# Solutions to Exercises, Chapter 20

20.1

20.2

20.3 Concentrations of radicals are small, so the probability of one encountering another is very small (although radical coupling can be one of the steps which terminates a radical chain mechanism). Reaction of the methyl radical with the more abundant Cl<sub>2</sub> to form chloromethane plus a chlorine radical occurs more often; this is one of the chain propagation steps which occurs repeatedly, and is the main reaction to give chloromethane (see Scheme 20.1).

20.4

$$CI \xrightarrow{H} CH_2CI \longrightarrow CI-H + \cdot CH_2CI$$
 $CI \xrightarrow{CI} CH_2CI \longrightarrow CI \cdot + CH_2CI_2$ 

20.5

20.6

20.7

20.8

(a) 
$$PhCH_2Br$$
 (b)  $Ph$   $CH_2Br$  (c)  $Ph$ 

(d) Two allylic radical intermediates are possible which give three products (all of which have *cis* and *trans* isomers).

20.9

(a) 
$$\operatorname{\mathsf{Br}}$$
 (b)  $\operatorname{\mathsf{Br}}$  (c)  $\operatorname{\mathsf{Ph}}$   $\operatorname{\mathsf{Br}}$  (d)

$$RO \left( CH_{2}CH \xrightarrow{}_{n} CH_{2}CH_{2} + RO \left( CH_{2}CH \xrightarrow{}_{n} CH = CH \right) \right)$$

20.14

20.15

Following the initial electron transfer to give the delocalized intermediate radical anion, protonation occurs mainly at position 3 *ortho* to a methyl group. Protonation of the cyclohexadienyl anion, formed by the second electron transfer, occurs mainly at the new position 3 *(ortho* to the other methyl group) to give the product shown.

20.16

#### 20.17

Initiation:

$$\begin{array}{c}
\text{Me} \\
\text{Ar-$\dot{\textbf{C}}$-Cl} + \text{Me}_2\text{CNO}_2^- \longrightarrow \begin{bmatrix} \text{Me} \\ \text{Ar-$\dot{\textbf{C}}$-Cl} \\ \text{Me} \end{bmatrix}^{\frac{1}{2}} + \text{Me}_2\text{CNO}_2
\end{array}$$

Propagation:

$$\begin{bmatrix} Ar - \overset{\mathsf{Me}}{\mathsf{C}} - \mathsf{CI} \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} \longrightarrow Ar - \overset{\mathsf{Me}}{\mathsf{C}} \overset{\mathsf{Me}}{\underline{\phantom{.}}} + \mathsf{CI}^{-} \\ Me \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} \longrightarrow Ar - \overset{\mathsf{Me}}{\mathsf{C}} \overset{\mathsf{Me}}{\underline{\phantom{.}}} + \mathsf{CI}^{-} \\ Me \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} \longrightarrow \begin{bmatrix} Me & Me \\ Ar - \overset{\bullet}{\mathsf{C}} - \overset{\bullet}{\mathsf{C}} - \mathsf{NO}_{2} \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} \\ Ar - \overset{\mathsf{Me}}{\mathsf{C}} - \overset{\mathsf{Me}}{\mathsf{C}} - \mathsf{NO}_{2} \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} + Ar - \overset{\mathsf{Me}}{\mathsf{C}} - \mathsf{CI} \\ \overset{\mathsf{Me}}{\underline{\phantom{.}}} & \mathsf{Me} & \mathsf{Me} \end{bmatrix}^{\overset{\bullet}{\underline{\phantom{.}}}} \longrightarrow Ar - \overset{\mathsf{Me}}{\mathsf{C}} - \mathsf{CI} - \mathsf{NO}_{2} + \begin{bmatrix} \overset{\mathsf{Me}}{\underline{\phantom{.}}} & \overset{\mathsf{Me}}{\underline{\phantom{.$$
