanket licences relating to the complete array of works and rights that they purport to represent, and that users can feel secure that, having obtained a licence from such a society, they will not be liable to individuals who are not members. Precedents for such 'extended collective licensing' exist from the Scandinavian countries<sup>122</sup> and were approved of by the Hargreaves Review.<sup>123</sup>

<sup>116</sup> This is referred to as the 'CELAS joint venture'—see <<http://www.celas.eu>>—but relates only to EMI-owned repertoire.

<sup>117</sup> The so-called 'Santiago agreement' is described in *CISAC v. European Commission*, Case T-442/08 (12 April 2013) (General Court, Sixth Chamber), [28], [109]ff, [170]ff.

<sup>118</sup> European Commission, *Commission Staff Working Document: Impact Assessment Reforming Cross-Border Collective Management of Copyright and Related Rights for Legitimate Online Music Services* (11 October 2005), SEC (2005) 1254, 9; European Commission, *Communication from the Commission to the Council, the European Parliament and the European Economic and Social Committee: The Management of Copyright and Related Rights in the Internal Market* (16 April 2004) COM(2004) 261 final, 6–9.

<sup>119</sup> Directive 2014/26/EU of the European Parliament and of the Council of 26 February 2014 on collective management of copyright and related rights and multi-territorial licensing of rights in musical works for online use in the internal market [2014] OJ L 84/72 (the 'Collective Rights Management Directive', or CRM Directive); cf. European Commission, *Monitoring of the 2005 Music Online Recommendation* (7 February 2008).

<sup>120</sup> A critical difference is that copyright holders can opt out of such a regime: Hargreaves Review, 38, [4.51]; UK IPO, *Extending the Benefits of Collective Licensing* (2013), 15, [3.61].

<sup>121</sup> UK IPO, *Extending the Benefits of Collective Licensing* (2013).

<sup>122</sup> A. Strowel, 'The European Extended Collective Licensing Model' (2011)34 *Colum JL & Arts* 665.

<sup>123</sup> Hargreaves Review, 37–8, [4.48]–[4.51].

A draft of proposed secondary legislation implementing extended licensing has been put out for review at the end of 2013.<sup>124</sup> Key features in the proposal are that applications would have to be made to the Secretary of State by an existing licensing body seeking to operate extended collective licensing for the same type of works and rights as it is already administering. The body must have the support of 75 per cent of its membership, must be significantly representative,<sup>125</sup> and must operate with a code of practice that offers adequate protection to non-members.<sup>126</sup> The application to the Secretary of State will need to specify, amongst other things, how the collecting society will contact non-members and how it will distribute income. The Secretary of State will publish the application for at least 28 days and consider any representations, before deciding whether to grant authorization (or the terms thereof). The authorization lasts for five years, but can be modified, renewed, or revoked. Provision is made for opt-outs and for requirements that the relevant collecting society publicize details of material that thus falls outside the scheme. Licences granted under the scheme are stated to have effect as if granted by the owner of the work or right. Fees collected on behalf on non-members are, after nine months, to be put into separate accounts,<sup>127</sup> and if unclaimed after a specified period, transferred to the Secretary of State.<sup>128</sup> On this basis, the real benefit of these schemes will largely be convenience for users and, importantly, not for members of the society.

## 10 DIGITAL COPYRIGHT EXCHANGES

For virtually a century, collecting societies proved to be an effective way of linking copyright holders with potential copyright uses. However, in the digital environment, even these organizational forms seem to have proved inadequate. Digitization has provided opportunities for individuals to become significant exploiters of copyright material held by others, whether by creating web pages or otherwise. Collecting societies have been seen to be ill-equipped to offer solutions to users who want to use a range of different types of work, of varying levels of obscurity, in low-value activities. One need only look at the ‘IPKat’ website, the leading UK blog on intellectual property, to see that a key feature of a blog is the inclusion of illustrative material designed to entertain alongside serious work of substantive commentary.

The question of establishing some sort of copyright clearing house was mooted in the Carter Report entitled *Digital Britain*.<sup>129</sup> Following the Hargreaves Review, the matter was taken forward in the Hooper Report. The first interim report, published in spring 2012, diagnosed the problems that needed attention to improve the ‘efficiency and effectiveness’ of copyright licensing;<sup>130</sup> the final report, dated July 2012, proposed a ‘copyright hub’.<sup>131</sup> The hub would be targeted at:

... the very high volume of automatable, low monetary value transactions coming mostly from the long tail of small users—the small digital start-up company wanting to use music

<sup>124</sup> The draft Copyright (Extended Collective Licensing) Regulations 2014, in UK IPO, *Extending the Benefits of Collective Licensing* (2013), 22ff. <sup>125</sup> *Ibid.*, reg. 3(4)(b).

<sup>126</sup> *Ibid.*, reg. 4(5). <sup>127</sup> See CRM Dir., Art. 13(2).

<sup>128</sup> CRM Dir., Art. 13(4) (suggesting that the monies become non-distributable after three years), but cf. Art. 13(5) and (6).

and images and text creatively for its customers, the teacher in the classroom, a user posting a video on You Tube.<sup>132</sup>

Copyright holders will be able to register and offer licences through the hub, and potential licensees would go there for ‘easy to use, transparent, low transaction cost copyright licensing’.<sup>133</sup> The hub, modelled on the US Copyright Clearance Center, would be ‘linked to a growing range of digital copyright exchanges’, such as that of PRS for Music and Getty Images, as well as being a place where individual creators, such as photographers, could ‘register and offer their rights directly’.<sup>134</sup> To facilitate this, the Hooper Report recommended action favouring the further development of international standard identifiers (already under way in forums such as the Linked Content Coalition), backed up with severe sanctions for stripping metadata.<sup>135</sup> With ‘good signposting and navigation’, the Hooper Report anticipates that the hub would become ‘the obvious platform for copyright licensing transactions’,<sup>136</sup> either automated or customized ‘manual’ licensing. The principle of the hub would be that it would be ‘voluntary, opt-in, non-exclusive and pro-competitive’.<sup>137</sup> The Hooper Report also recognized that such a hub would interact well with proposed orphan works regimes<sup>138</sup> and the further development of information systems that facilitate ‘diligent searches’. With modest financial support from government, a website for the copyright hub has been launched.<sup>139</sup>

## LIMITS ON EXPLOITATION

### CHAPTER CONTENTS

1 Introduction	312	4 Regulation of Contracts for the Protection of Users	329
2 Limits on Agreements between Authors and Entrepreneurs	313	5 Orphan Works	330
3 Competition Law and the Exploitation of Copyright	320	6 Controlling Collecting Societies	332

### 1 INTRODUCTION

The terms and conditions under which a copyright work is transferred or exploited are usually determined contractually by the parties. In this chapter, we look at the exceptional situations in which the law controls the way in which those rights are exploited. We begin by looking at the various mechanisms that are used to regulate contracts between authors and entrepreneurs. We then go on to examine the impact that British and European competition law has on copyright owners' ability to exploit their copyright. In turn, we consider the ways in which copyright contracts are regulated in respect to users of copyright. Finally, we explore the various controls that are imposed on collecting societies.

Before reviewing these matters, it is important to note that there are many other restrictions placed on the owners' ability to exploit and use the copyright work that we will not examine here. Although copyright is described as a 'property right' and therefore might be expected to give absolute dominion, copyright law operates as an exclusionary right: it prevents all parties (other than the copyright holder) from exploiting the work. Copyright, however, does not confer on the proprietor of the copyright any positive rights to make and sell copies of the work. Consequently, the copyright owner will be subject to the regulatory regimes in the field in question (relating, for example, to the showing of films or broadcasts), and criminal laws (such as obscenity or public order legislation). Another factor that may affect the ability of a copyright owner to exploit a work is the rights that exist in any underlying works. For example, where the owner of the copyright in an English translation of a French novel wishes to exploit the copyright in the translation, it will be necessary for them to obtain the permission of the owner of copyright, if any, in the French novel that has been translated. With some copyright works, such as films or multimedia works, a whole host of prior right owners will have to be identified, approached, and persuaded to consent to the exploitation. It should be noted that one joint owner may not exploit the work without the licence of the other owners.<sup>1</sup>

## 2 LIMITS ON AGREEMENTS BETWEEN AUTHORS AND ENTREPRENEURS

This section considers the extent to which UK law will interfere to regulate the terms of transactions between authors and entrepreneurs, either to protect the psychological link between the author and their work, or to protect an author's financial interests. A number of other jurisdictions, notably France and Germany, include within their copyright legislation provisions relating to the interpretation of copyright contracts. They also impose overriding terms that protect the financial interests of authors.<sup>2</sup> In the United Kingdom, there are very few provisions specifically directed at authors. The legal validity of such arrangements is generally dependent upon the law of contract, not the law of copyright. In the United Kingdom, the basic principle is that a contract freely entered into by an adult is binding. A court will not reopen the contract merely because the court thinks that the terms are unreasonable or unfair. The main way in which authors' interests are protected derives less from legal regulation than from collective processes, such as union activity or the promotion of standard contracts like those formulated by the Society of Authors and the Writers' Guild.<sup>3</sup> Individual authors and artists are also better able to secure reasonable terms by means of engaging literary agents.

Having said this, a contract entered into between an author and entrepreneurs may be regulated in a number of ways. On occasions, the general contractual doctrines of undue influence and restraint of trade have been used to protect particularly vulnerable authors from the more egregious of practices. In other cases, the courts may interfere with the sanctity of author–entrepreneur contracts where they are anti-competitive (under either domestic or European law). After looking at these, we will examine the specific terms that are implied by statute into certain contracts.

### 2.1 UNDUE INFLUENCE

If a disadvantageous bargain is the result of the exercise of undue influence, the court may set the bargain aside. An extreme example would be where an author assigned copyright to a publisher because of threats made by that publisher. However, the court's power to interfere extends beyond those extreme scenarios to all situations in which a 'person in a position of domination has used that position to obtain unfair advantage for himself, and so caused injury to the person relying on his authority or aid'.<sup>4</sup> For the courts to interfere in the sanctity of the contract, two elements need to be satisfied: first, it must be shown that the parties are in a relationship in which one person has influence over another; and second, it must be shown that the influence was used to bring about a 'manifestly disadvantageous transaction'.<sup>5</sup> If undue influence exists, the contract is then voidable, and copyright assigned thereunder may be re-vested in the author. It seems that, since the contract is voidable (as opposed to void), contractual dealings with bona fide purchasers that take place before the contract is avoided will remain binding.

<sup>2</sup> See L. Bently, *Between a Rock and a Hard Place* (2002); W. Cornish, 'The Author as Risk-Sharer' (2002) 26 *Colum JL & Arts* 1; G. D'Agostino, *Copyright, Contracts and Creators: New Media, New Rules* (2010); W. Nordemann, 'A Revolution of Copyright in Germany' (2002) 49 *J Copyright Soc'y USA* 1041.

<sup>3</sup> Even here, however, competition law may limit collective self-help: *In Re: Royal Institute of British Architects*, Case ref GP/908 (March 2003) ('fee guidance' infringed the Ch. 1 prohibition).

<sup>4</sup> *National Westminster v. Morgan* [1985] 2 WLR 588, 599 (quoting Lord Shaw).

<sup>5</sup> The relationship need not be one of domination: *Goldworthy v. Brickell* [1987] Ch 378, 404–6.

In order to have a contract set aside on the basis of undue influence, it must first be shown that the parties are in a relationship in which one person has influence over another—that is, it is necessary to demonstrate a ‘dominating influence’. The most common situation in which this occurs is where the parties are in a ‘fiduciary’ relationship—that is, one of trust. Where the relationship between the parties is deemed by the court to be fiduciary, the existence of a dominating influence is presumed. In most cases of copyright assignments, such as a publishing agreement, such a fiduciary relationship is unlikely to exist because there will rarely be any pre-existing relationship. An example of an exception to this is provided by *Elton John v. James*.<sup>6</sup> In that case, Elton John sought to avoid an agreement tying him to a publishing arrangement with James for six years. Nicholls J held that there was a ‘dominating influence’ even though the acquaintance of John and James was short before the publishing agreement was signed, because James ‘really took charge’, while the writer was young and eager, and received no independent advice, reposing trust ‘in a man of stature in the industry that he would treat them fairly’.<sup>7</sup>

A similar position was reached in *O’Sullivan v. Management Agency*.<sup>8</sup> This decision arose as a result of the fact that a young and then unknown composer named Gilbert O’Sullivan entered into an exclusive management agreement with the defendant. The defendant operated through a number of companies with which O’Sullivan entered into publishing and other agreements. O’Sullivan later sought a declaration that these contracts were void and unenforceable on the ground that they had been obtained by undue influence. Mars-Jones J held that the defendant was in a fiduciary position and thus that the agreements were presumed to have been obtained by undue influence. The associated companies were equally subject to fiduciary obligations.<sup>9</sup> Although there had been no pressure placed on O’Sullivan to execute the agreements, because a fiduciary relationship existed, the onus was on the defendants to show that O’Sullivan had been fully informed and freely entered the agreements. Because O’Sullivan had no independent advice, the defendants were unable to establish that the agreements should stand.<sup>10</sup>

In order to have a contract set aside on the basis of undue influence, it must also be shown that the dominating influence was used to bring about a transaction that was ‘manifestly disadvantageous’. The problem that confronts authors and artists here is that, in many cases, their grievances are collective, rather than individual, in nature. Consequently, the possibility exists for an assignee or exclusive licensee to deny that there is disadvantage by referring to agreements with other authors and the practices of other entrepreneurs. It should be noted that this tactic does not always work. For example, in *Elton John v. James*, some of the publishing agreements were found to be unfair even though James acted in a bona fide manner, imposing terms standard in the trade.<sup>11</sup> In that case (as with the *O’Sullivan* decision), the court was influenced by the fact that the royalty under the contract was less than that paid to other ‘unknown’ artists.

## 2.2 RESTRAINT OF TRADE

The second way in which vulnerable authors are protected is via the doctrine of ‘restraint of trade’. As it suggests, this doctrine reflects a general policy of contract law that a person

<sup>6</sup> *Elton John v. James* (1985) [1991] FSR 397. <sup>7</sup> *Ibid.*, 451.

<sup>8</sup> [1985] QB 428. <sup>9</sup> *Ibid.*, 448 *per* Dunn LJ.

<sup>10</sup> In an attempt to achieve ‘practical justice’, the Court of Appeal set aside the assignments of copyright and required the defendants to account for profits made from them, but subject to deduction of a service fee: [1985] QB 428, 458–9, 466–9, 471–3.

<sup>11</sup> *Elton John v. James* (1985) [1991] FSR 397, 453.

should be able to practise their trade.<sup>12</sup> Contracts that restrict this right will be scrutinized by the courts to ensure that they are justified.<sup>13</sup> In these circumstances, the courts have said that the terms must be no more than is reasonably required to protect the legitimate interests of the promisee and the public interest.<sup>14</sup> This doctrine has been important in relation to the long-term contracts that have been common in the music industry.

In *Schroeder Music Publishing Co. v. Macaulay*,<sup>15</sup> the House of Lords held that an agreement between a songwriter and a publisher was invalid because it was in restraint of trade. The agreement was in a standard form and required the songwriter to assign copyright in his works to the publisher. The duration of the agreement was to be five years, and if the royalties for those years exceeded £5,000, a further five-year period. In effect, the songwriter was bound to the publisher for ten years. However, the publisher was under no obligation to exploit the songs. Lord Reid said that it was an unreasonable restraint 'to tie the composer for this period of years so that his work will be sterilized and he can earn nothing from his abilities as a composer if the publisher chooses not to publish'.<sup>16</sup> Only a clause permitting the composer to terminate the agreement could save it.

In *Zang Tumb Tuum v. Holly Johnson*,<sup>17</sup> the Court of Appeal considered a publishing agreement and a recording agreement that the 1980s group Frankie Goes to Hollywood signed with Perfect and ZTT, respectively. The publishing agreement was for five years and the recording agreement possibly for nine years. Soon after the group became successful, Holly Johnson left the group. ZTT tried to enforce a 'leaving member' clause in the recording contract and sought an injunction to restrain Johnson from working for another record company. ZTT's action failed. Applying the doctrine of restraint of trade, the Court of Appeal set aside both agreements. The Court was particularly influenced by the duration of the agreement, Dillon LJ saying that:

[S]tringent provisions such as many of those in the recording agreement may be justifiable in an agreement of short duration. But the onus must, in my judgment, be on the recording company to justify the length and the one-sidedness of the provisions as to its duration in this recording agreement.<sup>18</sup>

The Court held that ZTT had failed to justify the terms.

The doctrine's limitations were highlighted in *Panayiotou v. Sony Music Entertainment*.<sup>19</sup> Panayiotou, a songwriter and singer who worked under the name 'George Michael', sought to have the recording agreement into which he had entered with Sony in 1988 set aside. The background to the agreement was relatively complicated. In 1982, as a member of the group Wham!, Michael signed an agreement with a record company called Innervision. After some initial success, the validity of the agreement was called into question. Subsequent legal proceedings were settled and, in 1984, a new agreement was entered into between Wham! and Sony (which had been licensees of Innervision). This agreement placed Wham! under a potential obligation to record eight albums. When the group disbanded in 1986, Sony exercised its 'leaving member clause', which was to the

<sup>12</sup> *Schroeder Music Publishing Co. v. Macaulay* [1974] 3 All ER 616, 621 per Lord Reid. See also below at pp. 1168–9.

<sup>13</sup> Certain categories may be excluded from the doctrine: *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 320. The doctrine has been held to apply to an exclusive agreement over image rights, even though it left unaffected the promisee's ability to trade in their primary field (football): *Proactive Sports Management Ltd v. Rooney* [2011] EWCA Civ 1444, [93] per Arden LJ.

<sup>14</sup> This is referred to as the 'Nordenfelt test' after *Nordenfelt v. Maxim Nordenfelt* [1894] AC 535.

<sup>15</sup> [1974] 3 All ER 616. <sup>16</sup> *Ibid.*, 622. <sup>17</sup> [1993] EMLR 61. <sup>18</sup> *Ibid.*, 73.

<sup>19</sup> [1994] EMLR 229. For criticism, see A. Coulthard, 'George Michael v. Sony Music: A Challenge to Artistic Freedom?' (1995) 58 MLR 731.

effect that the 1984 agreement was to continue to bind Michael as an individual recording artist. After the success of Michael's first solo album (*Faith*), the 1984 agreement was renegotiated and replaced by a new agreement with Sony (the 1988 agreement). This also bound Michael, if the defendant so wished, to deliver a further eight albums and was to endure for 15 years. As part of the renegotiation, Michael was given much improved financial terms. As a result of changes in the corporate structure of the defendant company, Michael became disenchanted and, in 1992, sought to release himself from his obligations to Sony.

Parker J rejected Michael's claim that the 1988 agreement should be set aside. The main ground for rejecting George Michael's claim was that it was contrary to public policy to seek to reopen a previously compromised action and that the 1984 agreement was such a compromise.<sup>20</sup> The 1988 agreement, being based on the 1984 predecessor, was covered by the same policy. However, Parker J went on to consider whether, had there been no compromise, the 1988 agreement would have been an unreasonable restraint of trade. He found that the agreement was restrictive of trade,<sup>21</sup> but that the restraint was reasonable. Although not explicit, Parker J appears to have accepted that the restraint was necessary to protect the defendant's interests not merely in recouping the investment that it had placed in Michael, but also the investment that it generally made in young artists who turned out to be unsuccessful.<sup>22</sup> Moreover, the restraint was reasonable as regards Michael's interests given the generous remuneration that was to be promised to the artist; the length of the agreement was simply a product of Michael's success. Parker J added that, when Michael's obligations under the 1984 agreement were taken into consideration, the 1988 agreement hardly restrained Michael at all.<sup>23</sup>

The *Panayiotou* case makes it clear that there are limits to the operation of the doctrine of restraint of trade. However, it has not provided any clear markers as to how to determine where those limits lie. More specifically, it is unclear what the legitimate interests of a recording or publishing company are and how the decision is to be made that the obligation (for example to produce eight albums, rather than three albums, or a five-year deal) is reasonable. Moreover, the case introduced a new limitation on the doctrine as a result of Parker J's final reason for dismissing Michael's claim: Parker J found that Michael, by requesting an 'advance' from Sony in 1992, had affirmed the existence of the contract and could not thereafter argue that it should be set aside.<sup>24</sup> If this approach is followed,<sup>25</sup> authors, artists, and performers who seek to have lengthy or one-sided agreements set aside will have to take great care to ensure that they do not accept the benefit of the agreement after being informed of its potential unenforceability.

### 2.3 ANTI-COMPETITIVE CONTRACTS

A further ground on which a court might reopen an agreement between an artist and an entrepreneur is on the basis that it is anti-competitive. More specifically, a contract may be declared to be void by virtue of Article 101 of the Treaty on the Functioning of the

<sup>20</sup> For criticism of this aspect of the case, see *ibid.*, 736.

<sup>21</sup> *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 342. <sup>22</sup> *Ibid.*, 361.

<sup>23</sup> Cf. *Watson v. Prager* [1993] EMLR 275. In fact, the 1988 agreement effectively required Michael to produce eight albums, not the six that would have been needed to meet his remaining obligations under the 1984 agreement.

<sup>24</sup> *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 385–6.

<sup>25</sup> It has been in *Nicholl v. Ryder* [2000] EMLR 632, but not in *Proactive Sports Management Ltd v. Rooney* [2010] EWHC 1807, [708]–[713] *per* Judge Hegarty QC, in which *Nicholl* was treated as a case of equitable estoppel. For arguments against the affirmation doctrine, see A. Coulthard, 'George Michael v. Sony Music: A Challenge to Artistic Freedom?' (1995) 58 *MLR* 73, 741–3.

European Union (TFEU) (ex Article 85 EEC and Article 81 EC).<sup>26</sup> As noted in Chapter 1, this renders void agreements (or clauses of agreements) that affect trade between member states and which have the object or effect of restricting competition within the Common Market. Articles 101 and 102 TFEU are applicable only to the conduct of undertakings. The case of *RAI/Unitel*<sup>27</sup> indicates that, when contracting to perform an operatic work, singers operate as ‘undertakings’, so that the agreement may be subject to Article 101 TFEU. Although the Commission took the view that an exclusive agreement concerning the broadcast of the performance of *Don Carlos* at La Scala in Milan was subject to Article 101 TFEU, today such an agreement would likely be permissible unless one of the parties were to have a market share of more than 15 per cent.

It seems possible that a contract between an author and an entrepreneur would fall outside the scope of Article 101 because the effect on competition might not be ‘appreciable’.<sup>28</sup> Alternatively, as with exclusive distribution agreements, the contract might be justifiable under Article 101(3).<sup>29</sup> An argument based on Article 101 TFEU was also raised, but rejected, in *Panayiotou v. Sony Music Entertainment*.<sup>30</sup> Parker J held that the 1988 agreement between Michael and Sony had no effect on trade between EU member states because the agreement operated ‘worldwide’,<sup>31</sup> that, because the 1988 agreement replaced the 1984 agreement, it in fact had no effect on trade at all,<sup>32</sup> and that it did not have the object or effect of restricting competition.<sup>33</sup> Moreover, because the agreement involved an assignment of copyright in the sound recordings to Sony, Parker J held that it fell within Article 345 TFEU (ex Article 222 EEC and Article 295 EC), which protects property.<sup>34</sup> Whether any or all of these conclusions are satisfactory has been doubted. However, had the contrary conclusion been reached—that the agreement infringed Article 101(1)—it is likely that the Commission would have been required to consider a deluge of individual applications for exemptions under Article 101(3).

Three developments that have taken place since the *Panayiotou* case are worth noting. The first is the Vertical Restraints Regulation (discussed in Chapter 42), which makes available a block exemption from Article 101 for ‘vertical agreements’ including exclusive supply agreements.<sup>35</sup> This means that even if an agreement falls within Article

<sup>26</sup> Article 102 TFEU applies to unilateral conduct of dominant undertakings. A contract with a dominant undertaking will not be enforced when to do so will allow an abuse to become manifest.

<sup>27</sup> [1978] *OJ L* 157/39, [1978] 3 *CMLR* 306; European Commission, *Twelfth Report on Competition Policy* (1982), [90].

<sup>28</sup> See Commission Notice on agreements of minor importance which do not appreciably restrict competition under Article 81(1) of the Treaty establishing the European Community (*de minimis*) [2001] *OJ C* 368/13 (22 December 2001). Below the threshold, the Commission considers that the competition authorities of member states should provide primary supervision.

<sup>29</sup> Article 101(3) is directly applicable from May 2004 and the old system, which required ‘prior notification’, has been abandoned. See Art. 1(2) of Council Regulation (EC) No. 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] *OJ L* 1/1 (4 January 2003); Communication from the Commission—Guidelines on the application of Article 81(3) of the Treaty [2004] *OJ C* 101/97 (27 April 2004).

<sup>30</sup> [1994] *EMLR* 229. For a review of this, see A. Coulthard, ‘*Panayiotou v. Sony Music Entertainment*’ [1995] *J Bus L* 414.

<sup>31</sup> [1994] *EMLR* 229, 416. <sup>32</sup> *Ibid.*, 420. <sup>33</sup> *Ibid.*, 425.

<sup>34</sup> It has since been recognized that Art. 345, which was primarily directed towards matters such as state ownership, does not affect the Treaty rules on the free movement of goods, non-discrimination, or powers to legislate: see *UK v. Commission*, Case C-30/90 [1992] *ECR* I-829, [18]; *Phil Collins v. Imirat*, Cases C-92 and 326/92 [1993] *ECR* I-5144, [17]–[28]; *Spain v. Council*, Case C-350/92 [1995] *ECR* I-1985, [16]–[23].

<sup>35</sup> Commission Regulation (EU) No. 330/2010 of 20 April 2010 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to categories of vertical agreements and concerted practices [201] *OJ L* 102/1 (23 April 2010) ((the ‘Vertical Restraints Regulation’, or VRR).

101(1) TFEU, it may automatically benefit from exemption under Article 101(3) as long as the market share of the purchaser is less than 30 per cent.<sup>36</sup> However, while a publishing, recording, or songwriting contract would fall within the general definition of a ‘vertical restraint’ in the Regulation,<sup>37</sup> the block exemption does not apply where the *primary object* of the agreement concerns intellectual property.<sup>38</sup> We await a decision on whether the primary object of such an arrangement concerns intellectual property. This seems more likely with publishing than recording agreements. However, even if the block exemption does not apply, a restrictive agreement may be found exempt individually under Article 101(3).

The second significant development since *Panayiotou* is that section 2 of the Competition Act 1998 introduced into the United Kingdom a national provision (the so-called ‘Chapter I prohibition’) equivalent to Article 101.<sup>39</sup> It seems that an author or artist will be better served by the domestic provision, since it does not require the applicant to show that the contract had an adverse effect on trade between member states. This is because the Competition Act requires only that the agreement ‘may affect trade within the United Kingdom’.<sup>40</sup> There is no express requirement that this effect must be ‘appreciable’ or ‘substantial’ (although there is an immunity from fines for ‘small agreements’ and ‘conduct of minor significance’<sup>41</sup>). However, as with the European provision, most vertical agreements are exempt from section 2 unless the agreement has as its primary object terms relating to the assignment or use of intellectual property.<sup>42</sup>

Third, and finally, it should be noted that, as from 1 May 2004, the effect of Regulation 1/2003<sup>43</sup> is to render Article 101(3) directly applicable by competition authorities and courts of member states. (Previously, such decisions could be made only by the European Commission.) This means that a finding that an exclusive recording agreement breaches Article 101(1) will not now produce the bureaucratic consequences (in terms of notifications) that it formerly would have entailed. This may make a court willing to abandon the reasoning employed in the *Panayiotou* case and to treat exclusive recording arrangements as anti-competitive, but to rely on its own assessment of Article 101(3) in deciding whether such arrangements improve the production of goods, while allowing consumers a fair share of the resulting benefit.

## 2.4 STATUTORY RIGHT TO EQUITABLE REMUNERATION

Although UK copyright law treats the terms of a contract as essentially a matter for voluntary negotiation, a significant exception has recently been introduced in relation to transfers of rental rights. This so-called ‘unwaivable right to equitable remuneration’

<sup>36</sup> VRR, Art. 3, assuming that it has no ‘hard core’ terms. <sup>37</sup> VRR, Art. 2(1).

<sup>38</sup> VRR, Art. 2(3). On the operation of the TTBER 2014, see Chapter 23.

<sup>39</sup> Competition Act 1998, s. 2. See J. Turner, ‘The UK Competition Act 1998 and Private Rights’ [1999] *EIPR* 181.

<sup>40</sup> Competition Act 1998, s. 2(1)(a).  
<sup>41</sup> Competition Act 1998, ss 39 and 40; Competition Act 1998 (Small Agreements and Conduct of Minor Significance) Regulations 2000 (SI 2000/262). But the CMA (and previously the OFT) takes the view that an agreement will have no appreciable effect on competition if the parties’ combined share of the market does not exceed 25 per cent.

<sup>42</sup> But the TTBER 2014 might operate: see Chapter 23. Agreements under UK law are treated in a similar manner to that which would be achieved under EU law: Competition Act 1998 (Land Agreements Exclusion and Revocation) Order 2004 (SI 2004/1260).

<sup>43</sup> Council Regulation (EC) No. 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] *OJ L* 1/1 (4 January 2003).

marks a first step in the transplanting of provisions protecting authors in countries such as France and Germany, via the process of European harmonization,<sup>44</sup> into UK copyright law. Section 93B of the Copyright, Designs and Patents Act 1988 (CDPA 1988) specifies that where a person transfers the rental right ‘concerning’ a film or sound recording to the producer of the sound recording or film, ‘he retains the right to equitable remuneration for rental’. The potential beneficiaries of the retained right are the authors of literary, dramatic, musical or artistic works, and the principal director of a film.<sup>45</sup>

The right applies whether the transfer is presumed under section 93A (or with performers, section 191F) or is voluntarily transferred. The right to remuneration cannot be excluded by agreement.<sup>46</sup> The remuneration is to be claimed from the person ‘for the time being entitled to the rental right’, and the relevant time is presumably the time of rental rather than of claim. The right can be assigned only to a collecting society, by testamentary transmission, or by operation of law (for example on bankruptcy). The amount deemed equitable is to be determined by agreement or, failing this, by the Copyright Tribunal. In determining what is equitable, the Tribunal is directed to take into account the importance of the contribution of the author or performer to the film or sound recording. Remuneration is not to be considered inequitable merely because it was paid by way of a single payment or at the time that the rental right was transferred.<sup>47</sup>

## 2.5 HARMONIZATION?

As can be seen, with one or two exceptions, English law leaves authors free to make arrangements for the exploitation of their rights and rarely interferes to protect authors against decisions that are not in their long-term interests. In contrast, most EU member states have provisions regulating the terms and conditions of contracts between creators and exploiters.<sup>48</sup> So far, the only harmonization in this area was the ‘unwaivable equitable right of remuneration’ conferred on authors and performers after the transfer of their rental rights. In 1992, this looked like this was going to be the first stage of a European copyright law that would protect authors from unfair contractual exploitation—but little appetite seemed subsequently to exist for further harmonization. The Commission has stated that differences between contractual rules are not significant enough to require harmonization.<sup>49</sup> The latest consultation, begun in 2013, may reopen the debate.<sup>50</sup>

<sup>44</sup> More specifically, the Rel. Rights Dir., Art. 4.

<sup>45</sup> CDPA 1988, s. 191G, has the same effect as regards performers. It seems that CDPA 1988, s. 93B, applies not only to circumstances in which the work is incorporated in a film or sound recording (e.g. the music used on a film), but also where the work is to be rented with the sound recording or film, such as might occur with artwork on a record sleeve. This conclusion is consistent with the expansive definition of author in CDPA 1988, s. 93B(1)(a), as covering authors of artistic works, and the use in s. 93B(1) of ‘concerning’. However, s. 93C(3) refers to the importance of the ‘contribution . . . to’ the sound recording or film.

<sup>46</sup> CDPA 1988, s. 93B(5).

<sup>47</sup> The right applies even where transfers were made pursuant to agreements made prior to 1 January 1994, but only if the author asserted a claim to that effect between 1 December 1996 and 1 January 1997: Rel. Rights Regs, reg. 33(b).

### 3 COMPETITION LAW AND THE EXPLOITATION OF COPYRIGHT

In this section, we look at the impact that UK and European competition law have on the copyright owner's ability to exploit copyright.

#### 3.1 REFUSALS TO LICENSE

In general, copyright is regarded as a property right that its owner may use or not use as they so wish: an author cannot normally be compelled to publish their private letters or manuscripts, nor are publishers required to keep their books 'in print'. Nevertheless, just as, in exceptional circumstances, competition law will require a property owner to make available an 'essential facility' to an economic operator,<sup>51</sup> so—exceptionally—competition law might require a copyright owner to license their rights to other traders.<sup>52</sup> The legal basis for this requirement is Article 102 TFEU, which prohibits the 'abuse' of a 'dominant position'.<sup>53</sup> An operator holds a 'dominant position' when it holds a position of economic strength that enables it to behave to an appreciable extent independently of its competitors, customers, and consumers.<sup>54</sup> It is generally accepted that a dominant firm has the right to choose its trading partners.<sup>55</sup> However, operators in a dominant position are regarded as having a 'special responsibility' not to allow their conduct to impair competition and, in 'exceptional circumstances', the holder of an intellectual property right may be required to license others. If an operator in such a position fails to license its copyright, such refusal may be regarded as an abuse and can result not merely in the order of a compulsory licence, but also in very substantial fines.<sup>56</sup> It is also the case that an obligation to license may be imposed to remedy other competition law infringements.<sup>57</sup>

The first case in which the Court of Justice affirmed the application of Article 102 to copyright was *RTE and Independent Television Publications v. Commission* (known as the 'Magill' case).<sup>58</sup> The decision in *Magill* arose from the practice whereby the Irish broadcasting organization (RTE), which owned copyright in its television schedules, refused to license newspapers to publish television listings in a weekly format. The effect of this was that the only weekly guides available were those issued separately by RTE and the other broadcasting organizations (BBC and ITV). As such, if a viewer were to want to plan their television viewing for the week ahead, they would have to purchase all three magazines. Magill, who proposed to publish a comprehensive guide, claimed that the refusal to license contravened Article 102. The Commission agreed and ordered the defendant to license the listings.<sup>59</sup>

<sup>51</sup> *Commercial Solvents v. Commission*, Cases C-6 and 7/73 [1974] ECR 223.

<sup>52</sup> In so doing, competition law does not violate TRIPS because special provision is made in TRIPS, Art. 40(2): *Microsoft v. Commission*, Case T-201/04, [2007] 5 CMLR (11) 846, 1077, [1192].

<sup>53</sup> I. Govaere, *The Use and Abuse of Intellectual Property Rights* (1996), 135–50.

<sup>54</sup> *Compagnie Maritime Belge Transports and ors v. Commission*, Cases C-395 & 396/96 P [2000] ECR I-365, [34].

<sup>55</sup> European Commission, *Article 102 Enforcement Priorities Guidance* [2009] OJ C 45/7, [75].

<sup>56</sup> In the case of Microsoft, the Commission's 2004 Order imposed a fine of €497 million: *Decision 2007/53 relating to a proceeding pursuant to Art. 82 EC and Art. 54 of the EEA Agreement against Microsoft Corp.*, COMP/C-3.37.792–*Microsoft* [2007] OJ L 32/23. The level of the fine was challenged by Microsoft before the CFI, but the Court affirmed: *Microsoft Corp. v. Commission*, Case T-201/04 [2007] 5 CMLR (11) 846, [1326]–[1367].

<sup>57</sup> *Volvo v. Veng*, Case 238/87 [1988] ECR 6211.

<sup>58</sup> [1995] 4 CMLR 18.

<sup>59</sup> *Magill TV Guide/ITP, BBC and RTE* [1989] OJ L 78/43.

The Court of Justice held that the broadcasting organization held a dominant position in the market for weekly television magazines.<sup>60</sup> The Court also agreed that the refusal to license was an abuse. It observed that the refusal to license an intellectual property right ‘cannot of itself constitute abuse of a dominant position’, but that ‘the exercise of an exclusive right by the proprietor may, in exceptional circumstances, involve abusive conduct’.<sup>61</sup> The Court of Justice agreed with the General Court that this was a case of abuse, because (i) there was a specific, constant, and regular potential demand on the part of consumers for comprehensive weekly listings, (ii) demand was going unmet because the appellants refused to supply listing information to others, and (iii) there was no ‘justification’ for this behaviour related either to broadcasting or to the publishing of television magazines. The consequence of the refusal to license was that the broadcasters reserved to themselves the secondary market in weekly television guides by excluding all competition from that market.

Parties in subsequent cases have sought to explore the scope of the *Magill* holding,<sup>62</sup> but so far the courts have managed to make determinations within its parameters. In *IMS Health GmbH & Co. OHG v. NDC Health GmbH & Co. KG*,<sup>63</sup> for example, the Court of Justice indicated that it is ‘sufficient’ to constitute an abuse if these elements are present (leaving open the question of whether all elements of *Magill* must be present).

### 3.1.1 Indispensability

The first requirement is that the asset must be ‘indispensable’ for operation of another’s business.<sup>64</sup> This means that it must be impossible, or at least unreasonably difficult, for an undertaking to operate in the relevant market without a licence.<sup>65</sup> In *IMS Health*, IMS provided information to pharmaceutical firms about sales by wholesalers to pharmacies (which gave the firms an indication of doctors’ prescribing habits, and thus enabled the pharmaceutical companies to assess and respond to the effectiveness of their marketing to doctors). For privacy purposes, the information had to be collated from data relating to at least three pharmacies. With the assistance of pharmaceutical firms, over a number of years IMS had developed a geographical model for analysing the German pharmaceutical market—a so-called ‘brick structure’, comprising 1,860 segments—which it used from January 2000. IMS believed that NDC was using the same brick structure and brought an action for copyright infringement. The Frankfurt *Landgericht* (that is, regional court)

<sup>60</sup> [1995] 4 CMLR 18, 718, [50]. The Court’s reasoning on this point has also been treated as less than fully satisfactory: T. Vinje, ‘The Final Word on *Magill*’ [1995] *EIPR* 297, 299. Subsequent commentaries have suggested that one distinguishing feature of *Magill* was that the dominance of RTE, ITV, and the BBC was in the provision of broadcasting services.

<sup>61</sup> [1995] 4 CMLR 18, 718, [50].

<sup>62</sup> The differences between the Commission and the CFI in the *IMS* case related to the very broad interpretation that the Commission was taking on when an abuse would be found under Art. 102: *IMS Health* [2002] OJ L 59/18; *IMS Health Inc v. Commission*, T-184/01 R [2002] 4 CMLR 58. Moreover, in the *Microsoft* case, the Commission argued that the application of *Magill* did not require the presence of all of the elements identified in *Magill*. Nevertheless, it argued, and the General Court found, that all those elements were present: *Microsoft Corp. v. Commission*, Case T-201/04 [2007] 5 CMLR (11) 846, [712].

<sup>63</sup> Case C-418/01 [2004] 4 CMLR (28) 1543, [38].

<sup>64</sup> In *Microsoft v. Commission*, Case T-201/04 [2007] 5 CMLR (11) 846, much time was spent contesting exactly what interoperability information was required, Microsoft claiming that the Commission’s orders in effect required disclosure that would enable its competitors to clone its products and arguing that all that it should need to disclose was sufficient information to allow its competitors’ products to connect with its system (‘one-way’ functionality). The CFI declined to overturn the Commission’s ruling, agreeing that, for the competitors to remain viable, the information must be sufficient to enable ‘two-way’ functionality and observing that the requirements imposed fell well short of requiring the revelation of source code or enabling cloning.

<sup>65</sup> *Ibid.*, [28].

granted an interim injunction, but referred various questions concerning the application of Article 102 TFEU to the Court of Justice.<sup>66</sup> One issue was whether use of the brick structure was ‘indispensable’ to NDC’s operations.<sup>67</sup> It was clear that the brick structure had been developed with the assistance of the pharmaceutical companies and that there would likely be resistance (and costs) were NDC to adapt to a different basis for assessing data. In these circumstances, even were NDC to develop an alternative structure, it might ‘be obliged to offer terms which are such as to rule out any economic viability of business on a scale comparable to that’ of IDC.<sup>68</sup> The Court of Justice advised that these factors were relevant to the national court’s assessment of the ‘indispensability’ of using the brick structure for the provision of data services.

In contrast, in *Tierce Ladbroke v. Commission*,<sup>69</sup> the proprietor of a chain of betting shops in Belgium complained that a refusal by the owner of rights in certain televised pictures of French horse races to allow retransmission in the applicant’s betting shop amounted to a breach of Article 102. The General Court held that while the refusal to license the complainant was an exercise of power from a primary market (transmission of horse races) into a secondary market (betting shops), the refusal to license in no sense prevented the defendant from operating in the secondary market. The provision of pictures was not essential for the applicant’s activity.

### 3.1.2 New product

The second requirement—that of a new product—was also at issue in *IMS Health*.<sup>70</sup> A key question before the Court of Justice was whether it was necessary for NDC to establish that it was offering a ‘new product’, since, on the face of things, it appeared that NDC wanted to use the brick structure to compete with IMS in providing an identical service (pharmaceutical data services). The Court of Justice held that the refusal would be an abuse only where a licensee:

... does not intend to limit itself essentially to duplicating the goods or services already offered on the secondary market by the owner of the copyright, but intends to produce new goods or services not offered by the owner of the right and for which there is potential consumer demand.<sup>71</sup>

The Court elaborated a little upon the requirement that there be an upstream and downstream market. While acknowledging that this leveraging from one market into another was an essential component in the *Magill* analysis, the Court of Justice admitted that a certain artificiality was possible in constructing the upstream market; it did not have to be a market that was actually offered. Thus, in the *IMS* case, the Court contemplated that the market for the 1,860-brick structure itself might be the primary market.

The ‘new product’ requirement was also discussed by the General Court in *Microsoft v. Commission*.<sup>72</sup> Here, the General Court was asked to review a Commission decision

<sup>66</sup> In light of the injunction, NDC sought a licence to use the 1,860-brick structure, offering an annual licence fee of about €5,000. When that was refused, NDC lodged a complaint with the Commission alleging an infringement of Art. 102. The Commission adopted a decision ordering interim measures, on the basis that IMS was abusing its dominant position: [2002] *OJ L* 59/18. The President of the General Court suspended the Commission’s decision, because it had taken a very broad interpretation of *Magill*: *IMS Health Inc v. Commission*, T-184/01 R [2002] 4 *CMLR* 58.

<sup>67</sup> *IMS Health GmbH & Co. OHG v. NDC Health GmbH & Co. KG*, Case C-418/01 [2004] *ECR I*-5039 (ECJ, Fifth Chamber). <sup>68</sup> *Ibid.*, [29].

<sup>69</sup> Case T-504/93 [1997] *ECR II*-923. <sup>70</sup> Case C-418/01 [2004] 4 *CMLR* (28) 1543.

<sup>71</sup> *Ibid.*, [49]. <sup>72</sup> Case T-201/04 [2007] 5 *CMLR* (11) 846.

from 2004 fining Microsoft and ordering it to make available so-called ‘interoperability information’ about its work-group server systems to interested parties. ‘Work-group server systems’ are systems that connect PCs to each other, to common servers, and to printers, so that they can share files, share printers, and operate as efficient and secure networks.<sup>73</sup> Microsoft had a 60 per cent share of the work-group server market, so was in a dominant position.<sup>74</sup> While the Commission found that some information was available, it took the view that this was not sufficient to enable competitors to remain viably on the market. The 13-member Grand Chamber of the General Court therefore found that the refusal would prevent the appearance of a ‘new product’ because the refusal to permit full interoperability would limit technical development.<sup>75</sup> Evidence indicated that consumers preferred various facets (reliability, security) of the work-group server operating systems of Microsoft’s competitors and that the chief quality associated with Microsoft’s systems was their ability to interoperate.<sup>76</sup> In effect, people were buying Microsoft’s items primarily because they were locked in, when they would have preferred the technical features offered by Microsoft’s competitors. The refusal of Microsoft to make available relevant information was thus impeding ‘innovation’.

### 3.1.3 Elimination of competition

The third *Magill* requirement is that the refusal must be *likely to exclude all competition in the secondary market*. In the *Microsoft* case, Microsoft argued that the continued existence of competitors in the work-group server system market—namely, Unix, Linux, and Novell—indicated that the refusal to license the information had not eliminated competition in the market. The Commission rejected that view and the General Court affirmed. The General Court stated that it was not ‘necessary to demonstrate that all competition on the market would be eliminated. What matters . . . is that the refusal at issue is liable to or is likely to, eliminate all effective competition on the market.’<sup>77</sup> The existence of competitors with a marginal presence in niche markets was not evidence of effective competition.<sup>78</sup>

### 3.1.4 Objective justification

The final *Magill* requirement is that the refusal must *not be justified* by objective considerations. In the *Microsoft* case, the General Court said that the burden of proving objective justification lies on the operator holding the dominant position.<sup>79</sup> It is evident that the existence of intellectual property rights is not itself a sufficient basis (otherwise Article 102 could never apply to such rights).<sup>80</sup> In *Microsoft*, the General Court affirmed the Commission’s view that the existence of secrets was not of itself a good reason to refuse to license,<sup>81</sup> but would, it seems, have accepted as an objective justification a substantiated argument that the requirement to license would seriously have affected Microsoft’s incentives to innovate.<sup>82</sup>

## 3.2 EXCESSIVE PRICING

The competition provisions may also be applicable where a copyright (or database right) owner is willing to license, but only at a price that is unacceptable to the user. Some such issues arose in *Attheraces Limited, Attheraces (UK) Limited v. The British*

<sup>73</sup> The GC did not consider that the Commission had formulated the relevant market too narrowly: *ibid.*, [531]. <sup>74</sup> *Ibid.*, [555]–[558].

<sup>75</sup> *Ibid.*, [647]. <sup>76</sup> *Ibid.*, [652], [407]–[412]. <sup>77</sup> *Ibid.*, [563]. <sup>78</sup> *Ibid.*, [563].

<sup>79</sup> *Ibid.*, [688], [697]. <sup>80</sup> *Ibid.*, [690]. <sup>81</sup> *Ibid.*, [693]. <sup>82</sup> *Ibid.*, [701].

*Horseracing Board Limited, BHB Enterprises plc*,<sup>83</sup> in which the Court of Appeal considered whether the British Horseracing Board was guilty of ‘excessive pricing’, and thereby abusing its admittedly dominant position, in relation to its charges for supplying pre-race data to horse-racing broadcaster, Attheraces. The Court of Appeal allowed an appeal from the judgment of Etherton J, who had held that there was abuse.<sup>84</sup> The Court recognized the difficulties with deciding the ‘economic value of data’, which was a preliminary to deciding whether BHB’s pricing was excessive. The Court rejected Etherton J’s approach of asking what the cost of creating the information was and allowing a reasonable profit on that cost; instead, the Court accepted that the value to the user might also be a relevant component of the ‘economic value’ of the data.<sup>85</sup>

### 3.3 TYING

If traders in a dominant position need to think carefully before refusing to license their copyright, they should also think carefully before giving away their copyright-protected software with their other products. In *Microsoft*,<sup>86</sup> the Commission held that Microsoft had breached Article 102 TFEU by its bundling of Windows Media Player with its operating system package. The Commission had found that Microsoft was dominant in the operating system market, with a 90 per cent market share. During the early 1990s, it had offered (but not imposed) its competitor’s media players (in particular that of RealNetworks), but from the end of the 1990s it had included its own audio-streaming software and stopped supporting the software of its competitors.<sup>87</sup> The General Court agreed with the Commission’s analysis that there was abuse where (i) the tying (Windows OS) and tied (Media Player) products are two separate products, (ii) the undertaking concerned is dominant in the market for the tying product, (iii) customers are not offered the choice of buying the tying product alone, and (iv) the practice forecloses competition (in the market for the tied product).<sup>88</sup>

The General Court held that the operating system and the media player were, at the relevant time, two products. The Court was persuaded that these were two products as a result of evidence that Microsoft sometimes offered Windows without Media Player and sometimes marketed Media Player separately, and that there was demand (from employers) for Windows without Media Player.<sup>89</sup> The second factor, Microsoft’s dominance in the operating system market was not contested. As to the third factor, consumer choice, Microsoft argued that consumers got the Media Player for free, and were able to install and use alternative media players.<sup>90</sup> Referring to Article 102(d), Microsoft argued that the circumstances were different from the classic case of abuse by tying, which involved imposing an additional obligation or expense (for example an obligation to buy expensive nails to go with a nail gun). The Court rejected the arguments: just because there was no separate charge for Windows Media Player, this did not imply that it was included gratis. Moreover, it found that it was not technically possible to remove Windows Media Player and that the bundling provided consumers with an incentive to use the Windows Media Player ‘at the expense of competing media

<sup>83</sup> [2007] *EWCA Civ 38* (concerning supply of data, but not based on database right).

<sup>84</sup> [2005] *EWHC 3015* (Ch), [2006] *FSR* (20) 336.

<sup>85</sup> *Attheraces Limited, Attheraces (UK) Limited v. The British Horseracing Board Limited, BHB Enterprises plc* [2007] *EWCA Civ 38*, [218]. <sup>86</sup> Case T-201/04 [2007] 5 *CMLR* (11) 846. <sup>87</sup> *Ibid.*, [837].

<sup>88</sup> Recital 794 of the Commission decision, set out at *ibid.*, [842], and expressly adopted by the CFI at [859].

<sup>89</sup> Case T-201/04 [2007] 5 *CMLR* (11) 846, [912]–[944]. <sup>90</sup> *Ibid.*, [951]–[952].

players, notwithstanding that the latter are of better quality'.<sup>91</sup> Turning to the fourth element, the General Court affirmed the Commission's view that the sheer ubiquity of Windows Media Player, which could not be removed from the operating systems with which it was installed, was likely to foreclose competition.<sup>92</sup> Given that most operating systems were pre-installed on PCs and laptops by 'original equipment manufacturers' (which were given no choice but to install Windows Media Player), such manufacturers and consumers were unlikely to choose to install a second, non-Microsoft, media player. In fact, had Microsoft not adopted the bundling tactic, the Court suggested that there would have been real competition with the market leader from the 1990s, Real Player. Finally, the Court considered whether there was an objective justification for the behaviour, through efficiency gains that outweighed the harm from the anti-competitive action. The Court found the claimed technical efficiencies unsubstantiated. Microsoft therefore had rightly been fined by the Commission and ordered to offer its Windows operating system without the Media Player (although it was also permitted to continue to sell the package).

### 3.4 ANTI-COMPETITIVE CONTRACTUAL TERMS

The key provision of European competition law affecting copyright agreements is Article 101 TFEU (ex Article 85 EEC and Article 81 EC). This renders void all agreements that affect trade between member states and which have the object or effect of distorting competition within the Common Market.<sup>93</sup> The 'object' of an agreement is determined from its content, objectives, and economic and legal context.<sup>94</sup> If a tribunal is considering whether Article 101 has been breached by reference to the 'effect' of the agreement, it is necessary to show that competition has in fact been prevented, restricted, or distorted to 'an appreciable extent'.<sup>95</sup> Nevertheless, certain agreements that provide benefits may be exempt. In contrast with the fields of technology licensing and vertical restraints, the Commission has been slow to develop block exemptions in the copyright field. The Technology Transfer Block Exemption Regulation (TTBER 2014) exempts certain agreements that deal with copyright,<sup>96</sup> but only where such agreement is 'ancillary' to a pure patent licensing or know-how licensing agreement, or to mixed patent and know-how licensing agreements. The Vertical Restraints Regulation (VRR) is of more general applicability, exempting many agreements relating to the distribution of copyright works (for example the distribution of books or sound recordings). However, as we noted earlier, the exemption does not apply where the primary object of the agreement is the assignment or use of intellectual property rights. Therefore it will rarely be applicable to copyright licences, such as software licences. However, the exemptions made may provide an important guide to the thinking of the Commission on terms in such agreements.

As a result of the Competition Act 1998, UK regulation of copyright agreements parallels European competition law. Section 2 introduces the 'Chapter 1 prohibition', which

<sup>91</sup> Ibid., [971]. Whether this would be so today is doubtful, because changes in bandwidth mean that consumers can readily download competing systems.

<sup>92</sup> Ibid., [1036]–[1037].

<sup>93</sup> *Football Association Premier League Ltd v. QC Leisure and ors and Karen Murphy v. Media Protection Services Ltd*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber) ('FAPL'), [135].

<sup>94</sup> Ibid., [136]. <sup>95</sup> Ibid., [135].

<sup>96</sup> Regulation No. 316/2014 of 21 March 2014 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to categories of technology transfer agreements [2014] OJ L 93/17 (the '2014 Technology Transfer Block Exemption Regulation'). For more on the TTBER 2014, see Chapter 23.

is equivalent to Article 101 TFEU.<sup>97</sup> An agreement will be deemed to be exempt from the national prohibition if it is exempt from Article 101 TFEU under the Community's TTBER 2014 or VRR.<sup>98</sup>

With these general points in mind, we now look at the cumulative effect of the 'Chapter 1 prohibition' and Article 101 TFEU on various terms that are used in copyright contracts.

### 3.4.1 Agreements conferring exclusive territorial rights

A copyright licence commonly includes terms guaranteeing the licensee the exclusive right to sell the work in a particular territory. For example, the licence may grant someone the exclusive right to sell paperback versions of a book in the United Kingdom, or to show a film in public in Belgium. It may also include an undertaking by the licensor not to put the work on the market in that territory and an undertaking by the licensee not to sell the work in the territories of other licensees. The inclusion of such a guarantee of exclusivity may be important to a licensee, who has to invest in the advertising or marketing of the work, and who needs to ensure that they have a reasonable degree of control in the relevant market.

In related situations, the Commission has recognized *both* the value of such terms *and* the threat posed by exclusive licensing to the achievement of the internal market. Consequently, the Commission treats exclusive agreements as legitimate, but simultaneously prohibits certain terms that it considers will have an unduly restrictive effect on the practices of parallel importers. While the Commission allows terms that prohibit the active marketing of the work in the territory of another licensee, the agreement may not prohibit 'passive' sales.<sup>99</sup>

Where an exclusive territorial agreement covers the representation (or exhibition), as opposed to the distribution of copies of the work, it may also fall within Article 101 TFEU. In *Coditel II*,<sup>100</sup> a French company granted a Belgian company the exclusive right to exhibit the film, *Le Boucher*, in Belgium for seven years. The French company later licensed a German broadcasting company to broadcast the film on German television. When it did so, Coditel, a Belgian cable operator, included the film in its Belgian service. The question referred to the Court of Justice was whether the exclusive exhibition agreement was prohibited by Article 101 TFEU. The Court held that, in general, exclusive territorial licences do not infringe Article 101(1). However, the Court added that an exclusive licence might do so if the agreement were excessively long, or if the exercise of the right were to be likely to distort competition within the Common Market.<sup>101</sup>

*Coditel* now needs to be viewed in the light of *Football Association Premier League Ltd (FAPL) v. QC Leisure and ors*.<sup>102</sup> In that case, FAPL licensed broadcasting rights for live transmission of football matches on a territorial basis for a term of three years. It awarded the rights on an exclusive basis, which it explained was to maximize its returns.

<sup>97</sup> Competition Act 1998, s. 2. See OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline* (November 2001) OFT 418.

<sup>98</sup> Competition Act 1998, s. 10 (parallel exemptions).

<sup>99</sup> TTR, Art. 1(2), Recital 15; VRR, Art. 4(b); See *Re BBC* [1976] CMLR D-89. An OFT investigation into the CD market found evidence of past anti-competitive agreements requiring retailers of CDs not to import cheaper CDs from mainland Europe, or offering favourable terms to those who did not do so: see OFT, *Annual Report* (2002-03), 61.

<sup>100</sup> *Coditel SA v. Cine Vog Films SA (No. 2)*, Case 262/81 [1982] ECR 3381.

<sup>101</sup> *Ibid.*, 3401-2, [15], [17], [19]. See also *FAPL*, [137].

<sup>102</sup> *FAPL*. See, e.g., W. Batchelor and T. Jenkins, 'FA Premier League: The Broader Implications for Copyright Licensing' [2012] *ECLR* 157 (stating that *FAPL* 'effectively reverses or at least heavily distinguishes the *Coditel I* and *II* line of cases which held that territorial limits of content licensing were entirely legal').

To maintain the territorial exclusivity, each licensee broadcaster undertook to prevent the public from receiving its broadcasts outside the territory. This was done by means of encryption of the broadcast and making access to those broadcasts conditional on being in the territory.<sup>103</sup> *FAPL* brought an action against the importers of equipment and cards that enabled people in the United Kingdom to watch Greek broadcasts. The defendant argued that *FAPL* had breached Article 101 by requiring its Greek licensees to prevent the use of the cards outside Greece.<sup>104</sup> The Court of Justice held that the licence terms that obliged the Greek broadcaster not to supply decoding devices that could be used outside of the territory covered by the licence agreement were in breach of Article 101.<sup>105</sup> The Court referred to *Coditel II*, but (without casting doubt on the conclusions) noted that if the agreement were to tend ‘to restore the divisions between national markets’, that would frustrate the objective of integrating markets by making interpenetration of market ‘more difficult’.<sup>106</sup> As a matter of principle, these agreements were to be regarded as having the object of restricting competition within Article 101(1) TFEU.<sup>107</sup> The Court recognized that it might be that the legal and economic context might justify such a provision,<sup>108</sup> or that there might be circumstances in which a person could benefit from Article 101(3), but that no such justification had been persuasively offered.<sup>109</sup> The specific subject matter of any intellectual property rights in receiving ‘appropriate remuneration’ (not the ‘highest possible remuneration’) was sufficiently protected by the remuneration received from the Greek broadcaster, and there was no reason why that could not be calculated by reference to audiences not merely within Greece, but also outside that territory (on the basis of the numbers of decoders).<sup>110</sup>

Where does the *FAPL* case leave territorial licensing? Some commentators have seen it as having radical implications, undermining the comfort that the *Coditel* case had been taken to provide.<sup>111</sup> However, others have observed the rather limited scope of the holding: the Court emphasized that territorial licensing was not in issue, but only clauses reinforcing such licensing.<sup>112</sup>

### 3.4.2 Restrictive field of distribution agreements

Where a work has a number of potential markets, a copyright owner may wish to limit the field in which the licensee exploits the work. For example, a copyright owner may wish to license a work for sale by a book club separately from its sale by retail outlets. Such agreements are akin to ‘fields of use’ limitations. Under the Vertical Restraints Regulation,

<sup>103</sup> *FAPL*, [32]–[35].

<sup>104</sup> So the case did not concern territorial limitations themselves, just attendant obligations to enforce them: *ibid.*, [141].

<sup>105</sup> *Ibid.*, [144], [146].      <sup>106</sup> *Ibid.*, [139].      <sup>107</sup> *Ibid.*, [139].

<sup>108</sup> Here, the Court referred back to [118]–[121], where it had considered whether there was any justification for the limitation on free movement of services that was a consequence of the rules prohibiting the use of decoder cards from one territory in another. There, it distinguished *Coditel I* as a case involving unauthorized retransmission by cable, whereas in *FAPL* the Greek broadcaster was authorized and provided remuneration.      <sup>109</sup> *FAPL*, [145], where the Court referred back to [105]–[124].

<sup>110</sup> *Ibid.*, [105]–[117].

<sup>111</sup> See, e.g., B. Hugenholtz, ‘Europe 1 Premier League 0’, (9 October 2011) [kluwercopyrightblog.com](http://kluwercopyrightblog.com) (‘the judgment is likely to have far-reaching ramifications for current business practices in the broadcasting sector, as licenses conferring absolute territorial exclusivity are common, not only as regards televised football matches and other sporting events, but also in respect of motion pictures and other premium content offered by satellite pay TV services’).

<sup>112</sup> D. Doukas, ‘The Sky is not the (Only) Limit: Sports Broadcasting without Frontiers and the Court of Justice: Comment on Murphy’ [2012] *ELR* 605, 625 (the ruling is not the ‘gravedigger’ of territorial exclusivity).

these would be restrictions of the customers to whom the buyer may sell the contract goods or services. These would not be exempt unless the restriction were to be confined to active sales to an exclusive customer group allocated by the supplier to another buyer. If a copyright owner has given general retail rights exclusively to one person and book club rights to another, a restriction preventing the book club owner from actively selling outside the club would be exempt from Article 101. The Office of Fair Trading (now superseded by the Competition and Markets Authority) seems to have taken a similar stance as regards the application of the 'Chapter I prohibition'.<sup>113</sup>

### 3.4.3 Price limitations

A copyright owner may wish to restrict the price at which the licensee sells a particular product. They might also require the licensee to specify to subsequent purchasers that they may not resell the product at anything other than a specified price. Although such agreements have traditionally been treated as being unlawful, from 1956 until recently UK law rather surprisingly went out of its way to tolerate one such price-fixing arrangement in the form of the 'Net Book Agreement'. This was an agreement between members of the Publishers' Association to impose certain conditions on booksellers as regards the price at which certain books ('net books') could be sold.<sup>114</sup> However, in 1995, the majority of publishers decided to abandon the net book system. As a result, the exemption previously afforded to the Agreement was removed.<sup>115</sup>

Under the Vertical Restraints Regulation, attempts at resale price maintenance constitute 'hardcore' restrictions that prevent the block exemption from operating.<sup>116</sup> An individual assessment would therefore be necessary.<sup>117</sup> The domestic position is similar: a provision relating to minimum price maintenance that is, on its face, anti-competitive would need to be justified on the ground that it (i) improves the production or distribution of goods or promotes technical or economic progress, and also (ii) allows consumers 'a fair share of the resulting benefit'.<sup>118</sup>

### 3.4.4 Site licences

One of the characteristics of most digitized works is that users of the work will ordinarily infringe copyright (insofar as they make a temporary reproduction on their computer). As a result, licences are frequently needed to permit such use. In the cases of software, databases, and journals in electronic form, it has become common to limit permitted use to a particular location. The question arises whether such a restriction is anti-competitive. It has been argued that, to the extent that site licences operate as caps on output, they are anti-competitive and fall within Article 101 TFEU. For example, if the effect of licensing software to one particular terminal were to restrict the productive use of that software, such a licence may fall within Article 101. However, if a site licence is 'open', in the sense that it allows for expansion of output or has a clause allowing for further licences on commercial terms, then this objection does not operate.<sup>119</sup> Under the Technology Transfer

<sup>113</sup> See OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline* (November 2001) OFT 418, [2.21]; Competition Act 1998, s. 10.

Regulation,<sup>120</sup> restrictions on quantities of output will place agreement outside the block exemption.

#### 4 REGULATION OF CONTRACTS FOR THE PROTECTION OF USERS

In this section, we consider the ways in which the law interferes with copyright contracts for the benefit of ‘users’, by which we primarily mean individual consumers who wish to utilize copyright-protected material. The idea of protecting users from unfair contracts imposed by copyright owners is a relatively new one. In part, this has arisen because certain acts carried out by users have come to require the consent of copyright owners. In the past, a person who bought a book could do almost whatever they wished with the book without the need for further consent: the book could be read, lent to a friend, or sold to a charity shop without raising any potential liability. Today, as a result of technological developments, many similar acts (such as photocopying the book or reading an electronic version on screen) might now require permission. The second reason why contracts between copyright holders and users are becoming increasingly common is that new techniques of distribution, particularly digital dissemination, are removing intermediaries from the distribution process. A consumer who formerly would have bought a hard copy of a phonogram from a retailer can now be supplied with an equivalent digital version over the Internet directly from the copyright holder. This direct contact allows the copyright owner to reinforce any rights that they may have under copyright with obligations imposed as part of the contract that they have with the owner.

The main concern in these circumstances is that ‘click-through contracts’ will extend copyright owners’ rights beyond their existing scope. Consequently, such licences might impose conditions for use of works in which copyright has lapsed, or in the case of software might prohibit the making of back-up copies or decompilation, or in other cases might prohibit criticism or review.<sup>121</sup> As the use of electronic resources increases and such contracts become the norm, the ‘delicate balance’ between owners and users encapsulated in statutory copyright may be sacrificed.

Although the E-Commerce Directive specifies that ‘electronic contracts’ should be recognized as valid,<sup>122</sup> specific directives nevertheless indicate that certain exemptions may not be overridden by contract law.<sup>123</sup> For example, the Software Directive allows certain acts, including the decompilation of computer programs; it also renders void contracts that attempt to restrict those rights.<sup>124</sup> A similar clause has been introduced to prevent contractual circumvention of defences to infringement of copyright in databases.<sup>125</sup> In its implementation of the Hargreaves Review, the UK government has (with one or two exceptions) adopted a similar approach to the new and amended exceptions relating to data mining, disability, education, and libraries (as well as the proposed exceptions for personal use, quotation, and parody).<sup>126</sup> Moreover, the Information Society Directive explicitly takes on

<sup>120</sup> TTR, Art. 3(5).

board concerns about oppressive use of technological measures to prevent access to material falling within copyright's carefully defined exceptions. Article 6(4) of the Directive provided for a strange, barely comprehensible, compromise. This, and its UK implementation in sections 296ZE and 296ZEA of the 1988 Act, is reviewed in Chapter 13.

## 5 ORPHAN WORKS

One problem with exploiting copyright-protected material that has attracted increasing attention is that of so-called 'orphan works'. An orphan work is one the copyright owners ('parents') of which either do not exist or cannot be located. Orphan works exist in part because there is no formal structure for registering copyrights and keeping track of ownership. In some cases, the authors of works may not even appreciate that they have created something protected by copyright. In other cases, the ownership of copyright is impossible to trace, perhaps because a firm went bankrupt or the relatives of a deceased author cannot be identified. The fact that many works are protected by copyright, but that owners are not easy to identify, means that the market in copyright transactions is inefficient. It is inefficient because some transactions that would voluntarily occur—agreements to use copyright-protected material—are not occurring simply because the costs of locating the owner are greater than the value of the transaction to the potential licensee. In other cases, users simply take a risk or utilize litigation insurance in case the copyright holder does appear.

The issue of orphan works has arrived on the legislative agenda for two reasons. The first is that the potential problem is growing as copyright term is extended. The British Library has estimated that 40 per cent of all print works are orphan works.<sup>127</sup> The second is that digital technologies have given rise to new potential uses of such largely forgotten or valueless works, for example in digital archives, but also because they can now be made available profitably to niche markets. If such projects are not to be impeded by heavy costs investigating copyright owners, it is necessary to offer users some way of immunizing themselves from later liability. This could be done by providing some sort of limited defence or immunity from financial liability.

Such schemes have been under consideration, in the United States, United Kingdom, and European Union, since 2005.<sup>128</sup> In 2012, the European Union adopted the Orphan Works Directive; in 2013, the United Kingdom passed framework legislation facilitating a broader orphan works regime.<sup>129</sup>

The EU regime is relatively limited in scope, being designed to enable digitization of the contents of public libraries, museums, and archives.<sup>130</sup> The regime extends beyond authorial works to include related rights (phonograms) and also includes unpublished works that are publicly accessible as long as 'it is reasonable to assume that the rightholders

<sup>127</sup> Gowers Review, [4.91].

<sup>128</sup> Register of Copyrights, *Report on Orphan Works* (2006), available online at <<http://www.copyright.gov/orphan/>>; Gowers Review, [4.99]; IViR, *Recasting Copyright*, ch. 5; Commission Recommendation 2006/585/EC of 24 August 2006 on the digitisation and online accessibility of cultural material and digital preservation [2006] *OJ L* 236/28 (31 August 2006), Recital 10; European Commission, *Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions on Creative Content Online in the Single Market* (3 January 2008) SEC(2007) 1710, COM(2007) 836 final, [2.1].

<sup>129</sup> ERR 2013, s. 77 (introducing CDDA 1988, s 116A).

<sup>130</sup> OWD, Art. 1(1); CDDA 1988, Sch. 7, para. 2 (defining 'relevant body').

would not oppose the uses.<sup>131</sup> It does not, however, apply to stand-alone photographs.<sup>132</sup> The specified organizations are to be permitted to reproduce and make available ‘orphan works’<sup>133</sup>—that is, works in relation to which all or some of the ‘right holders’ cannot be identified or located despite a ‘diligent search’ having been carried out.<sup>134</sup> Such a search must be carried out for each and every work by consulting appropriate sources for the category of work in question.<sup>135</sup> The search is targeted at the country of first publication,<sup>136</sup> but if there is ‘evidence to suggest that relevant information on rightholders’ is to be found in other countries, sources in such countries ‘shall also be consulted’.<sup>137</sup> The details of such searches are to be recorded in a single publicly accessible online database managed by the Office of Harmonization in the Internal Market (OHIM). If a work is regarded as orphan in one member state, then that status should be recognized in other member states.<sup>138</sup> Should the right holder reappear, they may bring the orphan status of a work to an end<sup>139</sup> and the ‘revenant’ right holder is entitled to ‘fair compensation’ for past uses.<sup>140</sup> The EU regime is due to be implemented by 29 October 2014.<sup>141</sup>

The UK regime, while deploying the same definition of ‘orphan work’ (that is, a work the owner of which has not been found after a ‘diligent search’) is more ambitious.<sup>142</sup> Although not in operation at the time of writing, the basic framework has been put in place in section 116A of the CDPA 1988 (introduced in section 77 of the Enterprise and Regulatory Reform Act 2013).<sup>143</sup> Accordingly, when regulations are brought into force, the UK Intellectual Property Office (IPO) will be entitled to authorize uses of ‘orphan works’,<sup>144</sup> and will maintain a register of diligent searches, licences granted, and licences refused.<sup>145</sup> If satisfied, the IPO will be able to grant non-exclusive licences for up to seven years.<sup>146</sup> Licence fees will be payable ‘up front’ and will correspond to comparable fees for non-orphan works.<sup>147</sup> Key differences between the proposed regime and the EU regime

<sup>131</sup> OWD, Art. 1(3); CDPA 1988, Sch. 7, para. 2(2) (defining ‘relevant work’).

<sup>132</sup> Groups representing photographers have lobbied effectively in the United States, United Kingdom, and Europe in opposition to orphan work legislation and believe that the difficulties with identifying authorship are particularly prevalent in their field. For a taste, see <<http://www.stop43.org.uk>>

<sup>133</sup> OWD, Art. 6(1); CDPA 1988, Sch. 7, para. 3.

<sup>139</sup> OWD, Art. 5; CDPA 1988, Sch. 7, para. 7.

<sup>140</sup> OWD, Art. 6(5). Determined by the laws of the country in which the organization using the work is established: CDPA 1988, Sch. 7, para. 7(2).

<sup>141</sup> A draft statutory instrument, The Copyright (Certain Permitted Uses of Orphan Works) Regulations 2014, was circulated for consultation in UK IPO, *Copyright Works: Seeking the Lost* (2014), 26ff. The draft Regulations, if adopted, will add s. 44B and Sch. 7 into the CDPA 1988.

<sup>142</sup> CDPA 1988, s. 116A(3); Draft Copyright (Licensing of Orphan Works) Regulations 2014, reg. 3 (not identified or, if identified, not located after a diligent search). ‘Diligent search’ is defined in reg. 4 (‘shall comprise a reasonable search to identify and locate the right holder of the copyright work or performer’s right’). Although the definition is the same, the precise type of search that is appropriate may differ, because the proposed ‘licence’ might cover different acts.

<sup>143</sup> UK IPO, *Copyright Works: Seeking the Lost* (2014), with the draft Copyright (Licensing of Orphan Works) Regulations 2014.

<sup>144</sup> CDPA 1988, s. 116A(2); UK IPO, *Copyright Works* (2014), 13, [3.9].

<sup>145</sup> Draft reg. 5.

<sup>146</sup> Draft reg. 6. The ‘licence’ will operate on the basis that moral rights have been asserted and thus require attribution. The UK IPO may refuse to grant a licence on the basis that the proposed use constitutes a derogatory treatment: draft reg. 6(4).

<sup>147</sup> Draft reg. 10. Non-commercial licences might be at a nominal charge: UK IPO, *Copyright Works* (2014), 21. So-called ‘revenant’ rights owners will be able to claim the fees from the IPO. The question of what happens to unclaimed fees, and how long the right owner has to reclaim the fees, remain sensitive and, at time of writing, had not been declared publicly.

include: (i) the subject matter covered (the UK regime will cover all works, including stand-alone photographs); (ii) the mechanism employed (a notional licence rather than an exception);<sup>148</sup> (iii) the types of potential licensee, which are not limited to ‘publicly accessible cultural and heritage organisations’ and thus might include commercial entities; and (iv) the types of act covered (going well beyond the mere digitization and ‘making available’, and covering commercial as well as non-commercial uses). The UK regime thus has potentially much greater reach than its European counterpart and might be regarded as establishing an example of what the European legislature should be striving for. In part, for this reason, at least one commentator has questioned the compatibility of the provision with European law.<sup>149</sup> However, the UK ‘licences’ can authorize acts only within the United Kingdom,<sup>150</sup> so while the legislation is more extensive, it is necessarily rather local in effect.

## 6 CONTROLLING COLLECTING SOCIETIES

In Chapter 11, we looked at the ways in which copyright owners exploit their rights by way of collective administration. While collective licensing can clearly be beneficial to both copyright owners and users, the existence of single bodies solely responsible for administering rights may also cause a number of problems. The problems posed are of two sorts: problems with members and problems with users. Problems with members typically occur because a copyright owner has little alternative to joining the society, which can thus impose restrictive terms. The second set of problems arises from the relations with users, who similarly have little alternative but to take a licence from the collecting society on whatever terms it chooses.

This section looks at how these problems have been recognized and regulated at both national and European levels, including (i) EU and UK competition law, (ii) the UK’s copyright tribunal, (iii) self-regulation, (iv) bespoke legislative standards at UK level, and (v) the 2014 Collective Rights Management Directive, regulating all aspects of the establishment and operation of collecting societies.<sup>151</sup>

### 6.1 REGULATION OF MEMBER-SOCIETY RELATIONS

The terms of membership and control over the collecting society are a matter, first and foremost, for the rules of the society. If a sufficiently large number of members object to these rules, they can be changed by consent. Equally, if a majority of the members are unhappy with the management of the society, control can be changed.<sup>152</sup>

<sup>148</sup> CDPA 1988, s. 116A(1) (empowering the Secretary of State to grant licences), 116A(5) (stating that the Regulations must provide for any licence ‘to have effect as if granted by the missing owner’); draft reg. 6(2)(d). Cf. CDPA 1988, s. 44B (introducing an exception for relevant bodies).

<sup>149</sup> E. Rosati has argued that the UK scheme would outflank the EU one to such an extent that the latter would be rendered otiose. E. Rosati, ‘The Orphan Works Provisions of the ERR Act: Are They Compatible with UK and EU Laws?’ [2013] *EIPR* 724. For that reason, and others, she suggests that the EU Directive ‘pre-empts’ the UK action in the field, which is therefore disallowed.

<sup>150</sup> UK IPO, *Copyright Works* (2014), 13, 17; draft reg. 6(2)(a). This suggests that there may, in due course, be reciprocal agreements with other countries operating similar schemes.

<sup>151</sup> For background, see European Commission, *Communication from the Commission to the Council, the European Parliament and the European Economic and Social Committee: The Management of Copyright and Related Rights in the Internal Market* (16 April 2004) COM(2004) 261 final.

<sup>152</sup> Copinger, [28–27].

### 6.1.1 UK competition control

A powerful form of external control of society–member relations is provided by the UK competition authorities. As mentioned previously, the Competition Act 1998 contains prohibitions on agreements and concerted practices that restrict competition (the ‘Chapter I prohibition’) and ‘abuse of a dominant position’ (the so-called ‘Chapter II prohibition’). Since collecting societies occupy a dominant position in the market (the supply of services of administering particular rights), relations are apt to be scrutinized to ensure there is no abuse. In addition, under Part IV of the Enterprise Act 2002, the Competition and Markets Authority (CMA) is able (after conducting a preliminary informal investigation) to constitute a group to investigate a market, the features of which it has grounds for suspecting prevent, restrict, or distort competition.<sup>153</sup> The group must investigate, assess whether there is an adverse affect on competition, and report. As a result of such a finding, the CMA may require that action be taken to remedy the adverse affect and make orders or require undertakings to bring about appropriate changes.<sup>154</sup> In a previous investigation, under powers similar to those now granted by the Enterprise Act, the Monopoly and Mergers Commission (a predecessor to the CMA) held that certain practices of the Performing Right Society were unsatisfactory and the Society agreed to amend its rules.<sup>155</sup>

### 6.1.2 EU competition law

Another form of control over the rules of the society is to be found in Article 102 TFEU (ex Article 86 EEC and Article 82 EC). This prohibits the abuse by one or more undertakings of a dominant position. Rights organizations constitute ‘undertakings’ when they supply certain services to composers, authors, and publishers; they also often hold a dominant position in relation to the provision of these services. The critical issue is the extent to which the conduct of the rights organization constitutes an abuse.

The balancing exercise required by Article 102 TFEU has been felt in four important aspects of society–member relations.

- (i) It is clear that, under EU law, societies may not discriminate on grounds of nationality, for example by conferring associate status on foreign authors. All collecting societies must permit other nationals from the European Union to join the society.<sup>156</sup>
- (ii) The Commission has stated that the rules of collecting societies should ensure that no group of members obtains preferential treatment from revenue collected from the membership as a whole.<sup>157</sup>
- (iii) In *Belgische Radio v. SABAM*,<sup>158</sup> the Court of Justice held that an abuse would occur if a society were to impose obligations on members that were not absolutely necessary for the attainment of the society’s objectives and which could encroach unfairly on members’ freedoms.<sup>159</sup> A restriction imposed upon a member must be ‘indispensable’ to the operation of the society and must restrict the member’s freedom to dispose of their works no more than is absolutely necessary (the ‘equity’ test).<sup>160</sup>

<sup>153</sup> Enterprise Act 2002, s. 131 (as amended by ERR 2013, Sch. 5).

<sup>154</sup> Enterprise Act 2002 s. 134(4) (as amended by ERR 2013, Sch. 5, with effect from April 2014).

<sup>157</sup> *Re GEMA’s Statutes (No. 2)* [1972] CMLR D–115.

<sup>158</sup> [1974] ECR 313.

<sup>159</sup> *Ibid.*, 317 [15].

<sup>160</sup> *Re GEMA (No. 1)* [1971] CMLR D–35; *Report on the Supply in the UK of the Services of Administering Performing Rights and Film Synchronization Rights* (Cm. 3147, 1996), [2.119]–[2.121].

- (iv) Societies are not permitted to impose unduly lengthy notice periods. In *Belgische Radio*, the Court observed that rules operated by SABAM, the Belgian collecting society, allowing the society to retain rights for five years after a member withdrew ‘may appear an unfair condition’, but left the specific determination of whether this was so to the national authority.<sup>161</sup>

### 6.1.3 Self-regulation

The Hargreaves Review recommended (also with a view to improving licensing practices) that:

[C]ollecting societies should be required by law to adopt codes of practice, approved by the IPO and the UK competition authorities, to ensure that they operate in a way that is consistent with the further development of efficient, open markets.<sup>162</sup>

The British Copyright Council responded to this and, in May 2012, issued a set of principles for codes of conduct for collecting societies,<sup>163</sup> setting in chain its own review of whether collecting societies operated such codes and appointing an ‘independent code reviewer’.<sup>164</sup> The principles are set out to be adaptable to the ‘particular role, nature, industry, membership base and licensee market’.<sup>165</sup> They are divided by themes: ‘Transparency’; ‘Accountability and consultation’; ‘Service levels and operational issues’; and ‘Queries, complaints and dispute resolution’. They are largely expressed in terms of topics to be addressed, rather than specifying any substantive standards.

### 6.1.4 Statutory regulation

The UK government, in turn, passed legislation that would enable it to regulate collecting societies. Schedule 22 of the Enterprise and Regulatory Reform Act 2013 introduced a new Schedule A1 into the CDPA 1988, allowing the Secretary of State to make regulations requiring a ‘licensing body’ to be required to adopt a code of practice. The government sought to take advantage of the power immediately by introducing the Copyright (Regulation of Relevant Licensing Bodies) Regulations 2014, which came into force on 6 April 2014.<sup>166</sup> The Regulations empower the Secretary of State to require a licensing body to adopt a code that complies with the criteria set out in the Schedule, which is an elaborate list not only of topics that the code needs to address, but also of the substantive content of many of the topics. These reflect certain ‘minimum standards’ developed in the ‘Codes Working Group’ (published in October 2012),<sup>167</sup> which were developed to inform individual licensing bodies’ own codes. They include a requirement that the code provides for an ombudsman.

### 6.1.5 The Collective Rights Management Directive

The European Commission has also been active on this question. In 2012, it issued a proposed directive on collective management of copyright and related rights.<sup>168</sup> In February 2014, this was approved in amended form by the European Parliament and adopted.<sup>169</sup>

<sup>161</sup> *Belgische Radio* [1974] ECR 313, 317, [12], 325–6 (AG). See also *Re GEMA’s Statutes (No. 2)* [1972] CMLR D–115.

<sup>164</sup> In August 2013, the BCC announced that this would be Walter Merricks.

<sup>165</sup> BCC, *Principles for Collective Management Organisations’ Codes of Conduct* (2012), 1.

<sup>166</sup> SI 2014/898. See UK IPO, *Regulation of Licensing Bodies* (2013).

<sup>167</sup> UK IPO, *Minimum Standard for UK Collecting Societies* (2012).

<sup>168</sup> COM (2012) 372 final.

<sup>169</sup> Directive 2014/26/EU of 26 February 2014 (the ‘CRM Directive’).

The Directive, rather like the UK Regulations, obliges member states to regulate the substantive content of society–member and society–user relations. It begins by articulating an obligation that member states ensure that collecting societies act in the best interest of their members,<sup>170</sup> and that member states ensure that various rights are conferred on right holders and members,<sup>171</sup> and various obligations on societies relating to annual meetings,<sup>172</sup> collection and use of revenue,<sup>173</sup> deductions,<sup>174</sup> and so on.

### 6.1.6 The interrelationship between the various regulations

This is a complex picture. In practice, it is likely that the substantive standards developed in the competition case law, the Directive (when it is implemented), and the domestic Regulations will simply be internalized within the self-regulatory systems adopted by the collecting societies (at least in the United Kingdom). But it could be useful to consider a couple of examples of issues that may face members, to see how the different regimes may regulate them.

One question that often arises is how readily an individual member can leave a society and with what effect. The BCC Principles merely state that the code should ‘explain arrangements for terminating membership and describe implications of termination’.<sup>175</sup> In contrast, the Regulations require licensing bodies to ‘have rules or a constitution that enables members and non-member right holders to withdraw their rights on reasonable notice’.<sup>176</sup> The Directive states that a ‘rightsholder shall have the right to terminate the authorization to manage rights . . . upon serving reasonable notice not exceeding six months’.<sup>177</sup>

What happens when a member thinks that they have been underpaid? The BCC Principles merely provide for the codes adopted to ‘state clearly’ the charges associated with the scheme, what happens to interest, and what deductions, if any, are made, to ‘explain’ what information will be provided in individual royalty statements, and to ‘explain’ how a complaint is to be made (and any independent complaints review mechanism).<sup>178</sup> The Regulations have a little more substance. They require that codes ‘maintain and make available to members on request, a clear distribution policy that includes the basis for calculating remuneration and frequency of payments together with clear information about deductions and what they are for’.<sup>179</sup> There are to be procedures for dealing with complaints internally, including ‘reasonable assistance’ for a complainant and a written decision giving reasons.<sup>180</sup> A complainant might also turn to the ‘licensing code

<sup>170</sup> CRM Dir., Art. 4.

<sup>171</sup> CRM Dir., Art. 5(2) (freedom to appoint collecting society from any member state), (3) (retention of right to license non-commercial uses), (4)–(6) (termination). <sup>172</sup> CRM Dir., Art. 8.

<sup>173</sup> CRM Dir., Art. 11.

<sup>174</sup> CRM Dir., Art. 12. In some countries, there are very strong traditions regarding these funds, often leading to deductions of 10 per cent for social and cultural purposes such as pensions, grants, festival support. For example, it is said that the French collecting societies in 2004 set aside €95 million for cultural and social purposes: see KEA European Affairs, *The Collective Management of Rights in Europe: The Quest for Efficiency* (2006), 39. The CRM Directive permits collecting societies to make deductions from which to operate ‘social, cultural or educational’ funds. Such deductions may be approved in the annual general meeting under Art. 8(5)(d), but under Art. 12(4) ‘such services shall be provided on fair criteria, in particular, as regards access to and the extent of those services’.

<sup>177</sup> CRM Dir., Art. 5(4).

<sup>178</sup> BCC, *Principles for Collective Management Organisations’ Codes of Conduct* (2012), 3.

<sup>179</sup> Copyright (Regulation of Relevant Licensing Bodies) Regulations 2014 (SI 2014/898), Sch., para. 5(b).

<sup>180</sup> *Ibid.*, Sch., paras 7, 8(c), 8(g).

ombudsman' if they find that the code of practice has not been followed.<sup>181</sup> The Directive is more exacting. There are requirements as to distribution,<sup>182</sup> annual royalty statements (specifying deductions),<sup>183</sup> internal handling of complaints,<sup>184</sup> and external adjudication of complaints by 'competent authorities'.<sup>185</sup>

## 6.2 REGULATION OF SOCIETY-SOCIETY RELATIONS

The Collective Rights Management Directive contains a number of provisions that seek to ensure that societies that enter into reciprocal relations with other societies are able to ensure that their members interests are secured. Importantly, for example, no deductions (such as for social and cultural purposes) are to be made by any society for fees that it collects on behalf of another society under a representation agreement.<sup>186</sup> The Directive also provides that there shall be no discrimination against right holders whose rights are managed under a representation agreement,<sup>187</sup> and that monies are distributed 'regularly, diligently and accurately'.<sup>188</sup>

## 6.3 REGULATION OF SOCIETY-USER RELATIONS

Another way in which collecting societies are regulated is in terms of their relationship with users of copyright. Here, the problem is that most people wishing to use copyright works have no alternative but to seek a licence from a collecting society. This places the society in a strong bargaining position, which may enable it to dictate terms of use to the licensee. In the absence of regulatory control, the society might charge exorbitant fees, discriminate unfairly between different kinds of user, or require parties to acquire licences over many more works than they want. In order to ensure that this monopoly power is not abused, there are both domestic and European regulatory controls.<sup>189</sup>

### 6.3.1 Self-regulation

The BCC Principles deal with the relationship between a collecting society and its licensees or potential licensees. The 'Transparency' principles require that the licensing schemes, terms and conditions, and tariffs are 'summarised', and that the code shall 'explain' how these have been negotiated and how and when they are reviewed, as well as whether they include powers to visit the licensees premises, and if so, how that power would be exercised.<sup>190</sup> The 'Queries, complaints and dispute resolution' principles call for codes to explain complaint procedures, as well as the functions of the Copyright Tribunal.<sup>191</sup>

### 6.3.2 The statutory regulations

The Copyright (Regulation of Relevant Licensing Bodies) Regulations 2014 also specify criteria relating to licensing. The code should require the licensing body to treat licensees and potential licensees fairly, honestly, and impartially, and to 'consult and negotiate

<sup>181</sup> Ibid., reg. 7.

<sup>182</sup> CRM Dir., Art. 13(1). Payments must be made within nine months of the year end in which they were collected.

<sup>183</sup> CRM Dir., Art. 16(b), (c), (e), (f). <sup>184</sup> CRM Dir., Art. 34 (requiring writing and reasons).

<sup>185</sup> CRM Dir., Art. 37. <sup>186</sup> CRM Dir., Art. 15.

<sup>187</sup> CRM Dir., Art. 14. <sup>188</sup> CRM Dir., Art. 15(2).

<sup>189</sup> A 'market investigation' reference could also be made under the Enterprise Act 2002.

<sup>190</sup> BCC, *Principles for Collective Management Organisations' Codes of Conduct* (2012), 3.

<sup>191</sup> Ibid., 5.

fairly, reasonably and proportionately in relation to the terms and conditions of a new or significantly amended licensing scheme'.<sup>192</sup> The code should also set out obligatory terms for licensees, which may include a requirement 'to respect the rights of creators and rightholders including their right to receive fair payment when works are used' and 'that copyright material is to be used only in accordance with the terms and conditions of a licence'.<sup>193</sup> This latter provision seems to allow collecting societies to require contractual payment for uses that perhaps fall within the scope of exceptions, which seems surprisingly in conflict with the recent expansion of the principle that contractual variation of exceptions in a way that prejudices users should be prohibited.<sup>194</sup> Codes should also inform licensees and potential licensees as to the scope of the repertoire, any reciprocal representation, and the territorial scope of any licence.<sup>195</sup> The code must also provide for a complaints procedure for licensees and potential licensees, who may also refer issues of compliance to the licensing code ombudsman.<sup>196</sup>

### 6.3.3 The Collective Rights Management Directive

The Directive (which is a minimum harmonization instrument) includes provisions that relate to users. These include obligations to conduct negotiations for the licensing of rights 'in good faith',<sup>197</sup> to base licensing on 'objective and non-discriminatory criteria', and for tariffs to reflect the 'economic value of the use of the rights in trade' and 'the service provided by the collective management organisation'.<sup>198</sup> The Directive requires member states to provide for disputes to be 'submitted to a court, and if appropriate, to an independent and impartial dispute resolution body'.<sup>199</sup> The Directive has a swathe of more detailed provisions relating to multi-territory licensing.

### 6.3.4 The UK's Copyright Tribunal

The Copyright Tribunal (which replaced the Performing Right Tribunal in 1989) has wide-ranging powers to review licences and licensing schemes operated by collecting societies.<sup>200</sup> The Tribunal normally sits in panels of three, selected from a group of up to eight. While it has been said that the Tribunal carries out a 'useful and indeed necessary function', its procedures have been criticized as being costly and lengthy.<sup>201</sup> Following consultation, a new set of rules were introduced in 2010.<sup>202</sup>

The Copyright Tribunal is primarily concerned with the operation of licensing bodies. A 'licensing body' is defined as a society or other organization that has as one of its main objects the negotiation or granting of copyright licences.<sup>203</sup> A body is still a licensing body if it is an agent, as well as when it becomes the owner of copyright. This means, for example, that the MCPS (which operates as an agent) is within the jurisdiction of the Copyright Tribunal. However, a body is a licensing body only if its object is the granting of licences covering works of more than one author.<sup>204</sup>

<sup>192</sup> SI 2014/898, Sch., para. 2(h), (j). <sup>193</sup> Ibid., Sch., para. 3.

<sup>194</sup> See above, pp. 229, 329. <sup>195</sup> SI 2014/898, Sch., para. 5(a).

<sup>196</sup> SI 2014/898, reg. 7. <sup>197</sup> CRM Dir., Art. 16(1). <sup>198</sup> CRM Dir., Art. 16(2).

<sup>199</sup> CRM Dir., Art. 35. The body must have 'expertise in intellectual property law'.

<sup>200</sup> Although, as is explained below, not every aspect of copyright is regulated by the Tribunal: See Rel. Rights Regs, reg. 17(4); CDPA 1988, s. 205B; Database Regs, Sch. 2.

<sup>201</sup> M. Freegard, 'Forty Years on: An Appraisal of the United Kingdom Copyright Tribunal, 1957–1997' (1998) 177 *RIDA* 3, 69, 63. See also *Universities UK v. Copyright Licensing Agency* [2002] *RPC* 693, 699, [16]. In *BPI Ltd and ors v. MCPS and ors* [2008] *EMLR* (5) 147, the costs were some £12 million.

<sup>202</sup> UK IPO, *Review of the Copyright Tribunal* (2007), leading to the Copyright Tribunal Rules 2010 (SI 2010/791). <sup>203</sup> CDPA 1988, s. 116(2).

<sup>204</sup> See D. Zeffman and J. Enser, 'The Impact of UK Competition Law on the Music Industry' [1993] *Ent L Rev* 67, 71.

The CDPA 1988 distinguishes between two kinds of activity involving a licensing body—namely, ‘licensing schemes’ and ‘one-off licences’. A ‘licensing scheme’ is defined as any regime that specifies the circumstances and terms on which a licensing body is willing to grant licences.<sup>205</sup> The Tribunal can consider complaints by representative organizations concerning the terms of a proposed scheme,<sup>206</sup> or complaints by organizations or individuals with respect to a scheme in operation.<sup>207</sup> The Tribunal has wide powers: it may approve or vary schemes, hold that particular applicants should be granted licences under such schemes, or approve or vary the terms of particular licences.<sup>208</sup> The Tribunal will also hear disputes over which applicants for licences fall within the scheme,<sup>209</sup> as well as refusals to grant licences. The Tribunal may make an order declaring that the complainant is entitled to a licence. After the Tribunal makes an order, a scheme may be referred again by its operator, a claimant for a licence, or a representative organization.<sup>210</sup>

The criterion against which the Tribunal judges matters is one of ‘reasonableness’. As such, its role is more than one of ‘arbitration’.<sup>211</sup> Indeed, where there are several reasonable solutions, the Tribunal’s job is to select whatever is the ‘most reasonable’.<sup>212</sup> In considering whether to make an order, the Tribunal is instructed to have regard to a number of factors, of which the most important is to ensure that there is no ‘unreasonable discrimination’ between the scheme or licence in issue and comparable schemes or licences.<sup>213</sup> Apart from that, specific factors are to be considered in relation to different schemes.<sup>214</sup> For example, if the scheme concerns reprographic copying, the Tribunal is to have regard to the availability of published editions, the proportion of the work copied, and the nature of the use to which the copies will be put. In addition to the factors specifically listed in the 1988 Act, the Tribunal will take account of factors indicated as relevant in EU directives.<sup>215</sup>

In determining the reasonableness of licence fees, the Copyright Tribunal has often described its task as determining what a ‘willing licensor and willing licensee’ would have agreed.<sup>216</sup> The usual starting point for ascertaining what this might be is with previous agreements, which are evaluated by the Tribunal in light of changed circumstances.<sup>217</sup> Because the Tribunal is directed to ensure that there is no unreasonable discrimination, it will often be presented with evidence of allegedly equivalent arrangements.<sup>218</sup> These may include arrangements by the same licensing body with other categories of user,<sup>219</sup> or arrangements by similarly positioned licensing bodies with the same licensees.<sup>220</sup> While evidence of schemes in other jurisdictions is frequently put forward, it has rarely been influential.<sup>221</sup> Other factors that are often treated as relevant include the extent of use, the size of the audience, and the user’s revenue. Ultimately, calculating fees is not a process of mathematics, but one of ‘judicial estimation’.<sup>222</sup>

### 6.3.5 Other avenues

A user who is dissatisfied with the terms of a licensing scheme or an individual licence from a collecting society might also be able to bring an action based upon either Articles 101 or 102 TFEU,<sup>223</sup> or the two prohibitions contained in the domestic Competition Act 1998.<sup>224</sup>

Applying Articles 101 and 102 TFEU, the Court of Justice has provided national courts with general guidance on legitimate collecting society behaviour. In particular, in *Ministère Public v. Tournier and Verney*,<sup>225</sup> it was argued that the arrangements between the French copyright management society SACEM and discotheques were prohibited under Articles 101 and 102 TFEU. In that case, SACEM granted a blanket licence for its whole repertoire and charged discotheques according to a percentage of gross receipts. Some discotheque owners complained that the charges were excessive and that SACEM refused to grant licences for part of its repertoire—namely, in relation to popular dance of Anglo-American origin. The public prosecutor brought criminal proceedings against Tournier, who was director of SACEM, for ‘unfair trading’. As part of the action, certain questions were referred to the Court of Justice.

In relation to SACEM’s refusal to license use of music from abroad separately, the Court noted that, coupled with similar stipulations by rights societies based in other member states, the behaviour might amount to strong evidence of a concerted practice (contrary to Article 101). The Court acknowledged that it might be possible to account for the parallel behaviour on the grounds that direct licensing would require each society to establish its own management and monitoring system in other countries.<sup>226</sup> With regard to SACEM’s decision to grant only blanket licences, the Court suggested that the test was one of ‘necessity’—that is, whether the terms or practices were ‘necessary’ to safeguard the interests of authors, etc. This was a matter for national courts to determine.

With respect to the charges, the Court of Justice found that if there exists an appreciable difference between the fees charged in one member state and those charged in other member states for the same services, such a discrepancy ‘must be regarded as indicative of an abuse of dominant position’.<sup>227</sup> The burden of proof is effectively being reversed, so that it is for the relevant collecting society ‘to justify the difference by reference to objective dissimilarities between the situation in the member state concerned and the situation prevailing in all the other member states’.<sup>228</sup>

With so-called ‘modernization’ of competition law and establishment of the European Competition Network, complaints about society–user relations are likely to be directed to national authorities. In the United Kingdom, this would be to the courts or the CMA if Articles 101 and 102 TFEU are implicated; otherwise, to the Copyright Tribunal.

<sup>223</sup> These prohibitions would also apply to society–society arrangements, such as reciprocal agreements.

<sup>224</sup> Competition Act 1998, ss 2 (‘Ch. 1 prohibition’), 18 (‘Ch. 2 prohibition’).

2 Performers' Rights	341	6 Public Lending Right	368
3 Database Right	349	7 <i>Droit de Suite</i>	369
4 Technological Protection Measures	357		

### 1 INTRODUCTION

If there is one characteristic that typifies the development of intellectual property law since the Second World War, it is the proliferation of new forms of intellectual property. In this chapter, we outline a number of regimes that are related to, but which fall outside of, the remit of copyright law: performers' rights; the database right; rights relating to technological protection measures and rights management information; the public lending right; and the so-called *droit de suite*, or artist's resale royalty right.

## 2 PERFORMERS' RIGHTS

While the creative or cultural contributions made by people who play instruments, read poetry, and act in plays have long been valued, nonetheless performers have been poorly served by intellectual property law. Indeed, it was not until technological changes at the beginning of the twentieth century (notably, the emergence of sound-recording technologies and radio broadcasting) threatened the livelihood of performers that the law intervened to protect performers. This occurred in 1925 when criminal sanctions were introduced to discourage people from abusing a performer's right to control the fixation and subsequent use of their performances.<sup>1</sup> The courts provided additional relief by allowing performers to bring civil suits for injunctions and damages for threatened breaches of the criminal law.<sup>2</sup> While it might have been expected that copyright law would have been expanded to accommodate performers, this was not the case. In part, this was because the transitory nature of performances meant that they could not satisfy the requirement of material form that was widely considered to be a prerequisite for the subsistence of copyright. Another reason why performers were not protected by copyright was that they were considered to be subservient to the interests of the 'proper' rights holders—namely, authors, composers, and dramatists. While authors and composers create primary works, performers were seen merely to translate or interpret these works. In short, it was believed (at least by some) that performers were involved in acts that were less 'creative' than authors, graphic artists, and film directors. The second-rate status of performers was reflected in the decision that performers did not belong within the Berne Convention (along with the producers of phonograms and broadcasting organizations). Indeed, it was not until the Rome Convention of 1961 that performers were recognized at the international level.<sup>3</sup> The rights given to performers have been expanded further in the WIPO Performances and Phonograms Treaty 1996 (WPPT) and the Beijing Treaty on Audiovisual Performances 2012.

Eventually, the lobbying efforts of performers paid off when the Copyright, Designs and Patents Act 1988 (CDPA 1988) provided performers with the right to control the recording of live performances (and other related rights).<sup>4</sup> Because the rights were not assignable, they are described as 'non-property' rights. The 1988 Act also provided producers with certain rights when they entered into exclusive contracts to record performers.<sup>5</sup> The scope of the protection given to performers was further expanded as a result of European harmonization. To bring UK law into line with the Related Rights Directive, the 1988 Act was amended from 1 December 1996 to provide performers with fully assignable 'property rights' and certain 'rights to remuneration'. In a third significant development, Article 5 WPPT required contracting parties to grant moral rights of attribution and integrity to performers,<sup>6</sup> and these have now been implemented in the United Kingdom. In all but two

<sup>1</sup> Dramatic and Musical Performers' Protection Act 1925, consolidated and amended in the Performers' Protection Acts 1958 and 1972. See R. Arnold, *Performers' Rights* (4th edn, 2008).

<sup>2</sup> *Rickless v. United Artists* [1987] FSR 362. <sup>3</sup> See above at pp. 41–2.

<sup>4</sup> The Act has been held to confer rights on performers, such as Jimi Hendrix, who were long dead: *Experience Hendrix LLC v. Purple Haze Records Ltd* [2007] EWCA Civ 501.

<sup>5</sup> CDPA 1988, ss 180–4. <sup>6</sup> See above at p. 44.

respects—namely, duration and depth of protection<sup>7</sup>—these bring performers’ protection to a level virtually equivalent to that of authors.<sup>8</sup>

## 2.1 SUBSISTENCE

Protection is confined to dramatic performances (which include dance or mime), musical performances, readings and recitations of literary works, and also to ‘a variety act or any similar presentation’.<sup>9</sup> This definition clearly encompasses much of what we would expect. Protection therefore arises for dramatic performances, such as the acting of a play in front of a live audience, or of a film script before a camera, or the performing of a ballet. It also arises where the performance is ‘musical’, as with the playing of a classical piece, such as Beethoven’s Fifth Symphony by an orchestra, or the rendition of a pop song by a band.<sup>10</sup>

However, the definition is not without its ambiguities and apparent restrictions. First, there are ambiguities raised by the definition as to whether the work performed must exist before the performance takes place. The wording of section 180 of the CDPA 1988 suggests that this need not be so for musical or dramatic works, since subsection (2) refers to musical or dramatic performances. Thus unscripted and improvised musical and dramatic performances are almost certainly covered.<sup>11</sup> However, in the case of readings or recitations, the definition suggests that the literary work must be in existence prior to the performance. Consequently, a person who gives a spontaneous speech or an interview will not obtain protection as a performer. Presumably, a singer who sings a song gives a ‘musical’ performance, even though, in copyright terminology, there might be only a performance of a literary work. Another ambiguity relates to what constitutes a ‘musical performance’. It is unclear whether the term covers the playing of the work from a recording, so that a disc jockey could be a performer. Finally, the definition of performance seems unduly restrictive. It seems that a performance of an ‘artistic work’—by way of *tableaux vivant*, for example—is not included unless such a performance can be classed as a ‘variety act’ or ‘similar presentation’. (A broad interpretation may be desirable in order to ensure compliance with the United Kingdom’s international obligations.) Owen Morgan has proposed a ‘principled definition’ of a performance as ‘the transitory activity of a human individual that can be perceived without the aid of technology and that is intended as a form of communication to others for the purpose of entertainment, education or ritual’.<sup>12</sup>

Before moving on, it should be noted that international and regional treaties frequently distinguish between audiovisual performances and performances embodied on phonograms. While the reasons for the distinction are easy to understand (some parts of the film industry fearing that giving performers rights will potentially jeopardize a film company’s ability to exploit a film), the distinction is not entirely satisfactory. This is because there is now a significant overlap and interchangeability between media, so

<sup>7</sup> Performers are not protected against imitation.

<sup>8</sup> For a wide-ranging review, see D. Liu, ‘Performers’ Rights: Muddled or Mangled? Bungled or Boggled?’ (2012) 34(6) *EIPR* 374.

<sup>9</sup> CDPA 1988, s. 180(2). The WPPT, Art. 2(a), defines performers as ‘actors, singers, musicians, dancers and other persons who act, sing, deliver, declaim, play in, interpret, or otherwise perform literary or artistic works or expressions of folklore’.

<sup>10</sup> One may wonder whether performance of Cage’s ‘4’33’’ constitutes a musical performance. See the earlier discussion at p. 72 as to whether the piece is a ‘musical work’ for copyright purposes.

<sup>11</sup> Kamina, 350. Given that a ‘dramatic work’ is a ‘work of action which is capable of being performed’, it seems that a performance of a dramatic work requires action, performances lacking movement not being covered (unless they can be categorized as akin to ‘variety acts’).

<sup>12</sup> See O. Morgan, *International Protection of Performers’ Rights* (2002), 27.

that, for example, some performances start life as audiovisual before being recorded onto purely aural media and some aural performances are later fixed on audiovisual media. The boundary lines are, not surprisingly, highly contested.

## 2.2 PERFORMERS AND RELATED BENEFICIARIES

The beneficiary of the rights given in a performance is, on its face, the performer (or performers).<sup>13</sup> Although performers are typically freelance workers rather than employees, a performer is entitled to performance rights *even if* they are employed.<sup>14</sup> Two issues are worth further consideration: the first concerns exactly who counts as a performer; the second, special provisions relating to the rights of those who are a party to exclusive recording agreements.

### 2.2.1 Main performers, ancillary performers, and other contributors

In contrast with some other jurisdictions, no attempt is made under UK law to exclude ancillary performers from the scope of protection.<sup>15</sup> This means that, in practice, care must be taken to deal contractually with all participants, including session musicians as well as named artists, extras as well as star performers. A person present in the audience at a performance would not normally be regarded as ‘giving’ a performance, although in situations in which a show depends upon active participation of members of the audience it is possible that a member of the audience might become a performer.<sup>16</sup> Although a director, or choreographer, or make-up artist may contribute significantly to the preparation of a performance, it cannot be said that they ‘give’ the performance. Consequently, they are left to their rights, if any, under copyright or contract law. The same is true for the organizer of a performance, such as a theatre or venue operator.

### 2.2.2 Exclusive recording contracts

Special provisions exist in the 1988 Act that relate to exclusive recording contracts. Section 185 defines an exclusive recording contract as:

... a contract between a performer and another person under which that person is entitled to the exclusion of all other persons (including the performer) to make recordings of one or more of his performances with a view to their commercial exploitation.

If the person having such rights is a qualifying person, then they are granted rights similar to a performer’s non-property rights. More specifically, their consent is required by anyone else wishing to make a recording. A party who is the beneficiary of an exclusive recording contract may commence an action for breach of statutory duty against a person who makes such a recording,<sup>17</sup> or who shows a wrongful recording in public or broadcasts it,<sup>18</sup> as well as against those dealing commercially in such illicit recordings.<sup>19</sup> While performers’ non-property rights are not transferable, the person with an exclusive recording contract may assign rights under that contract.<sup>20</sup>

<sup>13</sup> The Act provides no indication as to the test for co-performance, but courts have consistently favoured the view that each performer gains rights in their own performance: *Bamgboye v. Reed* [2004] EMLR (5) 61; *Experience Hendrix v. Purple Haze Records Ltd.* [2005] EMLR (18) 417, [21]; *Bourne v. Davis* [2006] EWHC 1567, [7].

<sup>14</sup> R. Arnold, *Performers’ Rights* (4th edn, 2008), ch. 3. Note that such performers are presumed employees under French law: see Kamina, 357.

<sup>15</sup> Cf. Art. L. 212 of the French Intellectual Property Code.

<sup>16</sup> Cf. Copyright Act 1968, s. 248A(2)(d) (Australia) (excluding ‘a participation in a performance as a member of an audience’).

<sup>17</sup> CDPA 1988, s. 186.

<sup>18</sup> CDPA 1988, s. 187.

<sup>19</sup> CDPA 1988, s. 188.

<sup>20</sup> CDPA 1988, s. 185(2), (3).

## 2.3 RIGHTS

There are four types of right available to protect performers: non-property rights; property rights; remuneration rights; and moral rights.

### 2.3.1 Non-property rights

A performer has the right to authorize the recording of a live performance. They also have the right to prevent the making of a recording of a live performance from a broadcast in which it has been included<sup>21</sup>—that is, the acts of ‘bootlegging’. Performers also have the right to prevent their live performances from being broadcast. Prior to the mass distribution of fixed recordings, this right would have been very important. Where a recording has been made without the consent of a performer, their rights are infringed when the wrongfully recorded performance is shown or played in public, or communicated to the public. This right is infringed only where the defendant knew or had reason to believe that the recording was made without the performer’s consent.<sup>22</sup> This would cover the playing of obviously bootlegged recordings at nightclubs or over the radio. Performers are also given the right to control the distribution of illicit recordings. These are recordings made, otherwise than for private purposes, without the consent of the performer or the person, if any, having recording rights.<sup>23</sup> Import and sale of illicit recordings is prohibited where the person knows or has reason to believe that the recording is illicit.<sup>24</sup>

All of these non-property rights are non-transmissible, except on death.<sup>25</sup> Infringement is actionable as a breach of statutory duty. A person may also be subject to criminal liability if they knowingly commit certain commercial acts in relation to illicit recordings.<sup>26</sup>

### 2.3.2 Property rights

Performers are also given property rights in their performances. These rights were introduced in order to implement the Related Rights Directive.<sup>27</sup> The performer’s property rights include the right to make copies of a recording of a qualifying performance, the right to issue copies of a recording to the public, the right to rent or lend copies, and the right to include the performance in an on-demand service.<sup>28</sup> The definitions of these rights correspond to those of a copyright owner.<sup>29</sup> In contrast with the other rights given to performers, these property rights are transmissible. Any assignments made must be in writing and signed by the assignor.<sup>30</sup> In relation to film production agreements, a performer is presumed, in the absence of an agreement to the contrary, to have transferred the rental right to the producer.<sup>31</sup>

### 2.3.3 Right of remuneration

Performers are also given two ‘remuneration rights’. These were introduced in the process of implementing the Related Rights Directive. The most important of these, at least financially, is the right to claim equitable remuneration from the owner of copyright in a *sound recording* (note, not an audiovisual work) of a qualifying performance where the

<sup>21</sup> CDPA 1988, s. 182.      <sup>22</sup> CDPA 1988, s. 183.      <sup>23</sup> CDPA 1988, s. 197.

<sup>24</sup> CDPA 1988, s. 184.      <sup>25</sup> CDPA 1988, s. 192A.

<sup>26</sup> CDPA 1988, s. 198. Illicit recording is defined in CDPA 1988, s. 197.

<sup>27</sup> See Chapter 2. The new regime applies to performances given before commencement: Rel. Rights Regs, reg. 26(1).

<sup>28</sup> CDPA 1988, ss 191A and 182A–C, 182CA (as added by Rel. Rights Regs, reg. 7). The Copyright Tribunal has an ultimate power to override a performer’s right to consent if they cannot be identified: CDPA 1988, s. 190, as amended.

<sup>29</sup> See Chapter 6.      <sup>30</sup> CDPA 1988, s. 191B.      <sup>31</sup> CDPA 1988, s. 191F.

sound recording is played in public, or communicated to the public (other than by way of ‘making available’).<sup>32</sup> This right formalized the existing practice whereby recording companies made *ex gratia* payments to bodies representing musicians. Under the new regime, performers must claim their revenue that accrues in the United Kingdom from the collecting society that administers the performing and broadcasting rights on behalf of the owners of copyright sound recordings—namely, Phonographic Performance Limited (PPL).<sup>33</sup>

The second remuneration right is less important. This provides that, where a performer has transferred their rental right concerning a sound recording or film to the producer, the performer retains the right to equitable remuneration for the rental of sound recordings or films.<sup>34</sup>

Both of the remuneration rights may be assigned only to a collecting society.<sup>35</sup> In the absence of a relevant agreement, the Copyright Tribunal may determine royalty rates.<sup>36</sup> As yet, there have been no cases in which the Tribunal has been asked to assess what an equitable remuneration should be. Although the concept of ‘equitable remuneration’ is a ‘Community concept’, it is one to be applied by national authorities, so each is left with a wide margin of appreciation, particularly as to determining relevant criteria. In the only decision to date, the Court of Justice has said that it was within this margin to calculate the money to be paid by a broadcaster by reference to: the number of hours of phonograms broadcast; the viewing and listening densities; the tariffs used in respect of such uses of musical works; the tariffs used in other member states; and the amounts paid by other (commercial) stations.<sup>37</sup>

[The] national court is therefore doing everything to ensure the best possible compliance with the provisions of Article 8(2) . . . assuring the equitable remuneration of performing artists and phonogram producers by giving preference to a contractual agreement based on objective criteria.<sup>38</sup>

### 2.3.4 Moral rights

Performers are granted the moral rights of attribution and integrity.<sup>39</sup> Like authors’ moral rights, these rights are not assignable, but may be waived, and are transmissible on death.<sup>40</sup>

The right of attribution applies in relation to live performances, live broadcasts of performances of all kinds, and the distribution and communication to the public of performances fixed on sound recordings.<sup>41</sup> Performers have the rights to be so named that their identities are brought to the notice of the relevant public; however, where a performance is by a group, attribution to the group may be sufficient.<sup>42</sup> As with the moral right of

<sup>32</sup> CDPA 1988, s. 182D (as amended by Rel. Rights Regs, reg. 7). A sound recording is not played in public when a film in which the recording is incorporated is shown in public: CDPA 1988, s. 5B(3)(a).

<sup>33</sup> Occasionally, equitable remuneration may be collectable from the person playing a sound record in public or communicating it to the public: CDPA 1988, s. 182D(1) (where rights subsist in the performance embodied in the sound recording, but copyright therein has expired, as a consequence of termination for non-exploitation under s. 191HA(4)).

<sup>34</sup> CDPA 1988, s. 191G.

<sup>35</sup> CDPA 1988, s. 191G(2). <sup>36</sup> CDPA 1988, ss 182D(4), 191H.

<sup>37</sup> *Stichting ter Exploitatie van Naburige Rechten (SENA) v. Nederlandse Omroep Stichting (NOS)*, Case C-245/00 [2003] ECR I-1251 (ECJ, Sixth Chamber).

<sup>38</sup> *Ibid.*, [44].

<sup>39</sup> Performances (Moral Rights, etc.) Regulations 2006 (SI 2006/18). For background, see The Patent Office, *Moral Rights for Performers: Consultation Paper on Regulations Implementing Performers’ Moral Rights in the UK Resulting from the WIPO Performances and Phonograms Treaty Obligations* (October 2004)

<sup>40</sup> CDPA 1988, ss 205J(2) (waiver), 205L (non-assignability), 205M (transmission on death).

<sup>41</sup> CDPA 1988, s. 205C. <sup>42</sup> CDPA 1988, s. 205C(3), (4).

attribution granted to authors, the right is not infringed unless it has first been asserted.<sup>43</sup> The right is subject to various exceptions, the most important being that the right does not apply where it is not ‘reasonably practicable’ to identify the performer or, as appropriate, the group; also, among other things, it does not apply where the performance is for the purpose of reporting current events or where the performance is for the purpose of advertising any goods or services.<sup>44</sup>

The right of integrity applies in relation to live broadcasts of all qualifying performances, as well as to the playing or communication to the public of sound recordings embodying qualifying performances.<sup>45</sup> The performers have the right to object to any such performance insofar as it is subject to a distortion, mutilation, or other modification that is prejudicial to the reputation of the performer. Modifications ‘consistent with normal editorial or production practice’ are permitted, and other exceptions parallel those to author’s moral rights.<sup>46</sup> The integrity right is also infringed by possession or distribution in the course of business of copies of a sound recording embodying a performance that has been so modified as to prejudice the reputation of the performer, but liability is dependent on a showing of *scienter*.<sup>47</sup>

## 2.4 DURATION, DEFENCES, AND REMEDIES

The term of protection offered to performers varies with the type of performance and its mode of embodiment. As a general matter, performers’ rights last for at least 50 years from the end of the year in which the performance took place. However, if a recording incorporating the performance is released within this period,<sup>48</sup> the rights last for 50 years from the year of release.<sup>49</sup> Rights vested in a performer at the time of their death may be exercised only by a person specifically nominated in the performer’s will or by their personal representative.<sup>50</sup>

However, if a performance has been embodied in a sound recording, the term of protection, initially 50 years from the fixation of the performance, is 70 years from the publication or communication of a fixation of the performance.<sup>51</sup> Where a performance is embodied in a sound recording, the term of protection is 70 years from the release of the recording.<sup>52</sup> This is a consequence of a legislative amendment that involved a complex compromise.<sup>53</sup> That compromise embodies three other key features all designed to ensure that performers—rather than those entitled under existing contracts—gain some benefit from the extension: the ‘use it or lose it’ mechanism; the waiver of deductions based on existing contracts when calculating royalties owing to featured artists; and the provision for remuneration for non-featured artists who assigned their rights for a lump sum.

<sup>43</sup> CDPA 1988, s 205D. On such assertion, see pp. 276–7.      <sup>44</sup> CDPA 1988, s. 205E.

<sup>45</sup> CDPA 1988, s. 205F.

<sup>46</sup> CDPA 1988, s. 205G(3). On parallel exceptions to authors’ moral rights, see Chapter 10.

<sup>47</sup> CDPA 1988, s. 205(H).

<sup>48</sup> CDPA 1988, s. 191(2). The requisite ‘release’ includes, if authorized, publication, playing or showing in public, or communication to the public: CDPA 1988, s. 191(3). For further details on these rights, see Chapter 6.

<sup>49</sup> CDPA 1988, s. 191.      <sup>50</sup> CDPA 1988, s. 192.

<sup>51</sup> CDPA 1988, s. 13(b) and (c) (introduced by Copyright and Duration Regs, reg. 6).

<sup>52</sup> CDPA 1988, s. 191(2)(c) (introduced with effect from 1 November 2013 by Copyright and Duration Regs, reg. 8, to implement Directive 2011/77/EU).

<sup>53</sup> Directive 2011/77/EU. The Directive was preceded by considerable debate and widespread academic criticism: see further Chapter 7, pp. 179–80.

First, there is a ‘use it or lose it’ obligation on the owner of copyright in the sound recording itself.<sup>54</sup> More specifically, once 50 years has run, the copyright in the sound recording might be determined if a performer decides to terminate an assignment of their property rights therein on the basis that the sound recording is not being exploited. This ‘use it or lose it’ provision introduces an interesting concept into copyright law, although its practical effects are likely to be minimal. This is because the conditions under which a performer can terminate the assignment are strictly defined,<sup>55</sup> in particular the right to terminate does not exist if the recording is accessible over the Internet.<sup>56</sup>

Second, where the term of protection of a sound recording has been extended from 50 to 70 years, performers acquire some additional benefits for the additional period. First, performers who are entitled to royalty payments from record producers are, during the added period, to be paid those monies ‘regardless of any provision in the agreement which entitles the producer to withhold or deduct sums from the amounts payable’.<sup>57</sup> The idea behind this was that a producer should no longer be entitled to deduct any ‘advance against royalties’—that is, an initial lump sum paid to the performers—from these royalties if it has not been recouped in the first 50 years. Such advances are usually paid to provide performers who are starting out with some provision, but also often in respect of the costs of purchasing time in a recording studio. However, if a recording is generating significant revenues 50 years after its release, it seems unlikely that many advances would not already have been recouped. Nevertheless, the provision could conceivably apply to other terms in the recording agreement (the assignment), such as the notorious clauses relating to breakages,<sup>58</sup> thus giving performers what would be in effect a royalty uplift.

Third, with respect to performers who were entitled to be paid only a ‘lump sum’ (as might be the case with a so-called ‘session musician’ who was contracted to contribute to a particular performance), a complex provision requires the producer to pay an annual lump sum, comprising 20 per cent of the ‘gross revenue’ on sales (including Internet downloads) to a collecting society for distribution to the performer.<sup>59</sup> Because session musicians are rarely identified on the recordings,<sup>60</sup> considerable contractual archaeology is going to need to be undertaken to ascertain whether such payments are due—that is, whether any such musician performed on a recording (such that a payment is required)—and who, precisely, is entitled to the payment.<sup>61</sup>

Performers’ rights are subject to a host of defences that, rather inconveniently, are contained in Schedule 2 to the 1988 Act. The defences parallel those for copyright and include fair dealing for non-commercial research,<sup>62</sup> text and data analysis,<sup>63</sup> fair dealing

<sup>54</sup> Note the minor clarifying amendment to the terms of Copyright and Duration Regs by SI 2014/434. Rather confusingly the copyright owner is referred to in the Copyright and Duration Regs as ‘the producer’ even though they may, in fact, not be a ‘producer’ as understood in CDPA 1988, s. 178, but may merely be an assignee of the copyright.

<sup>55</sup> CDPA 1988, s. 191HA(4) (introduced with effect from 1 November 2013 by Copyright and Duration Regs, reg. 9).

<sup>56</sup> CDPA 1988, s. 191HA(2)(b).

<sup>57</sup> CDPA 1988, s. 191HB(9) (introduced with effect from 1 November 2013 by Copyright and Duration Regs, reg. 9).

<sup>58</sup> These clauses supposedly date back to a time when records were made of shellac, which was brittle, and thus breakages were common. However, they continued to be utilized in recording agreements and sometimes entail deductions as high as 25 per cent.

<sup>59</sup> CDPA 1988, s. 191HB(3).

<sup>60</sup> A well-known exception is Billy Preston, who is attributed on The Beatles song ‘Get Back’ (but who also performed on other recordings).

<sup>61</sup> The operation of these provisions, which implement Directive 2011/77/EU, will be subject to review by the Secretary of State, which is to be completed by 1 November 2018.

<sup>62</sup> CDPA 1988, Sch. 2, para. 1C. This was added, from June 2014, by the Copyright and Rights in Performances (Research, Education, Libraries and Archives) Regulations 2014 (SI 2014/1372), reg. 3(3).

<sup>63</sup> CDPA 1988, Sch. 2, para. 1D.

for criticism or review,<sup>64</sup> fair dealing for reporting current events, and incidental inclusion, as well as a range of defences for persons with disabilities,<sup>65</sup> and for educational and library uses.<sup>66</sup> These are all discussed in Chapter 9 and the comments made there apply equally to performers (*mutatis mutandis*). However, the defence applicable to recording broadcasts for the purpose of watching or listening to the broadcast at a later time also applies to any performance included in the broadcast. Further exceptions in relation to personal copying<sup>67</sup> and fair dealing for quotation,<sup>68</sup> as well as for caricature, parody, and pastiche,<sup>69</sup> will come into force on October 1, 2014.

Like copyright, the property and non-property rights are enforceable in civil and criminal actions. The usual remedies for breaches of statutory duty are available—namely injunctions, damages, or account of profits. The right owner may also prosecute for a range of statutory offences, may seek orders that include delivery up and disposal, and may seize infringing articles from traders without premises. These remedies are discussed in Chapter 48.<sup>70</sup>

## 2.5 FOREIGN PERFORMANCES

Performances by foreign performers or performances that take place in foreign countries will be protected in the United Kingdom if the performance is ‘qualifying’. A performance is a ‘qualifying performance’ if it is given by a ‘qualifying individual’ or takes place in a ‘qualifying country’.<sup>71</sup> A ‘qualifying individual’ is a citizen of, or an individual resident in, a ‘qualifying country’.<sup>72</sup> A ‘qualifying country’ is defined as the United Kingdom, another member state of the European Economic Area (EEA), or a country ‘designated . . . as enjoying reciprocal protection’ under section 208 of the 1988 Act.<sup>73</sup> Section 208 empowers the Crown to designate certain countries as qualifying countries by Order in Council: either countries party to a convention relating to performers’ rights—namely, the Rome Convention or the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS)—or countries deemed to give ‘adequate protection’ to performances by British citizens, British residents, or taking place in the United Kingdom.<sup>74</sup> The qualifying countries are divided up elaborately into five categories, as follows.

- (i) *Designated countries* are members of the Rome Convention (such as the Russian Federation or Brazil), in relation to which performances are granted full protection.
- (ii) *Deemed countries* mainly covers countries belonging to the WPPT, but not to the Rome Convention (such as Indonesia, Malaysia, Trinidad and Tobago, and a host

<sup>64</sup> CDPA 1988, Sch. 2, para. 2.      <sup>65</sup> CDPA 1988, Sch. 2 paras 3A–E.

<sup>66</sup> CDPA 1988, Sch. 2, paras 4, 5, 6, 6ZA, 6C, 6D, 6E, 6F, 6G, 6H.

<sup>67</sup> The Copyright and Rights in Performances (Personal Copies for Private Use) Regulations 2014 added this as CDPA 1988, Sch. 2, para. 1B.

<sup>68</sup> The Copyright and Rights in Performances (Quotation and Parody) Regulations 2014 added CDPA 1988, Sch. 2, para. 2(1A).

<sup>69</sup> The Copyright and Rights in Performances (Quotation and Parody) Regulations 2014 add this as CDPA 1988, Sch. 2, para. 2A.      <sup>70</sup> CDPA 1988, ss 194–202.

<sup>71</sup> CDPA 1988, s. 181. Despite the use of the present tense in the legislation, once a country becomes a qualifying country or a person becomes a qualifying individual, the rights arise retrospectively in relation to past performances: see *Experience Hendrix LLC v. Purple Haze Records Ltd* [2007] EWCA Civ 501.

<sup>72</sup> CDPA 1988, s. 206. For a general analysis of concepts relevant to protecting foreign claims, see above at pp. 6, 41, 42, 118–22 and Chapter 4, section 5.

<sup>73</sup> There is no distinction drawn between ‘extension’ and ‘application’, though CDPA 1988, s. 208(5), allows Pt II of the Act to be ‘applied’ to countries that, in Pt I, are subject to ‘extension’.

<sup>74</sup> Copyright and Performances (Application to Other Countries) Order 2013 (SI 2013/536).

of African countries), so that performances with a required connecting factor to such a country receive more limited protection, which does not include public lending of copies.

- (iii) *Designated countries marked with a minus sign (-) in the Order* are parties only to the World Trade Organization (such as China or India), resulting in more limited protection than deemed countries, which does not include the 'making available' right.
- (iv) *Designated countries marked with an asterisk (\*) in the Order* are parties to the Rome Convention, but have reservations thereunder (such as Australia and Iceland), resulting in more limited protection that does not include the right to claim a single equitable remuneration for the communication of sound recordings to the public.
- (v) *Deemed countries are marked with a hash sign (#) in the Order* are parties to the WPPT, but have made a declaration thereunder (such as the United States and Australia), resulting in more limited protection that does not include the right to claim a single equitable remuneration for the communication of sound recordings to the public.

Section 185 of the 1988 Act, which confers equivalent rights on a person who is party to an exclusive recording contract, does so only if they or one of their licensees is a 'qualifying person'. A 'qualifying person' is defined as a 'qualifying individual' or a body corporate sufficiently connected with a 'qualifying country'.<sup>75</sup>

### 3 DATABASE RIGHT

Many different technologies organize and order information: encyclopaedias, filing cabinets, and textbooks all play their role in placing information in a usable format. Databases are another obvious example. While databases have existed in one form or another for a very long time, digital technology has transformed and revitalized databases. In particular, the digital database has enabled the production of facilities that enable easy access to vast collections of information. Examples familiar to lawyers include *Lexis* and *WestLaw*, as well as CD-ROMs such as the *Index to Legal Periodicals and Books*. The value of these facilities is the comprehensive nature of the information that they contain and the ease of access, rather than the way in which that information is ordered. While databases can cost a considerable amount of money to construct, they are readily copied. This makes them an ideal candidate for intellectual property protection.<sup>76</sup>

Faced with the fact that the level of protection varied, sometimes considerably, between member states,<sup>77</sup> the European Commission decided to harmonize the law that protected the effort that went into creating databases.<sup>78</sup> Eventually, these efforts took shape in the

<sup>75</sup> CDP 1988, ss 181, 185(3), 206(1).

<sup>76</sup> At least in economic theory: see Davison, 239ff, with criticisms; Derclaye, ch. 1.

<sup>77</sup> Some, such as the United Kingdom and Ireland, would probably have protected most databases by copyright; others would have done so by means of 'unfair competition'; the Nordic countries had adopted a special form of protection for catalogues and a burning issue remains to what extent the Directive should be read as generalizing the latter position. On this, see Davison, 141.

<sup>78</sup> Complete uniformity has not been achieved because member states are able to retain unfair competition protection and to diverge in implementing exceptions: Database Dir., Arts 9, 13. See Davison, 156–7.

form of the Database Directive,<sup>79</sup> which was implemented into the United Kingdom on 1 January 1998, in the Database Regulations.<sup>80</sup> The Database Directive required member states to introduce a two-tier system of protection for databases. The first tier involves retaining copyright protection for databases that are ‘original’.<sup>81</sup> This was discussed in Chapters 3 and 4. The Directive also requires member states to provide a second tier of protection by way of a new *sui generis* right known as the ‘database right’. Database rights arise in relation to databases, including those that fail to reach the copyright’s originality threshold.<sup>82</sup> The database right is separate from and in addition to any copyright protection that may exist in relation to a database. Although this new database right was described as ‘one of the least balanced and most potentially anti-competitive intellectual property rights ever created’,<sup>83</sup> much of its apparent strength has been curtailed by the Court of Justice in four decisions: *Fixtures Marketing v. Oy Veikkaus*;<sup>84</sup> *Fixtures Marketing v. Organismo Prognostikon Agnon Podosfairou*;<sup>85</sup> *Fixtures Marketing v. Svenska*;<sup>86</sup> and *British Horseracing Board v. William Hill*.<sup>87</sup> The first three concerned whether there was a database right in Premier League fixture lists, and the Court clearly indicated that there is not; *British Horseracing Board* concerned cumulative lists of runners and riders in British horse races and, following the Court’s advice, this was held by the Court of Appeal not to be protected.<sup>88</sup>

### 3.1 SUBSISTENCE

The database right is a property right that subsists in a database whether made before or after 1 January 1998.<sup>89</sup> A ‘database’ is defined as ‘a collection of independent works, data or other materials that are arranged in a systematic or methodical way, and are individually accessible by electronic or other means’.<sup>90</sup> We reviewed the meaning of ‘database’ in Chapter 3, noting its potentially awesome breadth.

Note also Database Dir., Recital 52, which enables countries that have specific rules providing a right comparable to the *sui generis* right (presumably the Nordic countries) to retain ‘as far as the new right is concerned, the expectations traditionally specified by such rules’.

<sup>79</sup> See above at pp. 52–3; Davison, 50–68.

<sup>80</sup> Copyright and Rights in Databases Regulations 1997 (SI 1997/3032). For implementation in Europe, see Davison, ch. 5.

<sup>81</sup> Transitional provisions make it clear that databases that were already protected by copyright on 27 March 1996, but which would not reach the standards required under the Directive, continue to enjoy protection until the end of the copyright term.

<sup>82</sup> Database Regs, reg. 13(2) (reflecting Database Dir., Art. 7(4)), says that it is immaterial whether or not the database or any of its contents are copyright works.

<sup>83</sup> J. Reichman and P. Samuelson, ‘Intellectual Property Rights in Data?’ (1997) 50 *Vand L Rev* 51, 81; Davison, 285.

<sup>84</sup> Case C-46/02 [2004] *ECR I*-10365 (ECJ, Grand Chamber) (*‘Veikkaus’*).

<sup>85</sup> Case C-444/02 [2004] *ECR I*-10549 (ECJ, Grand Chamber) (*‘OPAP’*).

<sup>86</sup> Case C-338/02 [2004] *ECR I*-10497 (ECJ, Grand Chamber) (*‘Svenska’*).

<sup>87</sup> Case C-203/02 [2004] *ECR I*-10415 (ECJ, Grand Chamber) (*‘BHB (ECJ)’*).

<sup>88</sup> *British Horseracing Board v. William Hill* [2005] *RPC* 883. For commentaries on the cases, see T. Aplin, ‘The ECJ Elucidates the Database Right’ [2005] *IPQ* 204; E. Derclaye, ‘The Court of Justice Interprets the Database *Sui Generis* Right for the First Time’ [2005] *ELR* 420; M. Davison and B. Hugenholtz, ‘Football Fixtures, Horseraces and Spin Offs: The ECJ Domesticates the Database Right’ [2005] *EIPR* 113.

<sup>89</sup> Database Regs, reg. 13(1), 27–8 (implementing Database Dir., Arts 14(3), 16). It is immaterial whether or not the database or any of its contents is a copyright work, so that there may be a database right where there is no copyright, or there may be both copyright and a database right. It may also be possible for a database to attract copyright, but not the database right, if the selection and arrangement renders the collection the author’s own intellectual creation, but there is not substantial ‘human’ investment in presenting the contents of the database.

<sup>90</sup> Database Regs, reg. 12.

The database right arises only if there has been a substantial investment in obtaining, verifying, or presenting the contents of the database. ‘Investment’ includes any investment, whether of financial, human, or technical resources.<sup>91</sup> Investment may be ‘substantial’ in terms of quality, quantity, or a combination of both. The former refers to ‘quantifiable resources’; the latter, ‘to efforts which cannot be quantified, such as intellectual effort or energy’.<sup>92</sup> The Court of Justice did not comment on the Advocate General’s view that the Directive requires an absolute lower threshold for investments worthy of protection as a sort of *de minimis* rule, albeit at a low level; a high threshold level ‘would undermine the intended purpose of the Directive, which was to create incentives for investment’.<sup>93</sup>

The act of ‘obtaining’ information is, it seems, to be distinguished from creating information: investment in creation is not relevant.<sup>94</sup> It is to be ‘understood to refer to the resources used to seek out existing independent materials and collect them in the database, and not to the resources used for the creation as such of independent materials’.<sup>95</sup> So the investment in deciding which horses may run in a race was regarded as investment in the creation of data and thus to be disregarded when assessing whether a collection of such material was a database that resulted from substantial investment.<sup>96</sup> Equally, the resources deployed to determine the football league fixtures was an investment in creating data rather than the database. Finding and collecting, verifying, and presenting that existing data did not require ‘any particular effort’.<sup>97</sup> The distinction between ‘creating’ and ‘obtaining’, however, will often not be straightforward: a number of commentators have suggested that scientific observation of natural phenomena ‘creates’ the resulting data.<sup>98</sup> In *Football Dataco v. Sportradar and Stan James*,<sup>99</sup> it was put to the English Court of Appeal that observations of events on a football field (who took throws, passed the ball, etc.) were not created as data until they were recorded. The Court rejected the argument as absurd. It found the idea that data did not exist until it was recorded to be ‘metaphysical’ and one that would undermine the purpose of the Directive. The distinction between creating data and collecting it must be drawn pragmatically. The English courts, at least, are willing to interpret the criteria so as to confer protection on customer lists (even though the artificial incentive provided by the database right hardly seems relevant in such cases).<sup>100</sup>

In *British Horseracing Board*, ‘verification’ was described as monitoring the accuracy of the materials when the database is created and during its operation; it does not include verification during the stage of creation of data.<sup>101</sup> In the three *Fixtures Marketing* references, Advocate General Stix-Hackl had observed that ‘presentation’ ‘entails not only the presentation for users of the database, that is to say, the external format, but also the

<sup>91</sup> Database Regs, reg. 13; Database Dir., Recitals 7, 12, 39, 40 (right protects *any* investment and referring to various types). Note Derclaye, 74 (arguing that databases created by the state are unprotected because the state does not ‘invest’).

conceptual format, such as the structuring of the contents'.<sup>102</sup> The Court of Justice did not comment on this.

The basic term of protection is 15 years.<sup>103</sup> More specifically, the database right expires 15 years from the end of the calendar year in which the database was completed.<sup>104</sup> However, where a database is made available to the public before the end of the period of 15 years from the year in which it was made, rights in the database expire 15 years from the end of the calendar year in which the database was first made available to the public. It is possible that a database right might subsist for 30 years (and thereafter be extended, as discussed below). Where copies of the database as published bear a label or a mark stating that the database was first published in a specified year, the label or mark shall be presumed to be correct until the contrary is proved.<sup>105</sup>

It is important to note that a new period of protection may be acquired for a database. For this to occur, there must be a substantial change *to the contents* of the database.<sup>106</sup> This will include a substantial change resulting from the accumulation of successive additions, deletions, or alterations (so long as the changes constitute a substantial new investment in the database). In these circumstances, the 'new' database qualifies for its own term of protection, but probably only as regards those contents that reflect the new substantial investment. In many cases, therefore, it will be legitimate to extract contents that are more than 15 years old from the database, even if the accuracy of those contents has been verified.<sup>107</sup> While the idea of giving a new period of protection to an updated database may seem no less justified than the idea of giving the authors of the third edition of a textbook copyright in the new edition, problems exist in relation to databases because many are subject to a process of continual updating. For example, in *British Horseracing Board*, the BHB database was constantly being updated, so that 800,000 new records or changes to existing records were being made each year—that is, more than 2,000 a day. In these cases, which Laddie J has described as relating to 'dynamic databases',<sup>108</sup> there are clear difficulties in deciding when a sufficient alteration of the contents will have occurred as to render the database a new, separate database.

### 3.2 MAKERS AND OWNERS

The 'maker' of a database is the first owner of the database right.<sup>109</sup> Subject to an exception as regards employees, the maker of the database is the person who takes the initiative in obtaining, verifying, or presenting the contents of a database, and who assumes the risk of investing in that obtaining, verification, or presentation.<sup>110</sup> The implication of this is that the maker must take the initiative *and* the risk of the investment. If one person takes the risk and another person takes the initiative, joint making may occur. Where a database is made by an employee in the course of employment, unless otherwise stipulated the employer is regarded as the maker of the database.<sup>111</sup>

A number of presumptions simplify the task of proving ownership.<sup>112</sup> Where a name purporting to be that of the maker appears on copies of the database as published or on

<sup>102</sup> For example, *OPAP*, [AG78].

<sup>103</sup> Where the making of a database was completed on or after 1 January 1983, the right begins to subsist in the database for the period of 15 years beginning on 1 January 1998: Database Regs, reg. 30.

<sup>104</sup> Database Regs, reg. 17 (implementing Database Dir., Art. 10).

<sup>105</sup> Database Regs, reg. 22(3); cf. Database Dir., Recital 53.

<sup>109</sup> Database Regs, reg. 15. <sup>110</sup> Database Regs, reg. 14; Database Dir., Recital 41.

<sup>111</sup> Database Regs, reg. 14(2). <sup>112</sup> Database Regs, reg. 22(1).

the database when it was made, the person whose name appeared is presumed to be the maker of the database and to have made it in an employment relationship. Where copies of the database as published bear a label or a mark naming a person as the maker of the database, the label or mark is presumed to be correct. Both presumptions are rebuttable.

The database right is an assignable property right, and sections 90–93 of the 1988 Act apply to the database right as they would to copyright works. It is also possible to license database rights, and licensing schemes and licensing bodies are subject to supervision in accordance with Schedule 2. The jurisdiction of the Copyright Tribunal has been extended accordingly.

### 3.3 INFRINGEMENT, RIGHTS, AND REMEDIES

The database right is infringed where a person, without the consent of the owner of the right, ‘extracts’ or ‘reutilizes’ all or a substantial part of the contents of the database. The owner of database right must prove that the alleged infringer has derived the material from the claimant’s database, whether directly or indirectly.

‘Extraction’ means the permanent or temporary transfer of those contents to another medium by any means or in any form.<sup>113</sup> ‘Reutilization’ means making those contents available to the public by any means.<sup>114</sup> In *BHB*, the Court of Justice indicated that the concepts must be interpreted in the light of the objective pursued by the Directive—namely, promoting investment in the creation and maintenance of databases.<sup>115</sup> Consequently, the terms are defined widely, to refer to:

... any act of appropriating and making available to the public, without the consent of the maker of the database, the results of his investment, thus depriving him of revenue which should have enabled him to redeem the cost of the investment.<sup>116</sup>

This might include indirect, as well as direct, extraction or reutilization.<sup>117</sup> In the case at hand, the Court held that William Hill had extracted data (albeit indirectly) and reutilized those data by making them available to the public on its Internet betting site.<sup>118</sup> In a later case, the Court clarified that there can be an extraction where a person consults a database and uses the results, rather than physically transfers them from one database to another.<sup>119</sup> The case concerned a database of poems, which the defendant had consulted before making its own database, named *A Thousand Poems Everyone Should Have*. The Court stated that the concept of extraction was to be given a broad construction and was not limited by technology (the extraction need not be electronic) or by purpose,<sup>120</sup> or by whether the contents were modified.<sup>121</sup> The Court left it to the referring court to determine whether the extraction had been substantial.

Extraction necessarily presupposes derivation. Inevitably, questions of proof will arise similar to those discussed in Chapter 8. In *Apis Hristovich EOOD v. Lakorda ad*,<sup>122</sup> the

<sup>113</sup> Database Dir, Art. 7(2)(a); *Apis Hristovich EOOD v. Lakorda ad*, Case C-545/07 [2009] ECR I-1627 (ECJ, Fourth Chamber) (*Apis*), [44].

<sup>114</sup> Database Dir, Art. 7(2)(b).

<sup>115</sup> *BHB* (ECJ), [46]. <sup>116</sup> *Ibid.*, [51]. <sup>117</sup> *Ibid.*, [52].

<sup>118</sup> *Ibid.*, [65]. On the location of the act, see *Football Dataco v. Sportradar*, Case C-173/11 (18 October 2012) (ECJ, Third Chamber), [39].

<sup>119</sup> *Directmedia Publishing GmbH v. Albert-Ludwigs-Universität Freiburg and Professor Ulrich Knoop*, Case C-304/07 [2008] ECR I-7565 (ECJ, Fourth Chamber).

<sup>120</sup> *Ibid.*, [46]–[47]; see also *Apis*, [46].

<sup>121</sup> *Publishing GmbH v. Albert-Ludwigs-Universität Freiburg and Professor Ulrich Knoop*, Case C-304/07 [2008] ECR I-7565[39]; *Apis*, [47]–[48].

<sup>122</sup> *Apis*, [50]–[55]. See further S. Vousden, ‘*Apis*, Databases and EU Law’ [2011] *IPQ* 215.

Court of Justice indicated that the question was one of fact for the national tribunal, but inferences might be drawn from the presence of the same material in the alleged infringing database, especially in the absence of any explanation of such coincidence.

The act must occur in relation to a ‘substantial’ part of the contents of the database. This means substantial in terms of quantity or quality or a combination of both. The Court in *BHB* held that this is assessed by reference to the investment in the creation of the database and the prejudice caused to that investment by the act of extracting or reutilizing that part.<sup>123</sup> The quantitative assessment compares the volume of data extracted to the volume of the whole contents of the database. However, an extraction/reutilization of a part will also be substantial if it represents a significant part of the investment viewed qualitatively—that is, in terms of human, technical, or financial investment in obtaining, verification, or presentation of the database. The intrinsic value of the material taken is irrelevant;<sup>124</sup> so too is the investment in the creation of those data.<sup>125</sup> If a database comprises a bundle of modules (such as a legal database divided into legislation, case law, commentary, and journals), the question of whether there has been an extraction of a substantial part can be assessed against each module insofar as the module concerned reaches the threshold for protection (that is, is a result of substantial investment). If the module itself does not qualify, then an extraction must be assessed against the collection of modules as a totality.<sup>126</sup>

Regulation 16(2) provides that the repeated and systematic extraction or reutilization of insubstantial parts of the contents of a database may come to amount to the extraction or reutilization of a substantial part of those contents. This will be infringement only where it comprises acts ‘which conflict with a normal exploitation of that database or which unreasonably prejudice the legitimate interests of the maker of the database’.<sup>127</sup> In the context of a database of information relating to horse races, Laddie J had held that the repeated use of information for betting services was the systematic extraction of parts of the claimant’s ‘dynamic database’.<sup>128</sup> However, the Court of Justice has taken the opposite view: the Regulation on insubstantial parts is ‘to prevent circumvention of the prohibition in Article 7(1)’; the systematic and repeated uses must be such that they would lead to the reconstitution of a substantial part of the database, and thus cumulatively would seriously prejudice the investment made by the maker of the database.<sup>129</sup> In the Court’s view, William Hill’s uses were systematic and repeated, but not infringing, because there was ‘no possibility that, through the cumulative effects of its acts, William Hill might reconstitute and make available the whole or a substantial part of the contents of the BHB database’.<sup>130</sup>

One problem that has already been raised before the courts is the conflict between, on the one hand, these rights over the ‘contents’ of the database and, on the other, the assertion made in the Recitals to the Directive that these rights ‘should not give rise to the creation of a new right in the works, data or other materials themselves’.<sup>131</sup> What is the difference between a right over the contents of a database and a right over the data themselves? Rejecting an argument to the effect that all that is protected is the ‘database-ness’ of a collection of information, Laddie J has held that infringement of the right is not avoided by rearranging the contents of the database; what is prohibited is certain kinds of use of ‘parts of the contents’ of the database.<sup>132</sup> Taking a collection of data from

<sup>123</sup> Case C-203/02 [2004] ECR I-10415, [69].      <sup>124</sup> *Ibid.*, [72], [78].      <sup>125</sup> *Ibid.*, [79].

<sup>126</sup> *Apis*.      <sup>127</sup> Database Dir., Art. 7(5).

<sup>128</sup> *British Horseracing Board v. William Hill* [2001] ECDR 257.      <sup>129</sup> *BHB* (ECJ), [86]–[87].

<sup>130</sup> *Ibid.*, [91].      <sup>131</sup> Database Dir., Recital 46.

<sup>132</sup> *British Horseracing Board v. William Hill* [2002] ECDR 41 (CA), 276–7.

the database is such an act.<sup>133</sup> However, it should be noted that, on appeal, the Court of Appeal referred the issue of the exact scope of protection to the Court of Justice.<sup>134</sup> The Advocate General recommended to the Court that protection not be limited to ‘database-ness’, referring to such views as ‘fundamentally mistaken’.<sup>135</sup> The Court declined to determine this issue.<sup>136</sup>

The database right allows the maker to control the first sale, but not the subsequent distribution, of hard copies on which data is stored. Where a copy of a database has been sold within the EEA by, or with the consent of, the owner of the database right in the database, further sales within the EEA of that copy shall not constitute the extraction or reutilization of the contents of the database. It is interesting that the right is exhausted only by ‘sale’ and not by other forms of transfer.<sup>137</sup> Consequently, the sale by a customer of gratuitously distributed copies of databases, such as British Telecom telephone directories, may infringe. Oddly, where there has been first sale of hard copies on which data are stored, the Regulations permit only resale and not other forms of transfer. The Regulations appear to suggest that the lawful buyer of a copy of a database can neither give it away, nor rent it.<sup>138</sup>

In relation to the remedies available for breach of the database right, the Database Regulations provide that equivalent provisions of the 1988 Act apply in relation to the database right and databases in which that right subsists as apply in relation to copyright and copyright works.<sup>139</sup>

### 3.4 EXCEPTIONS AND DEFENCES

#### 3.4.1 Lawful use

A lawful user of a database that has been made available to the public in any manner is entitled to extract or reutilize insubstantial parts of the contents of the database for any purpose.<sup>140</sup> This limitation may not be excluded by agreement.

#### 3.4.2 Fair dealing

Where a database has been made available to the public in any manner, the database right is not infringed by a fair dealing with a substantial part of its contents if three conditions are satisfied: (i) if that part is extracted from the database by a person who is a lawful user of the database; (ii) if it is extracted for the purpose of illustration for teaching or research and not for any commercial purpose; and (iii) if the source is indicated.<sup>141</sup> With respect to ‘text and data mining’, the government expressed the view that it was unnecessary to modify the exception to add something equivalent to the new section 29A (introduced in June 2014).<sup>142</sup> In its view, the existing exception was sufficiently broad to encompass acts falling within the new copyright exception.

<sup>133</sup> *BHB v. William Hill* [2001] ECDR 257.

<sup>134</sup> *British Horseracing Board v. William Hill* [2002] ECDR 41 (CA). <sup>135</sup> *BHB* (ECJ), [AG70].

<sup>140</sup> Database Regs, reg. 19; Database Dir., Art. 8. The definition of ‘lawful user’ is problematic: see pp. 227–8. See also Derclaye, 120–6.

<sup>141</sup> Database Regs, reg. 20(1); Database Dir., Art. 9(b). Criticized by the Royal Society as ‘vague and unhelpful’: Royal Society, *Keeping Science Open: The Effects of Intellectual Property on the Conduct of Science* (2003), [5.5].

<sup>142</sup> HM Government, *Technical Review of the Draft Legislation on Copyright Exceptions: Government Response* (2014), 13 (stating that the exception ‘will permit the extraction of whole works if required for text and data mining through the provision for “fair dealing with a substantial part”’).

### 3.4.3 Public lending

An exception is also made for public lending.<sup>143</sup> For lending to be ‘public’, it must take place through an establishment that is accessible to the public. Such an establishment is permitted to charge borrowers an amount that does not go beyond what is necessary to cover the costs of the establishment.<sup>144</sup> However, permitting remote access is not deemed to constitute a lending. Bizarrely, the exception for public lending does not apply to the making of a copy of a database available for on-the-spot reference use. Even if the lending is gratuitous and in a public establishment, the Regulations suggest that it may be an infringement.<sup>145</sup>

### 3.4.4 Other defences

Defences also exist in relation to parliamentary and judicial proceedings, royal commissions and statutory inquiries, material open to public inspection or on an official register, material communicated to the Crown in the course of public business, public records, and acts done under statutory authority.<sup>146</sup> The Regulations also provide a defence where the extraction or reutilization occurs at a time when the identity of the maker could not be ascertained by reasonable inquiry, or in pursuance of arrangements made at a time when such identification was not possible. It must also be reasonable to assume that the database right has expired.<sup>147</sup> Competition law will also apply to the database right in the same way as to other intellectual property rights.<sup>148</sup> This is considered in Chapter 12.

## 3.5 FOREIGN DATABASES

The database right will subsist only where, at the material time,<sup>149</sup> its maker was either: a national of an EEA state; habitually resident within the EEA; a body incorporated under the law of an EEA state; a body with its principal place of business or its registered office within the EEA; or a partnership or other unincorporated body that was formed under the law of an EEA state, which, at that time, satisfied certain conditions.<sup>150</sup>

## 3.6 ASSESSMENT

Although the Database Directive had been described by many as unduly protective, the Court of Justice cases have seriously curtailed the perceived excesses (by limiting the availability of protection of sole-source databases).<sup>151</sup> In December 2005, the Commission issued an evaluation of the effect of the Directive and was disappointed to find that the number of databases created in 2004 had declined to pre-Directive levels.<sup>152</sup> The Commission then embarked on a stakeholder consultation, asking whether stakeholders favoured maintenance of the status quo, repeal of the whole Directive (including its copyright components), repeal of the *sui generis* database right, or modification of

the latter right.<sup>153</sup> Most respondents favoured reform of the right, but they were divided over whether the right should be strengthened or the exceptions broadened.<sup>154</sup> The Commission has given no indication of its plans.

#### 4 TECHNOLOGICAL PROTECTION MEASURES

As mentioned in Chapter 11, copyright owners have begun to exploit copyright-protected works using self-help mechanisms in the form of ‘technological measures of protection’. This new mode of exploitation reflects real fears amongst the right holders that digital reproduction and communication technologies present the threat of such widespread private copying that copyright law, by itself, could not be relied upon to protect the investment involved in creating and publishing the work. Such technological protection measures include: encryption and similar access controls, which encode works so that only those with legitimate keys can obtain access; and copy controls, which allow users access to works, but operate to prevent the subsequent making of copies.

The use of technological measures to support copyright is reinforced by complex and extensive laws prohibiting circumvention of such measures. The reinforcement is by way of a mesh of overlapping civil and criminal actions. This complex topic deserves treatment separate from secondary infringement of copyright, but as ‘related rights’, for two reasons: first, because the measures are, in many cases, not limited to those applied to protect copyright works, but also protect performances and the *sui generis* database right; and second, because the civil rights of action are frequently conferred not only on the copyright holder who applies the measure to the work, but also on the person issuing copies to the public in protected form and any other person with intellectual property rights in the technological measure employed.

The CDPA 1988, as amended, contains three categories of provision dealing with situations in which a person facilitates access to works that the person concerned is not entitled to use or receive.<sup>155</sup> The first category, in sections 296ZA–ZF, relates to the circumvention of effective technological measures applied to copyright works other than computer programs and is designed to implement Article 6 of the Information Society Directive.<sup>156</sup> The second category, which is found in section 296, applies only to computer programs (and is intended to implement Article 7(1)(c) of the Software Directive). The third category, in sections 297–9, relates to reception of transmissions (and is intended to implement the Conditional Access Directive).<sup>157</sup> Each needs to be considered in turn.

<sup>153</sup> *Ibid.*, 25–7, [6.1]–[6.4].

<sup>154</sup> European Commission, *Protection of Databases* (2014), available online at <[http://ec.europa.eu/internal\\_market/copyright/prot-databases/index\\_en.htm](http://ec.europa.eu/internal_market/copyright/prot-databases/index_en.htm)>

<sup>155</sup> P. Vantsiouri, ‘A Legislation in Bits and Pieces: The Overlapping Anti-Circumvention Provisions of the Information Society Directive, the Software Directive and the Conditional Access Directive and Their Implementation in the UK’ (2012) 34(9) *EIPR* 587.

<sup>156</sup> CDPA 1988, ss 297ZA(1), (6), and 296 ZD(1), (8) (copyright works—other than computer programs—performances, database right, publication right); Info. Soc. Dir., Recital 50 (without prejudice to Software Dir.). In turn, Art. 6 implements WCT, Art. 11, and WPPT, Art. 18. However, they go beyond the requirements of those treaties in breadth (since they apply also to broadcasting organizations, publication rights, and *sui generis* database rights) and—more importantly—depth. The Directive goes beyond acts of circumvention to cover devices and services that enable circumvention.

<sup>157</sup> Directive 98/84/EC of the European Parliament and of the Council of 20 November 1998 on the legal protection of services based on, or consisting of, conditional access [1998] *OJ L* 320/54 (28 November 1998) (the ‘Conditional Access Directive’).

#### 4.1 MEASURES APPLIED TO COPYRIGHT WORKS (OTHER THAN COMPUTER PROGRAMS)

Sections 296ZA–ZF are intended to implement Article 6 of the Information Society Directive, which requires member states to provide ‘adequate legal protection’ against a number of activities in relation to the circumvention of ‘effective technological measures’. Because those provisions are not supposed to affect the provisions in the Software Directive, we are here concerned with cases in which effective technological measures have been applied to a copyright work other than a computer program.<sup>158</sup> Section 296ZF defines ‘technological measures’ as ‘any technology, device or component that is designed, in the normal course of its operation, to protect a copyright work other than a computer program’.<sup>159</sup> A technological measure is ‘effective’ where the use of a protected work, etc., ‘is controlled by the copyright owner through either (a) an access control or protection process such as encryption, scrambling or other transformation of the work, or (b) a copy control mechanism, which achieves the protection objective’.<sup>160</sup> This makes clear that the provisions apply both to access controls, such as encryption, and copy controls, such as the Serial Copy Management System (SCMS). In *Nintendo v. PC Box*,<sup>161</sup> the Court of Justice was asked whether protection was afforded to a games console (as opposed to the games themselves), such that use of a device that would enable other games to be played on the console counted as circumvention. The Court said that it could not see any reason why not, the copyright in the game being protected by the interaction between the console and the game, although it left to the national court the assessment of the purpose of the supposed circumvention device.<sup>162</sup> It remains unclear, however, whether it covers devices that monitor usage.<sup>163</sup>

Following largely the schema of the Directive, the Act distinguishes between two sorts of objectionable behaviour: on the one hand, protection is given against the act of circumvention itself; on the other, protection is given against those who make or sell devices that enable circumvention, or who supply services that achieve that end.

##### 4.1.1 The act of circumvention

Section 296ZA of the 1988 Act gives specified persons civil rights of action where a person does anything that circumvents technological measures knowing, or with reasonable grounds to know, that they are pursuing that objective. The persons given the right to bring the action, who are described as having the same rights as those that a copyright

<sup>158</sup> CDPA 1988, s. 296ZA(1). In *Andreas Grund, SR-Tronic GmbH, and ors v. Nintendo Co. Ltd*, Case C-458/13 (pending), the German BGH has asked the Court of Justice whether this precludes the application of Art. 6(2) to a work that includes a computer program. The answer (that it does not) seems clear from *Nintendo v. PC Box*, Case C-355/12 (23 January 2014) (ECJ, Fourth Chamber).

<sup>159</sup> CDPA 1988, s. 296ZF. This largely echoes Info. Soc. Dir., Art. 6(3). However, there the definition is worded so as to relate to devices designed ‘to prevent or restrict acts, in respect of works or other subject matter, which are not authorised’ by the right holder. A device that merely discourages infringement, rather than physically preventing it, is not covered: *R v. Higgs* [2008] *EWCA Crim* 1324.

<sup>160</sup> CDPA 1988, s. 298ZF(2), replicating Info. Soc. Dir., Art. 6(3). Note the decision of the Helsinki District Court, Case R 07/1004 (25 May 2007), which held that the widespread availability of DeCSS code meant that the CSS used to protect content on DVDs could not be regarded as an ‘effective’ technological measure. For a translation, see <[http://www.valimaki.com/org/docs/css/css\\_helsinki\\_district\\_court.pdf](http://www.valimaki.com/org/docs/css/css_helsinki_district_court.pdf)>

<sup>161</sup> Case C-355/12 (23 January 2014) (ECJ, Fourth Chamber). <sup>162</sup> *Ibid.*, [28].

<sup>163</sup> L. Bygrave, ‘The Technologisation of Copyright: Implications for Privacy and Related Interests’ [2002] *EIPR* 51, 54–5. It is unclear whether the definition in Info. Soc. Dir., Art. 6(3), of ‘effective’ is exhaustive and so covers only access or copy controls, and if it is, whether a system for monitoring usage is an ‘access control or protection process’.

owner has in respect of an infringement of copyright, are the copyright owner of the work protected (or their exclusive licensee) and the person issuing copies of the work or communicating the work to the public in a form to which technological measures have been applied.<sup>164</sup> The *scienter* requirement means that users do not commit a wrong if they circumvent accidentally; it is only where a person knows or has reasonable grounds to know that they are trying to circumvent technological measures that they infringe. The wrong is committed only where a successful act of circumvention has taken place; mere attempts are not covered. The provision is inapplicable where a person circumvents a measure ‘for the purposes of research into cryptography’, unless, by so doing ‘or issuing information derived from that research, he affects prejudicially the rights of the copyright owner’.<sup>165</sup>

#### 4.1.2 Facilitating circumvention

The Directive requires member states to provide adequate legal protection of effective technological measures by preventing manufacture of and trade in circumvention devices. These include devices that are promoted, advertised, or marketed for the purpose of circumvention, or have only a limited commercially significant purpose or use other than to circumvent, or are primarily designed, produced, adapted or performed for the purpose of enabling or facilitating the circumvention of any effective technological measures. In *Nintendo*,<sup>166</sup> the Court of Justice was asked to advise on whether a device that altered a games console and would allow it to play both pirated games and lawful, but unauthorized, games fell within the provision. The Court indicated that the Directive embraced a principle of proportionality: that the technological measures should not restrict activities beyond those necessary to protect the copyright in the works. Thus it was relevant to consider whether adequate protection could be achieved for copyright from measures directed at the games themselves, rather than the console. The Court of Justice suggested that, when assessing the purpose or effect of the defendant’s device, the national court would need to assess how it was used in practice, in particular whether it was used to facilitate unauthorized copies of Nintendo games or rather alternatives to those games.<sup>167</sup> It thus seems that, in a case in which the right holder measures disproportionately exclude a high volume of legal acts, the measures will be unprotected because an equally high proportion of circumvention tools will be used for legal ends.

In the United Kingdom, the provision is implemented by civil and criminal measures.<sup>168</sup> The addition of criminal liability reflects the fact that these acts are regarded as the ones that seriously threaten the copyright holder’s interests—after all, the general public does not have the time or means to break technological locks or controls. It is only with the assistance of commercially available circumvention devices or services that anti-circumvention is likely to become widespread.

There are two criminal provisions. The first applies to devices, products, or components ‘primarily designed, produced or adapted for the purpose of enabling or facilitating the circumvention of effective technological measures’.<sup>169</sup> The limitation to devices ‘primarily designed’ for circumvention is important, and while it would cover forged smart cards for decrypting copyright-protected broadcasts, devices that serve legitimate

<sup>164</sup> CDP 1988, s. 296ZA(3); cf. the wider range of persons mentioned in ss 296ZD(2) and 296(2).

<sup>165</sup> CDP 1988, s. 296ZA(2); Info. Soc. Dir., Recital 48. One may wonder whether circumvention ought not to be lawful where it is done in the public interest.

<sup>166</sup> Case C-355/12 (23 January 2014) (ECJ, Fourth Chamber). <sup>167</sup> *Ibid.*, [31]–[38].

<sup>168</sup> Member states may also prohibit private possession of such devices: Info. Soc. Dir., Recital 49.

<sup>169</sup> CDP 1988, s. 296ZB(1). See *R v. Higgs* [2008] EWCA Crim 1324.

purposes (such as general-purpose PCs) fall outside its scope even if they can be used to avoid technological protection. A person commits an offence if they manufacture such a device for sale or hire, or distribute one in the course of business, or do so to such an extent as to affect prejudicially the copyright owner, unless they prove that they did not know and had no reasonable grounds for believing that the device enabled or facilitated the circumvention of effective technological measures.<sup>170</sup> One peculiar feature of this offence is that, in a situation in which a device is primarily designed for circumvention, but can be used for other legitimate purposes, a person commits an offence by making and selling such devices even where they were genuinely making and selling them for legitimate purposes. In such a situation, the defence is of no assistance, because while the person has good reason to believe that the device will not be used to circumvent, they know that it *could* be so used.

The second criminal provision relates to a service, the purpose of which is to enable or facilitate the circumvention of effective technological measures. A person commits an offence if, in the course of business or to such an extent as to affect prejudicially the copyright owner, they provide, promote, advertise, or market such a service.<sup>171</sup> As with devices, it is a defence for the accused to show that they did not know, nor had reasonable grounds for believing, that the service enabled or facilitated circumvention. In both cases, a further defence applies to acts of the intelligence services and law enforcement agencies.<sup>172</sup>

The civil actions cover broader ground than the criminal ones (and, in contrast to the criminal provisions, apply *mutatis mutandis* to effective technological measures used in relation to performances, the database right, and the publication right).<sup>173</sup> As regards manufacture and distribution of devices (etc.), liability exists not only in relation to devices ‘primarily designed, produced, adapted . . . for the purpose of enabling and facilitating’ circumvention, but also to devices ‘promoted, advertised, or marketed’ for that purpose and ones having ‘only a limited commercially significant purpose or use other than to circumvent’.<sup>174</sup> This latter criterion was at issue in *Nintendo v. PC Box*,<sup>175</sup> in which the Court highlighted that the limitation was intended to embody the principle of proportionality. This meant that the right holder must not deploy technological measures that disproportionately inhibit lawful activities of third parties<sup>176</sup> and that a device that might enable circumvention should be permissible only where, in reality, it is used primarily for purposes other than to enable the use of copyright-infringing material.<sup>177</sup>

<sup>170</sup> CDPA 1988, s. 296ZB(5).

<sup>171</sup> CDPA 1988, s. 296ZB(2). The reference to non-business activities that affect the copyright owner prejudicially goes beyond the requirements of the Directive and seems designed to cover making available on the Internet of decryption code: see, e.g., N. Hanbridge, ‘Protecting Right Holders Interests in the Information Society: Anti-Circumvention; Threats Post *Napster*; and DRM’ [2001] *Ent L Rev* 223; B. Esler, ‘Protecting the Protection: A Trans-Atlantic Analysis of the Emerging Right to Technological Self-Help’ (2003) 43 *IDEA* 553. Although not in the Directive, the provision may well be justified because the former CDPA 1988, s. 296(2)(b), covered the situation in which a person ‘publishes information intended to enable or assist persons to circumvent copy-protection’.

<sup>172</sup> CDPA 1988, s. 296ZB(3).

<sup>173</sup> CDPA 1988, ss 296ZD(8). 296ZE(11).

<sup>174</sup> CDPA 1988, s. 296ZD. The wrongful acts are more broadly defined too: any manufacture, as opposed to manufacture for sale or hire; import, compared to import ‘otherwise than for his private and domestic use’; any distribution, rather than distribution in the course of business; selling or hiring, or offering or advertising for sale or hire, rather than doing so in the course of business. Moreover, civil liability extends to the situation in which a person has a device in their possession for commercial purposes.

<sup>175</sup> Case C-355/12 (23 January 2014) (ECJ, Fourth Chamber), [29].

<sup>176</sup> *Ibid.*, [32]–[33].

<sup>177</sup> *Ibid.*, [36].

As regards services, civil liability is in some respects more narrowly defined than criminal liability, being confined to the *provision* of services (as opposed to the advertising, promoting, and marketing of a service). Civil liability exists, most obviously, where the service is performed for the purpose of enabling or facilitating circumvention. However, civil liability also exists in two other circumstances: where the service provided is merely advertised or promoted for that purpose (even if the service does not achieve the advertised purpose!); and where a service is provided that has only a limited commercially significant purpose other than to circumvent (even, it seems, if it is provided for just such a non-circumventing use).

Civil actions to enforce these provisions can be brought by a number of parties: the copyright owner, or their exclusive licensee; the person issuing copies of the work to the public or communicating to the public the work to which technological measures have been applied; and the owner, or exclusive licensee, of 'any intellectual property right in the effective technological measures'.<sup>178</sup> There is no defence of ignorance, although damages may not be awarded against a defendant who demonstrates that they did not know, nor had reason to believe, that their acts enabled or facilitated an infringement of copyright.<sup>179</sup>

#### 4.1.3 Attempts to avoid digital lock-up

When the proposals to expand the scope of protection of technological measures were being debated representatives of consumers vigorously articulated their fear that such provisions would facilitate digital lock-up of material that the public is currently entitled to access and use (without payment). Those fears related in part to the supply of works in the public domain (for example the works of Shakespeare) in digital form, but subject to technical measures: why, it was asked, should the public not be able to circumvent such measures to access what are, after all, works in the public domain? The fears also related to the use of technical measures to prevent uses that fall within existing copyright exceptions: in a world in which works are protected by technical measures, and those measures are protected by law against circumvention, how are users to be able to access and copy works for research and private study, criticism and review, and so forth?

The first concern may seem to have been met through the definition of 'technological measure'. As already observed, 'technological measure' is defined as a technology designed in the normal course of its operation to protect a copyright work other than a computer program. Moreover, the provisions on civil liability for circumvention, or supplying devices or services that facilitate circumvention, apply only where 'effective technological measures have been applied to a copyright work other than a computer program'.<sup>180</sup> While this may seem, at first glance, to protect the public against 'digital lock-up', in practice the result is likely to be quite different: this is because if the measure protects at least one work, civil liability applies. Consequently, devices cannot be circulated, services provided, or acts of circumvention carried out where versions of public domain (that is, unprotected) works protected by technological measures include *any* copyright material: liability will exist, for example, where a person circumvents a measure to access the complete works of Shakespeare, because the collection also contains a recently written introductory essay.

In addition, one should note that the criminal provisions apply irrespective of the *particular* application of a technological measure. As long as the measure is 'designed' to

<sup>178</sup> CDPA 1988, s. 296ZD(2).

<sup>179</sup> CDPA 1988, s. 296ZD(7).

<sup>180</sup> CDPA 1988, s. 296ZD(1).

protect a copyright work other than a computer program, criminal infringements occur in the circumstances that have been set out above. Imagine that an entrepreneur designs a technological measure to protect copyright works, but then decides to apply the measure to works in the public domain. The measure, even though now applied to such works, retains its quality of being designed to protect a copyright work. A person commits a criminal act by selling devices or advertising services to enable or facilitate the circumvention of such measures. The defence in section 296ZB(5) will not assist.

As regards the relationship between technological measures and exceptions to copyright, Article 6(4) of the Information Society Directive provides a strange, barely comprehensible, compromise.<sup>181</sup> The Community was caught in the tricky position of wanting to legislate to protect technological measures from circumvention, but without being in a position to understand fully the implications of such strong protection.<sup>182</sup> As things currently stand, it is impossible to predict how dependent consumers are going to be on digital delivery or the extent to which consumers who previously relied on the limited scope of the rights conferred on copyright owners are going to be inconvenienced by such measures. Article 6(4) is intended to reassure the user community that the legislature will not stand by and let everything go horribly wrong. If technological measures start to impair user actions seriously, ways will be found in which to sort out the problems. Pending review at the EU level (under Article 12(1), every three years), national authorities may (or indeed, in some cases, must) take action to release content from its technological chains. Article 6(4) also operates to indicate to content holders that they should develop technological measures with as much sophistication as is possible, so that they can enable users to take advantage of limitations and exceptions traditionally recognized by copyright law. Article 6(4) of the Directive states that:

Notwithstanding the legal protection provided for by paragraph 1, in the absence of voluntary measures taken by rightholders, including agreements between rightholders and other parties concerned, Member States shall take appropriate measures to ensure that rightholders make available to the beneficiary of an exception or limitation provided for in national law in accordance with Article 5(2)(a), (2)(c), (2)(d), (2)(e), (3)(a), (3)(b), or 3(e) the means of benefiting from that exception or limitation, to the extent necessary to benefit from that exception or limitation and where that beneficiary has legal access to the protected work or subject-matter concerned.

The United Kingdom implemented Article 6(4) in section 296ZE and 296ZEA of the CDPA 1988.<sup>183</sup> This allows for complaints to be made to the Secretary of State where an effective technological measure prevents a person from carrying out a permitted act. The

<sup>181</sup> P. Akester, 'The Impact of Digital Rights Management on Freedom of Expression: The First Empirical Assessment' (2010) 41(1) *IIC* 32; V. Samartzi, 'Optimal vs Sub-optimal Use of DRM-Protected Works' (2011) 33(8) *EIPR* 517; S. Dusollier, 'The Protection of Technological Measures: Much Ado about Nothing or Silent Remodelling of Copyright?', in R. Dreyfuss and J. Ginsburg (eds), *Intellectual Property at the Edge* (2014), ch. 12.

<sup>182</sup> For thoughtful consideration of ways of protecting users, see D. Burk and J. Cohen, 'Fair Use Infrastructure for Rights Management Systems' (2001) 15 *Harv JL & Tech* 41.

<sup>183</sup> Section 296ZEA applies in relation to the new personal copying exception and adds some further qualifications to the procedure. In particular, the Secretary of State must consider the right of the copyright owner to adopt adequate measures to limit the numbers of personal copies that can be made and whether copies are available commercially on an alternative basis that allows for unlimited copying. Thus a person who could buy a version that would give complete freedom for a higher price might not successfully complain if they were to purchase a version that allows only for limited copying at a lower price: see HM Government, *Technical Review of the Draft Legislation on Copyright Exceptions: Government Response* (2014), 5.

relevant permitted acts are listed in Schedule 5A.<sup>184</sup> It does not apply to copyright works that are made available on agreed contractual terms in such a way that members of the public may access them from a place and at a time individually chosen by them.<sup>185</sup> Given that this would cover most Internet supply of works (where a person accesses a work from their own terminal at a time chosen by them), this exclusion may confine the scope of the complaint procedure to circumstances involving encrypted broadcasts or technologically protected hard copies.<sup>186</sup> The Secretary of State is given wide powers to issue directions to ascertain whether voluntary measures are in place enabling such acts to be permitted, and if not, to ensure that the owner or exclusive licensee of the copyright work makes available to the complainant the means to carry out the permitted acts.<sup>187</sup> The order might be complied with by placing a copy lacking the technological measures at the disposal of the complainant, or possibly by giving the complainant access to a circumvention device. If the copyright owner fails to comply, the complainant is granted normal remedies for breach of statutory duty.<sup>188</sup> It is understood that the system has never been used, despite the widespread claims from users that access to the benefit of exceptions is hampered by technological measures.<sup>189</sup>

#### 4.2 COMPUTER SOFTWARE

Section 296 confers a civil right of action where a person does either of two specified acts that facilitate the circumvention of any ‘technical device’ that has been applied to a computer program.<sup>190</sup> ‘Technical device’ is defined as ‘any device intended to prevent or restrict acts that are not authorised by the copyright owner of that computer program and are restricted by copyright’.<sup>191</sup> The right is conferred on three sets of persons: the owner of copyright in the computer program, or their exclusive licensee; the person issuing or communicating the program to the public; and the owner (or their exclusive licensee) of ‘any intellectual property right’ in the technical device.<sup>192</sup> The right is infringed by two specified acts: the manufacture, distribution, or possession for commercial purposes of ‘any means the sole intended purpose of which is to facilitate the unauthorised removal or circumvention of the technical device’; or the publication of information intended to enable or assist persons to remove or circumvent the technical device.<sup>193</sup> In either case, liability is predicated on *scienter*—that is, there is infringement only where a person does the act ‘knowing or having reason to believe it will be used to make infringing copies’.<sup>194</sup>

<sup>184</sup> As amended, in particular by the Copyright and Rights in Performances (Research, Education, Libraries and Archives) Regulations 2014 (SI 2014/1372) Sch., para. 10. The contents of the list are determined by Art. 6(4), although the logic is hard to fathom. See T. Foged, ‘US v. EU Anti-circumvention Legislation: Preserving the Public’s Privileges in the Digital Age’ [2002] *EIPR* 525, 537.

<sup>185</sup> CDPA 1988, s. 296ZF(9), implementing Info. Soc. Dir., Recital 53.

<sup>186</sup> M. Hart, ‘The Copyright in the Information Society Directive: An Overview’ [2002] *EIPR* 58, 63.

<sup>187</sup> CDPA 1988, s. 296ZE(3). <sup>188</sup> CDPA 1988, s. 296ZE(6).

<sup>189</sup> See P. Akester, ‘The Impact of Digital Rights Management on Freedom of Expression: The First Empirical Assessment’ [2010] *IIC* 31. For some suggestions as to why this might be the case throughout Europe, see S. Dusollier, ‘The Protection of Technological Measures: Much Ado about Nothing or Silent Remodelling of Copyright?’, in R. Dreyfuss and J. Ginsburg (eds), *Intellectual Property at the Edge* (2014), 264–5.

<sup>190</sup> CDPA 1988, s. 296(1). <sup>191</sup> CDPA 1988, s. 296(6). <sup>192</sup> CDPA 1988, s. 296(2).

<sup>193</sup> The wording of the first act follows closely that in Software Dir., Art. 7(1)(c).

<sup>194</sup> Infringing copies are made for these purposes when a computer is loaded into a console: *Sony Computer Entertainment v. Owen* [2002] *EMLR* 742; *R v. Higgs* [2008] *EWCA Crim* 1324. See also *Sony*

It is useful here to observe how much more limited are the provisions related to software than those applicable to other copyright works. First, there is civil liability only in relation to circumvention of software (subject to what was said above about the possible application of measures ‘designed’ for copyright works—other than computer programs—to other material including computer programs). Second, there is no liability for the act of circumventing devices protecting software. Third, as regards software, liability applies only in relation to any means ‘the sole intended purpose of which’ is to facilitate circumvention, whereas the information society provisions cover the much broader array of devices advertised for, or primarily designed for, circumvention, or with only a limited commercially significant purpose other than circumvention. Fourth, liability in relation to the supply of devices to circumvent measures protecting software is predicated on a knowledge requirement that the person knows or has reason to believe the computer program will be used to make infringing copies; *scienter* is not relevant to section 296ZD except as part of a defence of innocence to an action for damages. Fifth, in relation to technological measures protecting software, no liability pertains to offering or carrying out circumvention services.<sup>195</sup> Although these differences might be taken to reflect a legislative awareness that too-strong control of technical measures applied to software might seriously limit access to and development of software, almost certainly they reflect a desire not to reopen the legislative compromise effected in the Software Directive of 1991. Nevertheless, the existence of such stark differences in the scope of protection is likely to prompt those who own copyright in software to argue that the technological measures that they employ simultaneously protect copyright software and other protected works, so that they too obtain the benefit of the generous protection granted by Article 6 of the Information Society Directive and sections 296ZA–ZF of the 1988 Act.

#### 4.3 TRANSMISSIONS

A third set of provisions deals with protection measures used in relation to transmissions. Although the 1988 Act, as enacted, contained some such provisions, they have been amended to implement the Conditional Access Directive by the Conditional Access Regulations 2000.<sup>196</sup> These apply to broadcasts and ‘information society services’ that are encrypted and, among other things, prevent unauthorized dealings in decoders. The definition of ‘information society service’ is found in a directive that lays down a procedure for the provision of information in the field of technical standards, and covers any service that is normally provided for remuneration and which operates at a distance by electronic means and at the individual request of a recipient of the services.<sup>197</sup> However, applying Article 56 of the Treaty on the Functioning of the European Union (TFEU) (free movement of services), the Court of Justice has ruled that a broadcaster may not

*Entertainment v. Ball* [2004] ECDR (33) 323, [15] (holding that infringing copies are limited to ‘articles’, but an article containing a transient reproduction is an infringing copy, and that where a person makes mod chips for export, these do not produce copies that infringe UK copyright law, but that a copyright owner might nevertheless sue in the United Kingdom in relation to foreign infringements).

<sup>195</sup> While the general effect of this comparison is that technological measures receive much stronger protection outside the field of computer programs, it should be noted too that the safeguard provisions of s. 296ZE (implementing Info. Soc. Dir., Art. 6(4)) do not apply to computer programs and that, in that minor respect, the provisions of s. 296 are stronger.

<sup>196</sup> SI 2000/1175.

<sup>197</sup> Council Directive 98/34/EC of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards [1998] *OJ L* 204/37 (21 July 1998). The Directive excludes television and radio broadcasts from the definition, as well as providing an ‘indicative list’ of services that are not ‘at a distance’, ‘by electronic means’, nor ‘at the individual request of a recipient’, in Annex V.

territorially limit reception of its broadcasts to consumers in particular member states, so that decoders supplied to users in one EU country may be lawfully used elsewhere in the European Union.<sup>198</sup>

#### 4.3.1 Fraudulent reception

Section 297 of the 1988 Act imposes criminal liability for dishonestly receiving a programme included in a broadcasting service provided from a place in the United Kingdom. It must be proved that the recipient intended to avoid payment of any charge applicable to the reception of the programme. Not unimportantly, in the light of the Court of Justice case law, section 297 is violated where a person utilizes a domestic decoder card to receive and display broadcasts to a commercial audience.<sup>199</sup> According to Laws LJ, the phrase ‘any charge applicable to the reception of the programme’ refers to ‘whatever charge is properly applicable to the reception of the programme in the circumstances in question’.<sup>200</sup>

#### 4.3.2 Unauthorized decoders<sup>201</sup>

Section 297A imposes criminal liability on those who supply ‘unauthorized decoders’, which decode encrypted transmissions so as to enable access to the transmission without payment of the fee that the person making the transmission charges for access.<sup>202</sup> A ‘transmission’ is defined as any programme included in a broadcasting service from a place within the United Kingdom or any other member state, or ‘an information society service’. It therefore covers transmissions of encrypted television services (which, as we saw in Chapters 3 and 6, do not include most ‘on-demand’ transmissions) and encrypted services providing video, music, or access to databases ‘on demand’, the latter falling squarely within the complex definition of ‘information society service’. The wrongful acts include making, importing, distributing, selling, possessing (for commercial purposes), and advertising the sale or hire of unauthorized decoders, as well as installing, maintaining, and replacing for commercial purposes an unauthorized decoder. Obvious examples of such wrongs would include the unauthorized manufacture of ‘digi-boxes’, as well as re-enabling or extending the range of reception on old smart cards.<sup>203</sup> However, following the guidance of the Court of Justice in *Football Association Premier League Ltd. v. QC Leisure*, it does not cover the importation of decoder cards from another member state, even if that involves breach of contractual terms or the card was obtained only by making a misrepresentation (for example as to the recipient’s residence).<sup>204</sup>

<sup>198</sup> See *Football Association Premier League Ltd. v. QC Leisure and Karen Murphy v. Media Protection Services Ltd*, Joined Cases C-403/08 and C-429/08 [2011] ECR I-9083 (ECJ, Grand Chamber) (‘FAPL’), [125].

<sup>199</sup> *FACT v. Ashton* [2013] EWHC 1923 (Admin).

<sup>200</sup> *Ibid.*, [8]. This conclusion does not violate Conditional Access Dir., Art. 3(2): FAPL, [72]–[74].

<sup>201</sup> CDPA 1988, s. 297A.

<sup>202</sup> CDPA 1988, s. 297A(4). A transmission is ‘encrypted’ when it is ‘subjected to scrambling or the operation of cryptographic envelopes, electronic locks, passwords or any other analogous application’. A ‘decoder’ is defined as an apparatus designed or adapted to enable an encrypted transmission to be decoded. A decoder is unauthorized where it is designed or adapted to enable an encrypted transmission to be accessed in an intelligible form without payment of the fee that the person making the transmission charges for access.

<sup>203</sup> See, e.g., *R v. Bridgeman & Butt* [1996] FSR 538 (re-enabling or extending the range of reception on old smart cards for Spain, where the transmitter did not supply the cards, violated CDPA 1988, s. 297A, and thus involved a conspiracy to defraud).

<sup>204</sup> See FAPL, [63]–[67]. See also *R v. Brent Magistrates’ Court, ex p Helidon Vuciterni* [2012] EWCA 2140 (Admin) (holding that the magistrates had improperly issued warrants to search the premises of a supplier of decoder cards imported from Albania, a country outside the European Union, because sale of such cards was not an offence under s. 297A).

### 4.3.3 Civil liabilities

Section 298 gives civil rights of action, akin to those of a copyright owner, to persons who charge for the reception of programmes included in a broadcasting service, send encrypted transmissions, or provide ‘conditional access services’.<sup>205</sup> This would cover many of the existing satellite broadcasters, such as Sky, Film Four, etc. A ‘conditional access service’ is defined as a service providing conditional access technology—that is, any technical measure or arrangement whereby access to encrypted transmissions in an intelligible form is made conditional on previous individual authorization.<sup>206</sup>

A person covered by section 298 has the same rights as a copyright owner against a person who makes or trades in various ways in apparatus that is ‘designed or adapted to enable or assist persons to access the programmes or other transmissions or circumvent conditional access technology related to the programmes or transmissions when they are not entitled to do so’.<sup>207</sup> This would seem to cover the situation in which somebody made or sold fraudulent smart cards or decoders to enable reception of Sky channels by persons who were not subscribers. The rights also encompass a person who publishes any information calculated to enable or assist access.<sup>208</sup>

### 4.3.4 Relationship with sections 296ZA–ZF

As we saw earlier, a copyright owner and person communicating a work to the public have various rights under sections 296ZA and ZD where technological measures are applied to the work. These can operate cumulatively with the special transmission and conditional access provisions. For example, if a person installs a device enabling receipt of an encrypted transmission, they will violate section 296ZA if they knowingly circumvent a technological measure. They will also violate section 298(2)(a)(iii) if they install, maintain, or replace for commercial purposes ‘an apparatus designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology . . . when they are not entitled to do so’. If someone distributes an unauthorized decoder, they will both be distributing ‘a device . . . primarily designed . . . for the purpose of enabling the circumvention of those measures’—that is, measures applied to the copyright-protected broadcast—and so violate section 297ZD(1)(b)(iii), and also be distributing an apparatus ‘designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology . . . when they are not entitled to do so’. In each situation, a careful analysis needs to be undertaken to decide which section is most suitable.

## 5 RIGHTS MANAGEMENT INFORMATION

Article 7 of the Information Society Directive has required the introduction of provisions protecting ‘electronic rights management information’. By ‘rights management information’ is meant any information provided by the copyright owner that identifies the work, the author, the copyright owner, the holder of any intellectual property rights, information about the terms and conditions of use of the work, or any numbers or codes

<sup>205</sup> CDPA 1988, s. 298 (as amended by the Conditional Access Regulations). The rights apply only to transmissions ‘from a place in the UK or any other member state’.

<sup>206</sup> CDPA 1988, ss 298(7), 297A(4).

<sup>207</sup> CDPA 1988, ss 298, 299.

<sup>208</sup> CDPA 1988, s. 298, as amended by the Conditional Access Regulations, to implement the Conditional Access Dir.

that represent such information.<sup>209</sup> In effect, what we are concerned with is information equivalent to the copyright page of a book (author, publisher, ISBN, etc.) that is electronically attached to (typically being woven into the fabric of) a work that is distributed digitally. This is sometimes referred to as ‘metadata.’<sup>210</sup> The information falls within the scope of protection when it (or any of it) is associated with a copy of a work or appears in connection with the communication to the public of a work.<sup>211</sup> The provision also applies to the *sui generis* database right.

Although the phrase ‘rights management information’ may not sound very glamorous, the European Commission sees its protection as the key prerequisite to an effective ‘information society’.<sup>212</sup> This is essentially for two reasons. The first is that rights management information is seen as having the potential to enable direct contracting between content holders and consumers, to enable the ‘metering’ of uses of works, and to enable rights clearances more generally (for example in relation to the production of multimedia works). It is thus seen as the lubricant that will keep the legal cogs of the Internet turning. As Thomas Dreier has written:

[Digital rights management] clearly goes beyond mere protection against piracy and illegal copying. Rather, . . . [digital rights management] aims at implementing a technical structure which enables product and service differentiation together with, and on the basis of, price discrimination.<sup>213</sup>

Second, the Commission recognizes that works in digital form are ‘plastic’—that is, that works in digital form are readily capable of modification and alteration. The protection of rights management information is needed to prevent the removal of various identifying insignia from works, and to enable users to keep track of what the information is and where it comes from.

Section 296ZG provides the copyright owner, its exclusive licensee, and any person communicating or issuing work to the public<sup>214</sup> with the ability to prevent the removal of rights management information and the further circulation of copies from which such information has been removed.<sup>215</sup> Liability is dependent in both cases on *scienter*. As regards removal or alteration, a person is liable where they ‘knowingly and without authority’ remove or alter metadata in circumstances under which that person ‘knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright’.<sup>216</sup> Accidental removal of data is therefore permitted, as is deliberate removal of metadata where a person has no reason to think that there has been, is, or is likely to be an infringement. A researcher who deliberately deletes metadata when making an electronic copy of material from an electronic source for purposes of their own non-commercial research or private study will therefore not violate the section. As regards dealings in material that has been tampered with by the removal or alteration of metadata, a person infringes where they ‘knowingly and without authority’

<sup>209</sup> CDPA 1988, s. 296ZG(7). It is clear from this that protection extends to all sorts of information that is electronic rather than being limited to information about ‘electronic rights’.

<sup>210</sup> Dusollier has questioned whether the definition of ‘rights management information’ would cover digital watermarks, because some do not contain ‘identifying information’: S. Dusollier, ‘Some Reflections on Copyright Management Information and Moral Rights’ (2003) 25 *Colum JL & Arts* 377. For speculation as to whether it covers personal data about users, see L. Bygrave, ‘The Technologisation of Copyright: Implications for Privacy and Related Interests’ [2002] *EIPR* 51, 55–6.

<sup>212</sup> See Commission Staff Working Paper, *Digital Rights: Background, Systems, Assessment* (14 February 2002) SEC (2002) 197.

<sup>213</sup> Thomas Dreier in the Rights Management Report of the Commission meeting Santiago de Compostela, June 2002.

<sup>215</sup> Info. Soc. Dir., Art. 7; cf. 17 USC §1202.

<sup>216</sup> CDPA 1988, s. 296ZG(1).

<sup>211</sup> Info. Soc. Dir., Art. 7(2).

<sup>214</sup> CDPA 1988, s. 296ZG(3)–(5).

distribute, import for distribution, or communicate to the public, copies of such material where that person ‘knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright’.<sup>217</sup> The provisions do not expressly prevent the publication of information on how to remove such information or the sale of devices that enable the removal of information, although the English legal system might regard this as joint tortfeasance.<sup>218</sup>

## 6 PUBLIC LENDING RIGHT

Although copyright in books enables authors to control (and seek compensation) where their works are copied, they have no right to prevent a range of people from reading the same book. Typically, this occurs when books are repeatedly borrowed from a library. Because borrowing reduces sales of a work, when it is carried out on a large scale (public libraries in England lend 300 million times a year), it can substantially reduce an author’s expected income. To remedy these problems, a public lending right (PLR) was established in the United Kingdom in 1979. The Public Lending Rights Act 1979 provides a framework for the scheme that is implemented in the Public Lending Right Scheme Order 1982.<sup>219</sup> The PLR scheme has been amended a number of times and its modern form is set out in a 1990 instrument.<sup>220</sup>

The PLR scheme entitles authors to remuneration where their works are loaned by public libraries. This is based on the principle that authors should be compensated for lost revenues, since such loans are substitutes for sales. The right does not provide authors with large sums of money. Basically, an author<sup>221</sup> may register their right to receive a share of up to £6,600 per annum from a government fund of £8 million.<sup>222</sup> The right persists for the same period as copyright.<sup>223</sup> To qualify for the scheme, authors must have their principal homes in a listed country (at present, EEA countries).<sup>224</sup> The right applies only with respect to books, which must be ‘printed and bound’;<sup>225</sup> musical scores are excluded.<sup>226</sup> The scheme is administered for the government by the British Library.<sup>227</sup> However, section 3(3) of the 1979 Act declares that the entitlement is to be ‘dependent on, and its extent

<sup>217</sup> CDPA 1988, s. 296ZG(2). <sup>218</sup> See below at Chapter 47, section 3.

<sup>219</sup> Public Lending Right Scheme 1982 (Commencement) Order 1982 (SI 1982/719); Public Lending Right Scheme (Increase of Limit) Order 2003 (SI 2003/839).

<sup>220</sup> SI 1990/2360. For fuller commentary, see Copinger, ch. 19.

<sup>221</sup> Defined in Art. 4. Note that the author’s name should appear on the title page or be entitled to a royalty from the publisher: Art. 4(2). While the right is assignable and devolves on death, only the author may apply to register a book.

<sup>222</sup> SI 2003/839 and SI 2005/1519. <sup>223</sup> SI 1982/719, as amended.

<sup>224</sup> In 2013, 3 per cent of the PLR fund was paid out to authors from elsewhere in Europe.

<sup>225</sup> The Digital Economy Act 2010, s. 43, allows for the extension of the scheme to audio books and e-readers. In February 2014, following an independent inquiry conducted by William Sieghert—published as W. Sieghert, *An Independent Review of E-Lending in Public Libraries in England* (March 2013)—the DCMS launched a consultation on whether and how to do so: DCMS, *Consultation on the Extension of the Public Lending Right to Rights of Holders of Books in Non-Print Formats* (February 2014) (proposing to introduce scheme awarding 60 per cent for authors, 20 per cent for the narrator, and 20 per cent for the producer).

<sup>226</sup> Eligible books are defined in Art. 6. ‘Book’ means printed and bound publication, but does not include books bearing corporate names, musical scores, and serial publications. The restriction to books of 32 pages has been removed.

<sup>227</sup> Replacing the Public Lending Right Registrar from October 2013: Public Bodies (Abolition of the Registrar of Public Lending Right) Order 2013 (SI 2013/2352) (made under the Public Bodies Act 2011, Sch. 1). A consultation on the future of the Registrar had occurred in 2012, but most respondents opposed the abolition of the Registrar; the government nevertheless had its own ideas.

ascertainable by reference to, the number of occasions on which books are lent out from particular libraries'. Libraries thus have to provide information about the books that they have loaned.

## 7 DROIT DE SUITE

The final right 'related' to copyright is the *droit de suite*, or, as it is also known, the 'artist's resale royalty right'.<sup>228</sup> The *droit de suite* (literally translated as the 'right to follow the work') enables artists to claim a portion of the price for which a work is resold. The idea is that an artist may sell a painting for a low price at a time when they are unknown and have little bargaining power. In due course, if the artist's reputation develops, that painting can be resold for continually increasing sums. The *droit de suite* enables the artist to claim a proportion of the increased value. The right is seen as justifiable not only because it encourages creation, but also because the artist is conceived (through the authorial link) as responsible for the increase in value (economic success) of their works.<sup>229</sup> Consequently, although the right is essentially economic in nature, it is sometimes categorized as a 'moral right'. Because of its specific *sui generis* nature, we have included it in this chapter on related rights.

Until recently, no such artists' resale right was recognized in British copyright law.<sup>230</sup> However, as many European countries introduced such a right and because there was thought to be a potential impact on the internal market from the differences in national laws for modern artworks, the Resale Rights Directive was adopted requiring all member states to introduce such a right.<sup>231</sup> Prior to its adoption, the proposal was widely criticized, particularly from the perspective of the British art market. One particular fear that was expressed was that the effect of harmonizing 'upwards' would be to drive sales of modern artworks out of Europe, to the auction houses of New York, where no such 'tax' will be imposed on the seller. (Apparently, when California created a *droit de suite*, Sotheby's closed its auction house there.) These criticisms and questions, however, did not prove persuasive, although the *droit de suite*, as adopted, is much more limited than that originally proposed and gives considerable leeway to member states as regards implementation. The Directive was implemented in the United Kingdom by a statutory instrument, operative from February 2006.<sup>232</sup> The British government, rather surprisingly, did not take advantage of all of the flexibilities provided to implement the Directive in a minimal fashion.

The Directive applies to original works of art—that is 'works of graphic or plastic art'; it does not apply to manuscripts of writers and composers.<sup>233</sup> The Directive includes within that definition works such as paintings, engravings, tapestries, ceramics, and photographs, and this implicitly suggests that the right is not available to designers of 'works of applied art'. The right applies not merely to unique works, but also to works produced

<sup>229</sup> Cf. J. Merryman, 'The Proposed Generalisation of the *Droit de Suite* in the European Communities' [1997] *IPQ* 16, 22–3.

<sup>230</sup> See, for previous British views, Whitford Committee, ch. 17.

<sup>231</sup> Resale Rights Dir. For an argument that the Directive was invalidly adopted, see J. Wuenschel, 'Article 95 EC Revisited: Is the Artist's Resale Right Directive a Community Act beyond EC Competence?' (2009) 4(2) *JIPPL* 130.

<sup>232</sup> The Artist's Resale Right Regulations 2006 (SI 2006/346). See IPI, *A Study Into the Effect on the UK Art Market of the Introduction of the Artists Resale Royalty* (2008) (reporting no evidence of diversion of trade); J. Collins, 'Droit de Suite: An Artistic Stroke of Genius? A Critical Exploration of the European Directive and Its Resultant Effects' (2012) 34(5) *EIPR* 305.

<sup>233</sup> Resale Rights Dir., Recital 19.

in multiples, provided that they are made by the artist or are copies considered to be original works of art that have been made in limited number by the artist or under their authority.<sup>234</sup>

The Directive requires member states to confer the resale royalty right on the author of such a work.<sup>235</sup> The right is to last for the full term of copyright protection.<sup>236</sup> After death, the right passes with the author's estate.<sup>237</sup> The right is not assignable.<sup>238</sup> Royalties can be collected only through a collecting society, and provision is made for the administration of rights by a collecting society even without the holder's action.<sup>239</sup> Two societies, the Design and Artistic Copyright Society (DACs) and the Artists Collecting Society (ACS), collect the resale royalty.<sup>240</sup> Although the right applies to sales of existing works in which copyright subsists,<sup>241</sup> it may be exercised only by a person who is, at the contract date, a 'qualifying individual' or a charity. As regards 'individuals', they must be a national of an EEA state or of one of the 26 countries currently listed in Schedule 2 to the Regulations.<sup>242</sup>

The right operates only in relation to 'resales' of such works—that is, sales by persons to whom the tangible property in the embodiment of a work has already been transferred<sup>243</sup>—and only when such resale is effected by an art market professional, such as salesrooms, galleries, and dealers.<sup>244</sup> It therefore seems to exclude transactions between individuals acting in their private capacity. A recital in the Directive also makes clear that the right is not to apply to resales by persons acting in their private capacity to museums that are not-for-profit and are open to the public.<sup>245</sup> The royalty is payable by the seller, and the seller's agent or, if there is no such agent, either by the agent of the buyer, if there is one, or by the buyer.<sup>246</sup>

As regards calculation of the sum due, it should be noted that member states may operate a threshold where the seller acquired the work directly from the author within three years of the resale and the resale price is less than €10,000.<sup>247</sup> Recital 18 implies that this is confined 'to the particular situation of art galleries which acquire works directly from the author'—but the Article is not so restricted. Since the maximum that such a seller would have to pay would be €500, the utilization of this exemption would seem particularly mean-minded.

<sup>234</sup> Resale Rights Dir., Art. 2; ARR Regs, reg. 4.

<sup>235</sup> See Resale Rights Dir., Art. 6(1). The ARR Regulations define the term 'joint authors' in a different manner from that used for copyright: ARR Regs, reg. 5 (different from CDPA 1988, s. 10). The name appearing on the work is presumed to be the author: reg. 6.

<sup>236</sup> Resale Rights Dir., Art. 8.

<sup>237</sup> See Resale Rights Dir., Art. 6(1); ARR Regs, regs 9, 7(4).

<sup>238</sup> ARR Regs, reg. 7; nor is it waivable: regs 7(2), 8.

<sup>239</sup> ARR Regs, reg. 14.

<sup>240</sup> See <<http://www.dacs.org.uk>>; <<http://www.artistscollectingsociety.org.uk>> DACS distributed £4.7 million (and collected more than £8 million): DACS, *Annual Review* (2012), 9, 11.

<sup>241</sup> ARR Regs, reg. 16(1)(b).

<sup>242</sup> Authors from non-EU countries may enjoy the right as long as authors from member states enjoy reciprocal treatment in those countries: Resale Rights Dir., Art. 7; ARR Regs, reg. 10(3). The list comprises 30 countries that offer reciprocal protection, including Brazil and the Russian Federation, but not the United States.

<sup>243</sup> ARR Regs, reg. 3.

<sup>244</sup> Resale Rights Dir., Art. 1; ARR Regs, reg. 12(3)(a).

<sup>245</sup> Resale Rights Dir., Recital 18.

<sup>246</sup> ARR Regs, reg. 13; Resale Rights Dir., Art. 1(3), Recital 25. Note Resale Rights Dir., Art. 1(4) (member states may provide that a buyer or intermediary shall 'alone be liable or shall share liability with the seller for payment of the royalty'). The French Supreme Court has referred a question to the Court of Justice as to the compatibility with the Directive of an auction house's standard terms, which require the buyer to pay the resale royalty: Decision 13–12675 (22 January 2014, 1st Civ Ch); *Christie's France v. Syndicat National des Antiquaires*, Case C-41/14 (pending).

<sup>247</sup> Resale Rights Dir., Art. 3(1); ARR Regs, reg. 12(3)(b). A sale price of €1,000 produces a royalty of a mere €40. No royalty is payable on a sale for less than €10,000 where the seller acquired the work directly from the author less than three years before the sale: reg. 12(4).

Under the Directive, royalties are calculated on sales prices, net of tax.<sup>248</sup> The member states are given free rein in establishing a threshold (as long as it does not exceed €3,000) and setting royalty rates where the minimum threshold is lower than €3,000, as long as the rate is 4 per cent or above.<sup>249</sup> The United Kingdom, rather surprisingly (given its outright opposition to the Directive), elected to set a threshold of €1,000 at 4 per cent. After that, the royalty rates are set by the Directive and the percentage decreases as the resale price increases: up to €50,000, the artist is to be entitled to 4 per cent;<sup>250</sup> between €50,000 and €200,000, 3 per cent; for sales between €200,000 and €350,000, 1 per cent; for those fetching €350,000–500,000, a mere 0.5 per cent; and for those exceeding €500,000, 0.25 per cent. As if these sums were not measly enough—a sale for €1 million giving the artist €10,000 (exactly 1 per cent)—there is also a cap, so that the royalty may not exceed €12,500.<sup>251</sup> This cap was reached by the 2014 auction of Tracey Emin’s ‘Bed’, which she originally sold to Charles Saatchi for £150,000, but which achieved a selling price of £2.5 million (from gallery operator, Jay Jopling). The rates are set so low in order to avoid the right having the effect of causing sales to relocate in order to circumvent the rules.<sup>252</sup> Provision is made for periodic review by the Commission.<sup>253</sup>

<sup>248</sup> Resale Rights Dir., Recital 20.

<sup>249</sup> Resale Rights Dir., Arts 3, 4(3). The threshold may help to avoid disproportionately high collection and administration costs: Recital 22. However, member states may desire to provide royalties below €3,000 ‘to promote the interests of new artists’. The Recital notes that variations are unlikely to have a significant effect on the proper functioning of the internal market.

<sup>250</sup> Resale Rights Dir., Art. 1(a), 1(2). If a member state elects, this figure can be set at 5 per cent. The United Kingdom chose 4 per cent.

<sup>251</sup> Resale Rights Dir., Art. 4(2); ARR Regs, Sch. 1. The rates are cumulative: 4 per cent on the first €50,000, *plus* 3 per cent on the next €150,000, *plus* 1 per cent on the next €150,000, *plus* 0.5 per cent on the next €150,000. The right holder is entitled to 0.25 per cent on any part of the sale price above €500,000. The maximum royalty would be achieved only on a net sale of €2.3 million.

## INTRODUCTION TO PATENTS

### CHAPTER CONTENTS

1 Introduction	375	3 Justifications for Patents	379
2 History of the British Patent System to 1977	376	4 Current Legislative Framework	381

### 1 INTRODUCTION

A patent is a limited monopoly that is granted in return for the disclosure of technical information. Under this Faustian pact, an applicant is required to disclose their invention so that it can be used (or worked) by a ‘person skilled in the art’.<sup>1</sup> In return, the state (in the guise of the patent office) issues the applicant with a patent that gives them the exclusive right to control the way in which their patented invention is exploited for a 20-year period.

While the protection provided by a patent, which is limited to 20 years, is not as long as the protection provided by copyright law or (possibly) trade mark registration, the rights granted are more extensive. The rights granted to the patent owner cover most commercial uses of the patented invention. In addition, the rights will be infringed irrespective of whether or not the defendant copied from the patented invention. In part, the breadth of the patent monopoly is offset by the fact that patents are only granted if an applicant complies with a relatively onerous registration process. Unlike copyright, which arises automatically on creation of the work, patents are only granted after the applicant satisfies the requirements of registration. Although the granting process may not be as onerous as some would like, it does impose a number of limits and safeguards on the types of inventions that are patented, the scope of the monopoly granted, and the nature of the information that is disclosed in the patent. As such, rather than merely being seen as a prerequisite to grant, patent registration should be seen as a process in which policy goals are implemented and enforced.

Two bodies grant the patents that operate in the United Kingdom. The first and oldest granting authority is the UK Intellectual Property Office (UK IPO). (Until 2 April 2007, the IPO was known as the ‘UK Patent Office’.) Patents granted by the IPO only apply in the United Kingdom. A British patent cannot be infringed, for example, in Ireland or Germany. As of 1 June 1978, it is also possible to get a patent to protect inventions in the United Kingdom by applying to the European Patent Office (EPO). It should be noted that the EPO grants a bundle of national patents—that is, rather than granting a single

<sup>1</sup> This is a notional person who has the requisite skill and knowledge appropriate to the type of invention in question.

pan-European patent, the EPO grants a series of national patents. While there are some subtle differences, once a patent has been granted by the EPO it is treated as if it had been issued by the UK IPO. As we will see below, there are plans to introduce yet another type of patent: the so-called ‘unitary European patent’, which, if it enters into force, will provide a single patent that spans most, but not all, of Europe.

Applications for grant of a patent can be made directly to the UK IPO or the EPO. It is also possible to apply to these offices indirectly by way of an international filing under the Patent Cooperation Treaty (PCT). The European Patent Convention (EPC) has superseded the UK IPO as a source for applications for UK patents. As a result, the question has arisen as to whether there is much to be gained from retaining a national patent office.<sup>2</sup> In line with the fact that there are two routes by which a patent for the United Kingdom can be granted, there are also two (interrelated) legal regimes that need to be taken into account. These are set out in the European Patent Convention 2000 (EPC 2000) and the Patents Act 1977 (PA 1977), which is modelled on the EPC. In addition, there are also two different sets of tribunals that adjudicate on patent disputes: the tribunals at the EPO and the traditional British judicial structure (with some amendments for specialist tribunals for patents).

## 2 HISTORY OF THE BRITISH PATENT SYSTEM TO 1977

The passage of the Patents Act 1977 marked an important change in British patent law. As well as introducing procedural and substantive changes, it also saw Britain’s entry into the European Patent Convention. While there are many important differences in the post-1977 law, in the following chapters we will encounter many concepts that pre-date the 1977 Act. For example, the image of the invention as the human intervention in nature that brings about a resulting physical change, which underpins much contemporary jurisprudence, was well entrenched in British law by the mid-nineteenth century.

Insofar as patents can be seen as monopolies offered by the state as rewards, there are many historical antecedents.<sup>3</sup> A notable example is the practice that came to prominence in sixteenth- and seventeenth-century Britain, where the Crown granted privileges to subjects in return for the subject carrying out some corresponding duty. Initially, these privileges were granted in letters patent—that is, as ‘an open letter’ from the Crown to a subject (from which the term ‘patent’ is derived). Unlike the present system, there were no formal checks or balances on the privileges granted by the Crown. As such, patents were frequently granted for activities that were already being performed by individuals. A famous example is the grant of a monopoly over the selling of playing cards.<sup>4</sup> Clearly, the grant of such a monopoly would have been detrimental to anyone who was already selling playing cards. As Crown grants of patents increased over the course of the sixteenth and seventeenth centuries, so too did the criticism. Eventually, the Crown’s right to grant such privileges was challenged in the courts.<sup>5</sup> It was also subject to parliamentary intervention with the passage of the 1624 Statute of Monopolies, which imposed a general prohibition

<sup>2</sup> See W. Kingston, ‘What Role Now for European National Patent Offices?’ [2003] *EIPR* 289; J. Phillips, ‘Time to Close the Patent Office Doors?’ [1990] *EIPR* 151.

<sup>3</sup> See M. Biagioli, ‘Patent Republic: Specifying Inventions, Constructing Authors and Rights’ (2006) 73 *Soc Res* 1129.

<sup>4</sup> *Darcy v. Allin* (1602) 11 *Co Rep* 84b, 74 *ER* 1131.

<sup>5</sup> *Ibid.*, 77 *ER* 1131, 1260; *The Clothworkers of Ipswich Case* (1614) *Godb R* 252, 78 *ER* 14.

on the grant of patents by the Crown. While the Statute of Monopolies imposed a general prohibition on the grant of monopolies, an exception was made in section 6 where the grant related to 'a manner of new manufacture'. As well as limiting the circumstances in which a patent could be granted, the Statute also limited the duration of the patents for new manufacture to a period of 14 years. This period, which corresponded to two terms of apprenticeship, was based upon the idea that in return for the monopoly, the patentee would teach the new 'art' to two sets of apprentices.

While patents have existed in one form or another for many centuries, the patent system that exists today is largely a creation of the nineteenth century. Indeed, many aspects of the registration process, as well as many of the legal concepts at which we look in subsequent chapters, crystallized over this period.<sup>6</sup> One of the most important changes that took place over the course of the nineteenth century was that patents changed from being primarily a creature of Crown prerogative to become a creature of bureaucracy. Although some of the trappings of the patent system's early connection with the Crown remain, patents are better seen as the product of an administrative process than as a form of Crown prerogative. The shift from Crown to administration was reinforced with the passage of the Patents Act 1977, which saw the United Kingdom enter the EPC. Another important, yet often overlooked, change that took place in the nineteenth century was the crystallization of patent law. Indeed, it was only after the publication of the first textbooks on patent law and the first series of judicial decisions to consider the validity and infringement of patents that a distinct and relatively coherent body of law came into existence.

Another important event that took place over the nineteenth century was that the emerging patent system was subject to a considerable amount of vocal and highly critical public scrutiny.<sup>7</sup> This scrutiny led not only to calls for the reform of patent law, but also, in some cases, to calls for the abolition of the whole patent system itself. Critics of the patent system said that it was unnecessarily complicated, technical, and obscure. They also said that while applicants were able to benefit from the protection provided by the patent monopoly, the corresponding public interest in the disclosure of technical information was not being met. In part, this was because in many cases, the information disclosed in the patent was of limited practical value. Given the lack of control exercised over the nature and content of the information disclosed in the patent, key aspects of inventions were often not disclosed. As a result, third parties were often not able to work or practise the invention from the information that was disclosed in the patent. Even where the information disclosed in the patent was potentially valuable, it was often very difficult for third parties to locate the relevant information. This was attributed to a range of factors, from the fact that the titles of many patents did not match the subject matter of the invention, to the fact that patent specifications were often not filed in a consistent or logical fashion. The criticisms of the patent system were also motivated by ideological concerns that focused on the monopolistic nature of the patents. Motivated by political economists who championed laissez-faire ideas that the government should interfere in the operation of the market only where it was absolutely necessary, patent monopolies were presented as unjustifiable inhibitions on the market that inhibited free trade. (This is in contrast with critics of the Crown grant of patents in the seventeenth century when monopolies were seen to be undesirable because of their association with the Stuart attempts to govern without Parliament.)

<sup>6</sup> See Sherman and Bently, 95–110.

<sup>7</sup> The patent controversy was also important insofar as it led to public discussions about the goals and functions of patent law (and intellectual property law more generally). See F. Machlup and E. Penrose, 'The Patent Controversy' (1950) 10 *J Econ Hist* 1.

The criticisms made of the patent system had a long-standing impact on its shape and direction. Importantly, the shift away from patents being seen as a form of Crown prerogative opened the system up to the possibility of reform. Many of the objections to the existing patent laws were rectified in the Patents Designs and Trade Marks Act 1883 and by changes to Patent Office rules and guidelines. In turn, many of the criticisms made of the registration process were met by a raft of administrative reforms. For example, the patent system was rationalized with the establishment of the Patent Office in 1852. In addition, patents were organized alphabetically and rules were introduced that helped to ensure that the titles of the patent corresponded to the patented invention. The growing practice of including a description of the invention in the patent application (now called the 'specification') was formalized. There was also more attention given to the form and nature of the information disclosed in the patent.

While many of the criticisms made of the patent system were met by legal and administrative reforms, nonetheless the criticisms made of the patent system continued to have an impact upon the way patents were viewed long after the debates had ended. In part, this may explain why from '1883 until after the end of the [Second World War], the courts tended to regard patent monopolies with some disfavour as being generally contrary to the public interest'.<sup>8</sup> It is interesting to contrast these attitudes with the approach after 1949, when it was said that:

[T]he climate of opinion has changed. It is now generally recognized that it is in the public interest to encourage inventive genius. Accordingly the modern tendency of the courts has been to regard patent claims with considerably more favour than before.<sup>9</sup>

This trend has become even more marked in recent years as both UK courts and the EPO have grown increasingly inventive in their efforts to circumvent legislative obstacles to patent protection.

Another notable trend that developed over the nineteenth century was the growing influence that foreign patents systems had on the development of the British patent regime. As well as borrowing concepts from French and American patent law, aspects of the British registration process were modelled on foreign regimes. The second half of the nineteenth century also saw the growing internationalization of the patent system.<sup>10</sup> These moves reached their peak with the signing of the 1883 Paris Convention (which, at the end of 2013, had 175 member countries).<sup>11</sup> One of the notable achievements of the Paris Convention was that it introduced the principle of 'national treatment'. This is the principle that a convention country must treat the nationals of other signatory countries in the same way as it treats its own.<sup>12</sup> Another notable aspect of the Convention was that it provided that an application for a patent in one member state should not prejudice subsequent applications in other member states.<sup>13</sup> This is achieved by requiring the later application to be treated as having the priority date of the earlier application. It should be noted that the Paris Convention does not impose minimum standards of protection for patents, as the Berne Convention does for copyright.<sup>14</sup>

<sup>8</sup> *Ethyl Corporation's Patent* [1972] RPC 169, 193.      <sup>9</sup> *Ibid.*

<sup>10</sup> Bilateral arrangements that dealt with patent-related issues were entered into in the early nineteenth century. These were usually in the form of treaties of freedom, commerce, and navigation.

<sup>11</sup> See S. Ladas, *The International Protection of Industrial Property* (1930); E. Penrose, *The Economics of the International Patent System* (1951); *Asahi Kasei Kogyo* [1991] RPC 485 (HL), 532.

<sup>12</sup> Paris, Art. 2.      <sup>13</sup> Paris, Art. 4. The priority period is 12 months.

<sup>14</sup> Although Paris, Art. 4*ter*, requires mention of the inventor, Art. 4*quater* requires that patents are not refused on the ground that sale of the product is restricted in domestic law, and Art. 5 restricts the ability to forfeit the patent and the availability of compulsory licences.

### 3 JUSTIFICATIONS FOR PATENTS

Over time, a number of different justifications have been given in support of the patent system.<sup>15</sup> At times, the proponents of patent protection have emphasized the natural rights of inventors to the products of their mental labour.<sup>16</sup> Others have argued that justice demands that an inventor's contribution should be recognized by the grant of a reward.<sup>17</sup> While arguments of this ilk have occasionally been relied upon in discussing aspects of the patent system, they have not been as popular as the public interest rationales. Having said that, the current debates about how indigenous interests should best be accounted for in the patent system have seen a resurgence of interest in arguments about inherent rights and justice.

While commentators have occasionally drawn on natural rights in support of the grant of patents, the most common form of argument has concentrated on the public benefits that flow from the grant of patent monopolies. Although these arguments have changed over time, what they share in common is the basic idea that the public should only ever have to endure the harm caused by the grant of a patent if the public receives some corresponding benefit. These arguments have tended to dominate discussion of the function of the patent system since the nineteenth century.

Initially, the public interest in the patent system was said to flow from the fact that the patentee introduced a form of technology that had not previously been available in the United Kingdom. Often, this simply involved the patentee importing information about a trade or a craft from another country. Over time, this rationale was replaced by the argument that the public benefit lay in the disclosure of the invention that occurred on publication of the patent application—that is, the justifications focused on the role that the patent system played in the generation and circulation of technical information. (This is often referred to as the ‘information function’ of the patent system.) In particular, it is said that patents act as incentives to individuals or organizations to disclose information that might otherwise have remained secret.<sup>18</sup> Patents also encourage information to be disclosed in a way that is practically useful. At a more general level, the public interest in allowing patents is said to flow from the fact that the numerous patents that have been granted over time constitute a substantive and valuable database of technical and scientific information. The information function of the patent system was reinforced by the Patents Act 1977 and the European Patent Convention, which emphasized the need for the invention to be disclosed in such a way that it could readily be put into practice.<sup>19</sup> The value and effectiveness of the information was also bolstered by the publication of patent specifications on the Internet.

While the primary focus of the patent system is on the disclosure of technical information for scientific and industrial reasons, the information that is collected at patent offices throughout the world is occasionally used for other purposes. For example, historians have used the patent system as an indicator of public attitudes towards different technologies.<sup>20</sup> More bizarrely, the fact that patent applications had been lodged for ovens for the burning of human corpses was used in a defamation action as evidence of the existence of gas chambers at Auschwitz.<sup>21</sup>

<sup>15</sup> See R. Merges, *Justifying Intellectual Property* (2011).

<sup>16</sup> F. Machlup and E. Penrose, ‘The Patent Controversy’ (1950) 10 *J Econ Hist* 1, 11–17.

<sup>17</sup> *Ibid.*, 17–21.

<sup>18</sup> See D. Davies, ‘The Early History of the Patent Specification’ (1934) 50 *LQR* 86.

<sup>19</sup> See Chapter 20, sections 1 and 2. <sup>20</sup> T. O’Dell, *Inventions and Official Secrecy* (1994).

<sup>21</sup> *Irving v. Penguin Books* (2001) *EWCA Civ* 1197, [7.65]; G. Reimann, *Patents for Hitler* (1945).

Patents have also been justified by the fact that they provide an incentive for the production of new inventions.<sup>22</sup> As Lord Oliver said in *Asahi*:

[The] underlying purpose of the patent system is the encouragement of improvements and innovation. In return for making known his improvement to the public the inventor receives the benefit of a period of monopoly during which he becomes entitled to prevent others from performing his invention except by his licence.<sup>23</sup>

More specifically, it is said that because patents provide the possibility for inventions to be exploited for a 20-year period, this means that investors will be more willing to fund research and development. In this sense, patents act as a vector that links scientific and technical research with commercial spheres.<sup>24</sup> Arguments of this nature have proved to be particularly important in situations in which an invention can be readily ascertained (or reverse-engineered) from the product that is put on the market (and no other form of protection exists).

The fact that a product is patented is often used by retailers trying to gain a competitive advantage to show the innovative nature of their products. There is also a sense in which the fact that a product has been patented suggests that the product (or process) has been publicly sanctioned in some way or other. This has proved to be an important consideration in the ethical debates about whether patents should be granted for genetically modified humans, animals, and plants.

If we reflect upon the way in which patent law has been viewed over the last century or so, a number of things stand out. The first notable feature is that the patent system has widely been seen, both by supporters and critics alike, as a system of regulation—that is, as a regime that modifies behaviour. In some cases, this is explicit; in most cases, it is implicit in the way in which commentators think about patents.<sup>25</sup> Another notable and consistent trend has been that whenever commentators talk about the patent system in a *positive* sense—that is, as a system that regulates and controls behaviour in a desirable way—they have almost always seen it as a tool to promote economic ends, such as to encourage new industries, research and development, or innovation.<sup>26</sup> In contrast, whenever non-economic factors such as health, human rights, the environment, or ethics are discussed, they have either been treated as external (*negative*) constraints upon the core activities of the patent system or as undesirable side effects that need to be mitigated.

<sup>22</sup> Kitch emphasized the way in which the grant of patents could be analogized to the grant of mineral rights, giving the grantee an incentive to invest in the exploitation of the 'prospect': E. Kitch, 'An Economic Review of the Patent System' (1977) 20 *J L & Econ* 265.

<sup>23</sup> *Asahi Kasei Kogyo* [1991] *RPC* 485 (HL), 523; E. Mansfield, 'Patents and Innovation: An Empirical Study' (1986) 32 *Manag Sci* 173; *Esswein/Automatic programmer*, T 579/88 [1991] *EPOR* 120, 125. See J. Aubrey, 'A Justification of the Patent System', in J. Phillips (ed.), *Patents in Perspective* (1985); A. Plant, 'The Economic Theory Concerning Patents for Inventions' (1934) *Economica* 30; C. Taylor and A. Silbertson, *The Economic Impact of Patents* (1973), chs 2 and 14.

<sup>24</sup> The role that the patent system played in inducing the invention and implementation of new industrial practices has been widely, but inconclusively, debated. See C. MacLeod, *Inventing the Industrial Revolution* (1988); H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution: 1750–1852* (1986).

<sup>25</sup> Driven by a form of legal positivism that has long disappeared from most other areas of law, it is occasionally suggested that patent law does not regulate behaviour; rather, it merely grants property (or monopoly) rights in inventions. Invariably, however, the pretence of neutrality that underpins arguments of this nature disappears when commentators talk about the importance of patent protection in promoting technical innovation or investment in innovation.

<sup>26</sup> Occasionally, policy debates have also focused on the positive impact that patents have on the collection and distribution of technical information.

While there is no denying the important role that patents play in macro-economic policy, there is no reason why the patent system, as a regulatory tool, should only be used in the pursuit of economic ends, nor any reason why ‘external’ factors such as the impact of technology on the environment or health should not fall within the core remit of the patent system. That is, there is no compelling reason why the various practices, rules, and concepts that have been developed and fine-tuned over the last couple of centuries or so should be used only for economic ends. Given that modern patent law already performs a number of sometimes surprising non-economic roles, this is not as alien a proposition as it might first appear. For those who require an older lineage, there are also many examples from pre-modern patent law of instances in which the grant of a patent was used by the Crown to achieve political and personal, rather than economic, ends. As we will see below, arguments of this nature are beginning to have an influence on patent law, particularly in relation to its role in promoting food security, improving access to medicine, reducing climate change,<sup>27</sup> and protecting indigenous knowledge.<sup>28</sup>

## 4 CURRENT LEGISLATIVE FRAMEWORK

The law that regulates the creation and use of patents that operate in the United Kingdom is a hybrid mixture of national, European, and international elements. In this section, we provide an introduction to the legislation, conventions, and treaties that we will encounter in subsequent chapters. We begin by looking at the most important regimes—namely, the European Patent Convention and the Patents Act 1977. We then go on to look at the impact that the European Commission has had on patent law. After looking at the Community Patent Convention, we turn to look at some of the international treaties that have shaped British patent law. In particular, we look at the Patent Cooperation Treaty, the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS), and the Convention on Biological Diversity.<sup>29</sup>

### 4.1 EUROPEAN PATENT CONVENTION

The European Patent Convention (EPC) was signed in Munich in 1973 and came into operation on 1 June 1978.<sup>30</sup> The original Convention which we will refer to as the ‘EPC 1973’, was replaced by the European Patent Convention 2000 (EPC 2000) on 17 December 2007.<sup>31</sup> The provisions of the EPC 2000 apply unless the transitional provisions provide otherwise for the applicability of the EPC 1973.

The EPC 1973 was based upon the patent law of the various member states in force at the time. The EPC is an intergovernmental treaty that is distinct from the European Community. As such, membership extends beyond members of the EC. At the beginning

<sup>27</sup> For example, see E. Derclaye, ‘Should Patent Law Help to Cool the Planet?’ (2009) 31 *EIPR* 168, 227; M. Rimmer, *Intellectual Property and Climate Change: Inventing Clean Technologies* (2012).

<sup>28</sup> See below pp. 401–3. For general discussion, see G. Dutfield, ‘A Critical Analysis of the Debate in Traditional Knowledge, Drug Discovery and Patent-Based Biopiracy’ (2011) 33 *EIPR* 238.

<sup>29</sup> There are a number of other regional patent agreements, most notably the Bangui Agreement, the Harare Protocol on Patents, and the Eurasian Patent Convention (Moscow, 1994).

<sup>30</sup> Work began on a European patent system in 1949 in the Council of Europe with the Longchambon Plan. For background, see K. Haertel, ‘The Munich Diplomatic Conference on European Patent Law’ (1973) 4 *IIC* 271; E. Ventose, ‘In the Footsteps of the Framers of the European Patent Convention: Examining the *Travaux Préparatoires*’ (2009) 31 *EIPR* 353.

<sup>31</sup> See below at pp. 383–5.

of 2014, the EPC had 38 member states.<sup>32</sup> The EPC is primarily concerned with the granting of European patents.<sup>33</sup> This was facilitated by the establishment of the European Patent Office (EPO) in Munich, which acts as a centralized system for the grant of European patents. As the Enlarged Board of Appeal (EBA) said:

[The] European Patent Organisation is an international, intergovernmental organisation, modelled on a modern state order and based on the separation of powers principle, which the sovereign contracting states have entrusted with some of their national powers in the field of patents.<sup>34</sup>

When an applicant wishes to protect their invention in a number of European countries, the EPO provides them with the benefit of a single application and search procedure, and a single grant of a bundle of national patents in each of the member states.<sup>35</sup>

Applications are made to the EPO, in Munich. The application is submitted to the Examining Division and appeals are made from there to the Technical or Legal Board of Appeal. In rare cases, the Boards of Appeal (or the President of the EPO) may refer legal matters to the EBA.<sup>36</sup> While applications may be filed in any language,<sup>37</sup> if the application is not in an official language of the EPO (English, German, or French), the applicant is given two months in which to translate the application into an official language.<sup>38</sup> Upon grant, a European patent becomes a bundle of national patents that have effect in each of the member states for 20 years from the date of filing. The procedure for application to the EPO is similar to that at the UK IPO.<sup>39</sup>

When the EPC was being formulated, it was decided that for there to be an effective single granting process, it was necessary for the member states to harmonize the basic rules of patent law. This was particularly the case in relation to the rules on patentability and validity. As we will see, the tribunals at the EPO have had a substantial impact on this area of law. After some resistance, there has been a much greater recognition, as Lord Walker has said, of the ‘importance of UK patent law aligning itself, so far as possible, with the jurisprudence of the EPO (especially decisions of the Enlarged Board of Appeal)’.<sup>40</sup> Jacob LJ took this one step further when he said that the Court of Appeal could, but was not

<sup>32</sup> As of 1 January 2014, the 38 members were Albania, Austria, Belgium, Bulgaria, Cyprus, Croatia, Czech Republic, Denmark, Estonia, Finland, France, former Yugoslav Republic of Macedonia, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, the Netherlands, Norway, Poland, Portugal, Romania, San Marino, Serbia, Slovenia, Slovakia, Spain, Sweden, Switzerland, Turkey, and the United Kingdom. In addition, there are two extension states: Bosnia and Herzegovina, and Montenegro.

<sup>33</sup> This has cast doubts over the independence of the Office. Interestingly, the European Parliament suggested that the EPO reconsider the practice whereby it ‘obtains payments for the patents that it grants as this practice harms the public nature of the institution’: *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* (February 2002), COM (2002) 92 final, Recital 7b (introduced by European Parliament, Amendment 95). For a general overview of these problems, see P. Drahos, *The Global Governance of Knowledge* (2010).

<sup>34</sup> *President’s Reference/Programs for Computers*, G 3/08 (12 May 2010), [7.2.1].

<sup>35</sup> The second planned element of the European patent system, the Community Patent Convention (CPC), provided for the establishment of a Community-wide patent. It has not yet come into force and has been supplanted by the EC’s plan for a Europe-wide patent. See below at pp. 391–7.

<sup>36</sup> EPC 2000, Art. 112a, provides that decisions of the boards of appeal can be contested on limited grounds including fundamental procedural defects.

<sup>37</sup> EPC 2000, Art. 14(2); EPC 2000 Regs, r. 40. <sup>38</sup> EPC 2000 Regs, rr 6(1), 58.

<sup>39</sup> One important difference is that the EPC allows for third-party opposition to the grant during the nine months after publication of the details of the grant. Opposition is not possible under the UK system, but it is open to a person who objects to the patent to seek revocation on similar grounds.

<sup>40</sup> *Generics (UK) v. H. Lundbeck* [2009] RPC (13) 407 (HL), [35]. See also *Conor Medsystems v. Angiotech Pharmaceuticals* [2008] RPC (28) 716 (HL), [3]; *Human Genome Sciences v. Eli Lilly & Co.* [2011] UKSC 51, [83]–[95].

bound to, depart from its own precedent if there were a ‘settled view’ of European patent law at the EPO that was inconsistent with earlier Court of Appeal decision.<sup>41</sup> While in some areas (such as patentable subject matter and inventive step), the approach in the United Kingdom is very different from that at the EPO, in other areas (such as sufficiency and novelty), both the approach and the outcomes are very similar.

The EPC only provides a mechanism for the grant of national patents. As such, while the EPC is concerned with the validity of European patents, matters of infringement, enforcement, revocation, renewal, and litigation are dealt with exclusively by national law. One of the consequences of this is that a patent granted at the EPO for two countries might be interpreted differently in each country. In order to reduce the chances of problems of this nature from arising, the EPO examiners, national judges, and examiners meet annually.<sup>42</sup> Further, a Protocol on the Interpretation of Article 69 of the EPC 2000 (reproducing Article 69 of the EPC 1973) provides guidance as to how patents should be interpreted.<sup>43</sup> Problems also arise because courts in the United Kingdom and the EPO have concurrent jurisdiction over questions of validity (infringement is only heard at the national level). As we explain below, this is potentially problematic insofar as it gives rise to the duplication of validity proceedings and conflicting decisions in the United Kingdom and at the EPO.<sup>44</sup> After some confusion, it is now clear that:

[W]here judgement is given in an English court that a patent (whether English or European) is valid and infringed, and the patent is subsequently revoked or amended (whether in England or at the EPO), the defendant is entitled to rely on the revocation or amendment on the enquiry as to damages.<sup>45</sup>

#### 4.1.1 EPC 2000

Over the course of the 1990s, there were growing calls for the EPC to be changed to take account of the technological, political, and legal changes that had occurred since it was signed in 1973. To this end, a conference took place in Munich in November 2000 to discuss its revision.<sup>46</sup> The conference aimed to modernize the European patent system, while maintaining the proven principles of substantive patent law and procedure. The conference also aimed to undertake a comprehensive review of the EPC in light of technical and legal developments, and more than twenty years of practical experience. The conference also wanted to bring the EPC into line with TRIPS, the future Community patent, and provisions of the World Intellectual Property Organization (WIPO) Patent Law Treaty. In light of the leading political and legislative role that the European Union played in relation to the protection of biotechnological inventions, it was decided that it was inadvisable to open up parallel discussions in this area. It was also decided that further diplomatic conferences should be organized to consider the protection for computer programs and biotechnology inventions, as well as the changes required to implement the Community patent.

At the end of the conference, the member states of the EPC agreed to make a number of changes to the Convention.<sup>47</sup> The EPO Administrative Council adopted the revised

<sup>45</sup> *Virgin Atlantic Airways v. Zodiac Seats UK* [2013] UKSC 46, [35].

<sup>46</sup> The Administrative Council of the EPO launched the revision project in 1998.

<sup>47</sup> Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 November 2000), MR/3/00 Rev. 1e (the ‘EPC Revision Act’).

Convention, known as the ‘EPC 2000’, and new Implementing Regulations on 28 June 2001. The EPC 2000 and its Implementing Regulations came into force on 13 December 2007. In so doing, the EPC 2000 replaced the EPC 1973. The new law applies to all European patent applications that were filed after the EPC came into force. In certain situations, the EPC 2000 also applies to applications that were pending on 13 December 2007 and to patents that had already been granted by that date. In this section, we provide an overview of some of the key features of the EPC 2000; we leave more detailed discussions (including the transitional arrangements) for the appropriate place in the text.

For the most part, the EPC 2000 did not bring about (or at least was not intended to bring about) many changes in the existing law. For example, Article 52(1) of the EPC 2000 did not make any substantial changes to the types of invention that were patentable under EPC 1973. Following Article 27(1) of TRIPS, EPC 2000 does, however, add the ‘European patents shall be granted for any invention, in all fields of technology’. Contrary to the Base Proposal for the Revision of the European Patent Convention, which proposed to delete ‘*computer programs as such*’ from Article 52(2)(c),<sup>48</sup> the conference decided not to remove computer programs from the list of non-patentable inventions in Article 52(2) of the EPC 2000.<sup>49</sup> As such, the statutory position under the EPC 1973 remains unchanged. The provisions in the EPC 2000 in relation to novelty, inventive step, and the internal requirements for patentability are basically the same as in the EPC 1973. The main change is that Article 54(4) of the EPC 1973 has been deleted. This means that the state of the art will include all previous European applications irrespective of their designation.

In other cases, existing provisions have been reworded to make them more transparent. For example, Article 52(4) of the EPC 1973 said that methods of treatment and diagnosis were lacking in industrial applicability and, as such, excluded from patentability. In contrast, Article 53(c) of the EPC 2000 takes a more direct approach insofar as it simply says that such methods are excluded from patentability. In other cases, the text has been changed to ensure that the EPC 2000 reflects current practice. As such, while there may have been a change in the language of the Convention, this was not intended to bring about changes to the existing law. For example, Article 54(5) of the EPC 2000 expressly allows for claims to second and further medical uses of known substances or compositions without the need for such claims to be expressed as ‘Swiss-type claims’, as was previously the case. The EPC 2000 also clarifies and strengthens the extent of protection conferred by European patents by expressly including the doctrine of equivalents in the revised Protocol on Article 69 of the EPC 2000.<sup>50</sup>

One of the most notable changes brought about by the EPC 2000 is that it provides patent owners with the option of limiting the protection afforded by their patents in a central procedure before the EPO.<sup>51</sup> The existence of a centralized procedure for amendment means that proprietors no longer have to go through the national patent offices. It also means that should a patent as granted turn out to be invalid, it can be amended quickly. It was hoped that this would act as an incentive to amend incorrectly granted patents promptly and at a lower cost. Article 138 of the EPC 2000 also enables proprietors to amend patents granted by the EPO in national proceedings relating to a patent’s validity. As we will see, this has ramifications for the judicial discretion that exists in UK patent law as to whether an amendment should be allowed.

<sup>48</sup> CA/1000/00e, distributed by the German Federal Ministry of Justice on 27 June 2000; Diplomatic Conference on the Revision of the EPC, 20–29 November 2000.

<sup>49</sup> EPC 2000, Art. 52(2)(c) (which is identical to EPC 1973, Art. 52(2)(c)).

<sup>50</sup> EPC 2000, Protocol on the Interpretation of Art. 69, Art. 2: EPC Revision Act, Art. 2, item 2.

<sup>51</sup> EPC 2000, Art 105 (a)–(c). See below at Chapter 16, section 5.

The EPC 2000 also made a number of amendments that simplified the patent grant procedure before the EPO.<sup>52</sup> These changes were intended to provide greater legal certainty for applicants and patent owners. It is now possible, for example, to file patent applications in any language, since a translation into one of the official languages of the EPO will not be required until a later date. The EPC 2000 also aims to streamline the European grant procedure. Notably, it was decided that the search and examination parts of the patent application should be brought together. Previously, search and examination were carried out in a number of different locations. On the basis that the EPO's vast collection of search documentation was available through databases at all of its duty stations, it was decided that there was no longer any need for the two tasks to be separated. It was hoped that this would improve the productivity and efficiency of the EPO. The EPC 2000 also made a number of other notable procedural changes. For example, in contrast to the EPC 1973, which required applicants to designate the states in which they wish to be protected,<sup>53</sup> Article 79(1) of the EPC 2000 provides that all EPC states will be deemed to be designated at the date of filing. The EPC 2000 has also created a legal basis for special agreements to be made between the contracting states concerning the translation of European patents. It provides for the introduction of a central court system for the enforcement of European patents, issues that are of importance for the Community patent proposed by the European Commission.<sup>54</sup> In addition, the EPC 2000 authorizes the Administrative Council to adapt the EPC to international treaties and European Community legislation.<sup>55</sup> Given the activity of the European Community in patent law, this may prove to be an important change.

#### 4.1.2 London Agreement

One of the long-standing problems confronting the European patent system is the cost of translation. Given the informational role played by patents and the problems that arise where European patents are granted for 38 member states (with more than 23 different languages), it is not surprising that translation has been a key issue within the EPO. Many of these problems have been alleviated as a result of the London Agreement, which came into operation in the European Union and the United Kingdom on 1 May 2008. As we will see below, as part of the unitary patent package, the Commission has recently passed a new regulation that will, if implemented, reduce the cost of translations even more.

One of the reasons why translation proved to be so problematic under the EPC and why the London Agreement was initiated in the first place was that Article 65 of the EPC 2000 (as was the case under EPC 1973) allows member states to require the patent to be translated into the national language as a prerequisite for validity.<sup>56</sup> Prior to 1 May 2008, for example, for a European patent (UK) not in English to be valid in the United Kingdom, the patent had to be translated into English within three months of grant. As the number of member states proliferated, so too did the cost of translation. Given the expense of translation (estimated to be 40 per cent of overall patent costs, with an average cost of €3,800),<sup>57</sup> it is not surprising that it attracted a lot of criticism. The concerns about translation cost were heightened by the fact that because most patent litigation was to be based on the 'authentic' text (published in English, German, or French) rather than the translated text, it was suggested that the national translations were redundant.<sup>58</sup> Given

<sup>52</sup> See, e.g., EPC 2000, Art. 15ff; EPC 2000 Regs, rr 1–2. See also EPC Revision Act, Art. 1, items 27–43.

<sup>53</sup> See EPC 1973, Art. 79. <sup>54</sup> EPC 2000, Art. 149a(1). <sup>55</sup> EPC 2000, Art 149a (2).

<sup>56</sup> EPC 2000, Art. 65.

<sup>57</sup> See EPO, *The London Agreement* (14 November 2007), 1. In 1995, the cost of translation was estimated to be DM400 million per year.

<sup>58</sup> Interestingly, this does not take account of the informational value of the patents and what impact this might have, for example, in Portugal or Turkey. The EPO's response is to deny the value of the translation in

this, the contracting parties to the EPC decided to modify Article 65.<sup>59</sup> To this end, the London Agreement was adopted on 17 October 2000.<sup>60</sup> The Agreement came into force on 1 May 2008.

In order to reduce translation costs and thus the cost of patenting in Europe, Article 1(1) of the London Agreement provides that signatory parties that share an official language with the EPO (namely, Austria, Belgium, France, Germany, Ireland, Luxembourg, Monaco, Switzerland, and the United Kingdom) must waive, wholly or partially, the requirement under Article 65 of the EPC 2000 that a patent be translated into their national language. Article 1(2) provides that member states that do not have English, French, or German as their official language must also dispense with the translation requirement (allowed under Article 65 of the EPC 2000). Article 1(3) does, however, allow these countries to require that for a patent to be valid, the claims must be translated into the local language.<sup>61</sup> Under Article 2 of the Agreement, in the case of a patent dispute, the owner of the patent is required to supply a full translation of the patent to both the alleged infringer and the competent court.

The United Kingdom implemented Article 1(1) of the London Agreement as of 1 May 2008.<sup>62</sup> As a result, section 77(6) of the Patents Act 1977 no longer has effect in the United Kingdom. This means that European patents in French or German no longer have to be translated into English within three months of grant at the EPO for them to be valid in the United Kingdom. In line with Article 2 of the London Agreement, the rules of procedure before British courts and the Comptroller may require the full text of the patent to be translated into English.

#### 4.2 PATENTS ACT 1977

The law that regulates the creation and use of patents in the United Kingdom is found in the Patents Act 1977, as amended.<sup>63</sup> Because the bulk of the 1977 Act was based upon the EPC, the passage of the Act brought with it a number of substantive and procedural changes to British patent law. It also saw the United Kingdom's entry into the EPC.

Insofar as the provisions of the Patents Act 1977 are based on the EPC, the Act says that those provisions should be interpreted so as to give effect to the EPC and decisions made thereunder.<sup>64</sup> The important task of ensuring that the UK law remains consistent with the law at the EPO has been recognized by the English courts in numerous cases.<sup>65</sup>

providing information about new technologies, because they occur four or five years after filing; EPO, *The London Agreement*, 2.

<sup>59</sup> Previously, the EPO had proposed that full translation be replaced with translation of an enhanced abstract: EPO, 'Cost of Patenting' (1995) 26 *IIC* 813; P. Braendli, 'The Future of the European Patent System' (1995) 26 *IIC* 813. This has generated further proposals, including requiring only translation of claims or some part of the description, or allowing further delays as to when the translation must take place: B. Pretnar, 'How to Reduce High Translation Costs to European Patents' [1996] *EIPR* 665; K. Heinonen, 'Translation of European Patents: Package Solution not the Answer' [1997] *EIPR* 220; E. Jeneral, 'Once More How to Reduce High Translation Costs of European Patents' [1997] *EIPR* 490; C. Lees, 'Translation: The Key Solution' [1997] *EIPR* 594.

<sup>60</sup> The full title is 'The Agreement on the application of Article 65 of the Convention on the Grant of European Patents made in London on 17th October 2000'.

<sup>61</sup> The Netherlands, Sweden, and Denmark require that the claims be translated into their official languages. They will also require the description to be published in English.

<sup>62</sup> Patents (Translations) Rules 2005 (SI 2005/682).

<sup>63</sup> This replaced the PA 1949.

<sup>64</sup> PA 1977, s. 130(7); PA 1977, s. 91(1).

<sup>65</sup> *Wyeth's Application* [1985] *RPC* 545; *Gale's Application* [1991] *RPC* 305, 322–3 *per* Nicholls LJ and 332 *per* Browne-Wilkinson V-C.

Interestingly, the EPO has occasionally reciprocated by taking notice of the decisions of national offices and courts so as to avoid lack of uniformity in the law of the EPC countries.<sup>66</sup> Although there is no consistent pattern, pre-1977 decisions have not been treated as being wholly irrelevant when deciding questions under the 1977 Act. In some cases the courts have said that the 1977 Act swept away the old law.<sup>67</sup> In other cases, however, they have acknowledged that because the intent of the EPC was to harmonize existing national rules, pre-1977 decisions are still important.<sup>68</sup> Despite this, as the jurisprudence at the EPO develops, it is clear that pre-1977 cases are becoming less important in the United Kingdom.

#### 4.2.1 Reform of the Patents Act 1977

In November 2002, the UK Intellectual Property Office and the Department of Trade and Industry released a Consultation Paper that outlined a number of possible amendments to the PA 1977.<sup>69</sup> While the aim of these changes was primarily to give effect to the EPC 2000, the Consultation Paper also suggested a number of other changes designed to improve the 1977 Act. The government's conclusions drawn from the consultation process were published in late 2003.<sup>70</sup> After a brief period of debate, the Patents Act received royal assent on 22 July 2004.

Many of the changes made by the Patents Act 2004 mirror those in the EPC 2000 (discussed above). The 1977 Act was amended to reflect the changes in the EPC 2000 by dealing with methods for treatment and diagnosis as exceptions to patentability under section 4A(1), rather than on the basis that they lacked industrial applicability, as had been the case previously.<sup>71</sup> Following Article 54(5) of the EPC 2000, the government also simplified and clarified the manner in which patent protection can be obtained for second and further medical uses. In particular, under the Patents Act 2004, claims to second or further medical uses of a known substance or composition are allowed.<sup>72</sup> The 1977 Act was also amended to reflect the fact that all applications for European patents form part of the state of the art under section 2(3).<sup>73</sup> The government's earlier proposal to amend section 1 of the 1977 Act to reflect Article 52(1) of the EPC 2000 (particularly that inventions 'should be granted in all fields of technology') was not adopted in the 2004 Act.<sup>74</sup>

A number of changes also related to the amendment of patents. As well as recognizing the new centralized limitation process available under the EPC 2000, the government changed the 1977 Act to remove a number of anomalies that previously existed in terms

<sup>73</sup> *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of Responses*, [23]–[24].

<sup>74</sup> *Ibid.*, [17]. On the basis that the revised Protocol to Art. 69 would operate in the United Kingdom under the current arrangements, it was decided that it was not necessary to make any changes in this regard: *ibid.*, [40]–[41].

of when a patent may be amended.<sup>75</sup> The Patents Act 2004 also made a number of minor changes to the scheme developed to compensate employee-inventors.<sup>76</sup> It also clarified that co-owners have the ability to amend and revoke a patent if they act jointly.<sup>77</sup>

Infringement proceedings can only be brought before the Comptroller if both parties agree that this should happen. In order to provide patentees (particularly small and medium-sized enterprises) with an alternative dispute resolution process, the Consultation Paper suggested that the 1977 Act should be changed to allow infringement proceedings to be brought before the Comptroller at the request of one party. This proposal was not supported.<sup>78</sup> Instead, the 2004 Act amended the 1977 Act to give the Comptroller a general power to undertake post-grant re-examination of a patent and also to make declarations as to whether a particular patent has been infringed. This is to be a non-binding opinion of the Intellectual Property Office, rather than a legally binding decision. It was hoped that this will provide a fast, fair, and effective way of resolving disputes, as an alternative to formal litigation.<sup>79</sup> The Patent Office Rules, which play a central role in many aspects of patent law in the United Kingdom, were overhauled and revised to modernize and simplify the patent process, as well as to improve patent litigation at the Office. The new rules, which are known as the 'Patent Rules 2007', came into force on 17 December 2007. All references to UK patent rules will be to the 2007 Rules unless otherwise stated.<sup>80</sup>

#### 4.3 COMMUNITY PATENT CONVENTION

As part of the plans for the establishment of a European patent system in the 1960s and the 1970s, it was decided that a dual system of protection should be introduced. The first element, which eventually emerged as the EPC, aimed to establish a centralized granting authority. The second part aimed to establish a single Community patent that was to be obtained by one central procedure and be binding in all member states. This came to be known as the 'Community Patent Convention' (CPC) and was signed in Luxembourg in 1975.<sup>81</sup> One of the key advantages said to flow from the Community patent was that it would lead to a rationalization of patent administration and thus to a reduction in costs. Unlike the EPC, however, the CPC has never come into force. These initial plans have been superseded by recent EU moves to establish a single Community-wide patent discussed below.<sup>82</sup>

<sup>75</sup> PA 1977, s. 75, was changed to allow amendment during any proceedings in which validity may be in issue. This was a response to a problem highlighted by Jacob J in *Norling v. Eez-Away* [1997] RPC 160.

#### 4.4 IMPACT OF THE EUROPEAN COMMUNITY

While the European Community has not been involved in the reform of patent law anywhere near as much as it has been in relation to trade marks and copyright, to date the Commission has had an impact on European patent law in two areas: in relation to the duration of patents, via the supplementary protection certificate (SPC) scheme; and biotechnological inventions.<sup>83</sup> As we will see below, another area in which the Community may have a very important impact is in relation to the proposal to establish a unitary European patent. In this context it is important to recall that the EPC, the membership of which extends beyond the boundaries of the EC, is a separate and distinct treaty that operates outside the remit of the EC. The potential for overlap and conflict between the two regimes has been minimized by the fact that the two bodies have worked in tandem on many issues (which, given the membership overlap, is not that surprising).

##### 4.4.1 Supplementary protection certificates

The first area of patent law in which the EC has intervened relates to the duration of patent protection. Faced with growing delays caused by the need for regulatory approval prior to marketing, patent owners argued that the time available during which they could exploit their inventions was much shorter than the planned 20-year period.<sup>84</sup> To remedy this problem, the EC introduced the so-called 'supplementary protection certificate' (SPC), which extends patent protection where it has not been possible for the patent proprietor to take full advantage of their patent rights over the period of the grant.<sup>85</sup> In particular, SPCs compensate the owner where they have not been able to market the patented product because of delays in seeking regulatory approval.<sup>86</sup> The effect of the basic patent can be extended for up to five years by means of this supplementary right. The right is characterized as a right distinct from patents in order to avoid the apparent conflict that would otherwise occur with the maximum term under Article 63 of the EPC 2000. A challenge made by the Spanish government to this regime in 1995 was dismissed by the Court of Justice.<sup>87</sup> A corresponding scheme for supplementary protection certificates has been introduced in the United Kingdom.<sup>88</sup>

##### 4.4.2 Biotechnology Directive

A second area in which the EC has intervened in the patent field is in respect of biotechnological inventions. After a decade of heated debate, the Biotechnology Directive was formally adopted by the Council and the European Parliament on 6 July 1998.<sup>89</sup> The

<sup>83</sup> EU competition law also plays a key role in shaping British patent practice: see Chapter 23, section 3.

<sup>84</sup> On the extent to which competitors may experiment prior to expiry of the patent, see below at pp. 635–7.

<sup>85</sup> Council Regulation (EEC) No. 1768/2 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products [1992] *OJL* 182/1; Regulation (EC) No. 1610/96 of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products [1996] *OJL* 198/30–35.

<sup>86</sup> The relevant regulatory authorities include the Medicines Control Agency, the Veterinary Medicines Directorate, the European Agency for the Evaluation of Medicinal Products, and the Pesticides Safety Directorate.

<sup>87</sup> This was on the grounds that the Community did not have competence to legislate a new patent right and that intervention could not be justified by reference to the need to harmonize laws for the internal market: *Spain v. Council of the European Union*, Case C-350/92 [1995] *ECR* I–1985.

<sup>88</sup> See below at pp. 675–81.

<sup>89</sup> EC Directive 98/44/EC of 6 July 1998 on the Legal Protection of Biotechnological Inventions [1998] *OJL* 213/13 (the 'Biotech. Dir.').

Directive deals with the patentability<sup>90</sup> and scope of protection conferred on biotechnological inventions.<sup>91</sup> As well as introducing special defences,<sup>92</sup> the Directive also establishes a scheme for compulsory licences and cross-licences to deal with the overlap between patent and plant variety protection.<sup>93</sup> In addition, it provides for the deposit of biological material.<sup>94</sup> The Directive has now been implemented in the United Kingdom.<sup>95</sup>

During the passage of the Directive, a question arose as to the nature of the relationship between the Biotechnology Directive and the EPC: what would a British court do, for example, if the EPC and the Directive were in conflict? Problems of this nature were resolved when the Administrative Council of the EPO incorporated the Biotechnology Directive into the Implementing Regulations of the EPC.<sup>96</sup> In so doing, the Administrative Council aligned the EPC with the provisions of the Biotechnology Directive. The Council also provided that the Directive should be used as a supplementary means of interpreting the EPC. As a result, the Recitals to the Directive can be taken into account where relevant.<sup>97</sup>

The controversial nature of the patenting of biotechnological inventions, which delayed the passage of the Directive for so long, has continued since it was passed. In addition to ongoing public criticism of biotechnological patents, in November 1998 the Dutch government filed a challenge to the Biotechnology Directive in the Court of Justice. While the Court rejected the Dutch challenge to the Directive,<sup>98</sup> there are still many critics of the ongoing expansion of patent law in the life sciences.<sup>99</sup>

#### 4.5 PROPOSED EUROPEAN CHANGES

There are currently a number of proposals for reform that have been put forward within Europe that will have an important impact upon patent law if and when they are finalized.<sup>100</sup> Here, we focus on two of the most important. The first are the plans for the establishment of a unitary European patent and a corresponding centralized patent court. We then examine the proposed Directive on patent protection for computer-implemented inventions.<sup>101</sup>

<sup>100</sup> For an examination of the fate of the proposal for utility model protection under the European Union, see Bently and Sherman (2004), 338–40.

<sup>101</sup> See *Green Paper on Innovation* COM (95) 382 (December 1995). The Green Paper also considers intervention into other areas of patent law, such as employees' inventions, the use of patent agents, and the recognition of professional qualifications: O. Bossung, 'The Return of European Patent Law to the European Union' (1996) 27 *IIC* 287. Following the Green Paper, the Commission issued an *Action Plan for Innovation*

#### 4.5.1 Unitary patent package

It seems that, after nearly fifty years of trying, the dream of a unified and centralized European patent system may soon become a reality. Over the last few years, 25 member states and the European Parliament have (nearly) agreed on a scheme, known as the ‘unitary patent package’, designed to establish and enforce a common unitary patent.<sup>102</sup> The unitary patent package consists of three elements. The first is the EU Regulation creating a unitary European patent.<sup>103</sup> The second is the EU Regulation that deals with the vexed issue of the language to be used in the unitary patent and the corresponding translation requirements.<sup>104</sup> Both of these Regulations, which were adopted in December 2012 using the little used ‘enhanced co-operation mechanism’,<sup>105</sup> entered into force in January 2013. The third and final part of the unitary patent package is the Agreement on a Unified Patent Court (‘UPC Agreement’).<sup>106</sup> Following the decision of the Court of Justice that a proposal to establish a unified patent was incompatible with EU law, it was decided that the unified patent court would need to be established via an intergovernmental treaty formed outside of the European Union. To this end, the 25 participating member states signed an international agreement on 19 February 2013 setting up a centralized patent court.<sup>107</sup> Once the Agreement and the Regulations enter into force, it will be possible to obtain a European patent with unitary effect across the 25 participating member states.

##### (i) A European patent with unitary effect: the ‘unitary patent’

One of the key elements of the unitary patent package is the proposed pan-European unitary patent or, as the European Union prefers, a ‘European patent with unitary effect’. Currently, applicants for a patent in Europe have a choice of one of two routes to grant: they can apply for national patents in the national patent offices in the countries

*in Europe* (November 1996), proposing three lines of action for tackling Europe’s perceived ‘innovation deficit’. Subsequent to this initiative, the European Commission adopted a *Green Paper on the European Patent* on 24 June 1997, the main proposal of which concerns the option of converting patent law into a Community instrument. This was followed by *Promoting Innovation through Patents: The Follow-up on the Community Patent and the Patent System in Europe* [1999] *OJ EPO* 197. For the background on the efforts over the last decade, see Bently and Sherman (2008), 350–2.

<sup>102</sup> The participating members are Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Germany, Denmark, Estonia, Greece, Finland, France, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Romania, Slovakia, Slovenia, Sweden, and the United Kingdom. Italy was not part of the Regulations, but was a signatory to the UPC Agreement. Poland was part of the Regulations, but not a signatory to the UPC Agreement. Spain was neither part of the Regulations nor a signatory to the UPC Agreement. Croatia subsequently acceded to the European Union in July 2013.

<sup>103</sup> Council Regulation (EU) No. 1257/2012 of 17 December 2012 implementing enhanced cooperation in the area of the creation of unitary patent protection (the ‘Unitary Patent Reg.’). The Regulation will apply once the UPC Agreement enters into force.

<sup>104</sup> Council Regulation (EU) No. 1260/2012 of 17 December 2012 implementing enhanced cooperation in the area of the creation of unitary patent protection with regard to the applicable translation arrangements (the ‘Translation Reg.’). The Regulation will apply once the UPC Agreement enters into force.

<sup>105</sup> The general arrangements for enhanced cooperation are laid down by the TEU, Title IV. This allows member states to move forward at different speeds and/or towards different goals. It does not allow extension of the powers as laid down by the Treaties, nor may it be applied to areas that fall within the exclusive competence of the Union. Enhanced cooperation may be undertaken only as a last resort, when it has been established within the Council that the objectives of such cooperation cannot be attained within a reasonable period by the Union as a whole.

<sup>106</sup> *Agreement on a Unified Patent Court* [2013] *OJ C* 175/1 (20 June 2013).

<sup>107</sup> This is the same 25 states that participated in the Regulations except for Italy (not part of the Regulations, but a signatory to the UPC Agreement) and Poland (part of the Regulations, but not a signatory to the UPC Agreement). Spain is still absent. See also Art. 142(1) of the EPC 2000.

in which they want protection; alternatively, they can apply to the EPO for a ‘classical’ or ‘bundled’ European patent. The EPO currently grants a bundle of national patents that are enforced separately through the courts of each country. The patent proprietor must choose the countries where they want protection and validate the European patent in those countries. The patent owner may also be required to pay a fee to the respective national patent office, comply with various formal requirements, and provide a translation of the patent in the official language of the country. Once validated, a bundled EPO patent has the same effect as a national patent granted in the respective territory.

There are a number of problems with the existing European patent system, not least that it is time-consuming, costly, and somewhat confusing. One of the goals of the unitary patent is to overcome these problems. To this end, it is proposed that the unitary patent, which will be a single patent that provides uniform protection in 25 member states, will be established. Under the planned new regime, an owner of a unitary patent will only be required to pay a single set of renewal fees to the EPO, which will manage the scheme centrally. In addition, only one validation (the request of the unitary effect with the EPO) will be needed to obtain patent protection in the 25 member states.

The unitary patent will be administered and granted by the EPO.<sup>108</sup> In order for a patent to have unitary effect across all of the participating member states, patent holders will need to request the unitary effect at the EPO no later than one month after the grant of their European patent has become effective. This will transform a European patent into a single patent for the 25 member states. Anybody, regardless of the country of origin, is able to opt for a unitary patent. When established, the unitary patent will coexist with existing national patents and with classical bundled European patents. This means that applicants for patent protection in Europe will be able to choose between national patents, classic bundled European patents, and unitary patents.

Translations costs have long been one of the factors hindering the effectiveness of European patents. One of the goals of the unitary patent package is to reduce the costs of patenting. The unitary patent aims to achieve this by ensuring that no further translations will be required after the grant of the European patent, except in the case of a dispute. The translation requirements of the unitary patent will be based on the current procedures within the EPO.<sup>109</sup> This means that an application for a European patent will need to be filed in either English, French, or German (which are the official languages of the EPO) or, if filed in any other language, translated into one of the official languages.<sup>110</sup> A compensation scheme has been designed to alleviate the translation costs that will inevitably arise where an application is not filed in one of the official languages. Under the scheme, European-based small and medium-sized enterprises (SMEs), natural persons, non-profit organizations, universities, and public research organizations that file an application in an official language of the European Union other than English, French, or German will be entitled to reimbursement (up to a ceiling) for the cost of translating the application into one of the official languages. This compensation scheme will be administered by the EPO.<sup>111</sup>

Following Article 14(6) of the EPC 2000, the unitary patent specification will be published in one of the three EPO languages and will include a translation of the claims in the other two official languages. Once a unitary European patent has been granted, no further translations will be required.<sup>112</sup> Patent owners will only have to provide (human)

<sup>108</sup> Unitary Patent Reg., Art. 9.

<sup>109</sup> Translation Reg., Recital 6.

<sup>110</sup> EPC 2000, Art. 14(2).

<sup>111</sup> Translation Reg., Art. 5, Recital 10.

<sup>112</sup> Translation Reg., Art. 3(1).

translations of their patents when, in a dispute, one is requested by an alleged infringer or by a court.<sup>113</sup>

A central aim of the proposed new system is to minimize costs by reducing the translation requirements post-grant. The problem with this, however, is that it potentially undermines a key feature of the patent system—namely, the information function of patents, which plays an important role in helping third parties to avoid infringement and to build technical and scientific information. One of the key features of the new scheme is that it relies on the free online translation service known as ‘Patent Translate’—which the EPO has developed in conjunction with Google to produce machine translations of European patent applications and patents automatically—to ensure that the lack of human translations does not jeopardize the patent system’s information function. It is hoped (at the time of writing) that by the end of 2014, machine translation of patents will be available for all the languages of the 38 EPO member states, including the 27 EU member states. As the Translation Regulation notes, machine translations will not have any legal effect; they will only be used for information purposes.<sup>114</sup> One of the problems with the fact that granted patents will only be available in the official languages of the EPO is that third parties who do not understand the official languages of the EPO may not, even with the possibility of machine translation, be in a position in which they know that they are potentially infringing. To some extent, this problem will be alleviated because in deciding a claim for damages, the courts will take into account whether the party ‘acted without knowing or without reasonable grounds for knowing that he was infringing the European patent with unitary effect’.<sup>115</sup>

The translation requirements of the unitary patent package are underpinned by the ability to make usable machine translations of patent documentation in all of the relevant languages. While the EPO has made progress, there are still issues with the quality of the translations. The service also needs to add a number of new languages. Given that Patent Translate is not yet fully operational, it was decided that there should be a transitional period of up to 12 years during which additional translations would be required. The transitional period will continue until a ‘system of high quality machine translations into all official languages of the Union becomes available’.<sup>116</sup> During the transitional period, where the language of the proceedings at the EPO is French or German, a request for unitary effect will need to be accompanied by a full translation of the specification in English. Alternatively, where the language of proceedings at the EPO is English, the applicant will need to supply a translation in an official language of an EU member state.<sup>117</sup> As the Regulation says, this will ensure that during the transitional period that all unitary patents are available in English, ‘which is the language customarily used in the field of international technological research and publications’.<sup>118</sup>

There are several notable legal characteristics of the unitary patent. One of these is that a European patent with unitary effect will provide uniform protection and have equal effect in all of the participating member states.<sup>119</sup> While a unitary patent can only be limited, transferred, revoked or lapse in respect of all participating member states,<sup>120</sup> it may be licensed in respect of the whole or part of the territories of the participating member states. For the purposes of exploitation, however, unitary patents will be treated as if they

<sup>113</sup> Translation Reg., Art. 4, Recital 8.

<sup>120</sup> Unitary Patent Reg., Art. 3(2).

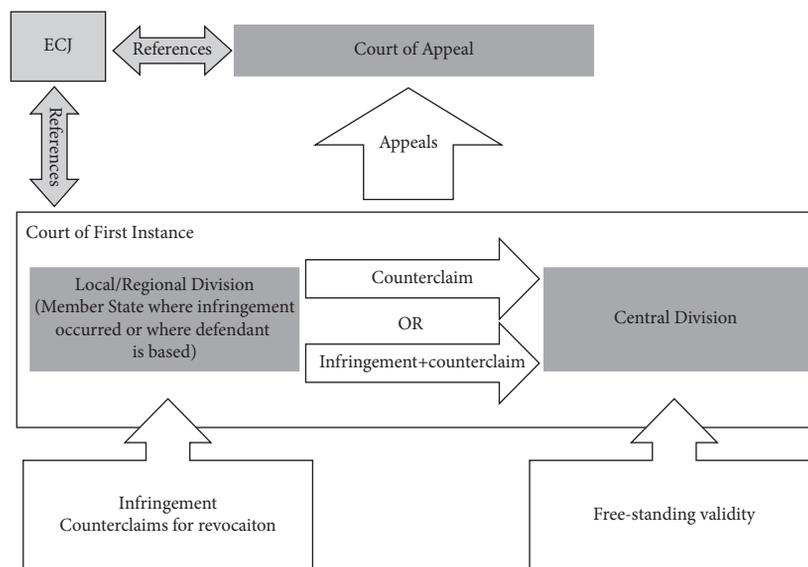

Fig. 14.1 Structure of the unified patent court

were national patents in member states.<sup>121</sup> As such, exploitation will be governed by local laws. The unitary patent package makes no changes in relation to patentability. It does, however, specify that a patent owner will have the right to prevent direct and indirect uses of the invention in certain situations.<sup>122</sup> It also provides for a series of defences including acts done for private and non-commercial purpose, acts done for experimental purposes, situations in which biological material is used for the purpose of breeding or discovering and developing new plant varieties, the pharmaceutical preparation of medicines, certain on-farm uses of patented plants and animals, and certain uses in relation to patented computer programs (such as decompilation and interoperability).<sup>123</sup>

#### (ii) Unified patent court

Another key part of the unitary patent package is the centralized patent court which, it is hoped, will simultaneously reduce litigation costs, unify patent law, and increase certainty. As we noted above, the Agreement that establishes the unified patent court was signed by 25 EU member states in February 2013. The UPC Agreement will enter into force on the first day of the fourth month after the 13th signatory state has deposited its instrument of ratification (so long as the United Kingdom, France, and Germany are all included). At time of writing, it is not expected that the unified court will come into effect until early 2015, at the earliest.

The unified patent court will consist of a decentralized court of first instance which, in turn, will consist of local, regional, and central divisions located in the member states (see Fig. 14.1).<sup>124</sup> The central division of the court of first instance will be divided between London (responsible for chemical, pharmaceutical, and the life science patents), Munich (responsible for mechanical engineering patents), and Paris (responsible for all other patents).<sup>125</sup> There will also be a Court of Appeal, which will be based in Luxembourg.

<sup>121</sup> Unitary Patent Reg., Art. 7(1).

<sup>122</sup> UPC Agreement, Arts 25, 26.

<sup>123</sup> UPC Agreement, Art. 27(a)-(l).

<sup>124</sup> UPC Agreement, Art. 7.

<sup>125</sup> The division is based on the International Patent Classification (IPC) system.

Decisions of the unified patent court will be enforced by the law of the country in which the enforcement takes place. Decisions of the Court of Justice will be binding on the unified patent court. References for preliminary rulings will be made whenever a question of Union law requires interpretation (like national courts).

The unified patent court will have exclusive jurisdiction over unitary European patents and, after a transitional period of seven years (extendable to 14), all classical bundled European patents. During the transitional period, individuals and companies with bundled European patents will be able to opt out of the jurisdiction of the unified patent court and continue to use national courts for litigation. The unified patent court will also have jurisdiction over infringement and validity actions in relation to supplementary protection certificates. The court will not, however, have jurisdiction over national patents (granted by the UK Intellectual Property Office or other national patent offices).

When the UPC Agreement comes into force, it will be possible to litigate European bundled patents and unitary patents at the unified patent court in single actions covering all relevant states. Infringement actions may be started at the local or regional division in the country in which the alleged infringement occurred or in which the defendant is based. Where the validity of a patent is challenged, the choice of court will be determined on the basis of the way in which the patent is classified under the International Patent Classification system. Where a defendant to an infringement action counterclaims that a patent is invalid, the judges at the local or regional division will decide whether to send the whole case (infringement and revocation) to the central division, to send the revocation case to the central division and hear the infringement case separately at the local/regional division, or to hear the entire case at the local/regional division.

The architects of the centralized patent scheme hope that a unified patent court will overcome some of the problems with the existing European patent system, particularly where a party wishes to bring an action in a number of different countries. Given that decisions relating to the infringement or validity of a unitary patent will have uniform effect across all participating member states, parties will no longer need to defend or challenge patents in different national courts. It is hoped that, in this way, the unified patent court will reduce litigation costs. It is also hoped that because decisions will be heard by a single centralized court rather than (potentially) by a number of different national courts, legal certainty will be improved. It is also hoped that the new centralized regime will reduce the differences that encourage the 'forum shopping' of European bundle patents (such as differences in the level of damages awarded, the speed of the decision making, and different jurisprudence).

### *(iii) Impact of the unitary patent package*

In order for the unitary patent to come into operation in the United Kingdom, a number of changes will need to be made to domestic law. In particular, changes will be needed to be made to confer jurisdiction on the new unified patent court with 'respect to those actions for which the [unified patent court] will have competence, i.e. infringement and validity of European bundle and Unitary Patents.'<sup>126</sup> While the patentability requirements for European patents with unitary effect are identical to those of classical bundled European patents (and, as such, no changes will be needed to this area of law), changes

<sup>126</sup> In order to facilitate Britain's entry into the UPC Agreement, the Intellectual Property Act 2014 amends the Patents Act to allow the Secretary of State to bring the unified patent court into effect (subject to approval by each House of Parliament, following public consultation): IP Act 2014, s. 17, which introduces new PA 1977, ss 88A, 88B.

will be needed to bring UK law into line with the infringement provisions and defences of the unitary patent. As noted above, the UPC Agreement sets out the infringement provisions for European bundle patents and for unitary patents. Currently, infringement of European bundle patents is a matter for national law. As a result, the Patents Act 1977 will need to be modified to ensure that UK law complies with the infringement provisions for European bundle patents and unitary patents in the UPC Agreement. According to the Intellectual Property Office, minor changes may also be necessary to ensure that British patent law is aligned with the UPC Agreement. For example, the law on infringement of patent rights may need to be amended to ensure that it is consistent with the provisions for European bundle and unitary patents. The IPO plans to provide more detailed information on the changes needed in 2014.

A number of different claims have been made about the benefits of a unitary patent administered by a centralized court. As the Regulation creating unitary patent protection states, unitary patent protection will make access to the patent system easier, less costly, and more legally secure.<sup>127</sup> One of the anticipated benefits of the new system is that will reduce the costs of patenting. For example, the UK government has said that unitary patent protection for new inventions across 25 member states would offer businesses savings in translation and validation costs (against the current system for protection in the same states) of up to £20,000 per patent.<sup>128</sup> While there has been a lot of criticism made of the accuracy of claims such as these, there is little doubt that the proposed regime will lead to a reduction in the transaction costs associated with the grant of a European patent. It has also been said that, because patentees will only need to enforce their patents in one court, rather than in a number of national courts, the new regime will avoid duplicated litigation and, in so doing, will reduce the costs of enforcement.

While critics of the unitary patent package have won a number of victories, concerns with the unitary patent still remain. Concerns have been raised, for example, about the effect of bifurcation on forum shopping, the training and quality of the judges, and the prohibitive expense of using the unitary patent, particularly for SMEs.<sup>129</sup> It has also been said that instead of consolidating patent law in Europe, the unitary patent package will add to its fragmentation on both the territorial and substantive levels.<sup>130</sup> In part, this is because rather than simplifying things, the unitary patent package will add an additional type of patent to the existing national and bundled patents. It has also been said that the proposed new regime does not go far enough. This is particularly the case in relation to the fact that it leaves key matters—such as exploitation<sup>131</sup> and compulsory licensing<sup>132</sup>—to be regulated by national law and because it does not address issues such as a general

<sup>127</sup> Unitary Patent Reg., Recital 4.

<sup>128</sup> House of Commons European Scrutiny Committee, *Draft Agreement on a Unified Patent Court and Draft Statute 30th Report of Session 2012–13* (3 February 2013), [8.28]. According to the EPO, obtaining patent protection in the territory of the 27 member states by means of a European patent costs about €36,000 (the majority of which goes on translation and other costs linked to validation, such as fees of local patent offices and costs for local patent agents). After full implementation of the unitary patent project, the costs will go down to about €5,000 (i.e. the fees up until the grant of the patent including the translation of the claims into the two other official languages of the EPO).

<sup>129</sup> *Ibid.* See also J. Pagenburg, 'Unitary Patent and Unified Court: What Lies Ahead?' (2013) 8 *JIPLP* 480.

<sup>130</sup> See R. Hilty et al., *The Unitary Patent Package: Twelve Reasons for Concern* (17 October 2013), online at <[http://www.ip.mpg.de/files/pdf2/MPI-IP\\_Twelve-Reasons\\_2012-10-17\\_final3.pdf](http://www.ip.mpg.de/files/pdf2/MPI-IP_Twelve-Reasons_2012-10-17_final3.pdf)>

<sup>131</sup> Unitary Patent Reg., Recital 15. Basic rules, as contained in all previous proposals (transfer of right; rights *in rem*; treatment in execution and insolvency; *erga omnes* effect of restrictive contractual licensing; date of third-party effects of patent transactions), are missing: see Hilty et al., *op. cit.*

<sup>132</sup> Unitary Patent Reg., Recital 10.

research exception or compulsory licenses for biotechnological research tools. There is also a concern that the proliferation in courts with competence to hear patent matters will fragment, rather than consolidate, patent jurisprudence. Within the United Kingdom, there are concerns about the impact that the proposed new system will have upon domestic jurisprudence and, more seriously, about whether it will effectively mark the end of domestic law.

While a number of legal obstacles have been overcome,<sup>133</sup> aspects of the proposed scheme are still under scrutiny. In particular, in March 2013 Spain brought actions in the Court of Justice challenging both the Unitary Patent Regulation and the Translation Regulation.<sup>134</sup> Until this matter is resolved, there will be a cloud over the legality of the unitary patent. At this stage, it is difficult to predict whether or not, and if so, when the unitary patent package will come into effect. While a unitary patent will undoubtedly bring about a number of benefits, the fact that it is clearly the product of a political compromise will mean, almost inevitably, that the end-product will not achieve all that is expected of it. In this sense, it seems that the dream of a harmonized, efficient, and centralized European patent system is still some way off. How close the final product comes to that dream is yet to be seen.

#### 4.5.2 Patentability of computer-implemented inventions

Another area in which the Community has been active is in relation to computer-implemented inventions. After a period of consultation, which raised a number of questions about the scope, nature, and impact of patents for computer-related inventions,<sup>135</sup> the Commission published a proposal for a Directive on the Patentability of Computer-Implemented Inventions in February 2002.<sup>136</sup> The proposed Directive was rejected by the European Parliament in July 2005.<sup>137</sup> While many commentators took this as marking the end of the issue, the question of the patentability of computer-related inventions was reopened in 2007 by the EPO President, who called for public discussion to fill the vacuum left by the rejection of the Directive.<sup>138</sup> With this loss, the focus of attention shifted back to the jurisprudence of the national courts and the EPO—a topic at which we look in more detail in Chapter 17.

## 4.6 INTERNATIONAL TREATIES

As we mentioned earlier, international treaties have long played an important role in shaping aspects of British patent law. In addition to the Paris Convention (discussed above),

<sup>133</sup> *Spain and Italy v. Council*, Joined Cases C-274/11 and C-295/11 (16 April 2013) (ECJ, Grand Chamber) (dismissing the claim by Spain and Italy that the Council's decision to authorize enhanced cooperation in the area of the single European patent circumvented the requirement of unanimity).

<sup>134</sup> *Kingdom of Spain v. European Parliament and Council of the European Union*, Cases C-146/13 and C-147/13 (15 June 2013) (action brought on 22 March 2013).

<sup>135</sup> The EC launched a process of consultation on 19 October 2000.

<sup>136</sup> *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* COM (2002) 92 final ('Computer-Implemented Inventions Dir.'). The Council considered the proposal and reached a common position in November 2002. See Committee on Legal Affairs and the Internal Market, *Report on the Proposal for a Directive* (18 June 2003) FINAL A5-0238/2003 ('McCarthy Report'). For a discussion of the proposed Directive, see Bently and Sherman (2004), 342–4.

<sup>137</sup> The Directive was rejected 648 to 14. For a more detailed analysis of the draft Directive, see Bently and Sherman (2004), 342–4.

<sup>138</sup> L. Sherriff, 'Incoming President Reopens Software Patent Debate' (4 July 2007) *The Register*.

the other treaties of note are the Patent Cooperation Treaty, TRIPS, and the Convention on Biological Diversity.

#### 4.6.1 Patent Cooperation Treaty (PCT)

The Patent Cooperation Treaty (PCT) was signed in 1970 and came into operation from 1978. The key feature of the Treaty is that it provides for a system of international application and preliminary examination procedure. The PCT has 148 contracting states.<sup>139</sup> The Treaty only provides for an international application and search; the authority to grant the patent remains with the national patent office.<sup>140</sup> The PCT provides a second route through which applications for patents that operate in the United Kingdom and the EPO can be made.

Under the PCT, an applicant can apply to an international office and get an international search and an international preliminary examination. Once this is carried out, the application is sent to the designated national office(s) to decide whether to grant national patents. The centralized procedure is particularly useful for countries in which the patent office is not capable of carrying out its own examination. The patent cooperation system is attractive because it reduces the fees payable, and because of the lengthy period between the initial application to the international office and the time when that application is forwarded to the relevant national offices. The extra time, which varies between eight and 18 months, gives applicants time in which to decide whether the invention is likely to be successful enough to warrant the translation costs that arise when the application is transferred to the national offices.

#### 4.6.2 Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS)

While TRIPS had a dramatic impact upon many developing countries, it had little direct impact upon European or British patent law.<sup>141</sup> Perhaps the most significant change brought about by TRIPS relates to the limits imposed on compulsory licences. The impact of TRIPS may increase, however, as the jurisprudence at the World Trade Organization (WTO) takes shape. In an important decision in relation to the patenting of computer programs, the EPO Technical Board of Appeal noted that because the EPO was not a signatory to TRIPS, it was not bound by it. However, on the basis that TRIPS aimed at setting common standards, the Board said that it acted as an indicator of modern trends.<sup>142</sup>

There were many critics of TRIPS, particularly in relation to the standards of protection that it imposed on developing countries. Given this, it is not surprising that reform of the 1994 Agreement has been a priority for many member states. Two areas of reform concern us here—namely, patents and public health, and the patentability of plants and animal inventions.

<sup>139</sup> As of 1 January 2014.

<sup>140</sup> The PCT was signed in Washington 1970, amended in 1979, and modified in 1984. See K. Pfanner, 'The Patent Cooperation Treaty: An Introduction' [1979] *EIPR* 98; D. Perrott, 'The PCT in Use' [1982] *EIPR* 67; C. Everitt, 'Patent Cooperation Treaty (PCT)' (1984) 13 *CIPAJ* 383; Anon., 'Patent Cooperation Treaty (PCT) in 1992' (1993) 75 *JPTOS* 354; J. Cartiglia, 'The Patent Cooperation Treaty: A Rational Approach to International Patent Filing' (1994) 76 *JPTOS* 261; J. Anglehart, 'Extending the International Phase of PCT Applications' (1995) 77 *JPTOS* 101. See below at pp. 418–20.

<sup>141</sup> TRIPS, Art. 2, requires members to comply with Arts 1–12 of the Paris Convention (1967). In addition, TRIPS, Arts 27–34, increase the level of standards: Art. 27, as regards patentability; Art. 28, rights; Art. 29, disclosure requirements; Art. 30, exceptions; Art. 31, authorized uses; and Art. 33 requires a term of 20 years from filing date.

<sup>142</sup> *IBM/Computer programs*, T 1173/97 [2000] *EPOR* 219, 224–5.

One issue that has attracted a lot of attention is the extent to which patents restrict access to life-saving drugs. This problem came to a head when patentees threatened to challenge legislation in South Africa that would have allowed their patented medicines (for the treatment of HIV/AIDS) to be sold at a price lower than they would have liked. Triggered by the dispute in South Africa, the Fourth WTO Ministerial Conference, held at Doha in November 2001, focused on access to patented medicines in developed and less-developed countries.<sup>143</sup> The delegates noted that compulsory licences, which are allowed under TRIPS, offer a possible solution for countries such as South Africa that have the domestic capacity to manufacture medicines. However, Article 31(f) of TRIPS, which provides that medicines produced under compulsory licence must predominantly be for the domestic market, creates problems for countries that are unable to manufacture the patented medicines themselves. In particular, it means that it is not possible to manufacture a patented drug under compulsory licence in Country A, with the intention of exporting the drug to Country B. While the delegates at Doha agreed that this problem needed to be resolved, they were unable to decide on how this should be done.<sup>144</sup> After heated public debate, on 30 August 2003, the WTO member states agreed that developed and less-developed countries that do not have the domestic capacity to manufacture drugs should be able to import cheaper generic drugs made under compulsory licences in other countries.<sup>145</sup> That is, the member states agreed to allow countries to manufacture patented pharmaceutical products under compulsory licence for export to developing countries. The decision covers patented products and products made using patented processes in the pharmaceutical sector, including active ingredients and diagnostic kits. The WTO member governments agreed that the obligations under Article 31(f) were to be waived, at least until the Article is amended.

A second area of the Agreement currently under review in the TRIPS Council is Article 27.3(b). This provides a limited exception to the general rule that patents should be granted in all areas of technology in relation to plant and animal inventions. In particular, it provides that members may exclude from patentability plants and animals other than micro-organisms and, essentially, biological processes for the production of plants or animals.<sup>146</sup> As part of the review process, a number of submissions have been made outlining the existing national patent protection for plants and animals, and also the plant variety protection. A number of countries have also made suggestions as to how Article 27.3(b) should be amended. These include discussions about whether patent applicants should be forced to disclose the origin of genetic materials and/or traditional knowledge used in the creation of their invention; the main debate here relates to the consequences of non-compliance.<sup>147</sup> At the same time, a group of African countries argued

<sup>143</sup> See R. Roumet, 'Access to Patented Anti-HIV AIDS Medicine: The South African Experience' (2010) 32 *EIPR* 137.

<sup>144</sup> WTO, *Declaration on the TRIPS Agreement and Public Health* (20 November 2001) WT/MIN(01)/DEC/2. See C. Correa, *Implications of the Doha Declaration on the TRIPS Agreement and Public Health*, WHO Health, Economics and Drugs EDM Series No. 12 (June 2002).

<sup>145</sup> WTO, *Implementation of Para. 6 of the Doha Declaration on the TRIPS Agreement and Public Health* (1 September 2003) WT/L/540 (decision of the General Council of 30 August 2003).

<sup>146</sup> TRIPS, Art. 27.3(b), also requires members to provide for the protection of plant varieties either by patent, an effective *sui generis* system, or both.

<sup>147</sup> The European Union has proposed that patent applicants disclose the origin of genetic material, with legal consequences outside the scope of patent law. Switzerland has proposed an amendment to WIPO's Patent Cooperation Treaty (and, by reference, WIPO's PLT), so that domestic laws ask patent applicants to disclose the origins of genetic resources and traditional knowledge. Failure to disclose could hold up a patent being granted or affect its validity. In turn, Brazil, Cuba, Ecuador, India, Peru, Thailand, and Venezuela want the TRIPS Agreement to be amended to make disclosure an obligation.

that there should be a general ban on the patenting of any life forms (including animals, plants, and micro-organisms) and that farmers should have a general right to save seed. Given the divergence of views on the question of patenting life forms, it is not surprising that reform of Article 27.3(b) has progressed slowly. The slow progress can also be attributed to the fact that the review touches on a number of contentious issues, such as patent protection for indigenous knowledge, the relationship between intellectual property and the protection of biodiversity, and the way in which TRIPS and the Convention on Biological Diversity (see below) are to interact.<sup>148</sup> Given this, it is likely that the review of Article 27.3(b) may take some time.

The slow progress of the TRIPS review continued at the Fifth WTO Ministerial Conference which was held in Cancun, 10–14 September 2003. While intellectual property issues were not at the forefront of the discussions, the meeting ended in a deadlock with the parties unable to reach agreement as to the next phase of the Doha negotiations. It is currently unclear how future negotiations will proceed. Given that developing countries have little to gain from the TRIPS review (with the possible exception of extending protection for geographical indications of origin), it seems that there is little impetus for them to break this stalemate. As a result, we might expect to see a move away from multi-lateral treaties towards bilateral agreements (as is currently being favoured by the United States) in an attempt to extend the scope of patent protection beyond that permitted by TRIPS.

The only area in which it seems that there might be some hope of change relates to compulsory licensing of patented medicines for export to developing countries. In late 2005, the WTO General Council decided that the 2003 Doha Declaration should be permanently incorporated into the TRIPS Agreement.<sup>149</sup> To this end, a Protocol amending the TRIPS Agreement was produced, which proposed that TRIPS should be amended to include a new Article 31*bis* and a new Annex. The proposed amendments are very similar to the text of the 2003 Doha Declaration. Under the proposed changes, member countries will be able to grant compulsory licences to allow the manufacture and export of pharmaceuticals for public health reasons. This will be permitted where the importing country is a developing country that lacks the capacity to produce the relevant pharmaceuticals (the proposed new Annex sets out the criteria to be used to determine whether a country lacks capacity). Importing countries have an obligation to take reasonable measures to prevent re-exportation.

The proposed changes will come into effect only when two-thirds of the WTO membership accepts the amendment. After two deadlines were missed, the period for acceptance of the Protocol was extended until 31 December 2013 (or some later date to be agreed).<sup>150</sup> As of 30 September 2012, only 45 of the 159 member states had done so.<sup>151</sup> This includes the European Union,<sup>152</sup> the United States, Australia, Switzerland, China, and India. While it may be some time before the Doha Declaration is formally embodied in the TRIPS Agreement, this has not stopped countries from using the provisions. The first

<sup>148</sup> The Doha Declaration says that, in reviewing Art. 27.3(b), the TRIPS Council should look at the relationship between the TRIPS Agreement and the CBD, and that between the protection of traditional knowledge and folklore.

notification of a compulsory licence being granted to allow a company to make a generic version of a patented medicine for export was made by Canada on 4 October 2007. The licence allows the Canadian company to manufacture the AIDS therapy drug TriAvir and export it to Rwanda.<sup>153</sup>

#### 4.6.3 Convention on Biological Diversity (CBD)

The Convention on Biological Diversity (CBD) was signed in June 1992.<sup>154</sup> While the Convention was not directly concerned with patent standards, it heralds a new approach to the way biological resources are treated. The Convention provided developing countries with an opportunity to voice their unhappiness at the exploitation of indigenous resources by firms from the developed world. Of late, there have been numerous examples of situations where this has occurred: the neem tree, traditionally used in India to make medicines and insecticides, has been the subject of 37 patents in Europe and the United States;<sup>155</sup> there have been applications relating to the use of turmeric for treating wounds;<sup>156</sup> and inventions based on genetic material obtained from the Hagahai people, a small group in Papua New Guinea, have been patented.<sup>157</sup> The CBD offers a potential basis to control the uses made of traditional knowledge. The Preamble recognizes the close and traditional dependence of many indigenous and local communities embodying traditional lifestyles on biological resources. It also recognizes the desirability of equitably sharing the benefits arising from the use of traditional knowledge, innovations, and practices relevant to the conservation of biological diversity and the sustainable use of its components.

Faced with concerns about how the access and benefit-sharing aspect of the CBD were to be implemented, in 2002 the parties to the Convention adopted the Bonn Guidelines on access to genetic resources.<sup>158</sup> The Guidelines, which are voluntary in nature, were designed to assist parties, governments, and other stakeholders when establishing legislative, administrative, or policy measures on access and benefit-sharing and/or when negotiating contractual arrangements for access and benefit-sharing. The voluntary nature of the Guidelines did not endear them to developing nations, who, soon after their adoption, began to lobby for the development of a binding legal regime.

The push towards a more equitable sharing of benefits under the CBD took an important turn when the Nagoya Protocol was adopted in October 2012. This establishes a binding legal regime to govern access to genetic resources and the fair and equitable distribution of benefits derived from their use. The Protocol also regulates access to and use of the traditional knowledge and genetic resources of indigenous and local communities. The Protocol, which reaffirms the sovereign rights of states over their natural resources,<sup>159</sup> has as its primary objective the fair and equitable sharing of benefits arising from the utilization of genetic resources, including by appropriate access to genetic resources and by appropriate transfer of relevant technologies.<sup>160</sup> Article 1 of the Protocol makes it clear

<sup>153</sup> (19 July 2007) IP/N/9/RWA/1.

<sup>154</sup> On 1 December 2013, there were 193 parties (168 signatories) to the Convention. The United Kingdom signed on 12 June 1992; the EC, on 13 June 1992.

<sup>155</sup> S. Kadidal, 'Subject Matter Imperialism? Biodiversity, Foreign Prior Art and the Neem Patent Controversy' (1996) 37 *IDEA* 371; E. <sup>158</sup> Adopted by the Sixth Meeting of the Conference of the Parties to the Convention on Biological Diversity, The Hague, 2002.

<sup>159</sup> Nagoya Protocol, Preamble.

<sup>160</sup> Nagoya Protocol, Art. 1.

that such access must take into account ‘all rights over those resources and technologies’, which is clearly intended to include relevant intellectual property rights.

The Nagoya Protocol applies to genetic resources falling within the remit of Article 15 CBD—that is, genetic resources that are provided by contracting parties that are countries of origin of such resources or by the parties that have acquired the genetic resources in accordance with the Convention—and to traditional knowledge associated with genetic resources within the scope of the Convention, as well as to benefit-sharing for use of such resources and knowledge.<sup>161</sup> The Protocol obliges parties to adopt legislative, administrative, or policy measures to ensure fair and equitable sharing of benefits with the party providing resources and with indigenous and local communities where there is use of traditional knowledge or genetic resources over which they have established rights.<sup>162</sup> Access to genetic resources is subject to prior informed consent of the party providing such resources and must be on mutually agreed terms.<sup>163</sup> Parties are required to ensure that use of genetic resources within their jurisdiction is carried out in conformance with the domestic access and benefit-sharing laws of the providing party.<sup>164</sup> Where no domestic laws exist, the access and benefit-sharing provisions of the Protocol do not apply. The situation is somewhat different with regard to the genetic resources and traditional knowledge of indigenous and local communities, in which case prior informed consent and mutually agreed terms appear to be compulsory for access to their genetic resources<sup>165</sup> and traditional knowledge,<sup>166</sup> even where there is no national access and benefit-sharing legislation.<sup>167</sup> States are also required to take the customary laws of indigenous peoples and local communities into consideration in implementing the Protocol.<sup>168</sup> Users of indigenous peoples’ and local communities’ genetic resources and traditional knowledge will, in the future, need to ensure that requisite prior informed consent for its use has been obtained with due respect and recognition of customary law.<sup>169</sup>

While the CBD may not yet have had an immediate impact on patent law, it does represent a change of attitude towards the way biological resources are exploited, which may impact upon the way patents are viewed. In particular, it may help to undermine the pro-patent attitudes that have dominated for the last forty or so years. The impetus provided by the CBD to reconsider the aims and functions of the patent system has been reinforced by the growing body of literature that questions the often taken-for-granted assumption that technological development is both desirable and neutral. In so doing, commentators have emphasized the adverse physical and psychological effects of technology on individuals, their relations with society (alienation), and the planet in general (environmental problems). Technology is also seen as having vastly altered the nature of political government and reduced individual autonomy (computer databases, surveillance devices). Following this, some authors have called for the democratic control of technology, in particular arguing that some research and development should be prohibited (note, for example, the debate over the patenting of higher life-forms). In recent years, the CBD has begun to impact upon patent law in a variety of ways, the most notable being the possibility of making ‘prior informed consent’ a condition of patentability. This has been given a new impetus by the adoption of the Nagoya Protocol. Debates about this and related

<sup>161</sup> Nagoya Protocol, Art. 3.

<sup>162</sup> Nagoya Protocol, Art 5.

<sup>163</sup> Nagoya Protocol, Art. 6.1.

issues have become intertwined with the ongoing review of the TRIPS Agreement being conducted by the TRIPS Council and with WIPO's discussions about the protection of indigenous knowledge.<sup>170</sup> We look at these issues in more detail below.

#### 4.6.4 WIPO Patent Law Treaty (PLT)

In the last decade or so, the World Intellectual Property Organization (WIPO) has been engaged in an ongoing programme of reform of international patent law. The first concrete outcome from this process was the Patent Law Treaty (PLT) which was completed in June 2000.<sup>171</sup> The PLT, which opened for signature on 2 June 2000, entered into force on 28 April 2005.<sup>172</sup> In essence, the PLT is an international treaty that aims to simplify and streamline procedures for obtaining and maintaining a patent. It also aims to harmonize patent procedures relating to national and regional patent applications and the maintenance of patents.<sup>173</sup>

The PLT promises to reduce the cost of patent protection (as a result of changes such as national patent offices sharing the results of search and examination procedures), and to make the process more user-friendly and more widely accessible. The specific changes include: the use of standardized forms and simplified procedures that reduce the risk of error; cost reductions for inventors, applicants, and patent attorneys; the elimination of cumbersome and complicated procedures; improved efficiency of patent offices and lower operating costs; the possibility of introducing electronic filing of patent applications and related communications; the standardization of patent formalities in all countries party to the PLT (including the incorporation of provisions under the Patent Cooperation Treaty); exceptions from mandatory representation; and the possibility of obtaining a filing date even if the main part of the application (description) is filed in a foreign language.<sup>174</sup> Under the PLT, the requirements and procedures for national and regional patent applications and those for Patent Cooperation Treaty international applications will be harmonized. This will eventually lead to standardized formal requirements and streamlined procedures for all patent applications at both national and regional patent offices.<sup>175</sup>

#### 4.6.5 Global harmonization of substantive patent law

The next stage in the WIPO reform of global patent law began in November 2000 when WIPO launched discussions on the harmonization of the substantive requirements of patent law.<sup>176</sup> These discussions go beyond the Patent Law Treaty of June 2000, which

<sup>170</sup> See above at pp. 434–6.

<sup>171</sup> WIPO, *Patent Law Treaty* (2 June 2000) PT/DC/47.

<sup>172</sup> There were 107 signatories to the Final Act of the Diplomatic Conference (including the United Kingdom and the EPO) on 2 June 2000. The Treaty had been ratified by 36 countries as of 1 December 2013. The United Kingdom ratified the Treaty on 22 March 2006.

<sup>173</sup> For criticisms, see R. Dreyfus and J. Reichman, 'Harmonizing without Consensus: Critical Reflections on Drafting a Substantive Patent Law Treaty' (2007) 57 *Duke LJ* 85.

<sup>174</sup> WIPO, 'Patent Law Treaty is Finalized' (1 June 2000) PR/2000/222; WIPO, *Patent Law Treaty* (2 June 2000) PT/DC/47.

<sup>175</sup> The consultation on proposed reforms to bring UK legislation into line with the WIPO PLT ended on 30 May 2003.

<sup>176</sup> WIPO Standing Committee on the Law of Patents (SCP), *Suggestions for the Further Development of International Patent Law* (25 September 2000) SCP/4/2. Negotiators attended a meeting of the SCP on 6–10 November 2000. For the background, see R. Petersen, 'Harmonization: A Way Forward' (1987) 16 *CIPAJ* 234; R. Petersen, 'Harmonization—or Backward?' (1987) 17 *CIPAJ* 66; R. Petersen, 'Harmonization: Postponement' (1989) 18 *CIPAJ* 118, 293; R. Petersen, 'On to Harmonization' (1990) 19 *CIPAJ* 147; R. Petersen, 'Harmonization Again' (1990) 19 *CIPAJ* 356; J. Pagenberg, 'WIPO: Diplomatic Conference in the Hague on Harmonization of Patent Law' (1991) 22 *IIC* 682.

focused on the task of harmonizing the processes by which patents are granted, to consider substantive issues. It is hoped that standardizing the rules on patentability will mean that, because applicants will not have to prepare totally different patent documents for different patent offices, the costs of patenting will decrease. It is also hoped that it will increase predictability about patentability of inventions.

Although the Patent Cooperation Treaty (PCT) contains some principles of substantive patent law, these are only taken into account at the international phase when an application is submitted under the PCT; PCT contracting states are free to apply any substantive conditions of patentability during the national phase of an international application. Importantly, it is at this stage that the national authorities make the important decision as to whether a patent should be granted.

## NATURE OF A PATENT

### CHAPTER CONTENTS

1 Introduction	405	3 Drafting of a Patent	406
2 Types of Patent	405	4 Contents of a Patent	407

### 1 INTRODUCTION

Patents have changed dramatically since they were first granted in England and Wales more than four centuries ago. Initially, patents were crude documents, often only one or two sentences long. Since then, patents have become much more sophisticated, complex, and lengthy. As we will see in the next chapter, the process by which a patent is granted has also changed dramatically. A lot of care and attention has been given to the form and content of the patent. If there is a kind of symmetry or logic to the patent system, the content of the patent is the key to that process. As such, to understand many facets of patent law, it is important to have a good grasp of the nature and content of the patent. This chapter is intended to provide an introduction to the nature of the patent. In so doing, we look at the different ways patents are described, the way patents are drafted, and the contents of a patent. To offer a sense of the nature of a patent, a patent for a relatively simple piece of technology is reproduced on the Online Resource Centre: [http://www.oxfordtextbooks.co.uk/orc/bently\\_sherman4e/](http://www.oxfordtextbooks.co.uk/orc/bently_sherman4e/)

### 2 TYPES OF PATENT

Patents are described in a number of different ways in the United Kingdom. Most commonly, a patent is seen as a legal document that confers a 20-year monopoly on the patentee. Patents are also characterized in terms of the organization that grants them. As we saw earlier, the patents that operate in the United Kingdom are granted by two authorities: the UK Intellectual Property Office (UK IPO) and the European Patent Office (EPO). The patents that operate in the United Kingdom are known either as 'British patents' or 'European patents (UK)'. British patents are issued by the IPO and are subject to British law. European patents are issued by the EPO in Munich; a European patent (UK) is a patent issued by the EPO and applies in the United Kingdom. Prior to the introduction of the 2000 European Patent Convention (EPC 2000), applicants had to designate the member states in which they wanted the patent to operate. In contrast, the EPC 2000 provides that all EPC states will be deemed to be designated as the country in which the patent will operate at the date of filing.<sup>1</sup>

<sup>1</sup> EPC 2000, Art. 79(1), provides that all EPC states will be deemed to be designated as the country in which the patent will operate at the date of filing (in contrast to Art. 79 of the EPC 1973, which required applicants to designate the states in which they wished the patent to operate).

While there are a number of differences between the two systems, once a European patent (UK) has been granted, it is treated as if it had been granted by the UKIPO.<sup>2</sup>

Another way of classifying patents is in terms of the subject matter that they protect. In some instances, patents are described by reference to the industry or branch of science to which the patented invention relates. So, for example, it is common to speak of ‘chemical patents’ or ‘biotechnology patents’. In other cases, patents are classified according to the nature of the interest that is protected—that is, whether it is a ‘product patent’, a ‘process patent’, or a ‘product-by-process patent’. These are looked at below.

### 3 DRAFTING OF A PATENT

The drafting of patents, which is normally undertaken by patent agents, is a crucial part of the patent process. It is also a complex and difficult task. These difficulties can partly be attributed to the nature of the subject matter that is protected by patent law and partly to the fact that it is sometimes very difficult to explain particular forms of technology in the form demanded by patent law. In certain instances, notably in relation to biological inventions, patent law has been forced to develop specific rules and procedures to enable them to meet the requirements for patentability.<sup>3</sup>

Another reason why patent drafting is often such a difficult process is that patents are at once technical, commercial, and legal documents. As such, they are written with a number of different purposes in mind. As we saw earlier, one of the rationales for the grant of patents is that they encourage the dissemination of technical and scientific information. In the hypothetical patent bargain that views patents as though they were a contract between inventors and the state, the information contained in the application is treated as the ‘consideration’ for the grant of the monopoly.<sup>4</sup> As well as encouraging inventors to disclose information that might otherwise remain secret, the patent system also attempts to ensure that the information that is made public is recorded in a format that is usable. To this end, a series of detailed rules and procedures regulate the way in which the patents are drafted.<sup>5</sup> To take one example, patent law stipulates that the patent specification ought to disclose the invention in a manner that is clear enough and complete enough for the invention to be performed by a person skilled in the art.<sup>6</sup>

While the patent system encourages inventors to disclose their technical creations, it would be incorrect to conclude from this that patentees necessarily draft their patents according to the rules and procedures set down by the law. In some cases, inventors may take out a patent, but attempt to manipulate the information in the patent application in a way that suits their own purposes. For example, as well as disclosing the invention, applicants may draft their patent in such a way as to attract sponsorship or to advertise the existence of the patent.<sup>7</sup>

<sup>2</sup> PA 1977, ss 77–78; EPC 2000, Art. 64.

<sup>3</sup> See A. Pottage and B. Sherman, *Figures of Invention* (2012).

<sup>4</sup> ‘This is the price which the inventor pays in return for his twenty-year monopoly’: *Mentor v. Hollister* [1993] *RPC* 7, 9. See also *Grant v. Raymond*, 31 *US* (6 *Pet*) 218, 247 (1832).

<sup>5</sup> For example, PA Rules, rr 14–15, Pts 1–4 of Sch. 2; EPC 2000 Regs, r. 47.

<sup>6</sup> PA 1977, s. 14(3); PA Rules, r. 12(4); EPC 2000, Art. 83; EPC 2000 Regs, r. 42. See Chapter 20, sections 1 and 2.

<sup>7</sup> In *Cartonneries de Thulin v. CTP White Knight* [2001] *RPC* 107, 116, Robert Walker LJ said that patent attorneys in different industrial countries adopt perceptibly different approaches to drafting patent

Given that the information contained in a patent application may be used by an applicant's competitors, it is understandable that applicants may be tempted to provide only the minimum amount of information that is necessary for them to obtain a patent. While patentees may not now be able to obscure their inventions as they once were, applicants are only required to disclose such details of the invention as to enable a person skilled in the art to make the invention. As a result, a patent might not reveal important features about the invention, such as the cheapest or strongest starting materials.<sup>8</sup> This 'know-how' may provide the patentee with a strategic advantage over competitors that may be important when an invention is made available to the public. Ultimately, the degree to which applicants are able to draft patents for their own purposes depends upon how stringently the patent offices and the courts enforce the disclosure requirements.

Another factor that adds to the complexity of the drafting process relates to what has been called the 'infringement–validity dichotomy' (or, as it is also known, the '*Gillette* defence'<sup>9</sup>). Because the scope of the monopoly is determined by what is claimed in the patent, the applicants may be tempted to claim more than they perhaps ought. At the same time, however, applicants need to be mindful of the fact that if they draft claims too broadly, this increases the chance of the patent being declared invalid (primarily for lack of novelty). Because matters of infringement and validity are heard in the same tribunal, the infringement–validity dichotomy helps to ensure that the scope of the patent monopoly corresponds to what was actually invented.

## 4 CONTENTS OF A PATENT

Patents in Britain and the EPO are made up of four key parts:

- (i) an abstract;<sup>10</sup>
- (ii) a description of the invention;<sup>11</sup>
- (iii) one or more claims;<sup>12</sup> and
- (iv) any drawings referred to in the description or claims.<sup>13</sup>

Before looking at these in more detail, it is important to bear in mind a number of preliminary issues.

The various components of a patent perform a number of different roles. Some of these, such as the abstract, are used both for administrative purposes and as a way of advertising the existence of the patented invention. The description and claims, which form the core of the patent, respectively disclose the invention in a usable form and demarcate the scope of the monopoly. It is also important to note that the contents of a patent application

specifications: German (and other continental) draftsmen tend to a 'central' style, which concentrates on the 'centre of gravity' of an invention; British (and, still more, American) draftsmen tend to a 'peripheral' style, which seeks to delimit the boundaries of an invention.

<sup>8</sup> Although there is no requirement of good faith, note PA 1977, ss 62(3), 63(2).

<sup>9</sup> This is based on the arguments before the House of Lords in *Gillette Safety Razor Company v. Anglo-American Trading Company Ltd* [1913] 30 RPC 465.

<sup>10</sup> PA 1977, s. 14(2)(c); PA Rules, r. 15; EPC 2000, Art. 78(1)(e); EPC 2000 Regs, r. 47.

<sup>11</sup> PA 1977, s. 14(2)(b); PA Rules, r. 12(4)(a), Pts 1–4 of Sch. 2; EPC 2000, Art. 78(1)(b); EPC 2000 Regs, r. 42.

<sup>12</sup> PA 1977, s. 14(2)(b); PA Rules, r. 12; EPC 2000, Art. 78(1)(c); EPC 2000 Regs, r. 43.

<sup>13</sup> PA 1977, s. 14(2)(b); PA Rules, r. 12; EPC 2000, Art. 78(1)(d); EPC 2000 Regs, r. 46. Patent applications must also contain a request for the grant of a patent and designate the inventor.

differ somewhat from the patent itself. While the patent and the application for a patent both contain a description and claims, the main difference is that the patent application contains additional information—the request for grant. The request for grant, which is used for administrative purposes, normally includes the title of the invention (which clearly and concisely states the technical designation of the invention), as well as relevant biographical details of the applicants and patent agents (if used). Because it is permissible to amend the patent application during and after the grant process, the final form that a patent takes may differ from the initial application. This process of amendment is examined in more detail later.<sup>14</sup>

While UK and European patents are very similar,<sup>15</sup> there are some differences that ought to be borne in mind. One of these relates to the language that is used to describe the components of the patent. More specifically, it relates to the fact that while the core of a British patent is known as the ‘specification’ (which comprises a description of the invention, the claims, and any drawings referred to in the description or claims), the EPC and the Patent Cooperation Treaty 1970 (PCT) speak instead of the contents of a ‘patent application’.<sup>16</sup> Another difference between UK and European patents relates to the controls that are exercised over the form and content of the patent. While similar, in that both have to meet the statutory requirements for patentability, the rules of the EPC (but not the United Kingdom) provide detailed guidance as to the precise form that a patent should take. This is particularly the case in relation to the description and claims.

With these initial points in mind, we can now turn to look at the contents of a patent in more detail.

#### 4.1 ABSTRACT

The first element of a UK and EPO patent is the abstract.<sup>17</sup> This is a brief summary (usually around 150 words) of the more important technical features of the invention. Normally, an abstract contains the title of the invention, a concise summary of the matter contained in the specification, and an indication of the technical field to which the invention belongs. The relevant rules also provide that the abstract should outline the technical problem that the invention attempts to resolve, the gist of the solution to that problem, and the principal use(s) of the invention.<sup>18</sup>

Patent abstracts perform two main tasks. First, they are used by the patent offices as a search tool when examining other patent applications. To this end, the patent rules stipulate that abstracts ought to be drafted in such a way that they constitute an efficient instrument for searching in the particular technical field.<sup>19</sup> Abstracts, which are normally published around 18 months after the application was filed, also alert third parties to the existence of the application. To ensure that abstracts are only used for these purposes, the Patents Act 1977 (PA 1977) and the EPC 2000 stipulate that the abstract can only be relied upon to provide ‘technical information’.<sup>20</sup> One of the consequences of this is that, for

<sup>14</sup> See below at p. 431, Chapter 16, section 5, and Chapter 20, section 4.

<sup>15</sup> European patents that designate the United Kingdom are treated as UK patents: PA 1977, s. 77.

<sup>16</sup> PA 1977, s. 14. See *Genentech’s Patent* [1989] *RPC* 147, 197–9, 236–7, 261; A. White, ‘The Function and Structure of Patent Claims’ [1993] *EIPR* 243; P. Cole, *The Fundamentals of Patent Drafting* (2006).

<sup>17</sup> PA 1977, s. 14(2)(c); PA Rules, r. 15; EPC 2000, Art. 78(1)(e); EPC 2000 Regs, r. 47.

<sup>18</sup> PA Rules, r. 15(3); EPC 2000 Regs, r. 47(2) (abstract may be amended by the Comptroller).

<sup>19</sup> EPC 2000 Regs, r. 47(5), requires that the abstract be drafted in such a way that it constitutes an efficient instrument for purposes of searching in the particular technical field, in particular by making it possible to assess whether there is a need to consult the specification (or patent application) itself.

<sup>20</sup> PA 1977, s. 14(7); EPC 2000, Art. 85.

patent law purposes, the abstract does not form part of the state of the art.<sup>21</sup> This avoids the potential problem of the abstract anticipating the patent and, in so doing, rendering it invalid for lack of novelty. The fact that the abstract is only used for ‘technical’ purposes also means that it cannot be used to influence the scope of the monopoly.<sup>22</sup>

## 4.2 DESCRIPTION

The next element of a patent is the description.<sup>23</sup> As with the abstract, the description plays an important role in ensuring that the information function of the patent system is performed. In many ways, descriptions are similar to scientific or technical papers: they explain what has been created, the problems that the invention solves, why it is important, and how the invention differs from what has been created before.<sup>24</sup>

In most cases, a description will begin with an account of the background to the invention.<sup>25</sup> In so doing, the description will summarize the prior art, usually referring to existing patents and other published documents. This information is used to understand the nature of the invention, for carrying out the search report, and for the purposes of examination.<sup>26</sup> Typically, a description will then disclose the invention as claimed.<sup>27</sup> This is usually done by outlining the technical problem that the invention attempts to solve and the solutions that it offers (which are often couched in terms of the advantages that the invention offers over the ‘background art’).<sup>28</sup> Following a brief introduction to any drawings that are used,<sup>29</sup> the description will normally provide a detailed account of how the invention is carried out.<sup>30</sup>

To ensure that the invention is disclosed in such a way that it is of practical use to people in the art, patent law imposes a number of constraints upon the way inventions are disclosed. At a general level, the application ought to describe the invention in a manner that is clear and complete enough for it to be performed by a person skilled in the art.<sup>31</sup> The description must also support the claims.<sup>32</sup> If the patent fails to meet these criteria, it may be declared invalid. These issues are dealt with in more detail later.<sup>33</sup>

<sup>21</sup> This is explicit in EPC 2000, Art. 85, and implicit in PA 1977, s. 14(7).

<sup>22</sup> *Bull/Identification system*, T 246/86 [1989] OJ EPO 199. (The TBA refused to allow an applicant to use an abstract that suggested that the apparatus was a credit card as a way of expanding the preliminary description and claims, which had not suggested that the apparatus could include a portable object.)

<sup>23</sup> PA 1977, s. 14(2)(b); PA Rules, r. 12(4)(a), Pts 1–4 of Sch. 2; EPC 2000, Art. 78(1)(b); EPC 2000 Regs, rr 42, 49. Unlike the EPC, which provides detailed guidance as to the contents of the description, the PA 1977 and the rules are silent as to the form that the description in a UK application ought to take.

<sup>24</sup> On the specification, see R. Merges and R. Nelson, ‘On the Complex Economics of Patent Scope’ (1990) 90 *Colum L Rev* 839, 844; G. Myers, ‘From Discovery to Invention: The Writing and Re-writing of Two Patents’ (1995) 25 *SSS* 57.

<sup>25</sup> EPC 2000 Regs, r. 42(1)(b); *EPO Guidelines*, C–II, 4.3–4.4. See *Sony/Television receivers*, T 654/92 [2000] EPOR 148 (on the meaning of ‘background art’).

<sup>26</sup> EPC 2000 Regs, r. 42(1)(b).

<sup>27</sup> EPC 2000 Regs, r. 42(1)(c); *EPO Guidelines*, C–II, 4.5–4.6.

<sup>28</sup> EPC 2000 Regs, r. 42(1)(c). For criticisms of EPC 1973 Regs, r. 27 (which is similar to EPC 2000 Regs, r. 42(1)(c)), on the basis that it is ambiguous and uncertain, see H. Ullrich, *Standards of Patentability for European Inventions: Should an Inventive Step Advance the Art?* (1977), 113.

<sup>29</sup> EPC 2000 Regs, r. 42(1)(d); *EPO Guidelines*, C–II, [4.7].

<sup>30</sup> The patent should include a specific description of at least one detailed embodiment, often referred to as the ‘preferred embodiments’. Occasionally, this will be unnecessary: see *Toshiba/Semiconductor device*, T 407/87 [1989] EPOR 470. EPC 2000, r. 42(1)(f), adds that, where necessary, the applicant should state the way in which the invention is capable of industrial exploitation: *EPO Guidelines*, C–II, [41.2].

<sup>31</sup> PA 1977, s. 14(3); EPC 2000, Art. 83. <sup>32</sup> PA 1977, s. 14(5)(c); EPC 2000, Art. 84.

<sup>33</sup> See Chapter 20, sections 1 and 2.

### 4.2.1 Description of biological materials

One of the rationales for the inclusion of the description in a patent application is that it ensures that the public is able to access and make use of the invention that is disclosed in the application. This is based on the presupposition that it is possible to describe the invention, whether using words, figures, or diagrams, in such a way that third parties will be able to understand and make use of it. While this assumption holds true in relation to most technologies, it is not necessarily the case in relation to biological inventions. The reason for this is that where an invention depends on the use of living materials such as micro-organisms or cultured cells, it may be impossible to describe the invention so that the public is able to make the invention.<sup>34</sup>

The EPC 2000<sup>35</sup> and the PA 1977<sup>36</sup> attempt to address this problem by providing that if an invention involves biological material that cannot be described in a way that enables the invention to be carried out by a person skilled in the art, the applicant must deposit a sample of this biological material at a 'recognized institution' (or depositary).<sup>37</sup> These issues were also addressed in the Biotechnology Directive.<sup>38</sup> The application must contain such relevant information as is available on the characteristics of the biological material.<sup>39</sup> In depositing a sample, the applicant is treated as consenting to the depositary making the sample available after publication of the application.<sup>40</sup> An applicant may require that until the application has either been abandoned or patented, the deposit should only be released to experts who are allowed to use the culture only for experimental purposes.<sup>41</sup> Special rules also exist in relation to patent applications relating to nucleotide and amino acid sequences.<sup>42</sup>

### 4.3 CLAIMS

The next element of a patent is the claims.<sup>43</sup> While the purpose of the description is to ensure that the invention disclosed in the patent is of some practical use, the primary

<sup>34</sup> In *American Cyanamid (Dann)'s Patent* [1971] RPC 425, the House of Lords held that there was no obligation on a patentee under the PA 1949 to supply the microorganism to the public. See A. Pottage and B. Sherman, *Figures of Invention* (2012), 183ff; B. Hampar, 'Patenting of Recombinant DNA Technology: The Deposit Requirement' (1985) 67 *JPTOS* 569; V. Meyer, 'Problems and Issues in Depositing Micro-organisms for Patent Purposes' (1983) 65 *JPTOS* 455. <sup>35</sup> EPC 2000 Regs, r. 31.

<sup>36</sup> PA 1977, s. 125A (introduced by CDPA 1988, Sch. 5, para. 30).

<sup>37</sup> Recognized depositary institutions include all international depositaries under the 1977 Treaty on the International Recognition of the Deposit of Micro-organisms (the Budapest Treaty) (modified 1980). This established minimum requirements for maintaining an international depositary for microorganisms (the United Kingdom joined on 29 December 1988). In December 2013, there were 78 member states, with 42 international depositary authorities (IDAs).

<sup>38</sup> Biotech. Dir., Arts 13–14; implemented in the United Kingdom by Patents (Amendment) Rules 2001, SI 2001/1412 (as of 6 July 2001).

<sup>39</sup> EPC 2000 Regs, r. 31(1)(b); PA 1977, s. 125A; PA Rules, r. 13(1), Sch. 1.

<sup>40</sup> EPC 2000 Regs, r. 31; PA Rules, r. 13(1), Sch. 1.

<sup>41</sup> EPC 2000 Regs, r. 32; PA Rules, r. 13(1), Sch. 1, paras 6–7.

<sup>42</sup> EPC 2000 Regs, r. 30; PA Rules, r. 13. See also *Decision of the President of the EPO 2 October 1998 concerning the presentation of nucleotide and amino acid sequences in patent applications and the filing of sequence listings* (1998) 11 *OJ EPO Supp.* No. 2 1.

<sup>43</sup> PA 1977, s. 14(2)(b); PA Rules, r. 12; EPC 2000, Art. 78(1)(c); EPC 2000 Regs, r. 43. The requirement for a claim was first introduced in the United Kingdom by the Patents, Designs and Trade Marks Act 1883, s. 5(5). However, the practice of including claims had been common from at least the 1830s. Claims are central to the operation of the European patent system: *Mobil/Friction-reducing additive*, G 2/88 [1990] *OJ EPO* 93, 99; J. Kemp (ed.), *Patent Claim Drafting and Interpretation* (1983). On the history, see *British United Shoe Machinery v. Fussell* (1908) 23 *RPC* 631, 650.

function of the claims is to set out the scope of the legal protection conferred by the patent.<sup>44</sup> As such, the claims play a key role in patent law.

Typically, a patent will consist of a number of claims that are arranged hierarchically.<sup>45</sup> Such patents will commence with a widely drawn ‘principal’ or ‘generic’ claim that defines the invention by setting out its distinctive technical features. General claims of this sort are often followed by a series of narrower dependent or subsidiary claims (which may refer back to earlier claims).<sup>46</sup> For example, the primary claim may be for a product (such as a contact lens) having a particular character (such as being made up of recycled plastic), whereas the dependent claims may limit the principal claim to certain quantitative parameters (such as minimum or maximum length).

One of the reasons why claims are arranged hierarchically is that this provides patentees with the flexibility to respond to any legal challenges that are made to the patent.<sup>47</sup> More specifically, if claims are arranged hierarchically, a challenge to the patent might only lead to the principal or broadest claim being severed, leaving behind the more narrowly drafted claims.<sup>48</sup> Confident in the knowledge that the validity of narrower claims are not dependent on the validity of the more general claims, patentees are able to draft claims more generously than they would otherwise be able to do. The rules under the EPC 2000 require that, where appropriate, claims ought to be in two parts.<sup>49</sup> The first, which is called the ‘preamble’, sets out the technical features of the invention that are necessary for the definition of the claimed subject matter, but which are already part of the prior art. This is followed by a so-called ‘characterizing portion’, which sets out the novel technical features that the applicant wishes to protect.<sup>50</sup> The characterizing portion of the claim is neither required nor forbidden in the United Kingdom.<sup>51</sup> In British patents, the final claim will often be an omnibus claim—that is, a claim that largely mimics the way in which the invention is set out in the descriptions or the drawings.<sup>52</sup> While permissible in the United Kingdom, omnibus claims are generally not permitted in EPO applications.<sup>53</sup>

A notable feature of most patent claims is that they are difficult to understand, at least to the non-expert reader. This is not surprising, given that patents are written not for the general reader, but for the relevant person skilled in the art. As well as being written for specialists,

<sup>44</sup> PA 1977, s. 14(5); EPC 2000, Art. 84. Given that the claims define the scope of protection, the way in which the claims are interpreted is very important: see Chapter 22, section 3. For an interesting examination of the typical nature of the claims (and how they might differ from the abstract), see *R (on the application of Knight) v. Comptroller-General of Patents, Trade Marks and Designs* [2007] All ER (D) 125.

<sup>45</sup> The number has to be reasonable having regard to the nature of the invention claimed: EPC 2000, r. 43(5). In *Oxy/Gel forming composition*, T 246/91 [1995] EPOR 526, a patent with 157 claims violated EPC 1973, Art. 84 and r. 29(5): ‘[P]atents should not be allowed to erect a legal maze or smokescreen in front of potential users of the inventions to which they lay claim.’

<sup>46</sup> *Hallen v. Brabantia* [1990] FSR 134, 140–1.

<sup>47</sup> Following EPO practice, it is now clear that numbering claims will not impact on the construction of the claims in the United Kingdom: *Virgin Atlantic Airways v. Premium Aircraft Interiors UK* [2009] EWCA Civ 1062.

<sup>48</sup> See *Van der Lely v. Bamfords* [1964] RPC 54 (CA), 73, 76; *Chiron v. Organon (No. 7)* [1994] FSR 458, 460–6.

<sup>49</sup> This provision, apparently put in to appease British interests, enables UK patents to be drafted according to the traditional British approach.
